MUCH ALIKE, YET MUCH DIFFERENT

PUBLIC VS PRIVATE

Form of ownership can make a difference, but the bottom line either way depends on caliber of management

BY BARBARA J. FRIEDMAN
presstime staff writer

In 1979, McClatchy Newspapers decided to gamble.

That year the Sacramento-based company bought the Anchorage Daily News, a newspaper in trouble in a competitive market. The company figured the paper had about a 1-in-20 chance of success.

The News was a long shot that paid off in the highest circulation and linage numbers in Anchorage. But the numbers looked dismal when McClatchy decided to invest, says Irwin Potts, executive vice president at privately held McClatchy. "Never would a public company take that kind of risk."

Not so, says John W. Madigan, executive vice president of publicly held Tribune Co. of Chicago. "I think the opposite is true." Extensive long-range planning and access to broader sources of financing afford "some security to go ahead and make some bets," he says.

And so disagreements go among some executives at five publicly held and five privately held companies in the newspaper business interviewed by **presstime** on the topic of differences between the two types of firms. In the United States, 18 publicly held firms own about 23 percent of the dailies, accounting for about 41 percent of the circulation.

From the private side, executives see limitations and demands they believe are intrinsic to doing business as a public company. For instance, some talk of a nearly stifling need for planning and quantitative analysis, a curtailed freedom to make fast decisions, and pressure to produce a string of steadily better quarterly profits that limits a company's ability to invest for the long run and to take risks.

On the other side, executives at publicly held firms speak of the extra element of discipline that comes with spending public shareholders' money, and of a willingness to take risks and wait long years for a payoff. They reject the notion of undue pressure to produce a better quarterly report.

Executives from both sides, however, tend to agree on one point: that a company's character and operations are shaped much more by its size and caliber of top management than by how its stock is traded. They say quality and efficiency have little to do with whether a company is public or private.

PRIVATE SIDE. Before Harte-Hanks Communications Inc. of San Antonio returned to private status through a leveraged buyout in 1984, "We were really at the mercy of Wall Street," says John T. Williams, a company executive. As a publicly held firm, there was "tremendous pressure to have 'up' quarters all the time—and no surprises."

> *"I don't know of a public company that isn't worried about quarterly growth."*

Williams, publisher of The Bryan-College Station (Texas) Eagle and president of Harte-Hanks' Southern Group of newspapers, says he felt that "pressure from above and communicated that pressure to people who worked for me."

Translated into daily operations at the Eagle, it could mean delaying expenses such as sending someone to a seminar, holding off on a trip or a charitable contribution, and finding other ways to keep expenses out of a particular quarter when revenues might be slipping or pulled down by seasonal variations, Williams says.

"Anything that was discretionary, we'd try very, very hard to keep it out of the first quarter," when newspaper revenues often sagged, he says. Quarterly pressures also meant that projects might be timed to start when they would have the least impact on profits, rather than when the launch might offer the best chance of success.

Williams says the nature but not the level of pressure has changed now that the company is private. The push is "not to make this quarter's numbers" but to maximize the company's value over the long run, he says. Although Harte-Hanks took on heavy debt to go private and must consider lenders' expectations, Williams—one of 34 current stockholders in the company—says "the time horizon (for planning and operations) is much longer."

William Dean Singleton, president of privately held Garden State Newspapers Inc., is also emphatic about quarterly pressure at public companies. "I don't know of a public company that isn't worried about quarterly growth," he says. Singleton, who owns 30 percent of Garden State, says he bases his thinking on feedback from friends at public companies and on high-level managers from public companies he has interviewed for jobs.

Being privately held "gives you more freedom in every respect," including the leeway to take your lumps in the short run in order to benefit over the long haul, says Singleton.

With an eye on the future, two-year-old Garden State has accumulated 22 dailies. However, before the company was formed, Singleton and Richard B. Scudder, also a partner in Garden State, bought The Gloucester County Times of Woodbury, N.J., from then publicly held Harte-Hanks.

That year, 1983, the Woodbury newspaper absorbed some short-term lumps, Singleton says, as it spent about $200,000 opening a bureau in a fast-growing township where the newspaper's penetration was low.

The money came "right off the bottom line," but it was well spent because penetration and advertising sales in the township have increased significantly, he says. A publicly held company would probably not have moved with such dispatch, he adds.

Singleton says Garden State also has

kept subscription and single-copy prices of its newspapers low in order to expand the circulation base. To him, that is part of the company's strategy of foregoing a short-term revenue boost in exchange for long-run gains.

At McClatchy, Potts describes a similar approach. "I could immediately yank up earnings by raising those (circulation) rates." But the beauty of a privately held company, he says, is the freedom to distinguish between profits needed "to maintain long-term health" and profits that impress shareholders.

"The opportunity at least exists for a privately held company not to be captive to that profit mania as much as a public company," he says.

At the Santa Ana, Calif., headquarters of family controlled Freedom Newspapers Inc., President D. Robert Segal says he, too, believes private status provides extra operating room.

"The very nature of a publicly owned company seems to require bureaucracy, specialization and a certain amount of show business," he says. Segal calls this neither good nor bad but makes clear he is glad to be working for a private company.

Presentations loaded with statistics and projections are to Segal part of the "show business put on by management for the owners" to convince them that "by God, we've got good managers." Referring to what he sees as extra demands upon executives of public companies, he says, "Perhaps some of it makes sense, but it's (mainly) a good show."

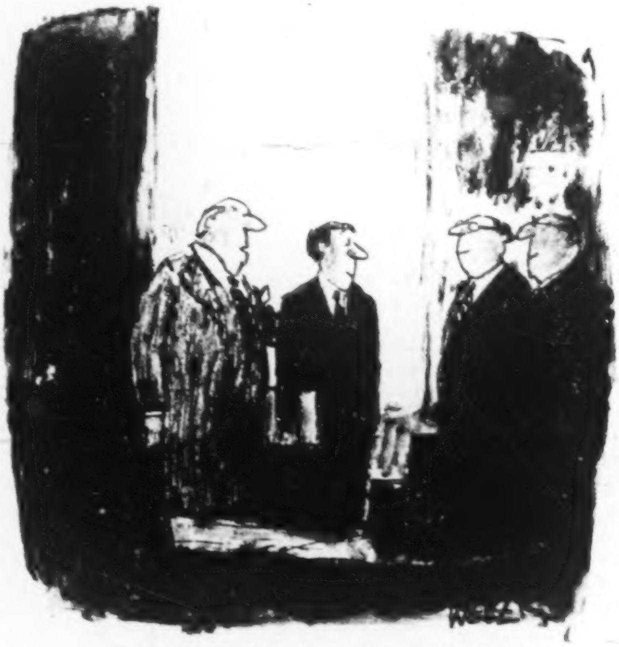
PUBLIC SIDE. At publicly held companies, executives take issue with the contention they face pressure to produce regular increases in quarterly profits.

That holds even for Gannett Co., which is quick to note in its 1985 annual report that "record earnings continued at a steady, dependable pace, marking 73 consecutive quarters of higher earnings, a performance also unmatched by any other media company."

The analysts have come to expect that kind of performance, and "we try not to disappoint them," says Douglas H. McCorkindale, Gannett vice chairman and chief financial and administrative officer.

McCorkindale says Gannett's financial success reflects a long-range focus that anticipates business trends and pays off in the short run by producing quarterly gains. Gannett, which had 1985 revenues of $2.2 billion, is too large to shift significant expenses from quarter to quarter to turn a potentially bad showing into a good one, he says.

Should Gannett have a quarter when profits fell, McCorkindale does not think there would be very much impact on the price of its stock. "We don't feel any pressure to keep the (higher) quarters coming," he says.



"George Tully is a really first-rate individual, up from second-rate this past quarter."

Drawing by Weber; copyright 1986, The New Yorker Magazine Inc.

Gannett has managed to keep its upward march of quarterly profits despite its launch of USA Today in the fall of 1982. Publication of USA Today first meant educating stock analysts that the new national newspaper would not bankrupt the company, then persuading them that its early circulation gains would not mean a quick bonanza, McCorkindale says.

USA Today is expected to become profitable late next year, he says. The timetable means Gannett will have absorbed five years of financial red ink at the colorful paper—not a short wait, McCorkindale notes.

Williams of Harte-Hanks says Gannett has done a phenomenal job of producing better quarters while financing USA Today, but he adds, "it's fair to raise (the question of) what impact that had on its local newspapers."

Circulation price hikes have helped Gannett's revenues, and McCorkindale says the increases may have contributed to the approximately 1-percent drop in circulation at the company's local newspapers in 1985.

However, he says other factors were at work within the group, such as the declining fortunes of evening papers nationally—the bulk of Gannett's dailies are p.m. publications—and combining morning and evening papers.

McCorkindale adds that where Gannett has raised prices, it has done so because it believes the newspapers are worth the price and that readers are willing to pay the higher cost.

At another public corporation, Dow Jones & Co., family control is as present as it is absent at Gannett.

Frederick G. Harris, senior vice president and chief financial officer of Dow Jones, says the family regards the company as a "quasi public trust." That family control shifts the focus away from quarterly reports, he says.

"We can take the long-term point of view, recognizing that if institutional investors become disenchanted with our stock, they could sell and put downward pressure" on the price, but "so be it," says Harris.

No single institutional investor has ever owned more than 1 million shares, or about 1.6 percent of Dow Jones' common stock, and the norm of such ownership is around 500,000, Harris says. Moreover, Dow Jones last reported lower profits in the third quarter of 1984 and has produced a compound growth rate in the last 10 years in the 18-percent range. "We would not be unduly concerned if we had a down year"—the last one was in 1976—and "we would not do anything to hype a down year," he says.

Harris says the company has risked money on projects with long-term payoffs such as Dow Jones' now-profitable investment in The Asian Wall Street Journal [presstime, Jan. 1986, p. 28]. Another example, he says, is the company's launch of The Wall Street Journal/Europe, which is not expected to be profitable this decade. The Journal was introduced in Asia in 1976 and then in Europe in 1983.

At A.H. Belo Corp., which publishes The Dallas Morning News, profits were down in 1985 from the year before.

Robert W. Decherd, Belo's president and chief operating officer, says how much quarterly pressure a company faces depends on how it presents itself to the investment community. At Belo, which first sold stock to the public in 1981, the company made clear from the outset that investors interested in "predictability in quarter-to-quarter earnings should not buy our stock."

By casting itself in that light, Belo attracted sophisticated, institutional investors who were "comfortable with our operating strategy," Decherd says. That strategy includes heavy debt and a downward pull on its earnings from interest expense and goodwill from acquisitions.

Decherd notes that cash flow is bringing down the debt "at a very rapid rate," and "people who own our stock understand" the use of debt [presstime, April 1986, p. 6].

Madigan of Tribune Co. makes a similar point about relationships between stock analysts and a company. "I think one of the most important things is that the analysts understand you. They can tolerate a down quarter much more if they know it's coming."

At the Chicago company, control by heirs of the founding families has given way to a broadly held stock. The holders include institutions, which may have goals different from a family with a love for the business, Madigan observes. However, "we have some sound institutional investors who like our business," he says, "and many are in for the long haul."

The Tribune first offered stock to the public in late 1983 but years before had been issuing reports on earnings and selling bonds. The extra scrutiny that comes with being publicly held is not a hindrance but an incentive to perform better, Madigan maintains.

MIXED PORTFOLIO. In the end, no clear-cut answers emerge about fundamental differences between publicly and privately held companies in the newspaper business. That may be because of the diversity among companies on both sides of the divide that separates the two.

At Park Communications Inc., founder Roy H. Park says going public in 1983 has caused few changes at his company. The only difference, says Park, who controls 90 percent of the stock, is "you stand naked every quarter when you make your earnings (report) available."

Government reporting rules require that publicly traded companies file reports that range from annual and quarterly financial statements to proxies with details such as top executives' salaries.

While many annual reports are full of glossy photographs on heavy paper, Park has kept its version slender and fairly plain. The company uses all its profits to nurture growth, and Park still meets with key executives every Monday to talk about problems, goals and the company's performance over the past week.

His control and personal hand in management is just the sort of situation that helps blur the line between publicly and privately held companies.

J. Kendrick Noble, a media analyst at PaineWebber Inc., says family influence at companies with newspapers seems to make no difference in the type of investors attracted by publicly traded stocks. What draws many of them, he says, is the predictability and growth in earnings that newspapers can produce.

When that growth does not show up in a quarterly report, a stock's price can tumble, Noble acknowledges. But he believes investors distinguish between a down quarter that is an aberration and one that is a sign of things to come.

Echoing Tribune's Madigan, Noble says investors respond best when they know what to expect. "The market hates uncertainty. In the event of uncertainty, it's likely to assume the worst."

Professional investors for institutions—which own a high proportion of the publicly traded stocks in the United States—are no different, Noble says. While they also face pressure to produce a good quarterly showing for the institutions they represent, he believes they take the long view if a company's vital signs are good.

At many publicly held, newspaper-owning companies, family holdings of stock have blunted the impact of investors interested only in profits, says Steven H. Star, a member of the faculty of the Sloan School of Management at the Massachusetts Institute of Technology.

Should that family control weaken and the economy sour, he worries that a public company in trouble might be under pressure to import "the fix-it, turnaround artist who last year did breakfast foods, the year before that a retail chain."

"Newspapers are a special kind of business," says Star, who has done consulting in the industry. "They have a soul, almost," and they are "not something you move hired hands in and out of." ☐

I DON'T WANT TO SPEND A FORTUNE ON A FRONT-END SYSTEM. I DON'T WANT TO GO 5 OR 6 PLACES FOR PARTS & SERVICE. AND I DON'T WANT TO REPLACE THE WHOLE THING IN A YEAR OR TWO. DOESN'T ANYONE UNDERSTAND?

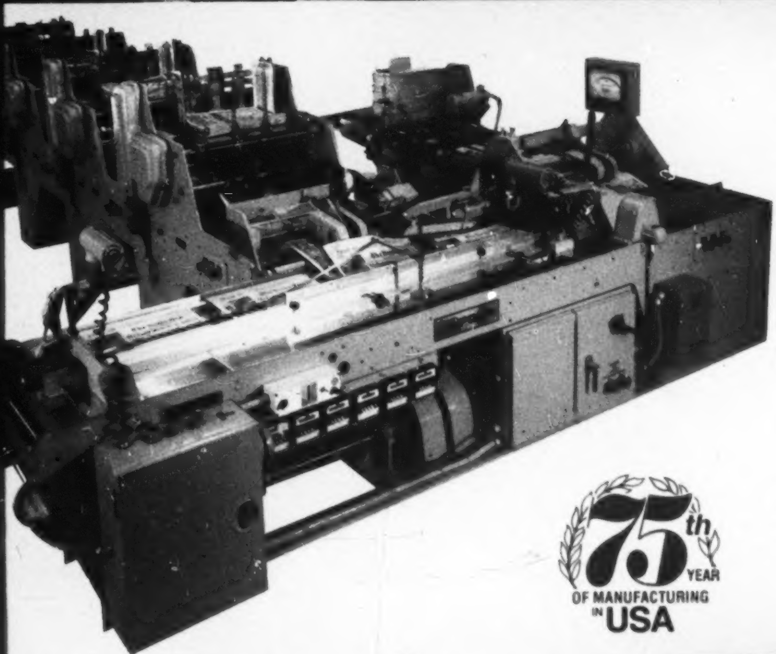
“The McCain 660 turned out to be a dependable investment… not an expense.”

Gregory Cushman, President
Loren Dyer, Operations Manager
THE BULLETIN
Bend, Oregon



“The McCain 660 inserting machine has done everything we expected and more. It has turned out to be an investment…not an expense. It's dependable, in averaging more than 12,500 papers per hour, with either single or multi inserts. I would recommend the serious consideration of the McCain 660 for anyone planning to purchase a stuffing system.”

McCain users across the country are quick to praise the 660's performance and dependability. It incorporates any number of in-line insert stations, so that all stuffs are gathered in a single pile. The gathered stuffs are then inserted into the body of the paper in one smooth, continuous operation. Difference in size and thickness of stuffs is, therefore, not a problem. There's a 660 system available to fit every stuffing need. Write or call for details. McCain Manufacturing Corp., 6200 W. 60th Street, Chicago, IL 60638, 1 312 586-6200.

TRYING NEW IDEAS

Alternative Arrangements for WORK

Newspapers are slow to adopt 'telecommuting,' 'flextime,' other workplace changes

BY CLARK NEWSOM
presstime labor writer

Widely publicized alternatives to traditional job arrangements such as "telecommuting," the four-day workweek, "flextime" and job-sharing are not sweeping across the newspaper business. But there are signs of change.

A few U.S. newspapers successfully have adopted new work policies in response to shifts in economic, social and demographic patterns. Those shifts, human resources specialists say, have resulted in a departure from the traditional family lifestyle in which the father worked and mother stayed home with the children.

One of the newest, and perhaps one of the most appealing, of job alternatives for many workers is telecommuting or "computer commuting," in which the employee stays home and communicates to the office via computer.

So far, however, there are only a few examples of its adoption by newspapers.

Susan L. Hartt

The Washington Post's Jonathan Yardley works in his Baltimore home.

One journalist who has found it to be a workable alternative is Jonathan Yardley, a Baltimore resident who is book critic of The Washington Post. He goes into the office some 40 miles away only once a week, every Monday morning, for a meeting. The rest of the week he spends at home producing two reviews and a column Tuesday through Friday.

The Post supplies Yardley with a computer and telephone modem to file his material. Yardley says he has two reading days and two writing days in which he turns out about 2,300 words per day. "I really have to do five days' work in four days because of the day in Washington," he notes.

The big advantage to working at home is that "I'm not interrupted often," he says. The only disadvantage is the lack of "human connections." After spending years in an office, "I miss that," he says.

Indeed, some psychologists have suggested that working at home can impose a lack of motivation and a sense of isolation.

Several newspapers' one-person Washington bureaus also are run out of the correspondents' homes [presstime, March 1984, p. 23].

Most of the national correspondents for The Philadelphia Inquirer have offices at home and file their copy by modem, as do several columnists for The New York Times.

An example of telecommuting on a smaller scale is at The Seattle Times, where Systems Editor Steve Raymond notes that a music critic occasionally transmits a story from home as do some reporters.

Such examples notwithstanding, the newspaper business has yet to take computer commuting to its bosom.

"I don't see as a practical matter how a majority of newspaper employees could function from their homes," says Charles N. Mock, senior vice president/personnel of The Providence Journal and Bulletin. "Reporters could communicate through computers with their desk people on a limited basis. But they need the frequent personal contact with not only their editors but their peers.

"Advertising salespeople by the nature of their job need frequent contact with their clientele as well as their managers," Mock says. "Production people obviously can't work out of their homes. For business office and clerical people, I see no application, as they all require frequent contact with other employees and direction from their managers."

At The Oregonian in Portland, where the subject has been discussed by editors, Assistant Managing Editor Judson Randall comments, "I don't think it will ever get to the point where newspaper people will spend all of their time at home. . . . I don't think it will ever replace the newsroom as we know it."

Nonetheless, The Newspaper Guild is keeping a watchful eye on the practice. It fears the possibility of a trend developing in use of off-site computers that could result in its members working unpaid overtime. Delegates to last year's Guild convention were urged to monitor any such developments closely [presstime, Aug. 1985, p. 46].

TIME CLOCK ADJUSTMENTS. There has been somewhat more activity at newspapers in adopting the concept of fewer days in the workweek—particularly in non-editorial departments.

Pressmen and printers working the night shift at The Gazette of Montreal have a four-day workweek of 30 hours in their labor agreements with the Graphic Communications International Union and the International Typographical Union respectively.

In the United States, there is a four-day workweek in the composing room of The Journal-Gazette and The News-Sentinel in Fort Wayne, Ind. Under the ITU contract, the workweek is 30 hours for the day shift and 29 hours for nights.

Several editorial employees of The Sacramento Bee work a four-day, 37½-hour week. The three-person payroll department of the Long Beach (Calif.) Press-Telegram works four 10-hour days.

Similar developments have come more slowly in editorial departments. Since 1965, the Guild has pushed for a four-day, 28-hour workweek as one of its bargaining goals. The closest the union has come to achieving it is the 33-hour week in the labor agreement covering advertising and editorial employees of The Daily Evening Item in Lynn, Mass. That agreement provides for four seven-hour days and one five-hour day.

The Columbian of Vancouver, Wash., recently experimented with having its six photographers work four 10-hour days, but the trial was unsuccessful. "It left us too thinly staffed at critical times," reports Managing Editor Dennis D. Dible.

The newspaper is now experimenting with a four-day week for its nine-person copy desk, three of whom remain on a five-day schedule. "It's working very well," Dible says. A key factor, he says, is that the schedule was devised by the people on the desk.

Another way to rearrange work hours is to implement a "flextime" schedule, in which workers are given a "window" of time to start their day. Employees may choose, for example, a starting time between 7 and 9 a.m. Quitting time depends on when work begins.

Flextime also is not prevalent at many newspapers, although The Oregonian has some arrangements in the personnel, accounting, credit and classified departments, according to Personnel Manager Frank E. Lesage.

The Seattle Times adjusts work hours, but "we don't call it flextime," says Personnel Manager Thomas C. Bryan. Employees who desire different hours can talk with their supervisors, and accommodations will be made if feasible, he says.

JOB SHARING. Creating greater interest among many people in the newspaper business is yet another innovative work concept: two employees' sharing one full-time job. Neither management nor labor has thrown up much of a roadblock to the plan

"The Guild sees job sharing as one of several alternative-work-schedule options that could help Guild members better balance work and family, or their personal lives, as well as an important step in achieving equality in the workplace," says Anna M. Padia, the union's human rights coordinator.

"I endorse the concept," says Keith R. Fuller, director of employee relations for McClatchy Newspapers of Sacramento,

Studies urge employers to accommodate new worker needs

Two new studies examining major trends in the U.S. workforce and workplace urge employers to respond to the need for better trained workers and to changes that have dramatically affected the family.

The first, "Employment Policies: Looking to the Year 2000," found evidence of "a growing and pervasive mismatch" between the nation's employment needs and workers' capabilities. The study was released in April by the National Alliance of Business, an independent, business-led, non-profit organization based in Washington, D.C.

The report estimated that basic deficiencies in employees' reading, writing and computing skills will add to company costs "through lower productivity, higher supervisory time and poorer product quality."

The alliance said business can assure that workplace needs will be better met if business people join with educators and trainers in the training and re-training process. "Employers must be more involved in our education system and training institutions and in the development of community strategies," the report said.

Over the next 10 to 15 years, the workforce will undergo a major change in composition, the report noted, with women accounting for the majority of labor force growth. Families with both parents working will become more common, increasing the demand for child care during working hours. Businesses need to consider flexible work schedules or greater part-time opportunities to meet the needs of parents, the report said.

The other report, "Work and Family: A Changing Dynamic," was released in April by the Washington, D.C.-based Bureau of National Affairs Inc., a private publishing company. It noted that today's families include two-earner couples who are delaying parenthood until careers are established, single-parent households, families that must care for an elderly dependent and families with children where both parents work. The needs of these "new" families are different from those of the 1950s, it said.

Fewer than 10 percent of the population lives in a family that is headed by a male breadwinner and a mother who stays home, according to BNA. More than half the children 13 years old and under live in a family in which both parents, or the only parent in the home, work.

Who takes care of these children is just one of the work and family issues that must be addressed, the report said.

A task force of ANPA's Human Resources Committee's personnel subcommittee is considering employee relations issues in the year 2000 and is expected to issue its report this fall [presstime, Nov. 1985, p. 61].

"but, obviously, it has to fit the individual job involved and the individuals involved."

Job-sharing partners sometimes are closely related, especially so at The Baltimore Sun, where a husband-wife team has filled one full-time job on the education beat since 1984. Reporters Will Englund and Kathy Lally approached management with the idea after their first child was born in 1982. A formal agreement was worked out and signed by the two employees and by Metropolitan Editor Tom Linthicum.

The agreement called for a nine-month trial, with the reporters' dividing the job by working alternate months. As it has turned out, they trade after five, six or seven weeks. "We tend to work more diligently" as a team, Englund reports. "We think alike. It works out great."

"I feel it is an experiment that has worked very well," says Linthicum. But he adds: "I'm not sure it would work in every circumstance. It would have to be done on a case-by-case basis."

The editor says there is no loss of continuity because "they (Englund and Lally) constantly talk about the beat."

One benefits package is granted the position. For example, Englund claims medical insurance and Lally is covered as a dependent. Sick leave and vacation are prorated according to the actual hours worked by each employee, not to exceed the equivalent of one full-time employee's accrual.

Another husband-wife job-sharing arrangement involves a Washington correspondent's slot for the St. Louis Post-Dispatch. The couple arranges time so that one person works in the morning and one in the afternoon. That way, one of them is home with the children at all times.

But some pairs who are sharing jobs are not related. For example, at the St. Paul Pioneer Press and Dispatch, two women—both of them mothers—fill a feature-writer position. They work alternate weeks.

There are several job-sharing arrangements at The Columbian in Vancouver, Personnel Director Ann Michael reports. For example, two advertising department assistants fill a full-time job, with one working three days and the other two days a week. A similar arrangement exists for a cashier/receptionist position, with one person working five hours a day and the other three hours. If one employee is absent, the other works the full shift.

Job sharing could get a boost in popularity, because the Associated Press has agreed to experiment with it.

Under terms of a new labor agreement with the Wire Service Guild, two employees may share a regular job, with wages being prorated according to number of days worked, says Wick Temple, AP director of human resources. AP will pay the equivalent of 100 percent of one employee's benefits.

The wire service is not obligated to find a job-sharing partner for an employee who wants to share a job.

In the case of two regular staffers who would like to share a job during the experimental period, a temporary employee may be hired to replace one of them in a full-time position, with the understanding that the temporary will leave the company if both employees want to return to full-time jobs.

The experiment is so new that the first job-sharing arrangement has yet to be made, Temple reports. ☐

CAN YOU MEASURE THE QUALITY OF YOUR NEWSPRINT?

IF YOU CAN'T FILL IN THE BLANKS, YOU PROBABLY AREN'T GETTING THE NEWSPRINT YOU NEED.

Quality printing demands quality newsprint . . . especially for quality color reproduction.

Today's increasing demands for color, by advertisers and consumers, require greater control of newsprint brightness, opacity and color. And now you have it.

Technidyne's MICRO TB-1C allows everyone to clearly communicate these values with real numbers that everyone understands. The simple-to-operate MICRO TB-1C provides accurate, reliable, standard measurements . . . a common language. Every time.

Newspapers can order quality newsprint with confidence, and check those orders when they arrive. Mills know what to produce. Exactly. Everyone will be talking the same language. At last!

Contact us today for more information or a demonstration. Or visit us at the ANPA Show, Booth #3503.

'HUCKLEBERRY' WRITING WANES

STRINGERS

Backyard-fence social columns inched out by more traditional journalism

BY MARCIA RUTH
presstime staff writer

As an Indiana editor remembers "Miss Oliver," she "kept her notes in a spiral notebook hung from a refrigerator door handle because it was near the phone." When people called, she would write things down, "and when she filled two pages, writing in pencil in her spiral notebook, she mailed it to us," says Stewart Huffman, editor of The Republic (evening, circulation 22,629) in Columbus.

Upon its arrival, Huffman recalls, the handwritten pages went to a Linotype operator "who always knew what Miss Oliver wanted to say" and therefore functioned, in effect, as her editor. For her labors more than two decades ago, "Miss Oliver received a complimentary subscription to the newspaper" each year.

"All of us had country correspondents in 1964," he says, recalling an American Press Institute seminar at which they were called "huckleberry" writers on the "chicken dinner" circuit. "But since then, we have been backing away from that kind of coverage."

The Columbus paper is part of a trend that has swept through many small to mid-size dailies across the United States. No matter how "wonderful and colorful" stringers were in the heyday of what John M. Lavine, publisher and editor of the Lavine Newspaper Group in Wisconsin, calls "backyard-fence news," they are on the wane. They're being replaced by a more modern breed of correspondent or not replaced at all—a slice of Americana vanishing from the landscape.

"The only so-called stringers we have left are the ones who have been on the payroll, so to speak, all their lives," says Robert Harper, managing editor of The Frederick (Md.) Post (morning, 22,113) and The News (evening, 14,842). "We're letting those die of attrition, and we're not replacing them."

Carroll Hall, Bangor Daily News

Doris W. Pratt of Castine, Maine, has been a Bangor Daily News stringer more than 30 years.

Although many editors agree with Harper that such stringers are "frankly more trouble than they're worth," others remember them fondly.; "God bless the little old ladies in tennis shoes," says Paul Reynolds, managing editor of the Bangor (Maine) Daily News, who credits them with providing a needed service while the paper was building up to its present morning circulation of 78,816.

For dailies that remain in the stringer business, especially those covering wide circulation areas, it is hardly business as usual.

Some have chosen to keep neighborhood stringers but to bring "Miss Oliver" into the 1980s, assigning full-time editors to coordinate stringers' work and in some instances providing them with portable computers to use in transmitting copy from their homes.

Other papers are using more versatile correspondents whose responsibilities resemble those of staff reporters.

And many continue to use part-timers for specialty jobs, such as writing a column about organic gardening or assisting in covering the wide variety of spring sports.

STRINGING ALONG. Who are today's stringers, and how are they paid?

Compared with their predecessors, they tend to be better qualified and to cover more legitimate news, observers say.

As for pay, it varies as much as the many different ways in which stringers are used.

At Lavine's papers in Wisconsin, stringers are paid "by the project, by the inch, by the photograph, by the assignment. It depends on what they are doing," he says.

Like many papers, the Roanoke (Va.) Times & World-News (all-day, 123,139) uses stringers primarily to provide copy for zoned editions. For work published in the Neighbors section, they are paid by the story and by the photograph, says Managing Editor William K. Warren, with variations based on "subjective judgment made not just on the length but on the difficulty" of the assignment.

With the increasing number of challenges by The Newspaper Guild to the use of stringers by major metropolitan dailies, there is growing caution among smaller papers about how stringers are used and rewarded.

"Our position is that anything that can be written by staffers ought to be written by staffers, whether they be full-time or part-time," says J. William Blatz, director of field operations for the Guild, which is generally stronger at the metros than at small papers. In making assessments on whether stringers should receive the benefits of staffers, Blatz says the Guild looks at such criteria as how they are paid, who supplies the equipment they use and how assignments are made.

At the Independent Journal in San Rafael, Calif. (evening, 38,384), which uses stringers only occasionally, Editor John M. Flanaghan cautions: "I think it is important for newspapers to be right up front with stringers on how they get paid and what they get paid for, and what they can do and what they can't do."

COORDINATION CRITICAL. One of the things editors invariably say about stringer operations is that proper coordination is essential for smooth operation.

Far from the old tradition of individualized correspondence, the "key ingredient" now is the regional editor, says Managing Editor Stephen Hartgen of The Times-News (morning, 20,563) in Twin Falls, Idaho. At his paper, the regional editor coordinates stringers' assignments, edits their copy and participates in the paper's training program for part-timers.

"You can't expect a correspondent in a local community to be an expert on libel," says Hartgen, and the editor has to be "willing to buck the copy back if it doesn't meet the standards."

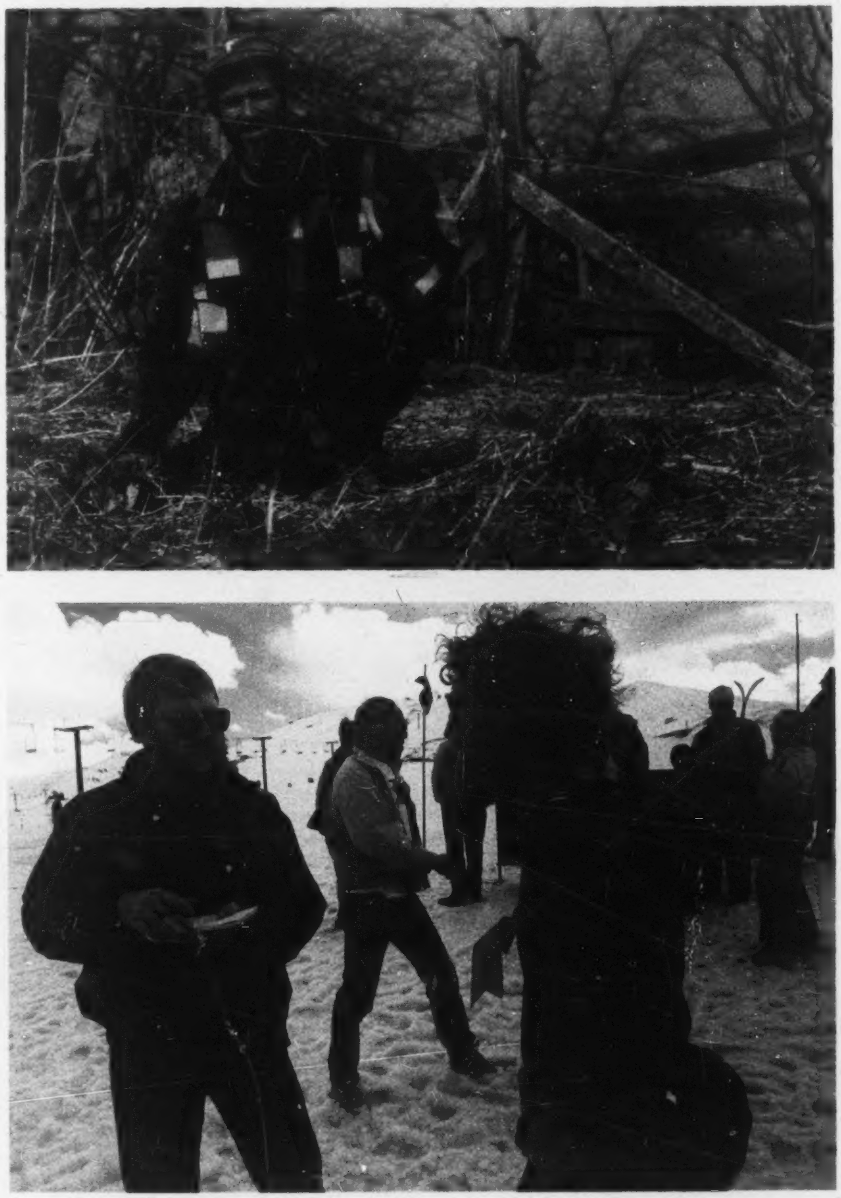
The Idaho daily "went through a phase of getting out of the correspondent business," then decided it was the most efficient way to cover a circulation area that Hartgen describes as "a big piece of real estate without too many folks."

With that area stretching 80 miles in every direction across eight counties, "local news is our franchise," says Hartgen. "Nobody is going to cover Southern Idaho like we do." Yet, like many papers of its size, The Times-News had to balance the lack of appeal among full-time reporters of covering a "West Buggywhip, Idaho, city council meeting," with the fact that "the people who live in West Buggywhip want to see something about them in the news."

The solution Hartgen has adopted over the past few years is a network of about 18 correspondents located in smaller communities. Equipped with Radio Shack lap-size computers supplied by The Times-News, they send copy directly to the central computer in Twin Falls for the regional editor's review.

A similar newsroom safety valve is in place at The Republic in Columbus. "All of the (stringers') material passes through some responsible desk editor before it gets to the news editor and the copy desk," says Huffman. "Those people tend to challenge free-lancers just as they would anybody else."

At the Alton (Ill.) Telegraph (evening, 37,247), a newly appointed regional editor will be responsible not only for coordinating the work of the 20 stringers already on



Mark Crowley, The Republic

board, but also for recruiting new ones to more than double their ranks this year, says Executive Editor D.G. Schumacher.

Although the Telegraph covers an area much smaller than that of the Idaho paper, it includes portions of five counties and numerous small towns.

"We recognize the need for better and more local news coverage in all the communities we consider to be our territory, and it is simply not possible to get to all the governmental meetings," says Schumacher.

Incorporating tips from such meetings as well as "people features" from areas outside of Alton leads to "more efficient" use of staff time, says Schumacher. This way, "a full-time reporter can spend time writing a more meaty feature, or investigating something" rather than spending excess time on the road.

A MIDDLE APPROACH. However, other papers, faced with similar situations, have abandoned the traditional stringer system and replaced it with a network of people whose stature is somewhere between that of regular reporter and old-style, country stringer.

At the Bangor paper, which covers eight counties accounting for about two-thirds of Maine's geographical area, Managing Editor Reynolds has phased out most of the stringers paid by the piece in favor of what he calls "district correspondents."

In a system that he says "has been evolving over the past 20 years," these correspondents work for one of the paper's 10 news bureaus. Some full- and some part-time, they are paid a regular stipend rather than by the story, but their pay scale is lower than that of regular reporters.

At The Spokesman-Review (morning, 83,518) and Spokane Chronicle (evening, 44,872), a similar staffing pattern has evolved to cover areas far from the city.

After a few years of experimenting with stringer coverage of Northern Idaho, "what we discovered is there is a short-term gain and a long-term liability," says Managing Editor Christopher Peck.

"There is a sort of 'life history' to a stringer," he says. "The very best people inevitably were always pestering you for a (regular staff) job, so they became demoralized or moved on."

After a while, he says, "the value of the stringer for the community is replaced" by the awareness that remote areas have not been given the priority staffing accorded the central city.

Consequently, the Spokane dailies have adopted a "two-tier" wage system, with correspondents in the field occupying the lower level. As in Bangor, these correspondents get "a minimum salary, no matter what," Peck says. In addition, they are also paid more for long or complex stories.

"It's so much better," he adds. "Paying by the inch, all you get is low-grade stories that are written too long."

Also backing away from the type of stringers it had two decades ago, The Patriot Ledger (evening, 89,153) has adopted a similar, two-tier system for covering the 28 communities it serves outside its home city of Quincy, Mass.

"Town correspondents" are paid a fixed, monthly stipend that is less than the compensation for regular staff reporters. Expected to turn out at least a story a day, each of the correspondents is supervised by one of the 13 regular reporters who coordinate coverage from the 28 towns.

While some of these individuals prefer to remain part-timers and have no ambition to report beyond their local communities, others use the town correspondent position as a springboard to full-time employment. In the past few years, says Managing Editor Thomas A. (Terry) Ryan, about half the Patriot Ledger's editorial vacancies have been "filled with correspondents moving up."

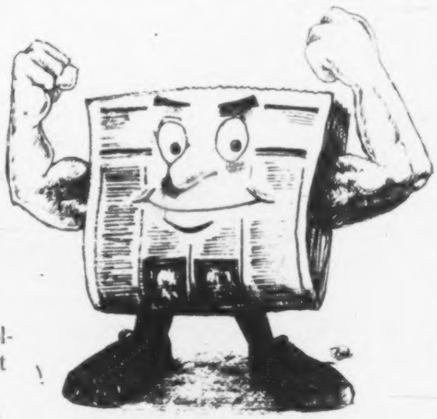
Beyond neighborhood reporting, many small and mid-size dailies use stringers for specialized pieces their own staff or syndicated columnists cannot provide.

"You can't use a (general) gardening column for a place where the altitude is over 4,000 feet," says Hartgen of Twin Falls.

In Columbus, Huffman located "Farmer John," a high school teacher of Russian and chemistry, who writes on organic gardening in the soils of Indiana.

In Southbridge, Mass, Executive Editor George Gears says The News (evening, 7,375) uses a retired physics professor to write on health care issues. One of his efforts was a series on the crisis caused by soaring malpractice insurance premiums—written before that subject became a hot, national issue.

"Sometimes (such writers) just show up at your doorstep," says Gears. "It's a lesson to all newspapers that there are some magnificent readers out there with knowledge. Keep your ears open." ☐



How your newspaper can meet the challenges of Marriage Mail, Radio, and TV.

Competition for advertising dollars is tough. Advertisers want to target their markets. This often results in newspaper advertising dollars being put into direct mail, radio, TV, and billboards.

So how can a newspaper get a greater share of an advertiser's budget?

Total Market Coverage (TMC) from Data Sciences is the answer. Because once you know your nonsubscribers, you can develop a marriage mail package for your existing advertisers . . . and use it to solicit new advertisers.

Our **TMC** package is available with the Papertrak™ family of software which includes **Circulation Management, Display Advertising**, and **General Accounting.**

To find out more about this proven family of management tools and money-makers call:

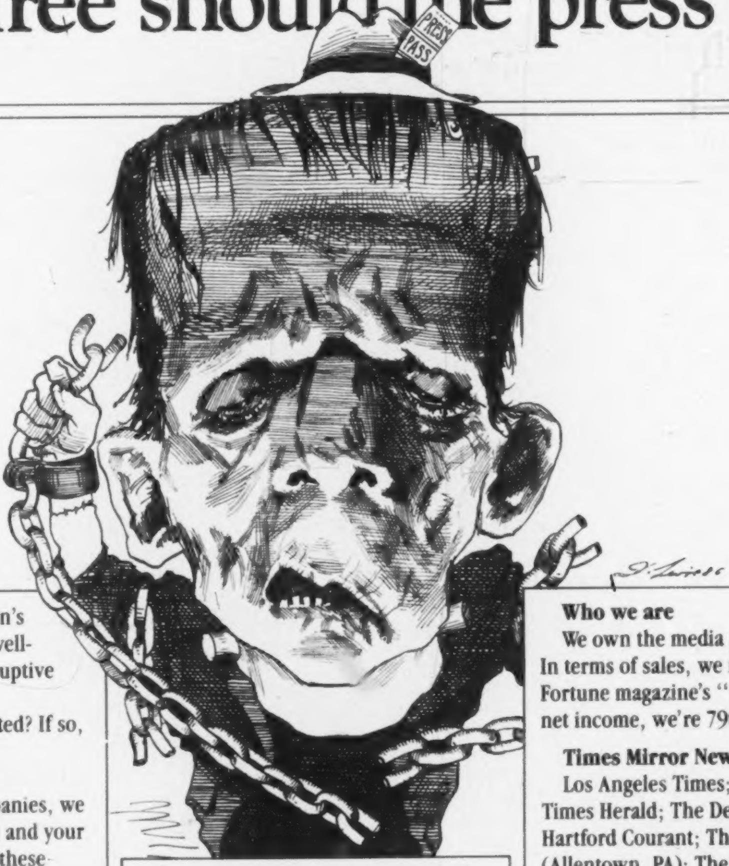
"The People & The Press," Ad #6 in a series

How free should the press be?



Is a free press Frankenstein's monster in disguise—a well-meaning but socially disruptive force?

Should its freedoms be limited? If so, where should the limits be?

As one of America's largest newspaper-based media companies, we felt we had to know what you and your fellow citizens thought about these questions, so we hired an expert to find out.

Between April and December, 1985, Gallup pollsters conducted over 4000 interviews on our behalf, asked nearly two dozen press freedom-related questions, and found:

- In general, the public values a free press, thinks its freedoms should take precedence over government prerogatives…but not over individual and community rights.
- Specifically, 54% think it should be difficult for government to stop news stories from being published; 26% disagree.
- 78% think reporters should be allowed to keep their sources confidential; 15% disagree.
- 42% think government should require the press to cover all sides of controversial issues; 48% disagree.
- 51% think government should outlaw election predictions; 42% disagree.
- 67% think the press should pay damages if a story turns out to be false; 19% disagree.

What do you think?

The primary purpose of this ad is to engage you in a dialogue about press issues—a dialogue that will strengthen the relationship between the press and the people it serves.

To that end, we'd like to know how free you think the press should be. Write our chairman, Robert Erburu, Times Mirror, Times Mirror Square, Suite 100, Los Angeles, CA 90053.

He's also the person to write for a summary of our "People & The Press" investigation or our new annual report. Or you can call our public affairs people at (213) 972-3946.

Who we are

We own the media properties below. In terms of sales, we rank 139th among Fortune magazine's "500." In terms of net income, we're 79th.

Times Mirror Newspapers:
Los Angeles Times; Newsday; Dallas Times Herald; The Denver Post; The Hartford Courant; The Morning Call (Allentown, PA); The Stamford Advocate and Greenwich Time (Connecticut).

Times Mirror Magazines:
Popular Science; Outdoor Life; Golf Magazine; Ski Magazine; The Sporting News.

Times Mirror TV Stations:
KDFW, Dallas; KTBC, Austin; KTVI, St. Louis; WVTM, Birmingham (AL).

Times Mirror Cable:
Fifty cable TV systems serve 300 communities in 15 northeastern, western and southwestern states.

Times Mirror Publishing:

Times Mirror
We're interested in what you think.

GOSS Newspaper Products

THE GOSS MPCS: ONLY A ADVANCED COULD BE SO

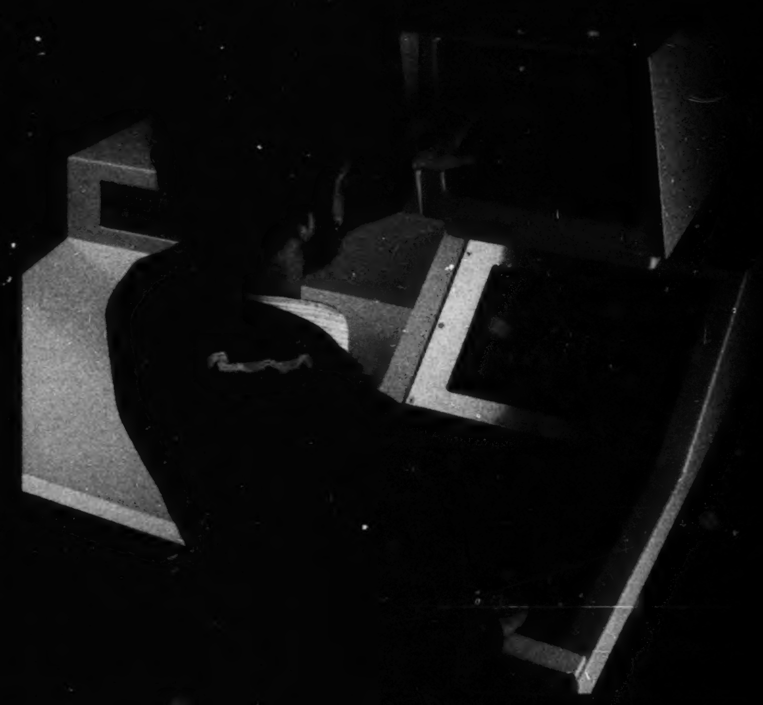
The revolutionary new Goss® Modular Press Control System™ (MPCS)—integral to the latest generation of Headliner Offset® presses—constitutes a quantum leap forward in newspaper productivity. As operationally simple as it is technologically sophisticated, the MPCS provides new capabilities for shorter makeready and reduced waste through computerized presetting and running adjustments.

Redefining user-friendliness, a menu-driven, touch-sensitive work station display is the key to MPCS simplicity. Following a fast self-diagnostic precheck of system software and microprocessors, the MPCS uses computer intelligence to help the operator select, preset and later adjust press functions from the quick-response touch-screen menu. Subsequent color-coded displays quickly confirm input, progress and function achievement—or report unattainable commands and describe the problem.

On the menu driven, touch sensitive display, the operator begins to set the press.

Here's what this unique system means to you. In addition to fast makeready and greater manpower efficiency, the flexible, powerful MPCS also produces significant materials savings. For example, inking values are defined across the web based on stored computer information. Paper is similarly conserved, with waste-reducing adjustments made automatically before any paper is used. There is no wasteful guesswork or experimentation.

MPCS advantages don't end there. The system allows better use of pressroom manpower—for example, multiple work stations on a single press permit input by more than one pressman at a time. The sequence of presetting the press closely follows pressroom opera-



By simply touching the MPCS work station display, a single operator can preset press functions. The productivity programmed central computer takes it from there.

Headliner Offset **MPCS**

SYSTEM SO SIMPLE.

The new Goss Modular Press Control System achieves significant technological advancement for the newest Headliner Offset presses (a four-color unit is shown).

The display verifies ink zone settings.

On another couple, a problem is indicated on the display.

tions—for example, pages can be input as available and the system automatically presets ink zones for each page. Other MPCS benefits: easier circumferential and sidelay adjustments. Running adjustments by plate or page. Specially designed diagnostic features for checkout and maintenance. Library of impositions. Press settings for a frequently used or an interrupted job can be saved and recalled at the operator's command.

There are important initial economies, too. With the building-block design of the MPCS, you order only what you currently require. The MPCS has assured expandability to grow as your requirements and press operations grow. It is easily maintained and accommodates a wide range of peripherals.

Perfected through more than 30 man-years of quality-assured development, the Goss Modular Press Control System makes the Headliner Offset press more than ever the world's pacesetter for newspaper productivity. For more details on MPCS potential in your pressroom, contact Goss Newspaper Products, Graphic Systems Division, Rockwell International, 3100 South Central Avenue, Chicago, IL 60650. Or phone 312 656-8600.

WE'RE DEVELOPING A REPUTATION

We're not surprised people are talking. Scripps Howard has some outstanding photojournalists in the family.

John Kaplan of The Pittsburgh Press was named runner-up photographer of the year in the National Press Photographers' Pictures of the Year Contest, and photographer of the year for NPPA's Region 3.

Bob Gwaltney of The Evansville Press won first place for features in the national NPPA competition…and then rounded out his winnings with a best of show and a first from the Indiana News Photographers Association.

Melvin Grier of The Cincinnati Post was named photographer of the year by the Ohio Newspaper Photographers Association. In all, the Post's photography staff won 33 awards…more than any other paper in the history of the contest.

To make sure the budding Kaplans, Gwaltneys and Griers get taken seriously, The Pittsburgh Press has organized The Pittsburgh Conference—an industry-wide seminar that provides an opportunity for reporters, editors and photojournalists to learn to work more effectively as equal partners to produce better newspapers.

It's all part of our goal to attract the very best people, and then make sure they get a chance to show their stuff.

We like getting that kind of reputation.

NEWSPAPERS

PROFITS, POPULARITY HIGH

NEWSPAPERS IN NEW ZEALAND

Conservative reporting and old-time production methods illustrate sharp contrast with U.S. papers

BY GEORGE P. KENNEDY

Last year, early in the continuing diplomatic dispute over New Zealand's refusal to welcome nuclear-armed American ships, the New Zealand Herald, the country's biggest newspaper, published a selection of comment and cartoons about New Zealand from American papers. The dominant cartoon theme was a belligerent sheep. Both words and pictures conveyed an impression of ignorance of New Zealand politics, history, even geography.

The Rainbow Warrior sinking, with its French repercussions, reminded Americans again that there may be more to New Zealand than mutton and mountains. Still, it's probably a good guess that few even among the editors who found themselves publishing stories datelined "Auckland" know much about their colleagues at the other end of the telex.

Maybe they should. After all, American and New Zealand journalism spring from the same British roots and share Western political, economic and cultural traditions. Keith Sinclair, New Zealand's leading historian, quotes approvingly a 1903 American writer who said of New Zealanders, "They are the Yankees of the South Pacific." Sinclair adds that his country belongs to "a branch of New World civilization the main centers of which are Sydney, San Francisco and Auckland—the Pacific Triangle."

The journalism of those centers is strikingly different. A look at the differences may, for Americans, illustrate the tight controls exerted on even a free press by the law and custom of its society. Such a look may also serve as a useful reminder of how remarkably robust the American press really is, compared to the New World or the Old.

In profit and popularity, New Zealand papers would light up many American publishers' eyes. The four companies that, among them, own all but one of the country's major papers reported increases in profit ranging from 34 to 72 percent for 1984-85. The largest group, Independent Newspapers Ltd., made a profit before taxes of $16 (NZ) million on revenue of $130 (NZ) million. At current exchange rates, $1 (NZ) equals 53.5 cents (U.S.).

> *A look at the differences may serve as a useful reminder of how remarkably robust the American press really is.*

The 3.2 million New Zealanders buy 1.08 million papers per day. To match that readership rate, the 240 million Americans would have to buy 82 million papers per day instead of the 63 million last year. It's no surprise, then, that newspapers took 42 percent of the $444 million spent on New Zealand advertising in 1984, with another 27 percent going to the two government-owned television channels.

If American publishers might be forgiven a moment of envy of their New Zealand colleagues, American editors walking into a New Zealand newsroom are more likely to feel that they've stepped back 15 or 20 years into the past.

Reporters write on battered Royal and Imperial typewriters; copy editors scribble with soft lead pencils. In late 1985, there was not a single video display terminal in a New Zealand newspaper newsroom. The 33 daily papers, with a few exceptions, reflect this time lag in their appearance. Pages that are nearly three inches wider than in the United States usually are laid out in 10 columns whose arrangement often owes more to the jigsaw puzzle than to any notion of modular design.

Other differences are even more important. Most New Zealand editors' definition of news is much narrower than Americans'. Politics, crime and other disasters—manmade or natural—dominate content. Feature stories are rare and usually restricted to a separate feature page. Investigative and analytical stories are even rarer. (Asked in a 1985 survey how often their papers undertake investigative projects, 14 of the 23 editors responding said once a year or less.)

The revolution in lifestyle coverage that has transformed many American papers has yet to reach New Zealand. "Women's pages," as most are still called, rely heavily on recipes and household hints. Consumer reporting is almost unknown. The topics that most concern most people, male or female—topics such as sex, childrearing, aging, disease and coping with stress—are left mainly to magazines.

Nor have most New Zealand papers come to grips with the problem, painfully familiar to American editors, of covering the country's minority population. Maoris make up about 12 percent of New Zealanders, a proportion that is rapidly increasing. Yet despite the country's image abroad as a successful multi-cultural soci-

---

Kennedy, associate dean and associate professor at the University of Missouri School of Journalism, recently spent six months in New Zealand as a Fulbright lecturer. He is a member of the **presstime** *Advisory Committee.*

There is nary a VDT in newsroom of The Evening Post of Wellington.

The Evening Post, Wellington

ety, the percentage of Maoris in newsrooms—less than 1 percent—is well below that of blacks in American newsrooms. One city editor expressed a common attitude when, at a conference last year, he responded to a Maori activist's complaint of inadequate coverage by muttering to several colleagues, "We give 'em two pages a day—the court news."

INFLUENCES. Isolation isn't a sufficient explanation. No single cause can be. The influences that seem to a foreign visitor—and to many New Zealand journalists—most important aren't much different from the forces that also shape American journalism. They include:

- **The law.** Americans who see threats to free expression in some of our recent legal developments would feel absolutely muzzled in New Zealand. Libel law requires, for example, that you must be able to prove in court the truth of any defamatory statement. If Time magazine were a New Zealand publication, Ariel Sharon would be a major shareholder today.

It is against the law in New Zealand to publish anything that might influence a court case. As soon as two French spies were arrested last year, the editor of Auckland's New Zealand Herald ordered a halt to any reporting of the Rainbow Warrior affair beyond the printing of police press releases. He changed his mind only after stories from abroad began flooding into the country. It is even against the law to publish the contents of reports of parliamentary committees before those reports have been officially released. The political reporter of Wellington's New Zealand Times, a nationally distributed Sunday paper, was forced to apologize to Parliament for a story based on a leaked document that would have been routine in the States.

- **Social standards.** Though their humor is bawdy and their drama loaded with sex, New Zealanders think of themselves as being conservative. In many ways, they are. School children wear uniforms. Violent crime is still so rare that every rape or murder is front-page news. The women's movement is only 10 years old, and "feminism" is widely suspect.

Another important influence is New Zealanders' attitude toward authority. Historian Sinclair points out that New Zealand, unlike the United States or even Canada and Australia, clung to its colonial status stubbornly and had independence virtually forced upon it in 1907 by the mother country. Today, the royal family may well be more popular in New Zealand than in Britain.

A good many journalists conclude from all this that their readers may not be eager for too much skepticism, investigation or challenge of conventions.

- **Unions.** Labor union membership is virtually compulsory in New Zealand. Longstanding mutual support between printers and journalists has so far left video display terminals in the hands of printers, who use them to set into type what the journalists have written on typewriters or with pencil. There also is a uniform national wage scale within each craft, with a current top minimum for journalists of about $500 (N.Z.) per week. With few exceptions, the contract minimum is the salary paid; premiums for outstanding performance are rare. On the other hand, job security is guaranteed. Some editors and many staffers say that this wage policy reduces incentive for above-average performance and contributes to the regular loss of top journalists to Australia and Britain.

- **Education of journalists.** Until recently, most journalists began their careers by joining papers as cadets fresh from secondary school and learning the craft on the job. Now there are three formal journalism training programs, but none offers the mix of academic and vocational training in a university curriculum that is commonplace in America.

The biggest of the three takes about 60 youngsters a year, mainly from secondary school, and gives them a six-month introduction to the basic skills. The smallest, and most prestigious, is the University of Canterbury course. It takes 20 graduate students each year for a nine-month course that includes a little, but not much, history, theory and ethics, along with a solid introduction to the law and extensive practical work. An editors' committee voted last September to urge that the third course, which takes both post-secondary and post-graduate students, be cut from nine to six months with two classes a year to provide more entry-level staff.

(It may not be pure coincidence that New Zealand's leading investigative reporter has a journalism degree from the University of Arizona; the woman who chairs the fledgling organization of investigative reporters and editors has a master's from the University of Missouri School of Journalism; and the persistently progressive director of the country's Journalists Training Board, a union-management group that runs on-the-job training programs, did graduate work at the University of California-Berkeley.)

- **Competition.** In sport, politics and international trade, New Zealanders are vigorously competitive. In journalism, there isn't much competition. Most of the 33 daily papers enjoy effective local monopolies. Three cities have two dailies under the same ownership, including Wellington, the capital. Only in Auckland which has one-quarter of New Zealand's population, and Christchurch, the largest South Island city, is there head-on competition. Television is largely advertiser-supported, but there is only one national network, split into two channels but with little stress on local advertising or news. Most daily papers have headed off the suburban paper threat by publishing their own free TMC weeklies. Few New Zealand publishers feel prodded by competition either to change or to excel.

PRESSURES. The signals are multiplying, however, that some of the same pressures that have forced dramatic changes on American newspapers in the last generation are finally asserting themselves in New Zealand.

The technology gap may be the first to close. Independent Newspapers Ltd., which publishes both Wellington papers, all three national weeklies and four provincial dailies, in late 1985 dispatched teams of editors and production people to Australia and the United States to study computer systems. The company has told its unions that it plans to introduce VDTs into its newsrooms within a year and move quickly on into pagination. The unions haven't said yes, but many of the company's journalists, at least, see the change as inevitable and overdue.

New Zealand's journalistic traditions are under challenge from both women and Maoris. New Zealand currently has just one woman editor and one woman city editor on major papers. Young women are quickly becoming the majority in newsrooms, though. For the past several years, women have made up more than half the students in all three journalism courses. A fledgling organization called Mediawomen is starting to raise the same questions about treatment in newsrooms and news columns that have led to change in America. Most papers have decided, grudgingly, that "Ms." is acceptable for women who want it.

Pressure to improve hiring and coverage of Maoris is coming from the Journalists Training Board. The board has published a newsroom guide to Maori language and customs and has graduated the first class of 14 from a controversial training course for Maoris and Pacific Islanders.

The law is changing, too. The government has promised revisions in the defamation law. One likely change will limit the amount of damages that can be awarded. Another good possibility is the creation of a special defense for journalists, permitting them to escape liability if they can show they took reasonable care. However, John Burrows, New Zealand's leading expert on media law, says, "A move to the American 'public figure' rule would probably not be acceptable yet in this country."

A two-year-old Official Information Act, which replaced the Official Secrets Act, has eased some restrictions on government information. Many journalists compare it unfavorably to the U.S. Freedom of Information Act because the New Zealand law has no time limits, no appeal to the courts and several broadly stretching exemptions.

Talk of a national daily newspaper seems likely to remain just that, but Auckland is about to get the country's first local Sunday paper. The afternoon Auckland Star, owned by the second-largest media company, was on the verge of collapse less than two years ago. This spring it is dropping its Saturday paper and starting a Sunday edition. Both national Sunday papers, the serious New Zealand Times and the tabloid Sunday News, depend heavily on Auckland for readers and advertisers.

Two other recent developments may accelerate the rate of change.

INL has become the first New Zealand media company to expand abroad. Itself one-quarter owned by Rupert Murdoch, INL early in 1985 bought the daily in Pawtucket, R.I. Robson says the company plans to use it as a base for exposing New Zealand staff to American developments in technology and advertising.

The editorial side of the industry staged New Zealand's first conference on investigative reporting last September at the University of Canterbury. The conference organizers had expected about 25 reporters and editors and got more than twice that many.

Most importantly, the conferees concluded that New Zealand needs more aggressive, more sophisticated reporting and that reporters need more skills and more support for that kind of work. A steering committee was set up to work on establishing a network of interested journalists.

If that develops, and if the other forces for change can shift the weight of tradition, New Zealand newspapers may be able to tell their country's story more fully and more accurately. American cartoonists may find themselves forced to find a symbol to substitute for that belligerent sheep. And the South Pacific may feel an American influence more benign and arguably more important than nuclear warships. ☐

Newspapers large and small have found a cost-effective way to electronically store their clipping files. They use DataTimes to install, support and market their electronic library. Some of these libraries are in-house systems, others run on service bureau computers. All utilize BASIS,™ the industry's fastest, most comprehensive search and retrieval software, developed by Battelle Laboratories, the world's largest research and development organization.

DataTimes is designed to interface with almost any editorial system including DEC, Atex, SII, CSI and Hastech. DataTimes even offers optical disk technology for maximum cost saving of clipping file storage. The DataTimes electronic library allows reporters and editors to retrieve information in seconds from their own desks.

These newspapers have found DataTimes to be more cost-effective, reliable and usable than their old clipping files. A better newspaper is the result.

Join these prestigious newspapers and become one of America's Newspapers Online.

PARADE

1986 Parade Publications, Inc. All rights reserved

INSIDE: What Makes A Champion?...By Dick Schaap

Six reasons why Parade is America's Sunday magazine.

Who. Who they read week after week. Pulitzer Prize-winning authors like Norman Mailer, David Halberstam, Carl Sagan.

What. What they read avidly: "Personality Parade"—America's best-read feature in print. Touching stories like that of James Stephens—a man who dedicated his life to saving children of lepers. And opinion makers/newsmakers like John Kenneth Galbraith and President Reagan.

Where. Where they read articles that are some of the most quoted in the world.

Why. Why they read it. Because Parade captures the fabric and texture of their lives. Sunday after Sunday.

When. Sunday morning. With Jack Anderson on Washington. Dick Schaap on sports. Earl Ubell on health. And colorful profiles and useful information from James Brady and Gail Sheehy. As well as tasteful tips and recipes from food editors Sheila Lukins and Julee Rosso, authors of the best-selling Silver Palate cookbooks.

How. How does all this affect you? Newspapers respond to their readers. And readers respond to Parade. So, last year, more than 150 newspapers responded by adding Parade. Find out more about Parade for your newspaper. For more information, call Parade's Publisher, Carlo Vittorini at (212) 573-7000.

IJE Management Program

Helping minorities be managers

BY MARGARET GENOVESE
presstime staff writer

The Institute for Journalism Education made its mark in the newspaper business through two innovative crash courses in reporting and editing for minority journalists.

Now, the Berkeley, Calif.-based institute has taken on another challenge: training what it hopes will become a new wave of minority newspaper managers.

By expanding its focus to include minority promoting, IJE is reflecting the growing awareness throughout the newspaper business that a good minorities program doesn't end with the hiring process.

Newspaper executives have great expectations for the program, which graduated the first class from its new Management Training Center last October. John C. Quinn, chief news executive of Gannett Co. and editor of USA Today, says there is "no reason to believe IJE won't deliver again at this level."

Quinn and IJE President Ellis Cose were co-chairmen of the task force that recommended creation of the center. When he joined IJE three years ago, Cose recalls, "one of the things that seemed to make sense to me was for us to get involved in the area of management training." When it comes to minorities in newspaper management, he says, "the figures speak for themselves."

According to an IJE study released last year, although minority journalists are more likely than whites to say they want a career in management (50 percent compared with 28 percent of whites), they are less likely to have been given managerial duties (27.6 percent compared with 39.8 percent of whites).

Moreover, the study revealed, 40 percent of minority journalists expect to leave the profession, "largely due to lack of opportunity within it." Journalists and managers at 18 newspapers in 10 cities were interviewed in that study [presstime, June 1985, p. 37].

THE FIRST CLASS. Although focused on helping to accelerate the movement of minority journalists up the newspaper ladder, the IJE Management Training Center is not restricted to minorities or to editorial employees.

The 14 members of the center's first graduating class included three white women, in addition to the other participants who were members of racial or ethnic minority groups. Most were editorial employees, but others came from advertising and circulation departments and one was a newspaper librarian. The average age of participants was 33; the youngest was 26, the oldest 42.

Class members are unanimous in their praise for the program. But many describe the experience as "grueling."

"I didn't expect to become 'Betty Coed' and start going to campus mixers," says program participant Ruby D. Scott of the Chicago Tribune, "but I didn't realize how intense it was going to be."

The first half of the nine-week program consisted of classroom instruction at Northwestern University in Evanston, Ill. The program's 24-member faculty was a mix of professional newspaper managers and professors from Northwestern's Medill School of Journalism and J.L. Kellogg Graduate School of Management.

In the second half of the program, participants observed the classroom theory put into practice.

Each went to a different newspaper and worked with managers throughout the plant. A host newspaper must pledge not to try to hire away the program participant for at least two years. For their part, graduates must agree to stay with their

IJE graduates Lopez (at right in left photo) of the Los Angeles Times and Corder (right photo, foreground) of the Detroit Free Press put management skills to work.

Jimmy Tafoya, Detroit Free Press

sponsoring news organizations for at least one year before accepting jobs elsewhere.

The program requires sponsoring newspapers to invest a considerable amount of money in the training. But IJE's Cose says the $4,500 fee, which may be waived for newspapers with circulations of less than 100,000, "doesn't even pay for half of the cost" of the program. The remainder of the center's $200,000 budget is supplied primarily by charitable foundations and other funding sources within and outside the newspaper business.

Cose also says comments by participants on the rigor of the curriculum don't bother him. He acknowledges that it would be impossible to maintain the same pace for a year or so. Sustaining it for a fairly short time, however, is "possible, necessary and desirable."

Only minor alterations have been made to the program, whose second class begins Aug. 3. The overall program has been reduced from nine weeks to eight, and the field experience has been shortened.

Unlike its two other programs, IJE does not guarantee participants of the Management Training Center a new job upon graduation. Rather, participants must be serious candidates for senior management positions upon entering the program. Not only must they already be in middle management, their sponsoring newspapers must draw up and submit what amounts to a career path for them.

ASSESSING SUCCESS. It will be several years before the newspaper business can assess whether IJE's latest initiative has achieved success comparable to its previous programs, says Gannett's Quinn.

He points to the Pulitzer Prizes won by graduates of IJE's Summer Program for Minority Journalists, which offers an intensive short course in newspaper journalism. In 1985, Dennis Bell was part of a three-man Newsday team that received the Pulitzer in international reporting for its coverage of famine in Africa (see profile, p. 34). In 1984, three Los Angeles Times reporters—Virginia Escalante, Louis Sahagun and David Reyes—were part of the team that captured the public service award for a series on Los Angeles' Hispanic community. In 1983, Joseph Oglesby won along with others on a Miami Herald team for editorials on Haitian refugees.

Even though the new program's ultimate success cannot now be judged, some early signs are positive. Among the first 14 graduates, four have received promotions and one has gotten expanded managerial duties:

- The Chicago Tribune's Scott has moved from editor of the Tomorrow section of the Sunday paper to associate editor of the Sunday magazine.

> *Four of the first 14 graduates were promoted, and one got expanded duties.*

- At the Los Angeles Times, John T. Lopez has advanced from copy control center supervisor in the classified advertising department to classified advertising operations manager.
- At USA Today, Caesar L. Andrews has been promoted from assistant national editor to deputy managing editor for the paper's Bonus Sections.
- At The Courier-Journal in Louisville, Jesse T. Lewis has gone from copy editor to assistant news editor.
- At the Chicago Sun-Times, Assistant Metro Editor Richard C. Mitchell has been given additional responsibilities of improving the paper's coverage of the black community and issues that affect minorities.

Several graduates reported the program opened up new possibilities for them. "My career goal going into the program was to become the classified advertising manager," says Shirley D. Corder, recruitment advertising manager in the classified advertising department of the Detroit Free Press. "Coming out of the program, I have no limits. I truly feel that I could be the president of the company one day."

In a graduation address last October, another class member, Joyce Richardson, said the program marks "a beginning of a new challenge for the industry." Added Richardson, classified advertising manager for The Washington Post: "Although all doors were open to us during our visits to the field sites, we hope the industry will open more doors to minorities and women who wish to advance throughout the profession." ☐

"Over 400 publications have increased profits with CDS management systems. When you buy from CDS, you profit from our experience."

INTERNSHIPS

become a fixture in education

BY RONALD H. CLAXTON

A dozen years ago, getting a handle on trends in internships offered by daily newspapers was like trying to predict the stock market: You knew things were going to change, but you didn't know where to place your money.

A dabbler could feel pretty certain the market's blue chips—such as the Dow Jones Newspaper Fund, The Washington Post, The Boston Globe, Newsday, the St. Petersburg Times, The Wall Street Journal, The Miami Herald—were going to remain fairly constant, but predicting growth areas was a gamble.

Today, all that has changed. Internships, that vast array of formal and not-so-formal programs to give students experience in their career-to-be, have become institutionalized in journalism education. Schools of journalism, in fact, have become so enamored of internships that many have set up positions on the faculty to deal with nothing but them.

A vast amount of information each year tells students and faculty where internships are—and this summer, newspapers will offer more than 3,000 of them. Educators feel comfortable with the training their students receive, almost to the point of expecting students to serve at least one internship during their college career. And many employers have come to expect internship experience on a recent graduate's resume.

NEW LISTINGS, PROGRAMS. Thus, what once was little more than sporadic fliers from newspapers offering summer internships has become almost a flood of publications to keep students and faculty abreast of the cornucopia of opportunities. Just this year, the Southern Newspaper Publishers Association entered the field with its first listing of internships offered by 204 of its 244 member newspapers. The list was put together by the association's Journalism Education Committee and will be renewed in the fall and sent to all college journalism programs in the United States, says Cynthia W. Durham, SNPA information director.

The Society of Newspaper Design, a group of graphics professionals with headquarters at The Newspaper Center in Reston, Va., began publishing a list of internships offered by its members' newspapers two years ago. The list also is made available to journalism educators and to schools of design, according to Pat Kelly, SND executive secretary, who says response to the publication has been "tremendous."

Then there is *The Student Guide to Mass Media Internships*, an annual compilation by the University of Colorado's School of Journalism and Mass Communication of internships offered by daily and weekly newspapers as well as magazines, journalism organizations and groups, syndicates, in-house publications and broadcast stations.

Each year, new programs crop up in what Thomas G. Wilkinson of The Washington Post calls a very competitive market for "the best and brightest" of the college students. "The intensity of competition for interns has been increasing in the past few years," says Wilkinson, assistant managing editor for personnel, who has been the Post's internship coordinator for five years.

In the "Woodward and Bernstein" years, the Post received 2,200 to 2,300 applications a year for the 20 positions it has been offering yearly, he says, but the annual volume of applications has leveled off to between 800 and 900.

One of the newest programs, sponsored by the Associated Press, is designed for blacks and Hispanics. It began in 1983, after the AP signed a consent decree to settle a discrimination lawsuit, says Margy McCay, AP assistant personnel manager. Six Hispanic and six black interns, selected from about 150 applicants in each of the past two years, are sent to bureaus where they are assigned to trainers, who have program guidelines to follow. Interns are paid a minimum of first-year scale and upon completion of the 13 weeks are offered a full-time job following graduation from college.

McCay says the program, which is required under the consent decree to run for five years, has been so successful that it probably will be continued in some form after that period. "It has taught all of us the advantage of structured training," she adds.

That program is in contrast to other temporary positions AP offers. McCay says those, called summer or "legislative" relief, are handled by each bureau and vary in the way they are conducted. People hired for those positions are expected to work as regular staffers with nothing like the training provided those in the newer program.

The Los Angeles Times' year long Minority Editorial Training Program is also relatively new. Known as METPRO, it begins its third year in June. This initia-

Ron Smith (left) of The Wall Street Journal instructs Newspaper Fund interns Pamela R. Sutton (center) and Michael Bailey on use of the Dow Jones News/Retrieval Service.

Claxton, a member of the faculty at the University of Colorado School of Journalism, compiles an annual directory of media internships. He has taught journalism at colleges in Wisconsin, Utah and Alaska, and worked for daily newspapers in Colorado, Virginia and Kansas.

tive is an addition to the Times' established summer program, which is open to all students and brings 13 to the newspaper to work on the metropolitan desk and in bureaus.

METPRO trains minority students who have just graduated and who had extensive courses in reporting or photography. The 10 trainees this summer, eight reporters and two photographers, will be paid $218.50 a week and will receive medical benefits and be provided housing. At the end of the program, interns are assisted with job placement, but there is no guarantee of employment.

The training program begins with an eight-week classroom session, says Larry Lane, its director. Trainees are then assigned to a series of beats—police, courts, municipal government—during which they write not-for-publication articles that are critiqued by him. "In October, each trainee is assigned to one of the Times' twice-weekly suburban sections," says Lane, and two months later, each one "joins the staff of one of the newspaper's three regional daily editions and works as a general-assignment reporter (or photographer) until the program ends the following May."

The Donrey Media Group got into the internship market about five years ago by offering to pay half the salaries of interns accepted by the company's 55 daily newspapers, says Cleatis Carroll, Donrey personnel director.

Donrey's corporate headquarters at Fort Smith, Ark., acts as a clearinghouse for its newspapers by screening applications and sending the top ones to individual newspaper editors, who have a choice of picking one of the candidates or declining. About 20 interns have been hired for this summer.

Increased interest in internships by newspapers is documented by the University of Colorado studies. Its 1974 survey revealed that 390 of the 733 responding daily newspapers were offering 1,046 internships. The school's survey for this year shows 502 of 654 responding newspapers planned to offer 1,698 internships this summer. Another 150 internships can be added to the 1986 figure when programs of newspaper groups and press-affiliated organizations are counted. One of the latter, the Dow Jones Newspaper Fund, projects there will be 3,100 editorial internships available nationally this summer.

Newspaper Fund intern Kathy L. Sizemore takes a story from a reporter over the phone.

MORE MONEY, RESPONSIBILITY. As the number of internships has increased, so has pay. The Colorado survey shows that interns will average $221.14 weekly this summer, compared with $108.76 in 1974.

It also shows that 38 newspapers, or 6 percent, will not pay and that 287 had not determined the amount of pay at the time of the survey.

Though the 1974-86 pay increase works out to 104 percent, it hasn't kept pace with the cost of living, according to U.S. Department of Labor's Bureau of Labor Statistics. Using 1967 as the base year of zero, BLS reports that the cost-of-living index went from 141.5 in February 1974 to 327.5 in February 1986, an increase of 131 percent.

One of the biggest gains over the 12-year period has been at The Dallas Morning News, which paid $100 weekly to its six interns in 1974 and will pay more than $300 weekly to up to 17 interns this summer.

The Seattle Post-Intelligencer offers the highest internship pay this summer, $462.17 weekly, followed by the Chicago Tribune's $440, the San Jose Mercury News' $416.96 and The Miami Herald's $400. The Los Angeles Times' summer interns will get $381.50 per week.

The Seattle Post-Intelligencer offers the highest pay this summer, $462.17 weekly.

The Washington Post, which in 1974 paid its interns $211.50 a week, will pay $350 this year. The Detroit Free Press has increased what it pays from $185 weekly to about $350.

Broken down into circulation groups, students working for newspapers of more than 500,000 circulation this summer will receive an average $374.81 weekly, compared with $212 in 1974, up 77 percent. Newspapers from 250,000 to 500,000 will pay an average of $259.77 weekly, compared with $148 in 1974, up 76 percent; those in the 100,000 to 250,000 group will average $244.94 compared with $123 in 1974, up 122 percent; the 25,000 to 100,000-circulation group will average $188.61, compared with $107.50, up 75 percent; and papers with less than 25,000 circulation will average $155.12, compared with $95.66 in 1974, up 62 percent.

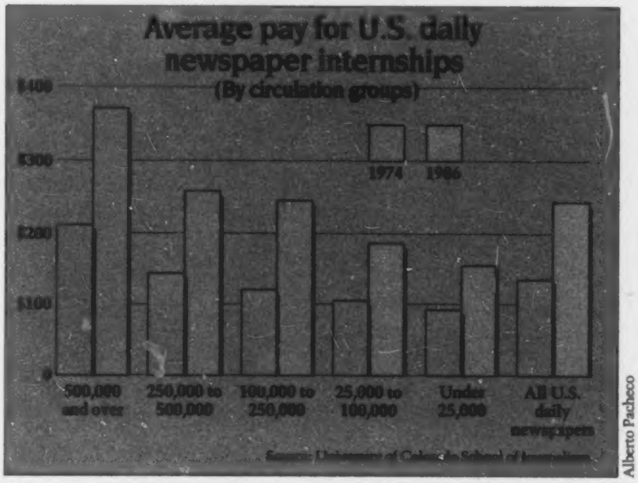
While numbers of internships and rates of pay have been going up, the perception of internships by educators also has been changing, from one of occasional misuse in 1974 to comfortable acceptance today.

"In too many instances the intern is a 'gopher': go fer coffee, go fer proofs, etc.," a professor said in a 1974 questionnaire, mirroring a number of responses. Instead of using students as entry-level, productive employees, some papers did indeed treat them as observers who could watch but not participate.

All of the newspapers with internships responding to this year's University of Colorado survey indicated that interns will work as regular reporters, copy editors or photographers, although they will receive more critiques of their work and evaluations than entry-level full-time employees.

Journalism educators applaud newspapers' increased and more responsible use of interns.

"We have nothing to complain about," says R. Neale Copple, dean of the University of Nebraska's College of Journalism, who adds he never thought he would hear himself make such a statement about the internship picture.



Source: University of Colorado School of Journalism

Alberto Pacheco

Last year, Copple says, 44 of his 207 news-editorial students found internships, and about 80 to 90 percent of those were with daily newspapers. Because the school encourages students to take internships between their junior and senior years, "That was about all of our eligible students," he notes.

Copple's elation is shared by Marjorie Blewett, who handles the journalism internship effort at Indiana University; by Bonnie Tucker, journalism internship coordinator at Drake University in Des Moines; and by Ester Ramirez, director of the Career Advisement Office at the University of Southern California School of Journalism.

ADVERTISING TRAILS. The educators are less sanguine about progress with advertising internships, however. All say getting students interested in newspaper advertising is more difficult than interesting news-editorial students in newspaper reporting.

Copple says advertising students suffer too much from an orientation toward advertising-agency work, where he observes that few internships or jobs await them. Advertising education has that bent, he says, because most of the people hired to teach the subject have agency backgrounds. Newspapers are partly to blame, he adds, because they have not paid as much attention to the advertising side as they have the editorial side in their internship programs.

Ramirez of USC comments that editorial internships are far superior to those on the advertising side because editorial internships are structured while those in advertising, for the most part, are in disarray.

After meeting with Gannett Co. executives about the need for better advertising internship programs, Copple says he is encouraged about future prospects.

Gannett started a program in a small way three years ago for minorities and women in advertising and business, and it has already been expanded to about 70 students, reports Vivyen J. Ray, manager of staffing and college relations.

Ray says Gannett pays half the salary of each intern for the 12-week program and offers a general training schedule if a manager wants it. Gannett suggests a one- to two-week orientation covering all newspaper departments, ending with advertising, where a student is given a detailed look at classified, retail and national advertising. In the third or fourth week, if a student is interested in outside sales, for instance, he or she accompanies a regular staff member to see the entire process and then is allowed to try it on his or her own.

What is needed is a more concerted effort by advertising managers and journalism educators, Ray says. Unlike the editorial side, where close contact is fostered by a myriad of associations and programs, the advertising side is not as attuned to what is going on in journalism education, she says.

But regardless of the type of internship being sought, students are advised to apply early, because deadlines for applications have been steadily rolled back.

To be eligible for a Dow Jones Newspaper Fund summer-long program, for example, a student must complete—by Thanksgiving—a rigorous application process: a 500-word essay, a three-page application, two instructor evaluations and a one-hour test that must be ordered by the student to be sent to an instructor who will administer it.

Many newspapers also have November deadlines; others want applications by early December so that they can interview during the Christmas break. ☐

CONGRATULATIONS

Michael Gartner
and
Loren Ghiglione

upon your election as president and treasurer respectively of the American Society of Newspaper Editors.

We were privileged to represent the owners of the Worthington (MN) Daily Globe in selling to Michael Gartner and his associate, Gary Gerlach, and the principal owners of the Bristol (CT) Press in selling to Loren Ghiglione.

Both newspapers were sold in 1985, and under their new owners, both dailies are continuing their long traditions of editorial excellence and community service.

Stands for Professionals.

David Steinberg (left), President of PR Newswire, reviews a news release with PRN Editorial Director Robert Frump. In 1958, Steinberg won the coveted Loeb Award for Distinguished Financial Journalism while he was an editor for the New York Herald Tribune. 25 years later Frump won the 1983 Loeb Award while a writer and business news editor for the Philadelphia Inquirer.

Newsrooms are the toughest customers. For three decades, we've been sending news releases by wire to newsrooms across the country. And for three decades, you've received us well.

We know why. We're not just PR. We don't transmit puff. Our roots are in the news. Like the full text of Johnson & Johnson Tylenol statements. Or Union Carbide on Bhopal. The decision by Searle to take IUD's off the market. Or the earnings statements, in good times and bad, for most of the Fortune 500 corporations.

We've grown bigger in 32 years. And better. We can show you how to use your systems computer to sort out our releases in an instant. We have offices in most major cities. We've even spawned some imitators.

But we've never lost touch with our news roots.

We never will.

Dennis Bell

From pressroom janitor to Pulitzer Prize-winning reporter

BY MARCIA RUTH
presstime staff writer

When Newsday reporter Dennis Bell speaks to aspiring journalists, he describes "two types of reporters."

When an editor says, "Look, I want three foxes, a squirrel and a rabbit," some reporters will "come back with three foxes, a squirrel and a rabbit. But there are other reporters," he says, "who will occasionally come in with a tiger," to which such an editor may respond, "it's not on the list."

"I always tell these young people," he says: "If you want to do any good, if you really want to make a contribution, be the kind of reporter who does whatever he has to do to get the tiger on the list. . . . The tiger is what journalism is all about, not the three foxes, the squirrel and the rabbit."

In less than a decade of reporting, Bell has brought in more than his share of "tigers"—and gotten them on "the list."

At 36, he was part of a three-member team that won Newsday a Pulitzer Prize for coverage of famine in Africa in 1984.

Earlier in the decade, his "tiger" was Dow Chemical's denial of the toxic effects of the defoliant Agent Orange, an issue which Bell encountered when Vietnam veterans brought court charges.

Yet Bell did not become a reporter until 1978 when he was just past his 30th birthday. As highlighted in a Newsday promotion headlined "from Porter to Pulitzer," his first job at the paper in 1972 had not been in the newsroom but in the pressroom—as a janitor.

Calling Bell's career "an inspiration" and "a triumph," Earl Caldwell, a columnist for the New York Daily News, describes him as "one of the young people who did not know the doors are open, but when he found the doors were open he showed what it is possible to accomplish if you are willing to work."

By his own description, Bell grew up poor in a "twilight zone"—the city of Muskegon Heights, Mich., which during his youth was hard-hit by the decline of the auto industry in nearby Detroit.

Dropping out of the University of Michigan, he joined the Army. Later, he returned to the university on an academic scholarship. He found the money insufficient to support his family of three, and with Michigan's unemployment problem getting worse, he moved to Long Island in search of more opportunities.

At Hofstra University, he found work and a way to continue his lifelong love of reading. "I cleaned classrooms at night and sat in them during the day," he says.

After taking the janitor's job at Newsday, Bell read the paper regularly and concluded: "I can do better than that." Working his way through a succession of jobs, including printer's assistant and sports agate clerk, he kept taking the entry-level reporters' test. But as then-Managing Editor Anthony Insolia told him at the time, Newsday, like most large papers, hires only reporters with experience—and he didn't have any.

Reluctant to move his family again to start at a smaller paper, Bell found another way to obtain needed experience—through the Institute for Journalism Education. (See story, p. 28.) Caldwell was one of his teachers there.

In 11 summer weeks in Berkeley, Calif., Bell says he "got the basics thoroughly ground in." The program, which IJE refers to as more intense than "boot camp," is so effective that Bell's Pulitzer was the third for its graduates in three years.

Hired as a Newsday reporter after IJE, Bell "just blossomed" as a court reporter, says James Hariston, now deputy metro editor, who as Nassau editor worked closely with him.

"He's come a long way," says Insolia, now senior vice president and editor. Bell "wasn't a whiz-bang right from the beginning," he says, "but he's never stopped growing." In a reflection of the paper's confidence in his work, he was assigned in January to cover Congress from Newsday's bureau in Washington, D.C., where he and his wife, Jacqueline, now live.

"Hard-working," "idealistic," "intelligent" and "committed" are the terms his colleagues most often apply to Bell. They also note his special knack for the long, tough piece. "He has an ability to take a very, very complicated story (a running story like Agent Orange) and report it over a period of time in a very straightforward, clear way that shows the impact . . . on your own backyard," says current Managing Editor, Anthony Mauro.

What drives him most?

"Anger," says Bell. "You see these things (poverty, famine, Agent Orange) and you get angry. And those are the things you go after."

Tracing some of Bell's professional value to his personal background, Les Payne, Newsday's assistant managing editor for national and foreign news, says, "He brings to journalism something journalism should never let go of. . . . We have a lot of reporters who are intelligent. But the combination of someone who knows the streets and is intelligent and somehow gets into the cityroom is very rare.

"I hope the day never comes when that kind of person with that kind of background is weeded out of our collection of reporters," says Payne, urging newspapers to reach beyond those who have "gone to Ivy League schools, who have stayed on the main streets and have never been out after dark in the alleyways." ☐

First Amendment applies to advertising, too

BY LOUIS T. HAGOPIAN

Some people still want to shut us up, nearly two centuries after the ratification of the Bill of Rights.

In Providence, the editor of The Journal recently got an 18-month suspended sentence because the paper spoke out. Nobody questioned the truth of what was printed—just the fact that it got printed.

And there are vigilantes telling me that we shouldn't be allowed to advertise for military recruits; or for the corporate aim of the telephone company; or for DeBeers, because 12 percent of the diamonds they market are mined in South Africa, even though our client is the most vocal company down there against apartheid.

I know you've been over this before. And at every ANPA Convention for the next century, there will be concern and discussion about the next threat to the freedom of the press, whether it stems from actions by the courts, legislatures, executive branch or the common council in Tuscaloosa.

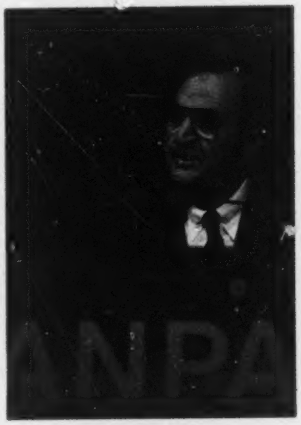
You've fiercely defended the freedom to report, but, on the other hand, I do wonder how much attention you pay to the freedom of commercial speech; that is, the freedom to advertise. It wasn't always as big an issue as freedom to gain access and report the news.

Advertising discovered the First Amendment much later than journalism did. And the court decisions regarding commercial speech, by and large, are more recent than those that address the freedom to report and comment.

For years, advertisers and agencies blatantly abused the freedom to have their say in print. One of the earliest proofs I know of is in our archives at Ayer. It's an ad about the virtues of Rock 'n Rye, which sold for $5 a gallon and was guaranteed to cure cancer and consumption.

Well, it took some muckraking journalists, some government standard-setting and the development of, I do believe, a model system of self-regulation before we realized our responsibility to get the facts straight, to tell the truth.

We check and we check and we prove our statements now, quite as thoroughly as the news departments of The New York Times or The Wall Street Journal, maybe more so because what we say and show must pass the standards of the media's advertising acceptance committees and, though after the fact, our own advertising review board.



Louis T. Hagopian

As advertisers and agencies have come to demand truth, so we have come to prize the freedom of speech that you and your editors have protected for us for so long.

So, believe with me. Act with me. Defend with me, when I say that the freedom of expression belongs to the advocates as well as the observers. Know that any limitation on the freedom to advertise is a direct obstacle to your freedom to cover a trial, write an editorial or publish a political column.

The right to a free press that news people usually defend is the right to get access to information that a third party, often government, wants to suppress with some chary notion that it is in the public interest for the public not to know. The right we defend is the right to express a point of view with the object of persuading others.

What we're defending is the traditional freedom to exercise opinion, the freedom earned by the stoning of Socrates and by John Peter Zenger and Thomas Paine.

Pick up the paper. There's probably more diversity in the ads than in the editorial: Avis advertising against Hertz, P&G vs. Colgate, K mart vs. Wal-Mart, A&P against Kroger. In the ads, the lines of diversity are most clearly drawn.

I can't grasp Jefferson's great mind, but I do think a basic reason for freedom of expression was to foster and to protect disparity among people. Difference is the essence of a democratic society, particularly in a country whose people came from different lands.

Diversity—you can call it competition. Diversity is the basis of our economic as well as our political freedom. Our marketplace is based on the freedom to choose from among competing pleaders.

And where would our two businesses be without this competition? Do you think you would get as much advertising if there were only one grocery store in town?

I can understand that the principal concern among newspaper people is curbs on editorial freedom. You're bound to be most angry if it's the man or woman at the next desk who is in danger of going to jail. But as a friend, let me ask you a favor. Raise your voices with ours when the freedom to advertise is threatened.

Any legal product has the right to be advertised in a truthful way. That goes for some things that I am personally opposed to, like guns and abortion. If the people don't like a product, let their leaders legislate its illegality. Until then, I say let it be advertised.

Agencies need newspapers and newspapers need the agencies. The public needs both of us.

And I do think we are ushering in another era of good feelings between our industries. We share so much, and we can help each other so much. But it all depends on how vigorously we stand up for three synonymous freedoms: the freedom of speech, the freedom of the press and the freedom to advertise. ☐

Hagopian is chairman of N W Ayer Inc. of New York City, the nation's oldest advertising agency. He is current chairman of the American Association of Advertising Agencies. This article is adapted from his presentation to the ANPA Convention April 22.

CONVENTION REPORT

100th ANPA CONVENTION

Upbeat mood prevails in sunny San Francisco

No matter that it marked the Association's 100th annual meeting, ANPA's Convention in San Francisco in April reflected an industry focused firmly on the future. For a centennial event, people spent precious little time dwelling on the past.

The milestone and ANPA's contributions to the newspaper business were referred to by ANPA Chairman and President Richard J.V. Johnson in his keynote address. But his overall theme was more anticipatory than congratulatory.

For example, he predicted some "exciting breakthroughs" soon in the area of illiteracy, as newspapers step up the attack. What newspapers have at stake was described by the Convention's second speaker, author Jonathan Kozol, who said 60 million American adults cannot read and understand newspapers.

In many respects, the Convention was a far cry from ANPA's first meeting in Rochester, N.Y., in 1887, which was attended by 46 publishers. This year's Convention attracted 2,808 registrants, second only to the 2,888 who attended the 1983 convention in New York City. The mood of the gathering was, for the most part, upbeat, reflecting the generally bullish spirit of those publishers who don't hail from the economically hard-hit oil and farm states. Also contributing to the good mood was the Convention's scenic setting and good weather (an 84-degree high on April 20 tied a record for that date in the city).

For the first time, Convention segments were held in three locations: the Fairmont Hotel, the Masonic Auditorium and the Hilton Hotel. The shifting of scenes provided an opportunity to get a breath of fresh air and some exercise.

Like natives of "the city by the bay," who expect rain clouds to be hovering just over the next hill, newspaper executives tempered their optimistic outlook with private talk about serious issues: newspaper-business concerns, including ownership changes and libel suits; and more general concerns, including terrorism and, as always, the state of the economy.

If San Francisco's climate had an effect on the spirit of the Convention, its location had an effect on the substance, as one program segment was devoted to a discussion of the influence of the nations of the Pacific Rim.

Gauged by attendance, the biggest attraction on the program was the Tuesday luncheon speech by New York Gov. Mario M. Cuomo, who is rumored to be a possible Democratic presidential candidate but who coyly sidestepped reporters' questions on the subject. Some 1,680 persons attended the luncheon, a record for a Convention meal event.

However, the most-talked-about speech was by former President Richard M. Nixon at the Associated Press Luncheon. Publishers accorded Nixon a standing ovation after listening to the Republican's views on U.S. aid to Nicaragua and other issues.

Other Convention highlights that could have been taken straight from newspapers' front pages included one panel discussion on the space shuttle tragedy and another on terrorism.

Nitty-gritty, newspaper-business subjects were addressed in topical clinic sessions on subjects such as circulation management, newsrack restrictions, and readership and credibility.

And for serious early arrivals, ANPA staff professionals were available Saturday and Sunday for consultation on many newspaper issues at "expert centers" at the registration area.

The Convention was ANPA's third in San Francisco. Under the Association's biennial schedule for Western Convention locations, the next in the West will be in Honolulu in 1988, followed by Los Angeles in 1990 and Vancouver in 1992.

Next year, as ANPA observes the 100th anniversary of its founding, publishers will be returning May 4-6 to the place where all of the Association's annual meetings were held until 1975—New York City. ☐

Centennial Convention opens with a gaze at the future

Opening ANPA's 100th Annual Convention with his keynote address, Chairman and President Richard J.V. Johnson paid tribute to the past but focused mostly on the future.

As ANPA enters its "golden year," he said, that future—for both the Association and the newspaper business—looks good.

"We are a long way from our beginning" a century ago when 46 newspaper executives gathered in Rochester, N.Y., to found ANPA, he told the crowd of more than 1,300 who packed the Fairmont Hotel Grand Ballroom.

"Never before has our mission been so clearly defined; never before have our resources and our abilities to meet the tests ahead been as great," said Johnson, president of the Houston Chronicle.

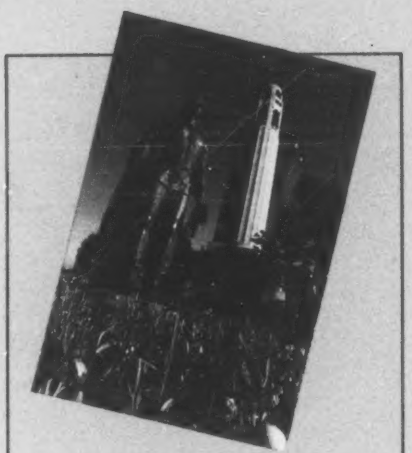
All those strengths will be needed, "because we all know that we are moving through difficult times, socially and economically. Our responsibilities have never been larger, our challenges in the marketplace never so serious," he said.

Nevertheless, Johnson, whose two years as head of the Association ended with the San Francisco Convention, did not recite any litany of problems facing newspapers. Instead, he reeled off some of the numbers indicating the strength of the business:

- There are 1,678 U.S. dailies and another 113 in Canada.
- Advertising expenditures in newspapers increased 8.3 percent last year to a record $25.5 billion.
- About 13,000 jobs were added last year, bringing U.S. newspaper employment to a record 453,000.

And, he said, "our products are getting better all the time."

As for the state of ANPA, the outgoing chairman told the newspaper executives that the Association "is tracking and responding to your needs better than it ever has before. Our comprehensive planning process—with its broad participation—assures that. Our committee structure, with nearly 400 newspaper executives contributing, enhances that process. Our stable staff grows in experience, talent and effectiveness every year."



Day 1 — April 21

- ✓ A former President returns
- ✓ In search of literacy
- ✓ Looking at the classifieds
- ✓ Aftermath of a space tragedy

Perhaps as welcome to the audience was Johnson's announcement that the Association's budget ended in the black again last year, and so again there will be no need to increase dues.

ANPA also continues to attract new members, 36 last year, he reported.

In his keynote Convention address last year, Johnson identified three key projects for the Association—improving printing quality, literacy and minority opportunity. "We have done just that," he reported this year.

The ANPA Technical Committee and staff engineers and scientists have been pursuing better printing quality for years, he said, "but during the past year we have redoubled our efforts."

One of the first, tangible results of that effort, he said, is the "Guide to Quality Newspaper Reproduction" book, produced jointly by ANPA and the Newspaper Advertising Bureau and mailed to member newspapers in April.

On the same front, he said, work is continuing on "flexographic printing techniques; on lighter-weight, energy-efficient press designs; on newsprint characteristics and quality; on electronic and computer linkage our production processes require; on new-formula inks, both black-and-white and color; and on safety and environmental matters that enhance employee productivity and encourage quality work."

On the literacy project, Johnson predicted "some exciting breakthroughs" will occur soon "because we are attacking the problem with typical newspaper imagination and energy."

Leading this endeavor, he said, is ANPA Foundation, which is "evolving its programs from Newspaper in Education work with students to broad-based literacy programs for both youth and adults."

To improve minority opportunities at newspapers, ANPA and the Foundation have joined with numerous other newspaper groups "in an industry-wide task force that is coordinating and supporting scores of individual minority-opportunity programs of each of our groups, associations and newspapers," he said. ☐

Johnson hails ANPA's effectiveness.

Nixon steals the show with his world views

By two indices, Richard M. Nixon was the star of the Convention.

After an address that many hailed as a profound overview of the world scene, the former President received a resounding, 40-second ovation that brought more than half the sellout crowd of 1,400 to its feet.

Later, his Associated Press Luncheon segment proved to be the best-selling tape recording of the Convention program.

It was Nixon's first speech to an ANPA audience since appearances during his vice presidency in 1953 and 1958. He verbally criss-crossed the globe, commented on contemporary politics and used humor to brush aside a question about the Watergate scandal that brought about his resignation.

Although he spoke for 35 minutes without benefit of a text or even notes, the 73-year-old Republican sprinkled his talk with quotations from Charles de Gaulle, Thomas Hobbes, Winston Churchill, British historian Paul Johnson and—without naming him—the man who defeated him in the 1960 presidential election, John F. Kennedy.

Nixon's main focus was on Nicaragua and how what happens there affects the rest of the Western Hemisphere.

He reminded the publishers that polls show 65 percent of readers oppose President Reagan's program of aiding the Contra "freedom fighters" in Nicaragua, while 75 percent support Reagan's decision to bomb Libya in retaliation for international terrorism linked to the government of Moammar Khadafy.

If he wanted "to play it safe" in his speech, Nixon said, "I would just bash Khadafy." However, "while what happens in Libya is important," he told the publishers that "what happens in Nicaragua is going to have much more impact on the future of the United States and the Free World."

Applying a three-part test, Nixon said the Contras deserve U.S. support because their efforts are in the best interests of Nicaragua, are in the best interests of the United States and stand "reasonable chance of success."

"I know it's not fashionable to mention the possibility that what happens in one country—the so-called 'domino theory'—could affect what happens in another country," he said. "But make no mistake about it: If the Communist government in Nicaragua, freed from the threat of the Contras, threatens its neighbors, the shock waves are going to move all over Central America and eventually could affect Mexico." French President de Gaulle, Nixon observed, once called Central America "an incident on the road to Mexico."

With tremendous debt, high unemployment and massive corruption, Mexico "is a country that is waiting for a revolution," Nixon said.

U.S. assistance to the Contras is required if the Sandinista government of Nicaragua is to be pressured to stop exporting revolution, stop receiving Communist aid from around the world and start negotiating with the opposition.

To those who would suggest a possible analogy between U.S. involvement in Nicaragua and American involvement in Vietnam, Nixon had this response: "I can say to you today that the way to get American forces involved in Nicaragua is to deny aid to the Contras." His reasoning was that if the Contras lack the wherewithal to fight the Sandinistas, and if the Sandinistas are thus allowed to expand their influence elsewhere in the region, the United States will have no choice but to take up the battle.

"Without the United States of America playing a responsible role on the world stage, there is no chance that peace and freedom will survive in the world," Nixon said. "That is our role. That is our destiny. And we should assume that responsibility, not in a grudging way, as a burden, but we should assume it as an inspiring challenge worthy only of a great people."

He closed his address by making an appeal to newspaper publishers: "There is enormous power in this room. And I would urge that you also have a responsibility—a responsibility to help Americans have the understanding, the patience, the maturity and the will to play that role on the world scene which history has bestowed upon us."

In the 30-minute, question-and-answer period that followed, Nixon gave detailed responses to seven questions on subjects ranging from Libya to presidential politics. But the most memorable was his deft, five-word reply when asked what lessons his successors should learn from Watergate. "Just destroy all the tapes,"

C. David Rambo

As Nixon engaged in a historic handshake with Katharine Graham, publisher of The Washington Post during its Watergate coverage, he said of the photo opportunity, "I want this shot!"

Former President speaks without notes.

Nixon said to laughter and applause.

After the luncheon, Frank A. Bennack Jr., president and chief executive officer of The Hearst Corp., summed up the feelings of many in the audience when he said "it was certainly a brilliant performance. Mr. Nixon displayed the kind of wisdom he could have used some years back." ☐

Future ANPA Meetings

Convention

New York City, May 4-6, 1987
Honolulu, April 25-27, 1988
Chicago, April 24-26, 1989
Los Angeles, April 23-25, 1990
New York City, April 22-24, 1991
Vancouver, April 20-22, 1992

Conference & Exposition

Atlanta, June 21-25, 1986
Las Vegas, June 6-10, 1987
Atlanta, June 11-15, 1988
New Orleans, June 10-14, 1989

AP marks year of 'progress and pain'

Fred Mertz, San Francisco Chronicle

Boccardi cites AP achievements.

The past year has been one of "progress and pain" for the Associated Press, President Louis D. Boccardi said at the AP Annual Meeting.

Progress has been made in enhancing the AP report and in strengthening the news cooperative's financial status, he said.

The pain is a result of the continued detention in Lebanon of Terry A. Anderson, AP bureau chief kidnapped in March 1985, and the slaying of 11-year-old Natasha Simpson, daughter of Rome News Editor Victor Simpson, in a terrorist attack Dec. 27 at an airport in Rome.

Among other developments, the membership approved an amendment to AP's bylaws allowing the board of directors, 18 members of which are elected by the newspaper membership, to appoint four instead of the previously allowed three additional directors.

Appointed directors customarily come from the AP's broadcast membership. The board said that with broadcast operations "contributing roughly 20 percent of AP's revenue and with broadcast members contributing significantly to the news report as well, a fourth board seat alongside the 18 newspaper member directors would be appropriate at this time." AP has about 1,500 domestic newspaper subscribers, 5,700 broadcast members and 8,500 foreign subscribers.

At the AP board meeting the day after the annual meeting, Frank Batten, chairman of Landmark Communications Inc., was re-elected chairman and William J. Keating, chairman and chief executive officer of the Detroit Newspaper Agency, was re-elected vice chairman and chairman-elect. Keating is expected to succeed Batten as AP chairman next year.

Over the past year, AP has added more than 1,000 satellite receiving dishes to its transmission network. The wire service now has more than 3,000 dishes in place, and Boccardi told the annual meeting they allowed AP to cut its phone bill from $13.2 million in 1983 to $8.2 million in 1985.

More changes are planned. Boccardi said AP this year will:

- Implement a new, computerized, vote-counting service that will be in place in 40 states this November and in all states by the 1988 presidential election
- Install electronic darkrooms—which store and transmit photos in digital form—in Los Angeles, Chicago and Washington, D.C., and upgrade its existing New York electronic darkroom
- Expand its practice of shooting only color negative film for news photography, now the standard in Washington and Los Angeles. ☐

A plea for literacy

In an emotional speech on illiteracy, author Jonathan Kozol pleaded with publishers assembled for the Convention's opening session. "One hundred issues come and go within a large convention of this kind. If, on the day you leave, there is just one that burns within your soul, let it be this of which I speak."

Kozol, who wrote the 1985 book *Illiterate America*, reeled off a series of alarming statistics, among them an estimate that 45 percent of American adults do not read newspapers. Of those, only 10 percent abstain by choice; the rest, he said, cannot read well enough to comprehend what's in a newspaper.

"Five in 10 New Yorkers cannot understand the news The New York Times sees fit to print," he said.

Although the number of functionally illiterate adults in the United States is frequently cited as 25-26 million, Kozol pegged it at a minimum of 60 million—one third of the adult population. The discrepancy in numbers results from different definitions of what it takes to be a functional adult in today's society, he said.

By Kozol's calculations, illiteracy costs the country more than $120 billion a year—$20 billion for such things as industrial accidents and welfare payments, and more than $100 billion in a lower gross national product. "Those who cannot read enough to hold a decent job do not add to the national wealth," he explained.

Kozol also pointed out that illiterate citizens seldom vote, and he contended that illiteracy compromises freedom of the press. "Indeed, a free press doesn't exist for those who cannot read it," he said.

More importantly, functional illiterates cannot write their own words, he observed, saying, "There is no prior censorship so absolute as this."

Kozol criticized the federal government for failing to provide an answer to the risk posed to the nation by deteriorating literacy skills.

Current federal spending on the problem is $100 million, he said, which "comes down to something like $1.65 for each illiterate American per year." Requested budget cuts would bring that spending level down to 80 cents per illiterate next year, he added.

Kozol also faulted U.S. Secretary of Education William J. Bennett for taking the position that literacy is not a federal issue but one to be addressed by local companies and especially by volunteers. "Why is it that the art of war should be a national priority, while the art of living should forever be consigned to volunteers?" Kozol asked.

"I am afraid for our republic," he concluded. "Those of you who live or die by power of the printed word must share that terror, too." □

Jonathan Kozol

Competition can be found in search for excellence

Thomas J. Peters

American industry is "anything but healthy" and proposed protective legislation would be the "worst possible solution" to its declining role in the world economy, Thomas J. Peters said in a blunt General Session address.

Citing "a 75-percent probability of significant protective trade legislation during the calendar year 1986," the author of two best-selling books on "excellence" in business warned that "we are about to shoot ourselves in the foot, or perhaps in the temple."

Instead of protecting faltering industries, the United States should encourage American companies to learn from the competition—particularly the Japanese.

The solution is "obvious," he said. "Turn *up* the heat of competition. *Don't* turn it down."

Although he is pessimistic about possible congressional action, Peters admitted to being "partially optimistic" about industries' abilities to rebound, based on what is known about excellence.

"We have winners," said the co-author of *In Search of Excellence* and *A Passion for Excellence*. "We have winners in every sector of the economy, including the most beaten and battered. Moreover, in every sector of the economy, we know the shape of the generic winner."

The primary key to success can be summed up in the phrase, "Big is no longer beautiful," he said. "Just the opposite is true. Uniformity has given way to broader choices. Mass markets have splintered. Size has lost its significance. Rank in the Fortune 500 no longer means anything."

Instead of the giant corporate model built by U.S. industry in the period between World War II and the oil crisis in the mid-1970s, Peters proposed a model made famous in Japan, where production takes place in "smaller or small stand-alone units within a larger organization."

In such an environment, he said, it is possible to "return to the common sense" of a "more human scale." Production is "closer to the customer, closer to the market, fleeter of foot, providing higher value . . . products, innovating much more rapidly, and providing superior service and superior quality."

By way of illustration, Peters said he could summarize the entire Japanese/American business issue in two sentences:

"In Japan, the managers' offices are small, cramped, crowded and dingy, and the plants are spotless. In the United States, the managers' offices are beautifully appointed and spacious, and the plants look like pigsties."

"There is no magic," he added. "We know what to do." □

Advances in telecommunications can give boost to classifieds

New telecommunications technologies can make newspapers' classified advertising departments more efficient today. But newspaper executives should be aware of developments in the telephone directory business and in government policies dealing with phone companies that could adversely affect newspaper classifieds tomorrow.

Those were the two main messages conveyed at the clinic titled "Getting a Competitive Edge: A Hard Look at Classifieds."

Classified advertising revenue more than doubled in a decade and accounted for 32 percent of all newspaper advertising revenue in 1984, according to moderator Uzal H. Martz Jr., president and publisher of the Pottsville (Pa.) Republican.

One of the best ways to keep classified ad dollars flowing to newspapers is to "be more responsive to advertisers' needs and to use the tools, including telecommunications technology, that are available to us," said Martz, chairman of the ANPA Telecommunications Committee.

"Remote entry"—advertisers' use of personal computers and telephone lines to enter material directly into newspapers' computer systems—is one such tool. Several newspapers already are using remote entry, Martz said.

But panelist James N. Longson warned of a drawback. "The good news is that lots of advertisers will have lots of computers, and many will want to use them to place advertising," he said. "The bad news is that they will all be different."

Longson, vice president/corporate development for the Tribune Co. in Chicago, compared the problem with one about 15 years ago, when wire services had different computer protocols, forms and codings. That led to development of the ANPA wire service standards.

"We need to do something similar, and soon, if we are going to allow our advertisers to use their various computers to place ads," Longson said. Any future standards should meet advertisers' needs, but they should be developed by the newspaper industry, he emphasized.

(Coincidentally, almost as Longson was speaking, steps were being taken to coordinate industry efforts to arrive at voluntary standards for remote entry of classifieds. Meeting in conjunction with the Convention, representatives of the Association of Newspaper Classified Advertising Managers, the International Newspaper Advertising and Marketing Executives, and ANPA's Telecommunications and Technical committees agreed that ANCAM should lead a joint project in that regard.)

The Minneapolis Star and Tribune is using another new telecommunications technology, "voice mail," the clinic was told. "Simply put, it's a computerized way of putting answering machines on the ends of your phones," explained Roger P. Parkinson, president and publisher.

The newspaper's primary objective was to use voice mail to improve service to big-volume classified customers. These contract advertisers can leave recorded messages if they are unable to reach sales people directly, he said.

During a typical week, 6,000 recorded messages are left, Parkinson reported. Two-thirds give specific instructions on handling an ad; one-third simply ask a sales person to return the call.

A "downside" to voice mail is that it is "not cheap," said Parkinson, noting that the Star and Tribune system cost $180,000.

While newspapers' classified operations are changing, so is the nature of the competition for classified advertising.

In many markets, newspapers have ignored a "significant competitor" in the form of the Yellow Pages business, noted Leonard P. Forman, director of planning and chief economist for The New York Times Co. That business has been considered a "relatively inflexible medium" with a "relatively stable share of the market," he said. But that is changing.

The Yellow Pages' share of the ad market grew from less than 5 percent in 1974 to 6.7 percent last year, Forman said. Between 1974 and 1984, the number of Yellow Pages publishers increased from 26 to 172 and the number of directories from 4,000 to 6,600.

Directories are becoming more versatile, too. "In recent years, you might find some directories having four-color inserts, as well as some spot-color highlights," he said. "In some, there are even tear-out coupons, sports schedules, seating plans, and the list goes on and on."

Another panelist urged newspapers to pay more attention to the battles being waged in Washington as the regional Bell operating companies attempt to loosen governmental restraints on their operations.

Lloyd G. Schermer, president and chief executive officer of Lee Enterprises Inc. in Davenport, Iowa, said the Federal Communications Commission is looking into changing its requirement that the regionals use separate subsidiaries to provide sophisticated, non-regulated telephone services. "It's my opinion we will lose the battle at the FCC and the requirement to go through a separate subsidiary will be eliminated," he said.

According to Schermer, other battlegrounds are the Justice Department, where the regionals have filed requests for changes in the "modified final judgment" governing the breakup of AT&T, and Congress, where legislation has been introduced to circumvent the MFJ.

The "consequences" of these proposals, he said, "could be a time bomb ticking in your classified department today and perhaps your newsroom tomorrow." ☐

Fred Mertz, San Francisco Chronicle

Longson (at lectern) warns of problems stemming from incompatible computer systems.

Readership studies analyzed

Readers and the public give generally high marks to newspapers, prominent researchers agreed, but they nonetheless identified areas for improvement.

Panelists at the clinic, "What They Think of Us: Our Readers/Public," clarified similarities and differences emerging from recent publicized studies commissioned by the American Society of Newspaper Editors, the Associated Press Managing Editors and The Times Mirror Co.

Also, Christine D. Urban, president of Urban & Associates Inc., highlighted conclusions based on 10 years of research by her Sharon, Mass., firm.

When defined as "believability," newspaper credibility is high, according to research by Minnesota Opinion Research Inc., retained by ASNE and APME, and by The Gallup Organization of Princeton, N.J., retained by Times Mirror.

But studies by both firms show wavering confidence in the media's "day-to-day practices," particularly in a perceived "intrusiveness" during news gathering, said Michael J. Robinson, director of the Media Analysis Project at George Washington University in Washington, D.C. The studies show press distrust to be most acute "at opposite ends of the socioeconomic spectrum," noted Kristin McGrath, president of Minneapolis-based MORI.

Most bothersome, according to the Times Mirror survey, is a perception that the press is "less than independent" from outside pressure. "In the public's mind, it is the *external pressures* exerted on the press that best explain why the news media sometimes fail to live up to standards," said Gallup President Andrew Kohut.

For McGrath, three issues from the ASNE and APME studies "might be cause for concern among top newspaper executives"—"unusually high distrust of the media" among certain groups; the needs of journalists she termed "'younger transients' who may contribute disproportionately to public distrust of newspapers"; and the danger that public misconceptions about the media could undermine the "watchdog" role of the press.

In a wide-ranging list of 11 "reader expectations," Urban included the following maxims for publishers:

- "Readers think we don't do enough in terms of institutions, which are easy to cover, but also expect us to get the story from the people behind those institutions, which is more difficult."
- "Readers expect newspapers to value their time. . . . Twenty-five minutes, give or take, is what you have." They want their papers to make "firm editorial judgments" that "cut the bloat," particularly in weekday editions.
- "Readers expect the paper to be written for normal folks. . . . Stop worrying as much about the demographics of who is reading and start worrying about how deeply or how much all of the market is reading."

Urban added: "Study after study has proven that the other scale—that is, the not-upscale, blue-collar, working-class, middle-income people, are excellent newspaper readers. They are interested and they are involved and they are experienced."

NEWSPAPER CREDIBIL

McGrath identifies readership issues.

'Wellness' programs can save health costs

Swelling health care costs and possible prescriptions to ease the pain were outlined in the "Wellness in the Workplace" clinic.

Panelists said private industry—which according to one estimate is paying $160 billion a year for employee health insurance and other medical programs—can lower costs over the long run by instituting "wellness" programs. Those can include a number of different activities aimed at what moderator Dr. Wayne O. Buck called "a physical, spiritual and emotional sense of well-being."

Many firms have, in fact, adopted such programs and are reporting success, panelists said. Few newspapers are among them.

"Newspapers have been slow to respond" to rising health costs, said Buck, corporate medical director of The Times Mirror Co. That is despite his estimate that for every dollar a newspaper spends in this category, it must generate five to 10 times that much revenue.

Buck noted that ANPA is drafting a model wellness plan newspapers can use as a basis for their own programs. It should be ready for distribution soon.

Among panelists outlining possible benefits from such a program was Robert N. Beck of Bank of America. He said a recent survey showed 73 percent of responding companies that changed their health-care plans to include more aspects of prevention and wellness reported lower costs in 1985.

Another panelist, Diana Chapman Walsh of the Boston University School of Health, said a major obstacle to examining workplace wellness programs is that nobody knows how many are in place or how intense they are.

Walsh described two general types of programs being adopted by industry.

One is the employee assistance program, in which a company identifies and helps employees experiencing personal or emotional problems.

The other is the workplace health promotion program, which can include programs to control hypertension, smoking, alcohol and drug abuse, and accidents.

Willis B. Goldbeck, president of Washington Business Group on Health, a health-issue educational organization in Washington, D.C., said firms can look at the expense of such programs as just another form of "asset management"—akin, say, to management of a computer system. Employers must find a "balance between the profit and productivity goals of a corporation and the benefit of the worker," Goldbeck said.

He said businesses also must deal with their role as an "illness maker" and look at stress, "unhealthy supervisory techniques" and other factors.

Newspapers have yet another obligation, Goldbeck maintained. "You are part of a mission in this society" to increase health awareness, he said.

Perspectives on the shuttle tragedy

Both the press and the National Aeronautics and Space Administration drew criticism during a wide-ranging Associated Press panel on the Challenger disaster.

From Howard Benedict, veteran AP space correspondent, the criticism concerned the "pack journalism" of reporters descending on Cape Canaveral after the explosion that killed seven space shuttle astronauts Jan. 28.

William R. Graham

For NASA's acting administrator, William R. Graham, it was a press "looking not just for information, which we were trying to provide as we learned it ourselves, but for speculation."

And in a terse exchange with AP President Louis D. Boccardi, veteran astronaut Alan B. Shepard dismissed discussion in the media about the doomed shuttle crew. "I just don't think that people are interested in that," he said. "It doesn't help anything."

In answer to Boccardi's invitation to "tell the opinion leaders of this country what you think the nation's space policy should be," Graham said it should be "both broad and deep."

However, following the Challenger disaster in January and the Titan accident last month, "we are finding now some unexplored shallows in our space program," he said.

Specifically, he observed: "I don't think we have enough breadth in our space program at this point. I don't think we have enough national capability to get to orbit, to overcome temporary setbacks, to deal with unexpected accidents . . . I think we are going to have to review the national space program in that light as we go from this point forward."

One of the panelists was critical of the nation's emphasis on manned space flight. NASA historian Alex Roland, associate professor of history at Duke University, observed that "we've come up with the harvest" of a policy "to make all our space flight manned space flight, to make everything ride on the shuttle."

But Barbara Morgan of McCall, Idaho, designated the next "teacher-in-space," had only kind words for NASA and no particular comment for the press: "I relate to this in school terms because I am a school teacher. As a teacher I work very hard with my students to try to instill attitudes that will help prepare them for the future. My two favorite attitudes are a sense of teamwork . . . and seeing problems as challenges. And that's what I see in NASA." ☐

White is oldest space candidate

The oldest of the 100 candidates chosen in the first round of the journalist-in-space selection procedure received considerable attention at the Convention.

Robert M. White II, the 71-year-old publisher of the Mexico (Mo.) Ledger, appeared nonplussed when asked how he stays in such good shape. "I play a little golf. I go fishing," he said. "I don't do anything special."

As for the NASA mission, he commented: "My mission is to make the next cut." ☐

Familiar faces at the Fun Run

If ANPA scored with its 100th Convention in a city beginning its 80th year after the 1906 earthquake, **presstime** kept the commemorative pace: Its second Convention Fun Run April 21 coincided with the 90th Boston Marathon.

As he had done a year earlier in Miami Beach, Circulation 86/87 Publisher Peter Sinding captured first place among male entrants, covering the two-mile course along San Francisco Bay in 11 minutes, 38 seconds. Finishing second, 13 seconds later, was Owen Van Essen, vice president of Lee Dirks & Associates in Birmingham, Mich. Third was Bill Baker, vice president/news of Knight-Ridder Newspapers Inc., whose time of 13:06 was best in what he proclaimed to be the "49-and-over category."

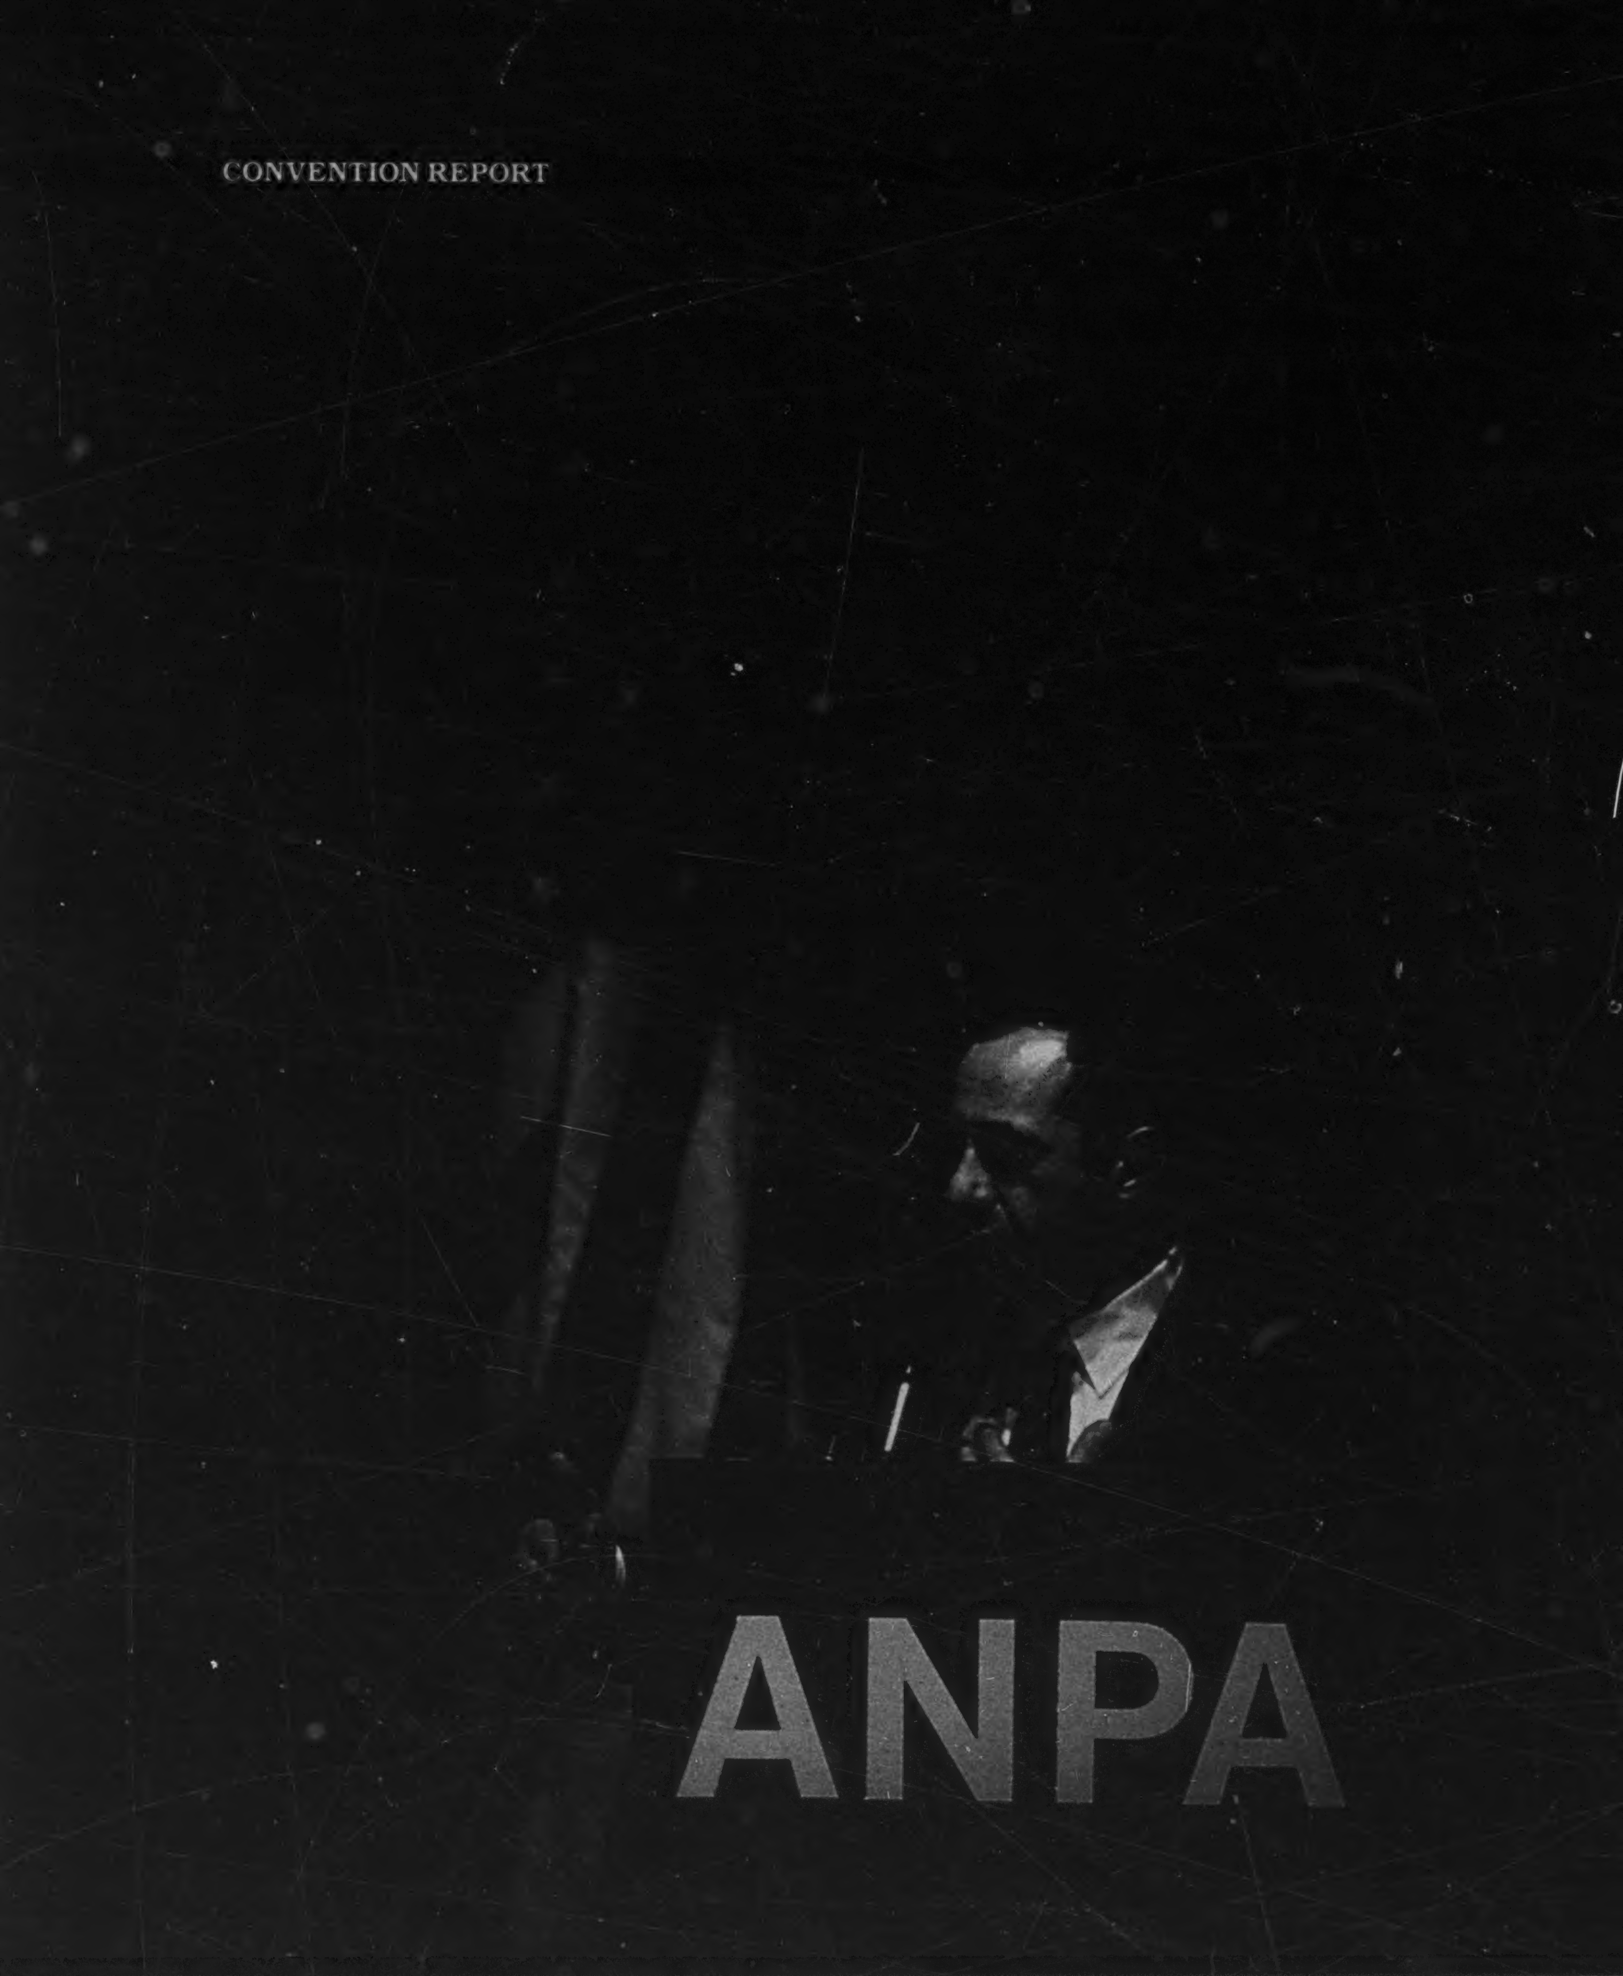
First among women was Lee Kintzel, a lawyer and wife of a Cox Enterprises Inc. executive, who finished 17th overall at 15:20. Next was Katharine P. Darrow, general counsel for The New York Tim[illegible] Co., at 16:41, followed by USA To[illegible] Publisher Cathleen Black, 17:33.

Plaques were presented to the winners. All 92 finishers, including the last-place (36:14) walker who identified herself as "anonymous," received T-shirts.

Another **presstime** Fun Run will take place June 22 in Atlanta during the ANPA Operations Management Conference & Exposition.

It wasn't the Boston Marathon, but it shared the same day.

CONVENTION REPORT



Cuomo makes strong pitch for covering nation's ills

Day 2 — April 22

- A possible presidential candidate
- Chapman elected to head ANPA
- Tough issues before ABC
- Setting the stage for the future of advertising

Mario M. Cuomo, governor of New York, possible candidate for president, orator nearly without peer, brought the publishers both a message—that there is poverty and hurt throughout the land—and an invitation—to increase their coverage of the problem.

Although the substance and resonance of the Cuomo remarks at the luncheon meeting raised memories of his celebrated "Tale of Two Cities" speech in the same city nearly two years ago, there was one powerful difference.

This time the audience was not the enamored throng that hung on every word of the Cuomo keynote address at the 1984 Democratic National Convention and cheered wildly at the end.

This time it was nearly 1,700 newspaper executives and spouses who received him warmly, applauded politely at the end, but did not appear to leave their hearts—much less their political souls—in San Francisco.

Cuomo tried hard in his 30-minute address to enlist the newspaper audience as allies.

"Some people think you set the agenda for the electronic media," he said. "That it's you . . . who decide what lead stories people will read, and hear, and see. And in what order."

In that agenda-setting role, Cuomo maintained, newspapers are beginning to tell stories that represent the flip-side of America's recent prosperity. The side, he said, where 8½ million people are out of work, where 5½ million are settling for part-time work "because they can't find a full-time job," where millions are homeless and hungry "more than at any time since the Great Depression," and where "more than one child in every five is growing up in poverty—among black children, more than one in two."

These newspaper reports about this "other America," he said, so far are "only trickling in. They are mostly anecdotal." What is needed, he said, is a greater effort by the press to tell the whole story.

Cuomo, who often is pressed to provide ideas for tackling the problems he so eloquently describes, deflected that point by stating that it is not the ideas that are lacking but the will to act. For that to come about, there must first be "a recognition and an understanding" of the problem. And that's where the press comes in.

"We need you to tell fully and clearly the Tale of Two Cities," he implored the publishers. "To describe for us the mean streets, how they oppress the people who live there and their menacing possibilities for those of us who live on the hill."

The response to Cuomo's performance, while warm, was in stark contrast to the 40-second standing ovation the same audience had given the previous day to former President Richard M. Nixon.

The New York governor, in a press conference following his speech, acknowledged the mood. "I'm glad they didn't throw stale rolls," he quipped. Publishers, he said, are doing very well. "They're riding around in yachts." But, he added, "they were very kind to me."

Cuomo himself had some gracious words for Nixon in his opening remarks. Noting that his was among the voices that found fault with the former President during the latter's "moment of sadness," he added, "President Nixon is a man of great intellect, unique experience and extraordinary political wisdom. He has shared all of that with the American people generously and beneficially, and I believe most Americans are grateful for that and hope that he will continue to offer us his counsel for many years to come."

When the applause died down, Cuomo added: "That does not mean he is right about the next election or knows anything at all about poetry and prose."

That last was a reference to Nixon's previous-day assessment of Cuomo as a possible presidential candidate. The former president said Cuomo is a "very savvy politician" who is "more poetry than prose."

About that possible presidential run, Cuomo said later that he would be announcing his decision in a few weeks. He has said many times that he would not run for the presidency if he decides to run for re-election as governor. ☐

At left: Cuomo was still mum on whether he will run for President.

Margaret Genovese

Kenneth C. Bronson of Stauffer Communications relaxes with the ANPA Chronicle in the Fairmont Hotel lobby. The special tab was produced four days by the San Francisco Chronicle.

Knight-Ridder's Chapman succeeds Johnson as ANPA chairman

Chapman (right) takes the Association's reins from Johnson.

Alvah H. Chapman Jr., chairman and chief executive officer of Knight-Ridder Newspapers Inc., was elected chairman and president of ANPA at the Association's annual business meeting.

Other officers elected were: vice chairman, George W. Wilson, publisher of the Concord (N.H.) Monitor; secretary, Arthur O. Sulzberger, chairman of The New York Times Co. and publisher of The New York Times; and treasurer, William H. Cowles 3rd, president and publisher of The Spokesman-Review and Spokane Chronicle.

For the first time in ANPA history, officers will be limited to one-year tenure and will follow an annual succession from treasurer to secretary to vice chairman to chairman. Previously, it was customary for the chairman and vice chairman to be re-elected to a second one-year term, and the only succession was from vice chairman to chairman. The new procedures were adopted by the Board of Directors in September [presstime, Oct. 1985, p. 64].

Three new directors were elected to two-year terms at the meeting. They are John J. Curley of Gannett Co., Arlington, Va.; Sandra C. Hardy of Calkins Newspapers, Levittown, Pa.; and Joe Hladky of The Gazette Co., Cedar Rapids, Iowa.

C. David Rambo

Reporter Lisa A. Chung of the San Francisco Chronicle interviews Sulzberger.

Re-elected for two-year terms were the following ten directors: Garner Anthony of Cox Enterprises Inc., Atlanta; Frank A. Bennack Jr. of The Hearst Corp., New York City; Charles T. Brumback of Chicago Tribune Co.; Robert F. Erburu of The Times Mirror Co., Los Angeles; Edward W. Estlow of Scripps Howard, Denver; Jacques G. Francoeur of UniMedia Inc., Montreal; Edwin L. Heminger of The Courier, Findlay, Ohio; Uzal H. Martz Jr. of the Pottsville (Pa.) Republican; John G. Montgomery of Montgomery Publications Inc., Junction City, Kan.; and James M. Moroney Jr. of A.H. Belo Corp., Dallas.

Retiring from the Board after completion of their normal tenure were former Chairman and President William C. Marcil of The Forum, Fargo, N.D.; Helen K. Copley of The Copley Press, La Jolla, Calif.; and K. Prescott Low of The Patriot Ledger, Quincy, Mass.

Under the new governance procedures, Chapman also will serve as chairman of the Executive Committee this year. In recent years, that position has been held by the immediate past chairman and president. Richard J.V. Johnson of the Houston Chronicle, the immediate past chairman, will serve one more year on the Board.

ANPA membership increased by a net of 17 newspapers since the 1985 Convention, according to the **membership report** presented by Membership Committee Chairman Montgomery. Current membership is 1,395, he said.

In his **treasurer's report**, Sulzberger said ANPA last year generated revenue of $11,682,082, incurred expenses of $10,399,123 and produced a net surplus of $641,480 after providing for contingencies.

"From a budget standpoint," he said, "last year was the first breather for the Association in some time." However, he noted, it is too early to forecast this year's performance.

As a hedge against "unforeseen events," the membership renewed the standby authority for the Board to increase the dues formula by a maximum of 10 percent. Over the past 24 years, Sulzberger noted, this authority has been exercised only eight times and only in 5-percent increments.

In his **executive vice president's report**, ANPA Executive Vice President and General Manager Jerry W. Friedheim described the Association's "outreach" activities, using a slide presentation to show the extent of those activities throughout North America.

Not all, or even most, of ANPA's work occurs at The Newspaper Center in Reston, Va., Friedheim said.

Jerry W. Friedheim

"In fact, most of what we do happens out in cities and towns all across North America. And that's how it should be," he said. "We are an international trade association carrying programs and services to our member newspapers and to newspaper executives wherever it is most convenient for them." ☐

Issues not as easy as ABC

The issues discussed at the General Session on circulation auditing have become familiar ones for newspaper publishers in recent months:

- Should the Audit Bureau of Circulations conduct readership research?
- Should ABC require newspapers to report circulation by ZIP code areas?
- Should ABC count bulk sales in total circulation figures?
- Should newspapers be allowed to promote the value of coupons on the day of publication?

Panelists from the three components that make up ABC—publishers, retail advertisers and ad agencies—provided fresh perspectives at the session, "Audit Bureau of Circulations—A Tripartite Focus on Newspaper Issues."

Readership and audience research—The ABC board in 1984 adopted a policy of "non-involvement" in this area.

"Readership research is at best an imperfect art" and entering this field might "dilute the credibility" of the ABC report, said Joseph W. Ostrow, executive vice president and director of communications services for Young & Rubicam ad agency, representing national advertisers.

Publisher representative James M. Moroney Jr., chairman and chief executive officer of A.H. Belo Corp. in Dallas, said that readership research "is not an alternative for audited circulation data" and that delving into it would "compromise the confidence that both the advertisers and the buyers have" in ABC data.

The retailer representative, James F. Boynton, manager of media services of JCPenney Co., said although readership research is "of interest to us," ABC's greatest strength is the standardization of its circulation reports.

ZIP code reporting—It is now optional for publishers.

Boynton said such reporting should be required because "we need to know what your circulation is in these units."

Ostrow said the information is not an "overwhelming issue" at the moment for national advertisers, but he said it will become increasingly important.

Moroney said newspapers recognize retailers' marketing needs, but many are "understandably concerned" about releasing such private business data.

Bulk sales—They are now reported separately in detailed ABC reports and not included in the shorter Fas-Fax.

Moroney said there are good reasons to include bulk sales, one of which is that they usually represent upscale readers. But there are concerns about inflated figures, he said. He also observed that newspapers can use current bulk statistics on an individual basis.

Ostrow said bulk sales should be shown clearly as a component of total circulation. Above all, he said, "give us the building blocks clearly identified," so that national advertisers can decide for themselves the worth of the data.

Boynton said retailers do not put much weight in bulk sales.

Same-day coupon promotion—The ABC Board of Directors will vote on this issue at its June meeting.

According to Moroney, benefits of such promotion are unclear. A recent test seemed to have "minimal" effects on circulation, he said. If that is true, "we end up with a two-headed coin: We can assure advertisers that same-day coupon promotions will not cause dislocation in our markets; we will at the same time also be admitting that same-day promotions are not circulation stimulants that we feel they might be."

Ostrow supported giving newspapers the right to market themselves in whatever fashion seems appropriate. ☐

The media and terrorism

The title of the panel discussion was "Terrorism." But the program, organized by United Press International, focused less on that phenomenon than on the media's coverage of it.

Calling terrorism the "overriding issue of the day," moderator Helen Thomas observed that the "role of the media in reporting on terrorism has been questioned, at times criticized."

"In different situations, the media, particularly television, have been accused of aiding and abetting the terrorists by giving them the spotlight," said the UPI White House bureau chief.

Acknowledging that he has asked himself many times whether his coverage plays into the hands of terrorists, panelist Thomas L. Friedman, Jerusalem bureau chief for The New York Times, said his answer is simple: "Bad, irresponsible journalism definitely does play into the hands of terrorists. Good, responsible journalism definitely does not."

When covering a terrorist incident, Friedman said he tries to keep a few rules in mind. The first is, "Don't exaggerate the role of the camera or the American angle." He said both of "these mistakes" were evident in coverage of last year's hijacking of the TWA airliner in the Middle East.

Friedman, a former Beruit-based correspondent for UPI, also said he tries to use the words "terrorism" and "terrorist" with "precision."

UPI's current Middle East correspondent in Beirut, said he likes to use the word "terrorist" as "little as possible." Said Peter Smerdon: "The word itself sells both newspapers and policies like hotcakes but goes little toward comprehending why or who."

Smerdon, who was kidnapped last June by gunmen in Beirut, threatened with death and driven around the city in the trunk of a car before being released, admitted that "like all journalists in the Middle East," he has been intimidated.

Journalists can protect their independence "by attempting to ensure that what the gunman reads in Beirut is not what is printed in Kansas," he said. Smerdon did not elaborate, but on the same issue, Friedman mentioned such devices as omitting datelines and bylines or mixing information into stories originating elsewhere.

The only television representative on the panel, ABC Chief White House Correspondent Sam Donaldson, said he has a "problem" with live TV coverage of terrorist incidents. "We've got to be careful that we don't just turn the cameras on events, people, situations without any editorial sense, any critical judgment," he said.

Terrell E. Arnold, former deputy director of the U.S. State Department's unit that addresses terrorism, recited a litany of charges made against the media in their terrorism coverage: getting directly involved, interfering, exhibiting bias, "putting the heat on incident managers" to get them to take a particular action, and helping terrorists by giving them the publicity they seek.

But, said Arnold, vice president of the Institute on Terrorism and Sub-National Conflict in Washington, D.C., "for every charge I can conjure up . . . against a media person in this area, I can very readily point to situations in which media people have been immensely helpful."

Preparing for the future in newspaper advertising

A highly detailed report of its Future of Advertising Committee anchored the General Session produced by the Newspaper Advertising Bureau.

Harold W. Andersen

Formed one year ago, the committee has been charged with assuring newspapers' ability to flourish in an increasingly complex and competitive media market. (See story, p. 71.)

Introducing the hour-long program summarizing the work of the committee's 10 task forces, outgoing NAB President W. Thomas Johnson called the project "one of the most significant industry-wide efforts ever undertaken."

"Even though many present conditions are quite positive, ever since the advent of television we have been slowly losing advertising market share and circulation penetration in many cities," said the Los Angeles Times publisher. "If we are to remain the nation's number one advertising medium, and if we are determined to improve our share of market, we simply must respond more aggressively and more creatively to the changing needs of our readers and our advertisers."

Professing himself "thrilled" with the work so far, ANPA's new chairman and president, Alvah H. Chapman Jr. of Knight-Ridder Newspapers Inc., pledged the Association's full support. "ANPA will be solidly behind this effort and will continue to give it the very highest priority," he said. "All of us know that advertising brings in 70 percent of the revenue in the newspaper business, and without that revenue, every effort to improve our business will go down the tubes."

More than 120 newspaper executives have served on the project's task forces, reported Committee Chairman Harold W. Andersen, chairman and chief executive officer of the Omaha World-Herald Co.

He noted that task forces are at different stages in their work. "In some cases, the problems are well-known, and the task force's job has been to suggest the best solutions. In other cases, the first challenge has been to precisely define the problem. And for several task forces, the first job has been to determine what kind of information is needed before going to work on possible recommendations."

Chairmen of the task forces then reported their developments and plans:

• **Readership.** Reg Murphy of The Baltimore Sun said a manual titled "How to Gain and Retain Readership" will be mailed to ANPA and NAB newspapers by June 1. Next, the task force will survey the effectiveness of circulation-retention strategies used by various newspapers, then follow up with formal research on the most successful ones. For the longer range, it will develop a "cost/benefit computer model for the analysis of newspaper economics."

• **Reproduction.** Walter E. Mattson of The New York Times Co. urged widespread use of the new "Guide to Quality Newspaper Reproduction." (See story, p. 84.) He called it "the most important document on newspaper reproduction in the business and the best that it has ever published." Planned by the end of 1986 are an ANPA quality-evaluation service for publishers and a publishers' checklist, tentatively called "How to Monitor Your Newspaper's Production Quality." Over the next few years, plans call for the ANPA Technical Committee to prepare a newspaper production manual setting "quantifiable, measurable minimum standards for each step of the newspaper production process."

• **Standardization.** Joe D. Smith Jr. of the Alexandria (La.) Daily Town Talk called attention to such initiatives as AD/SAT, a system for transmitting newspaper advertising by satellite that will begin a demonstration period this fall, and recent efforts by the International Newspaper Financial Executives to refine standardized invoices. In addition, the task force is working on standardization of advertising contracts and conditions; classifieds; and television program guides.

• **Alternate Distribution.** Tucker Sutherland of Harte-Hanks Communications Inc. noted that although 78 percent of U.S. and Canadian newspapers already have target-marketing delivery systems, the task force believes "this important growth area requires more formal and better organized efforts at the highest levels of the newspaper business." It has recommended that ANPA and NAB establish a joint committee to handle such projects as development of a manual on how to establish a profitable target-marketing plan.

• **Classified.** Ashton Phelps Jr. of The Times-Picayune/The States-Item in New Orleans said the task force in April distributed questionnaires to classified departments at more than 700 newspapers. After analyzing results of the survey, the committee will review existing readership research, hold focus-group sessions with key advertisers in real estate, recruitment and automotive, do pilot studies in individual markets, and commission outside research and consulting firms to study other classified media.

• **Sales Structure.** Vance L. Stickell of the Los Angeles Times said the task force is taking a comprehensive look at "present sales practices in the newspaper business, considering possible future directions and addressing the question of strategy in getting where we want to go."

• **Sales Personnel.** Cathleen Black of USA Today reported the task force will study three aspects—recruiting, training and compensation. "There is a suspicion" that current practices in these areas are "not competitive," she said.

• **Promotion and Advertising.** James F. Hoge of the New York Daily News said the task force will devise ways to publicize newspapers' community service projects; encourage publishers' contacts with ad agencies and advertisers; and increase publicity for NAB's Athena awards and Creative Newspaper, as well as promote similar ad competition on the local level. The group is also proposing an "industry-sponsored public relations campaign" over a three- to five-year period, he said.

• **Pricing and Positioning.** Jerome S. Tilis of the Detroit Free Press said that on pricing—a "sensitive area" because of antitrust laws—the task force will be studying some of the following areas: volume and frequency approaches to sales of national advertising; new ways to categorize ads besides the traditional national, retail and classified divisions; and uniform rate breaks for multi-market advertisers. On positioning, he commented: "We believe a lot of immediate progress can be made in offering advertisers new options to make their ads stand out, giving them the same kind of flexibility they enjoy" in magazines and preprints.

- **Marketing Data.** Chairman Andersen delivered the task force report and outlined several proposals to standardize marketing data.

In the bureau's annual business meeting that followed, NAB officers said revenue from dues, investments and other income was estimated at $13,970,000 for the fiscal year that will end June 1. Since June 1, 1985, 27 new members joined the bureau and 31 resigned, with a slight net increase in dues.

During this meeting, members elected nine new directors and re-elected seven incumbents. At an April 20 meeting of the bureau's board of directors, three new officers were elected to one-year terms: chairman, Frank A. Daniels Jr., The News and Observer and The Raleigh (N.C.) Times; vice chairman, Robert G. Marbut, Harte-Hanks Communications Inc.; and secretary and assistant treasurer, Hoge of the Daily News. ☐

Daniels (right) succeeds Johnson as chairman of the NAB Board.

An unhealthy feud

The chairman of the American Association of Advertising Agencies said newspapers and agencies should not have an adversary relationship. "That's not good. It's like two brothers fighting," said Louis T. Hagopian.

As head of the N W Ayer Inc. agency in New York City, Hagopian acknowledged that there are differences between newspapers and agencies. Newspapers "don't like the fact that we put so many of the big national advertising dollars into television." Agencies are "rankled at the discrepancy between national and local advertising rates. We think they are unfair."

He added that whenever "something's festering between us, let's work to heal it. Most sets of brothers do."

At the General Session arranged by the Newspaper Advertising Bureau, Hagopian saluted publishers for instituting the voluntary, expanded system of Standard Advertising Units, testing satellite delivery of ads from agencies to newspapers, achieving better color reproduction and improving editorially. "Far and away," he said, "the most important thing newspapers are doing to attract us is your constant effort to improve the editorial product. They may hate to hear it, but it is editors, deskmen and reporters who sell your national advertising."

Hagopian also called on publishers to join agencies in promoting corporate understanding about the advertising process and about the value of media advertising.

AAAA has launched an advertising campaign aimed at business leaders, Hagopian reported. "Our problem—and I submit that it is your problem, too—is that most corporate chief executives don't know much about advertising, pay it heed or recognize its contributions to the success of the enterprises they lead." Instead, they view advertising as a "chore to be delegated to middle management—an expense to be controlled."

The new campaign is designed to demonstrate that advertising is "a sturdy tool to build companies, brands and consumer franchises." Business leaders need to be told that "you hire outside accountants to keep you out of trouble, and you hire lawyers to get or keep you out of trouble. On the other hand, you hire a good advertising agency to make you more money," he said.

A related effort seeks to convince colleges and universities to require every student who majors in business administration to take a course in the basic principles of advertising. "We believe advertising is so important to business executives that some basic training is needed."

On the second battle, over the value of media advertising, Hagopian said the challenge is to convince business leaders that "building and sustaining brand equity through advertising has more direct and lasting value than premiums and promotions and coupons ever will."

Hagopian also appealed for newspaper support of the "freedom to advertise." (See essay, p. 35.) ☐

Newsprint price hike seen unlikely this year

Four securities analysts held the attention of a large audience for the clinic on "Newsprint—New Perspectives" by making a series of predictions about the future of the newsprint and newspaper businesses.

Two of the analysts were Canadians who specialize in watching the forest-products industry.

Brian F. Topp, senior financial analyst of Midland Doherty Ltd. of Toronto, assured the publishers "there will not be a newsprint price increase in 1986."

Surplus supply will "persist for at least two more years," said Topp, who reported that average transactions today are running about 10-percent lower than the U.S. list price of $535 per metric ton.

His forecast calls for the list price to reach $600 per ton in 1988 and $660 in 1990.

It will take more than a year "to eliminate deep spot discounting," said Topp, who noted that some Canadian newsprint producers are "locked into two- and three-year contracts" that are having "a devastating impact" on their profits.

He also pleased the publishers by saying he doubts there will be paper shortages in the foreseeable future, with the United States "undeniably" becoming more self-sufficient in newsprint and higher grades of paper by 1990.

Topp said that while the higher value of the U.S. dollar versus the Canadian dollar is a big reason why newsprint prices have held steady for two years, the "dominant" factor is abundant supply.

The higher value of the U.S. dollar means "superior profit opportunities" for Canadian mills. Topp said he expects the value of the Canadian dollar to decrease even more, from about 72 cents to 65 cents (U.S.).

"So let's not feel sorry for the Canadian newsprint producers," he said. "I expect that the Canadian newsprint industry's record 1981 operating profit of $115 per metric ton will be surpassed in 1986 as our Canadian dollar slides below 70 cents. I also project that Canadian operating profits before interest and income taxes will exceed $200 per metric ton in 1990."

John M. Duncanson, senior financial analyst for another Toronto securities firm—McLeod Young Weir Ltd.—gave a less bullish view of the Canadian newsprint business. Canadian companies are experiencing difficulty in competing with newsprint producers from Scandinavia and elsewhere, he said, because of Canada's higher labor costs and older equipment.

Duncanson said 26 of the country's 97 newsprint machines are at least a half-century old. Five of them are scheduled for conversion or replacement; it would cost $1.5 billion (Canadian) to upgrade the other 21, he reported.

With long-term debt currently in excess of $3 billion, the Canadian newsprint industry would be hard-pressed to justify spending that much, according to Duncanson. "Even if the desire was there," he said, "the ability to raise the necessary capital will be hampered by the extremely low rates of return based on current market prices."

He explained why U.S. newspaper publishers should be concerned about the health of the Canadian newsprint industry. Despite the fact that "the Canadian share of the U.S. market in the past five years has been watered down," Canada still provides the majority of newsprint consumed in the United States—about 57 percent of the total.

The other two panelists were newspaper analysts from New York City: Edward E. Dunleavy, vice president of Salomon Brothers Inc., and R. Joseph Fuchs, vice president and director of Kidder, Peabody & Co. Inc. Both said they expect the economics of newspaper publishing to change significantly during the rest of the 1980s because of "disinflation," with obvious impact on newsprint consumption.

Dunleavy said disinflation will mean a slowing of national economic growth, overall advertising and newspaper advertising. Of particular concern to publishers is the fact that "newspaper advertising has been losing market share in a very strong market" in recent years, and that "as the market growth slows, it is going to be increasingly difficult to show profit gains when you're losing market share."

Circulation training a sore spot

The hiring and training of circulation managers was described at one clinic as a significant problem area for newspapers.

"Newspapers, generally speaking, are just paying lip service to training," said panelist John B. Raytis, general manager of The Fresno (Calif.) Bee. Recounting a visit he made to observe employee training in Disneyland, he commented: "They're hiring $5-an-hour people, and they're training them for two weeks. We're hiring $500-a-week district managers, and we're training them for two days. I just kind of wonder why the newspaper industry really doesn't do the job the way it should."

Lack of systematic training is made more of a problem by the recent expansion of what is expected of circulation departments, Raytis told the clinic on "Circulation's Role on Your Management Team."

Recruitment is also a problem, he and other panelists observed. "Probably if we were honest, we would say the turnover in our circulation departments is the highest" perhaps twice as high as in other newspaper departments, said Stephen M. Hesse, regional circulation director of Gannett Co. "We're not doing something right on our recruiting."

Circulation is "the most demanding position in the newspaper," Hesse said. He described many of the traits needed by managers, the most important being "the ability to work with people."

Booker T. Izell

Speaking of the need to hire more minorities in circulation, Booker T. Izell, distribution director of the Atlanta Journal and Constitution, said "there isn't any difference in the training" they require. ☐

He offered "an optimistic forecast" calling for 7.5-percent growth in the "nominal" (not adjusted for inflation) gross national product; for 8.5-percent growth in total advertising; and for newspapers to "continue to lose market share and grow at about an 8-percent rate."

Because of this less-rosy advertising picture, Dunleavy predicted newspaper publishers will price single-copy sales and subscriptions "more aggressively."

He also said it is "inevitable" that there will be fewer cities with a.m./p.m. combination newspapers or competitive dailies, as well as more zoning of editions with part-run advertising. And he said more newspaper companies will move into commercial printing to pick up the business of printing advertising inserts.

"Potentially, I think that newspaper profits can continue to grow at a rate that is twice that of economic growth, but I think it's going to be much harder to do it," the Salomon Brothers executive said.

As a result of these various economic forces, newsprint purchases "will go under greater scrutiny" by U.S. publishers, according to Dunleavy, who predicted that consumption will grow at an annual rate of about 2 percent in the rest of this decade.

Fuchs of Kidder, Peabody said he expects newsprint tonnage to grow 1 to 2 percent a year in the next three to five years, compared with a projected rise in "real" (adjusted for inflation) GNP of 3 to 4 percent.

He sketched this picture of the near future of the newspaper business:

- An end to a period of rapid advertising growth, as advertisers cut advertising-to-sales ratios
- A shift in advertisers' philosophy to "marketing smarter" by pinpointing messages to particular audiences and, in general, using media more efficiently
- Improved cost management by newspapers
- A more sophisticated approach to circulation, with demographic targeting and an emphasis on "optimal" levels of penetration that "may not be as high as we previously thought"
- One-newspaper towns' "coming with more and more of a vengeance."

Moderator Michael E. Ryan, senior vice president of The New York Times Co., concluded the clinic by observing that "the future of newspapers and of the newsprint industry are closely linked." High-quality paper is an important ingredient in newspapers' goal of improving the product and keeping "readers and advertisers faithful and increasing in numbers," he said. ☐

FASSIO
LUCAN

Darrow (second from left) describes the potential for a "newsrack war."

In defense of newsracks

The number one reason given by local governments for regulating the placement of newsracks is public safety.

"You'd think that people were being killed right and left" by the vending machines, said Katharine P. Darrow, general counsel of The New York Times Co.

Strategies newspapers use to deal with newsrack restrictions were examined in the clinic on "Newsracks—Taking the Offensive."

Darrow told attendees that "newsrack wars" with local governments can surface in several ways:

- There is the "polite" approach, which usually starts with a letter demanding that the racks be removed.
- There is the "aggressive" approach, which can consist of impounding a machine or, as was done to a New York Times newsrack in Lenox, Mass., tarring and feathering it.
- There is the "legislative" approach, which involves passing an ordinance.

When New York City threatened to pass a newsrack ordinance, newspapers there worked with the city's legal counsel to draw up, in the alternative, a contract with a "pretty reasonable set of terms." Darrow said "everything has been blissful ever since."

Similarly, an agreement was worked out between newspapers and officials in San Francisco when "very oppressive" legislation was under consideration there, said clinic moderator Alan Freeland of the San Francisco law firm of Cooper, White and Cooper.

Negotiation also was stressed by panelist Joseph D. Priory, vice president/legal for Philadelphia Newspapers Inc., who addressed the issue of municipalities' right to regulate newsracks on the basis of aesthetics.

Although courts have upheld this right, Priory said decisions in recent cases in California and New Jersey cause him to be optimistic that newspapers can find some legal support for opposing aesthetic regulations. However, he said, "We are looking to try to resolve these cases on a conciliatory basis wherever possible."

Virgil Fassio, publisher of the Seattle Post-Intelligencer, observed that in most towns, there is no newsrack ordinance or the prospect of enacting one.

Fassio said newsrack problems have occurred where publications sold through vending machines proliferated and where "the big guy from somewhere else has gone into small towns."

Although the clinic emphasized government regulation of newsracks on public property, attendees were told that probably the most controversial area of newsrack restriction today involves quasi-public or private places such as airports and shopping centers.

USA Today has gotten mixed results to its new offensive aimed at getting newsracks behind security checkpoints on airport concourses, reported Alice Neff Lucan, assistant general counsel of Gannett Co. It has gone to court to get its boxes placed at the Reno airport, she said.

Lucan also said that courts in five cases have ruled that a shopping center is private property and therefore not a place where people can assert their free-speech rights, but that courts in three other cases have recognized an analogy between a shopping center and a town square. ☐

CONVENTION REPORT

Seeing (and hearing) a new way to communicate

The most jarring message of the Convention was delivered by Robert W. Pittman, "the father of MTV." He used 10 flashy videos with a high-decibel sound track to demonstrate that young people today "process information and develop opinions in a new way."

"I'm making the case that an entirely new form of communication has emerged," he said. "We can debate the issue of whether it's good or bad. But I doubt many will question its existence."

The Music Television Network, which Pittman founded five years ago at the age of 27, now reaches 28 million homes via cable TV. And in introducing him to the General Session Breakfast, USA Today Publisher Cathleen Black said his rock-music brainchild "has changed the way a generation looks at things."

Black explained why Pittman, president and chief executive officer of MTV Networks Inc., was invited to address newspaper executives. "I believe he has a message for us. We should want to know what the youth of this country want in their media choices. After all," she said, "his viewers will be our readers."

Cathleen Black

In his speech, titled "Communicating with the TV Generation," Pittman differentiated between people who grew up with television in their homes and those of an older generation for whom TV came along later in their lives. He said there is a "striking dichotomy" between them.

"Pre-TV adults" require that information "take a narrative form, moving logically from one thing to the next"; conversely, "the TV generation processes information in a non-linear manner. Kids today can do their homework, watch TV, listen to the radio and talk on the telephone, all at the same time," he said.

At left: The famous hills of San Francisco become familiar terrain for Convention-goers as they move between the meeting sites.

Day 3 — April 23

- ✓ The music-video revolution
- ✓ Examining the Pacific Rim
- ✓ Lessons on libel

Indeed, The New York Times recently reported that "some people wouldn't even consider watching television without a newspaper to read at the same time," Pittman said. He called that "truly the mark of the TV generation."

The cable TV executive said two other major factors have affected the communications environment of today's young adults—an overload of information and growing constraints on leisure time.

The way to deal with this situation is to provide quick bursts of information that young people find "exciting and stimulating and even essential," Pittman said. Already doing so, he added, are motion pictures ("Flashdance"), network television ("Miami Vice") and even TV news ("short, to-the-point stories" with "headlines and fast-moving graphics").

The print media also have begun catering to the demands of the younger generation for quick, non-narrative communication, he said. Print advertising now seeks to create a mood and get people's attention "with arresting visuals that convey strong images in very few words."

Moreover, "many newspapers and magazines have responded effectively to our need to know more and to be able to find it quicker than ever before." He cited USA Today "as an example of the effective use of boxes, capsulized headings, bursts of color, dynamic graphics—all designed to grab our attention."

In the question-and-answer period that followed Pittman's rousing, early-morning presentation, one person in the audience asked, "Is all that high volume necessary?" Pittman cupped his hand to his ear and feigned a hearing impairment. ☐

At the age of 32, Pittman is known as "the father of MTV."

Understanding the impact of the Pacific Rim

The bulk of America's newspaper readers "are not now aware of the immensity of the Pacific Rim—nor the enormous role it is playing and will play in their lives," San Francisco Mayor Dianne Feinstein told publishers. Because of that, she said, "you have work to do."

In that fashion, the mayor introduced a General Session panel on the Pacific Rim, defined as the East Asian nations in proximity to the Pacific Ocean. The four speakers then provided some of the background Feinstein said readers need about the area's politics and its economic impact on the United States.

Also addressed was what Fred Zimmerman, editor and publisher of The Asian Wall Street Journal, called the "perils of publishing" in Asia.

Zimmerman said that although in many ways his work is "like publishing anywhere else," many Asian governments "view the concept of a free and open press as an eccentric Western import that is totally impractical, if not downright dangerous, to allow in their countries."

As examples of "censorship and general harassment" present in five of the 12 Asian cities where the Journal has staff members stationed, Zimmerman cited:

- Government officials' removing offending passages with scissors or covering them with black ink or white paper
- Threats of imprisonment for violation of government procedures for dissemination of information
- Expulsion of reporters for stories considered offensive to host governments.

Feinstein urges enhanced coverage.

"But we are not totally helpless in this situation," he added. "Interested in becoming increasingly strong and influential players on the world economic stage," many of the restrictive governments, "to varying degrees and at different times, recognize that [a free press] is something that they have to tolerate," Zimmerman said.

Speaking as a journalist who has lived in East Asia for a quarter of a century, Derek Davies, editor of The Far Eastern Economic Review, challenged the tenor of Richard M. Nixon's remarks to the publishers two days earlier.

Despite what Davies called "the impressive statesmanship" of the former President's speech, he objected to Nixon's "underlying, rather arrogant assumption that as long as three or four criteria are filled—that it is for the good of the people, that it is for the good of the American people and that it is viable—America has the right, even the responsibility, to move in and depose or destabilize other regimes."

Citing examples from the history of several Pacific Rim nations, Davies cautioned against the tendency of Westerners to draw conclusions based on their own experience. "We put labels on these countries and try and force complicated and ancient societies into neat little ideological pigeonholes marked 'democracy' or 'dictatorship' or 'anti-Soviet' or 'free market economy,' when most of them are none of these things."

Davies said that instead of imposing an ideological framework on these nations, the West needs to understand the pragmatic concerns of "some of the world's most ancient and highly evolved civilizations," whose traditions have shown "enormous resilience and stability" through the considerable strains of modernization.

"If we persist in viewing the region through our own ideologically tinted glasses," he said, "we will continue to get it wrong."

Jeffrey E. Garten, managing director of Shearson Lehman Brothers Inc., was called back to Hong Kong for an emergency, and his speech was read by panel moderator Ray Shaw, president of Dow Jones & Co. Garten's thesis was that trade relations between the United States and Japan are getting better, not worse. ☐

Coors urges war against health costs

Private industry is paying dearly for rising health-care costs, but it can take steps to do something about it, said William K. Coors, chairman of Adolph Coors Co.

Addressing the ANPA Annual Luncheon, Coors noted that there are three parties involved in health matters: the patient, the doctor and the "payer" for services—typically the employer. Coors said one strategy is for employers to "get into case management" of employees' medical situations.

William K. Coors

He said, for example, it is incumbent upon employers to keep close tabs on medical bills. The beer company executive told of a case in which a worker received an unreasonably high bill for hospital surgery. The firm found that extra charges had been imposed because of a hospital goof: The patient fell off the operating table and broke his hip.

Another major part of containing costs is "wellness," or, as Coors said, "the art of not becoming ill." As much as 95 percent of all illness is a result of "individual lifestyles," he continued.

The Coors company is one of a growing number of firms that has a "wellness program." Components of a such a program include proper diet ("Eat to live instead of live to eat."), aerobic exercise (even "when you don't feel like it") and "meditation" ("I hate to call it meditation, but that's what it is.").

Coors acknowledged that excessive consumption of alcohol can be harmful. However, he said it can be demonstrated clinically that people every day generate in their bodies an amount of alcohol equivalent to that in two cans of beer. "So you're all getting your little nip, whether you like it or not."

He drew chuckles from the audience in saying there is "mounting clinical evidence that a little bit [of alcohol daily] is good for you." He did not specify how much that is, although he said health risks "skyrocket" when more than six beers are consumed daily. ☐

Audience is the jury in mock libel trial

Did The Trumpet libel Charlene J. Wheelwright?

That was the question before the "jury" at the Convention's closing event, a mock libel trial.

Staged with chilling accuracy, the trial was designed "to show as graphically and realistically as possible the difficulties we can get into with the law," said moderator John V.R. Bull, assistant to the executive editor of The Philadelphia Inquirer.

Prior to calling court into session, Bull noted that the press lost 83 percent of libel cases that went to a jury between 1978 and 1982, and 63 percent between 1982 and 1984. He pointed out, however, that 90 percent were reversed on appeal "because these verdicts have no basis in law."

Told they would serve as the jury in this case, people in the audience were given copies of the hypothetical "story" at issue: a report that U.S. secretary of defense-designate Wheelwright, chairman of "United Motors," had authorized production of the "Hamster" despite warnings the car had a design defect that could kill nearly 100 people a year.

The audience also was given copies of the memorandum upon which the story was based, as well as the notes of the reporter who wrote the story.

The unrehearsed drama featured people acting in familiar roles. Real journalists played journalists: Jack Nelson, Washington bureau chief of the Los Angeles Times, the reporter; Thomas Winship, former editor of The Boston Globe, the editor; William Lambert, retired investigative reporter for the Philadelphia Inquirer, the expert witness.

Real lawyers played lawyers: David Boies of the New York firm of Cravath, Swaine & Moore, and Samuel E. Klein of the Philadelphia firm of Kohn, Savett, Mario & Graf, as the defense attorneys; and A. Charles Peruto of the Philadelphia firm of Peruto, Ryan and Vitullo, as the plaintiff's attorney.

And a real judge, Zerne P. Haning III, a justice on the California Court of Appeal, presided.

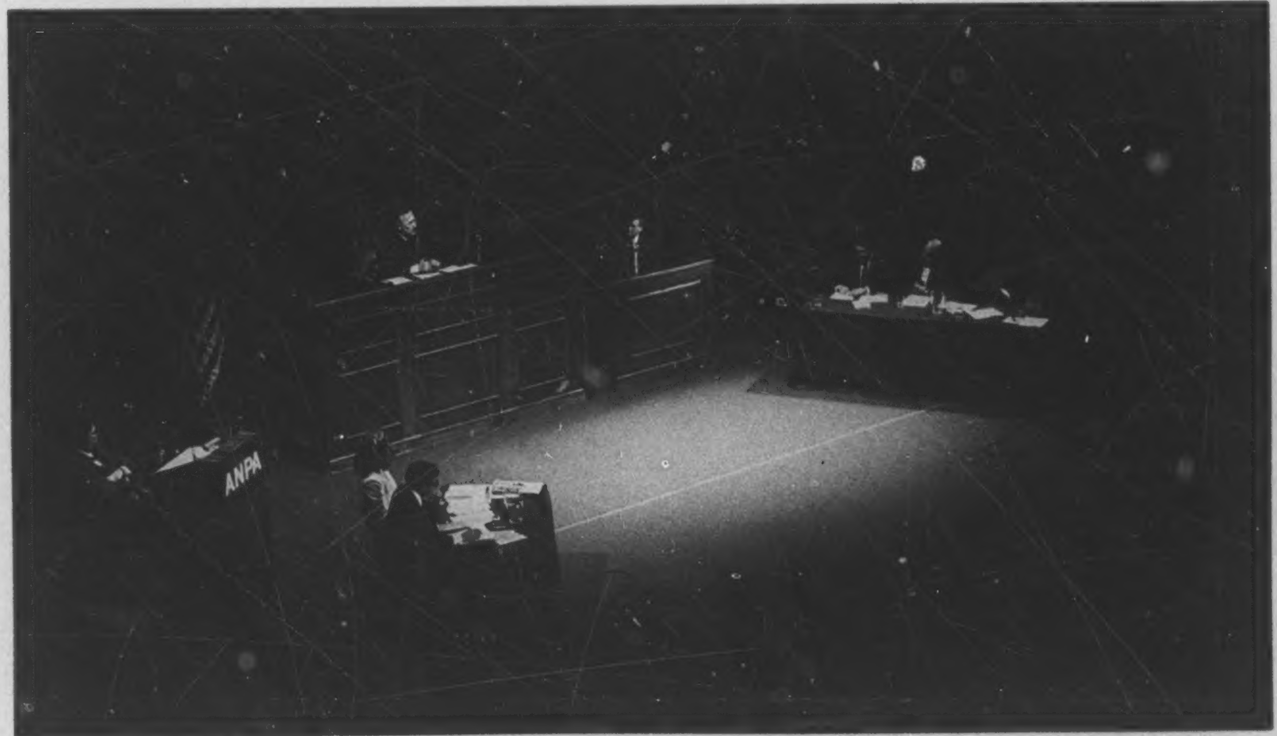
Wheelwright, the plaintiff, was portrayed by Mary E. Cunningham, president of Semper Enterprises Inc., Osterville, Mass. She had appeared at the last ANPA Convention in San Francisco, in 1982, shortly after quitting her job as an executive with the Bendix Corp. because of a controversy she said was aggravated by press coverage.

The two-hour trial was entertaining as well as thought-provoking. The audience erupted in laughter several times, once when attorney Peruto referred to the defendant newspaper as "The Strumpet."

People in the audience were forewarned that the case was heavily weighted against the press, in part so as to help them avoid similar pitfalls.

At the conclusion of the trial, although the "jury" was not asked to render a verdict, Haning said he suspected that if the same case were tried before a real jury, 7 or 8 times out of 10 it would award the plaintiff damages. Jurors will "forget about instructions that the court gives them," he said, and will "rule from their viscera."

Haning also said he hoped the press would not be "frightened" by the prospect of libel litigation. "Your function is so vital for those of us among the public that if you are deterred by the threat of a libel suit from carrying out your duties and responsibilities to keep the public informed, God help us, it's all over," the judge said. ☐



Nelson, playing the role of reporter, takes the stand to defend his story.

Convention sidelights

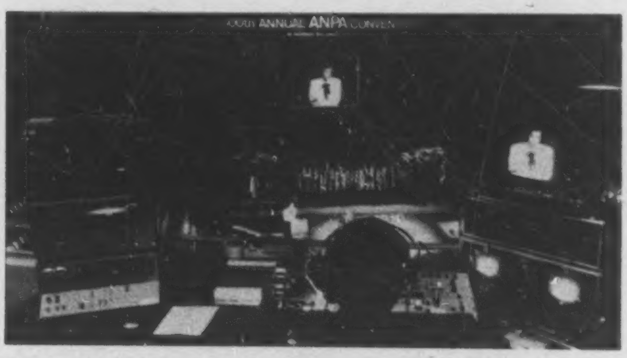
Convention Arrangements Committee Chairman Joseph F. Barletta (right) of the San Francisco Newspaper Agency shifted duties to become chairman of the ANPA Human Resources Committee. He succeeded Keith Fuller of McClatchy Newspapers, Sacramento, who shares notes.

High-tech registration

For the first time, the Convention entered the computer age, keeping track of registration. A laser jet printer spat out badges on site, making latecomers indistinguishable from preregistrants.

Expert help for the asking

Another innovation was the series of "expert centers" set up on the weekend preceding the Convention. They were staffed with experienced personnel and prepared for everything but one eventuality—the glorious, fog-free weather. "If you were a publisher, would you be inside?" asked one lonely "expert." But despite the tourist attractions of San Francisco, some did seek advice, with the technology booth attracting the most business.



Speakers in the Masonic Auditorium were photographed by a video camera that projected the images on a screen to the rear of the stage.

Weathering the Convention

Mindful that conventioneers would be on the move, and taking no chances that rain would spoil the proceedings, the San Francisco Examiner provided each registrant with an umbrella. At the Keynote Breakfast, Convention Arrangements Committee Chairman Joseph F. Barletta, president of the San Francisco Newspaper Agency, quipped that "if the weather holds, (Examiner Publisher) Will Hearst and I will be around Wednesday" to collect them. After a momentary rain shower on Tuesday, one newspaper executive was heard to remark: "Looks like we don't have to give back the umbrellas."

Robert M. White II (left) of the Mexico (Mo.) Ledger, the oldest of the 100 journalist candidates for space travel, greets Alan B. Shepard, the first American in space. At center is Alex Roland of Duke University.

A musical treat

The traditional Tuesday night dinner/dance was replaced with a concert, sponsored by The Hearst Corp. and its San Francisco Examiner, featuring Tony Bennett and Maureen McGovern.

Photographer revisits AP

Attending the Associated Press Annual Meeting was former AP photographer Joe Rosenthal, who took the famous 1945 photo of U.S. Marines raising the American flag on Mount Suribachi on the island of Iwo Jima.

Tapes available

Cassette tape recordings are available for all Convention sessions except the address of Thomas J. Peters. Prices are $8 per cassette or $213 for a full set of 28 tapes. There is a $1 handling charge for the first cassette, plus 50 cents for each additional tape, up to a maximum of $5. Contact ACTS Inc., 1025 E. Clayton Road, Ballwin, Mo. 63011; (314) 394-0611. ☐

Late news

A libel victory for the press

The U.S. Supreme Court ruled April 21 that a private-figure plaintiff who sues the news media for libel has the burden of proving falsity when the statement at issue in the case is a matter of public concern. The 5-4 decision came in the case *Philadelphia Newspapers Inc. v. Hepps* [presstime, Oct. 1985, p. 42].

ANPA may file brief in espionage case

The ANPA Board of Directors April 18 authorized the drafting of a friend-of-the-court brief for filing in the appeal of the espionage conviction of Samuel L. Morison [presstime, Nov. 1985, p. 42].

Heminger elected Foundation chairman

Edwin L. Heminger of The Courier, Findlay, Ohio, was elected chairman and president of ANPA Foundation at a meeting of the Foundation's Board of Trustees. Charles T. Brumback of Chicago Tribune Co. was elected vice chairman. Their terms are for one year.

ANPA's three new directors were elected as Foundation trustees; 15 other directors were re-elected as trustees. The terms of four trustees did not expire.

Postal Service scrutinizes ad-stamp venture

The plan to place advertisements around postal stamps has received less than a total blessing from the U.S. Postal Service. USPS announced April 25 that it "has neither endorsed the use of advertising decals bearing postage stamps nor ruled that their production and distribution is (sic) legal." (See earlier story, p. 70.)

Second-class TMC appeal moved

An appeals court judge April 25 granted the Postal Service a change of venue in ANPA's appeal of an adverse postal decision regarding the second-class mailing of total-market-coverage publications. The case will be heard by the 4th U.S. Circuit Court of Appeals instead of the 5th Circuit where ANPA had sought the hearing. (See earlier story, p. 64.)

Offer made for Advo parent firm

Macfadden Holdings Inc., publisher of numerous magazines, April 22 offered to buy John Blair & Co. for $287.5 million. Macfadden said if the offer is accepted, it plans to sell Blair's direct-mail subsidiary, Advo-System Inc., to another party. Blair officials in late April had no comment on Macfadden's purchase proposal.

Convention speeches available from the ANPA Public Affairs Department

Monday, April 21

ANPA Keynote Breakfast

- **Keynote address by ANPA Chairman and President Richard J. V. Johnson**, president, Houston Chronicle

- **Remarks of Derek Davies**, editor, The Far Eastern Economic Review, Hong Kong

REGULATIONS

ANPA is 'frequency coordinator' for Relay Press Radio Service

The Federal Communications Commission April 3 certified ANPA as the "frequency coordinator" for the Relay Press Radio Service—a block of two-way radio frequencies set aside for use by newspapers and wire services.

The certification was part of a revision of the rules governing licensing of mobile radio services that are land-based.

In the past, not all mobile radio services had coordinators to recommend appropriate frequencies to license applicants, and applicants could deal directly with the FCC. Now, the services must have a coordinator, who cannot be circumvented.

Relay Press was a service without a coordinator, and ANPA sought the certification [**presstime**, April 1985, p. 35].

For newspapers, this means that beginning next October, they will have to file applications for radio licenses with ANPA instead of with the FCC.

For ANPA, this means the Association will be responsible for reviewing applications for new licenses or modifications to existing licenses, determining the availability of frequencies, and recommending one for a user that will not cause interference with other users. The FCC still will decide whether to grant the license.

ANPA also will handle post-licensing conflicts over assigned frequencies and requests for sharing frequencies by other types of users.

According to Kathleen Criner, ANPA director/telecommunications affairs, ANPA is forming a committee to advise on how best to fulfill the new responsibilities. The committee will be made up of representatives of newspapers that use the Relay Press Service and members of the ANPA Telecommunications Committee, she said.

Among other things, ANPA will have to establish a computer database of Relay Press licensees, Criner added. An estimated 1,100 newspapers have licenses in the service, used for two-way conversations between the office and staff members in the field.

In a related development, President Reagan April 7 signed a bill that creates a schedule of fees for many of the services performed by the FCC, including the licensing of land mobile radio stations. The fee for obtaining a license will be $30. Currently, there is no fee.

The fees will take effect as soon as the commission establishes rules for collecting them. ☐

Newspapers should be in 'hazard' compliance

The federal "hazard communication" standard takes effect for newspapers May 25. By this time, "they should have their house in order," said George Cashau, ANPA director/technical research.

Among other things, the Occupational Safety and Health Administration standard requires that manufacturing employers (such as newspapers) assure that hazard-warning labels remain on chemical product containers, compile "material safety data sheets" and train employees on safe use of hazardous chemicals in the workplace [**presstime**, Dec. 1985, p. 37].

Newspapers should be reminded that employee training must be *completed* by May 25, Cashau said. ANPA staff members are available to field last-minute questions about training or any other aspect of the standard.

One question being asked is whether there are any "nice, neat packaged (training) programs to get into compliance without any effort," according to Richard W. Neergaard, ANPA manager/environmental services. The answer, he said, is "no." Materials are available that will do segments of the training, but "there is still going to be the need for newspapers to customize a program for their employees and situations."

Another question concerns the availability of training materials in Spanish. Neergaard said that such materials are available and that he can provide information about them. Although OSHA does not require newspapers to obtain material safety data sheets in languages other than English, newspapers are required to train non-English-speaking employees about any hazards related to their jobs, he added.

The standard took effect for chemical manufacturers Nov. 25. By April, federal inspectors had found 156 alleged violations, according to a spokesman for OSHA. ☐

IRS backs down on retroactive changes to stock taxation

Following protests by ANPA and other media organizations, the Internal Revenue Service April 8 decided not to apply retroactively controversial changes in the rules governing taxation of stock acquisitions by corporations.

In comments to the IRS March 30, the media groups had argued that making the changes retroactive to Aug. 31, 1982, constituted an "impermissible abuse" of the secretary of the treasury's discretion to apply regulations retroactively and violated the Administrative Procedure Act.

The IRS subsequently said the changes will be effective only for acquisitions made after Jan. 30, 1986.

The changes were issued Jan. 29 as temporary regulations with the proposal that they be made permanent. The regulations prohibit a company that paid more than "fair market" value for a stock acquisition from depreciating a portion of the excess, as is allowed for direct-asset purchases.

ANPA and other media groups took issue not only with the timing of the changes but also with their substance.

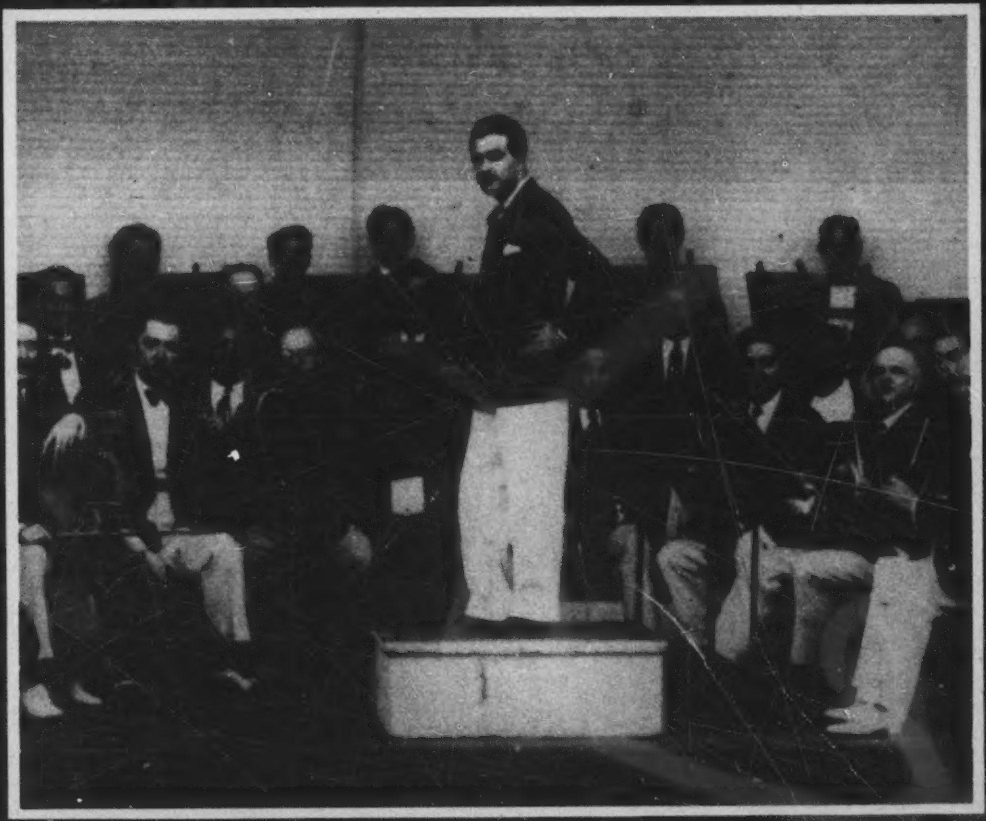
"The action of the IRS would mean that increased taxes would be collected for the 'premium' value in a purchase—that portion of the purchase price not directly attributable to tangible property," explained Martin Casey, ANPA manager/government and international affairs. "In the case of media companies that seem attractive to a number of competitive buyers, this 'premium' can be high." ☐

A press victory

"Open government 1, closed government 0." ANPA Assistant General Counsel Tonda F. Rush said that was the score when the Tennessee Valley Authority April 1 withdrew a proposal to keep some of its records secret.

ANPA and the American Society of Newspaper Editors had opposed the TVA's plan to withhold routinely the identities of people who comment on its activities—including matters of nuclear plant safety—from disclosure under the Freedom of Information Act.

Before Americans listened to their Pops.



The Boston Pops. They were a small group of musicians playing second fiddle to The Symphony. Then came Fiedler, the man who would lead them into the public eye. And ear.

But it was years before The Pops popped up that The Boston Globe started conducting business. Internationally and locally. From London's Old Vic to Boston's Old Howard. Covering opera, symphony, the blues and all that jazz. If it was opening on stage, you could find it by opening the Globe.

Which is why long before people listened to The Pops, they listened to the Globe.

The Boston Globe

REGULATORY NOTES

- Beginning Sept. 22, companies that monthly generate 220-2,200 pounds of **hazardous waste,** which includes waste pressroom solvents, will be affected by new regulations.

Such firms must obtain a U.S. Environmental Protection Agency identification number, store hazardous waste on-site in compliance with EPA storage standards, deal only with transporters and facilities with an EPA identification number, and meet other requirements.

Heretofore, these small-quantity generators have been exempted from most EPA hazardous waste regulations [presstime, Oct. 1985, p. 41].

The new regulations were issued March 24.

- President Reagan has nominated **Patricia Diaz Dennis** to a seat on the Federal Communications Commission. Dennis, a Democrat, currently is a member of the National Labor Relations Board.

She would fill the unexpired term of former Commissioner Henry M. Rivera, which is scheduled to end June 30, 1987.

COURTS

COURT BRIEFS

- The Arkansas Gazette April 14 filed a motion with U.S. District Judge William R. Overton asking him to set aside a jury verdict and his judgment that the Arkansas Democrat was not guilty of violating **federal and state antitrust laws.**

In the alternative, the Gazette asked for a new trial.

The Gazette had filed the suit against its Little Rock rival in 1984, accusing the Democrat of attempting to monopolize the market [presstime, Jan. 1985, p. 9].

- An antitrust suit filed against the Los Angeles Times by a company that conducts high-tech job fairs has been dismissed by a federal judge.

Westech Expo-Corp. of Santa Clara, Calif., sued in U.S. District Court over the newspaper's **refusal to carry** the company's preprinted recruitment advertising [presstime, Dec. 1985, p. 38]. After losing its bid for a preliminary injunction, Westech sought dismissal of the case.

- The Ohio Supreme Court March 24 dismissed a suit against Dow Jones & Co. brought by an investor who alleged he lost money in an investment deal because of **incorrect information** printed in The Wall Street Journal. The ruling overturned an appeals court decision that reinstated Columbus investor Phil Gutter's suit [presstime, July 1985, p. 54].

- U.S. District Judge Francis J. Boyle April 2 fined The Providence Journal Co. $100,000 and sentenced Vice President/Executive Editor Charles McC. Hauser to 18 months probation and ordered him to perform 200 hours of community service during that period for violating a **gag order** [presstime, April 1986, p. 48].

The sentences were stayed pending the outcome of the newspaper company's appeal of its contempt of court citation to the 1st U.S. Circuit Court of Appeals.

- Three reporters for McClatchy Newspapers have filed a $6-million **countersuit** against a real estate developer who brought a libel suit against them and McClatchy.

Reporters Denny Walsh, Jerry Bier and Jimmy McClung also named lawyers and investigators for Edward M. Kashian as defendants in their suit, which alleges conspiracy, abuse of process, malicious prosecution, invasion of privacy and negligence.

Kashian's suit was settled out of court with no money paid.

- The full 8th U.S. Circuit Court of Appeals April 10 upheld a trial court's dismissal of South Dakota Gov. William J. Janklow's **libel suit** against Newsweek magazine. Last year, a three-judge panel of the court ruled that the case should be reinstated.

- ANPA will cosponsor a **libel law conference** June 5-6 at the Law School of the College of William and Mary in Williamsburg, Va. The program, "Libel Law and the Press: Myth and Reality," will examine findings of the Iowa Libel Research Project [presstime, April 1986, p. 36]. Cosponsor is the Institute of Bill of Rights Law.

- At its March 20 meeting in New York City, the ANPA Legal Affairs Committee formed **two task forces.** One will examine proposals to change libel law, including more general tort reform efforts. The other will develop a model procedure for newspapers in handling editorial complaints.

LEGISLATION

ANPA, others back tax deductibility for tobacco ads

Six advertising and media organizations, including ANPA, have sent a letter to members of the Senate Finance Committee objecting to legislation to disallow business tax deductions for tobacco advertising expenses. The objections are on constitutional and other grounds.

The groups noted there is "absolutely no basis in precedent for denying tax deductibility of advertising expenses for one lawful product while permitting it for all other products that can legally be sold."

They argued that denying deductibility for tobacco advertising would have the same impact as a direct tax on tobacco advertising. "The United States Supreme Court has stated clearly that discriminatory taxation of speech is unconstitutional," they said.

They also contended the legislation "could establish a dangerous precedent."

The bill, S 1950, was introduced by Sen. Bill Bradley (D-N.J.), a member of the Finance Committee [presstime, Jan. 1986, p. 34].

Signing the letter with ANPA were the American Advertising Federation, American Association of Advertising Agencies, Association of National Advertisers, Magazine Publishers Association and Outdoor Advertising Association of America. □

FOIA 'tribunal' considered

Should an "administrative tribunal" be established to resolve Freedom of Information Act disputes?

The question has been posed by the Administrative Conference of the United States, an independent federal agency that makes recommendations to Congress and other federal agencies for improvements in administrative procedures.

A report submitted to the conference concluded that such a body could probably handle FOIA disputes with greater speed, cost-effectiveness and specialized expertise than the federal courts, which currently hear challenges to agency decisions to deny FOIA requests.

The conference's Committee on Judicial Review will consider public comments before making a recommendation to the full conference. □

In-county rates go down, but other costs go up

After sustaining two increases this year in second-class, in-county postage rates, newspapers got some good news April 20—a slight decrease in those rates.

But the good news was offset for some papers by elimination of subsidies in the "limited circulation" rate for mailings of fewer than 5,000 copies outside the county of publication. Now, all newspapers mailed outside the county must pay unsubsidized rates.

Tonda F. Rush, ANPA assistant general counsel, said the change in limited circulation would hit hardest those newspapers distributing by mail over a several-county area and those with many long-distance, out-of-state subscriptions.

The Postal Service Board of Governors made the changes in response to provisions of the Consolidated Omnibus Budget Reconciliation Act of 1985, a deficit-reduction bill that President Reagan signed April 7. Elimination of the limited-circulation subsidy will save about $12 million in subsidies between April 20 and the end of the year, a Postal Service spokesman said. The amount is being redistributed to in-county mail; hence, the lower rates for that category.

The new law also revises the procedure for figuring how many sample copies of publications may be mailed in-county. Previously, that allowance was based on the weight of all copies mailed within the county. Now, the allowance is based on the number of in-county subscriber copies.

ANPA in late April was analyzing the impact of the changes on newspapers.

Also being examined were possible approaches newspapers might take in the pricing of mail subscriptions out of their primary circulation areas. Many newspapers currently have a standard charge for those subscriptions. Rush said one approach newspapers might consider is to set a flat price for the newspaper and then add the cost of postage, whatever that might be.

Changes for in-county rates are as follows: The per-pound rate decreased 2.2 percent from 9.3 to 9.1 cents; the per-piece, carrier-route-presort rate went down 3.1 percent from 3.2 to 3.1 cents; and the basic per-piece rate dropped 2 percent, from 5 to 4.9 cents [**presstime**, April 1986, p. 50]. ☐

Third-class size restrictions at issue

The size of allowable third-class mail pieces in the carrier-route presort category should be enlarged slightly to accommodate newspapers' total-market-coverage publications, ANPA once again has told the U.S. Postal Service.

The Association for nearly four years has sought changes in the size restrictions, and its latest comments were filed March 26 after postal officials recently said they would take another look at the situation.

ANPA said newspapers need the restrictions changed from a format of 11½ by 13½ by 3/4 inches to 12 by 15 by 3/4 inches because of production requirements. "The change is essential because newspaper printing presses are unable to produce a newspaper sheet that, half-folded as newspapers generally are, fits the requisite proportions," ANPA said.

ANPA also told USPS:

- The change would end a restriction that creates "an advantage for newspapers' third-class competitors without any sound rationale for doing so."
- The change "would not create new operational difficulties" for USPS. ☐

USPS asks relocation of 2nd-class TMC case

ANPA has objected to a motion to move its appeal of the second-class, total-market-coverage case from a federal court in New Orleans to one in Richmond, Va., or Washington, D.C.

ANPA filed its suit in the 5th U.S. Circuit Court of Appeals, New Orleans, against a decision of the U.S. Postal Service governors that effectively disallows second-class TMC programs [**presstime**, April 1986, p. 50].

USPS, asking for a change of venue, said ANPA must file its suit in either of those two other courts because the Association's principal office is in Virginia. The Postal Service also said it appears that ANPA's choice of the 5th Circuit was "a simple exercise in forum shopping."

ANPA said the law clearly allows ANPA to file an appeal in any U.S. Circuit Court of Appeal. ☐

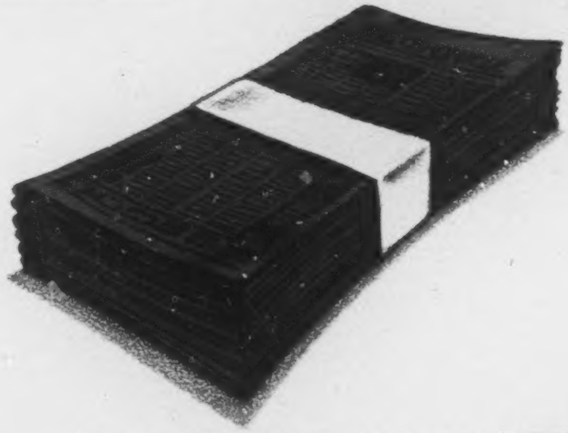
WHAT'S BLACK AND WHITE AND GREEN ALL OVER?



A newspaper that's benefited from the libel and privacy seminars of Mutual Insurance.

Preventing libel and privacy suits can save a newspaper a lot of money, but keeping up with the rapid changes in the law is a difficult task. That's why the reporters and editors of so many newspapers attend "How To Prevent Libel and Privacy Suits," a seminar offered by The Mutual Insurance Company of Hamilton, Bermuda.

Offered in half-day and full-day sessions, this seminar presents the facts behind recent cases affecting the current status of libel and privacy law, using actual stories, columns, cartoons, and photographs to illustrate important concepts. Seminar leader Barbara Dill is an experienced professional in the field of libel and privacy law, whose incisive commentary and exciting classroom method have been hailed by editors, reporters, and photographers across the country.

Offered to publications insured by Mutual as well as to press associations, this seminar gives journalists the insight they need to do their jobs with a minimum of risk. For more information on this unique opportunity, contact Barbara Dill at (305) 576-8651.

Hello Yellow, Telequest dropped at Justice Department request

Two subsidiaries of Bell regional holding companies have discontinued directory services—known as Hello Yellow and Telequest Service—at the request of the Department of Justice.

ANPA, in comments filed with the department in March, said the services appeared to be electronic Yellow Pages. Electronic information services are off limits to the seven Bell regionals under terms of the consent decree that governed the divestiture of AT&T [presstime, April 1986, p. 55].

Hello Yellow was run by NYNEX Information Resources Inc., an unregulated subsidiary of the regional NYNEX Corp. Telequest was operated by Pacific Northwest Bell, a regulated telephone subsidiary owned by US West Inc.

NYNEX closed Hello Yellow March 31, the day the company received a letter from the Justice Department saying the company appeared to be "offering an information service without having first obtained a waiver [of the decree]," the NYNEX subsidiary said.

NYNEX had said earlier that Hello Yellow was not an electronic information service. In announcing the closing, the company said it still believes that to be the case.

NYNEX is considering its response to the Justice Department, according to Kevin T. Flanagan, a spokesman for the NYNEX subsidiary.

Flanagan said the company's options included changing Hello Yellow in ways that the Justice Department approves or applying for a line-of-business waiver.

A Pacific Bell spokeswoman said Telequest was closed at midnight April 6 to comply with the government's request. She declined further comment.

Callers to Telequest and Hello Yellow could describe the service wanted, whereupon an operator provided appropriate names and phone numbers, and advertising messages. □

Company's service links Yellow Pages, coupons, recorded messages

A new company in Needham, Mass., plans to offer advertisers a package that ties together Yellow Page directories, recorded messages and money-off coupons.

InfoPlus Inc. expects to inaugurate the service in Boston in November, said Phil Apanovitch, InfoPlus vice president of marketing and sales.

The purchase of a display advertisement in a directory called Yellow Pages Plus will carry with it a free "talking ad." Directory ads will include codes that callers to a central number can punch in to hear a recording detailing the service or product offered.

The directory also will contain blank, money-off coupons with spaces for a merchant's name, the offer and dates it is available. Consumers—after listening to a recording telling about a special offer—can fill in the blanks and then use the coupon, Apanovitch said. In addition the directory will include more traditional coupons containing the merchant's name and the offer.

InfoPlus recently began selling ads and has signed contracts with about 450 customers, Apanovitch said. It already is looking ahead to publishing seven more directories elsewhere in New England next year and adding weather, sports and other news updates to the recorded messages, Apanovitch said.

If InfoPlus succeeds in entering the directory-publishing business, it will find plenty of company. Several of the seven Bell regional phone companies emerging from the AT&T breakup are moving into each other's territories peddling directories in the search for advertising revenue [presstime, March 1986, p. 16]. □

Cox plans to sell its cellular unit

Cox Enterprises Inc., citing its desire to focus on its "core businesses" of newspapers, broadcasting and cable television, announced April 8 that it plans to sell its mobile communications concern, CyberTel Corp. of St. Louis, which offers cellular telephone and radio paging service.

CyberTel began selling its cellular service in 1984, and last year subscriber growth allowed it to break even, not counting non-cash depreciation expense, a Cox spokesman said. □

States move to restrict telemarketing

Bills that would restrict telemarketing are cropping up increasingly in state legislatures. ANPA and other press associations are monitoring the legislation for any possible impact on newspapers' current or future telephone sales activities.

The most common legislative proposals have been for so-called "asterisk" programs. Typically, these would ban unsolicited telephone sales calls to people who have entered their names in a special listing in a phone directory indicating they do not want to receive such calls.

In April, asterisk bills were pending in at least 12 states, according to the Direct Marketing Association, which opposes such legislation, but no such bills have ever been enacted.

In the latest activity on such legislation, the Florida Press Association testified in April before a Florida House subcommittee against an asterisk bill. The measure also would ban sales calls between 6 p.m. and 9 a.m. and prohibit calls to consumers who have unlisted phone numbers. Violators could be fined up to $10,000.

FPA Executive Director Richard D. Shelton said the bill is "unfair and discriminatory" because it applies only to calls pertaining to sales of "tangible personal property" and not to calls concerning such things as insurance, real estate investment programs and auto clubs. The association also maintained that the restriction on calling hours is unconstitutional.

Compliance with the provisions limiting calls to certain consumers would be extremely difficult, Shelton added, because the transient nature of Florida's population makes phone books outdated by the time they come out.

While asterisk bills remain in limbo, several states have enacted restrictions on the use of devices that automatically dial numbers and give a recorded message. Washington state banned their use for commercial solicitation this year. It also enacted a law requiring telephone solicitors to identify themselves and the nature of their call within the first 30 seconds, and to remove names from a telephone calling list if parties indicate they do not want to receive such calls in the future.

Allied Daily Newspapers monitored the bills but did not oppose them, said Executive Director Paul R. Conard. □

California Superintendent of Public Instruction Bill Honig delivers the keynote address at the ANPA Foundation Newspaper in Education Conference in Los Angeles. The March 19-21 conference drew 165 registrants.

Foundation/Quill and Scroll winners named

Winners have been announced in the annual ANPA Foundation/Quill and Scroll National Writing and Photo Contest.

The contest recognizes excellence in high school journalism. This year's competition attracted 4,141 entries, the most in the program's history. The contest began in 1963.

Winners are:

- **Advertisement:** David Levine, Clearwater (Fla.) High School
- **Editorial:** Russell Wait, Roger Bacon High School, St. Bernard, Ohio
- **Editorial cartoon:** David Luebke, Millard South High School, Omaha
- **Feature story:** Joshua Barkan, West High School, Iowa City
- **In-depth reporting/individual:** Chris Keegan, Las Lomas High School, Walnut Creek, Calif.
- **In-depth reporting/team:** Glenbard East Echo staff, Glenbard East High School, Lombard, Ill.
- **News story:** Steve Brusk, Reynoldsburg (Ohio) High School
- **Photo/news-feature:** Michael Campbell, Burlington (Iowa) Community High School
- **Photo/sports:** Ken Schaefer, Kirkwood (Mo.) High School
- **Sports story:** Ramon Carpio, Helix High School, La Mesa, Calif.

The winners and their schools receive plaques commemorating the achievement. This year, each winner also will receive an electronic typewriter, courtesy of Smith Corona. ☐

First Midwest NIE instructor training session June 9-12

The Newspaper in Education Instructor Training Seminar at St. Charles, Ill., June 9-12 will be the first sponsored by ANPA Foundation in the Midwest.

The seminar is designed to help newspaper NIE personnel run workshops for teachers on how to use the newspaper as a classroom teaching tool.

It will be conducted by Edward deRoche, dean of the School of Education at the University of San Diego, and Linda Skover, assistant director of ANPA Foundation.

The $350 registration fee includes meals and transportation between Chicago's O'Hare Airport and the seminar location, Pheasant Run resort. For more information, contact Rose Ann Stormer of the Foundation, The Newspaper Center, Reston, Va. ☐

New data for retailers advocated

With a record crowd of more than 150 newspaper researchers at its semiannual conference, the Newspaper Research Council heard a retailer and researchers describe the kinds of research that could increase retail advertising.

Retailers are shifting from a focus on pushing merchandise to developing a marketing strategy, said Kassie Davis, vice president/marketing for the Chicago-based department store, Marshall Field's. Newspapers, as the dominant medium in retail advertising, can help stores develop such a strategy by providing marketing, as well as readership data, she told NRC's spring conference, held in Scottsdale, Ariz., April 13-16.

"A vast reordering of priorities is now taking place in retailing," agreed Melissa P. Cook, project director in the research services division of the Chicago Tribune's marketing department. As retailers cut back or discontinue their unprofitable outlets or product lines, they are also "seeking specialty niches, making the concept of market segmentation increasingly important."

What this means for newspapers is the need to move beyond the presentation of readership demographics to potential advertisers to the measurement of shopping attitudes and behavior among newspaper readers, as well as their use of specific stores and shopping areas, Cook said.

Beyond the efforts of individual newspapers to supply such data, the industry is moving toward standardized formats to make retail research more useful to advertisers.

Robert C. Momsen, who has made the move to such standardization a priority of his term as president of the International Newspaper Advertising and Marketing Executives [presstime, March 1986, p. 53], told the group that NRC and INAME committees are close to working out final details on retail research guidelines with the National Retail Merchants Association. They will be announced at an NRMA meeting in San Diego in mid-May, said Momsen, vice president/marketing for the St. Paul Pioneer Press and Dispatch.

Such guidelines for standardized research are also a priority of the Newspaper Advertising Bureau's Future of Advertising Committee. (See story p. 71.) ☐

Editors home in on credibility

Most of the published headlines went to Dr. Ruth, Ronald Reagan and Lee Iacocca, but during the April convention of the American Society of Newspaper Editors, "credibility" remained a quiet focus of many editors' attention.

Two early-morning workshops aired successful efforts by a variety of newspapers to enhance credibility, and a booklet of "206 practical approaches to heighten reader trust" prepared by ASNE's Credibility Committee was distributed to the approximately 550 editors attending.

Defining credibility as "much more than simply 'believability,'" committee chairman David Lawrence Jr., stressed that the word "encompasses our readers' sense of how much we can be trusted, how fair we are, how willing we are to acknowledge our frailties, how well and how often we explain ourselves."

Using "believability" as the main criteria for "credibility," a Gallup study for The Times Mirror Co. concluded in January that there was "no credibility crisis in the nation's media," while earlier studies by ASNE and Associated Press Managing Editors (which defined credibility more broadly) concluded that there was room for concern [presstime, Feb. 1986, p. 44].

In the booklet and at the workshops, editors described their individual efforts to enhance their papers' credibility. At the workshops, Lawrence, publisher and chairman of the Detroit Free Press, set the tone by offering his definition of the term.

"A newspaper of high credibility," he said, "is a newspaper packed with hard news and information, and authoritatively done; a newspaper that places a premium on fairness and compassion; a newspaper that aggressively goes after the truth; a newspaper that aims to be complete, realizing that reader needs vary greatly; a newspaper with a diverse staff and, hence, perspective; a newspaper willing to spend time and space to explain itself; and finally, a newspaper that is honestly open to readers."

THREE BLIND MICE. Joining credibility as problems that should be of concern to all editors are minority hiring and promoting (see story, p. 88) and journalism education—the "three blind mice of journ[illegible]ism," in the words of outgoing ASNE President Robert P. Clark, vice president/news for Harte-Hanks Newspapers.

"If we as editors are blind to (the three problems), we are in trouble with our readers—with the public," Clark said in his president's address. "And another way of saying we are in trouble is that we may get our tails cut off."

Michael G. Gartner

By reports from its various committees, the editors were informed of the activity and status of those "three blind mice" issues and several others. They included:

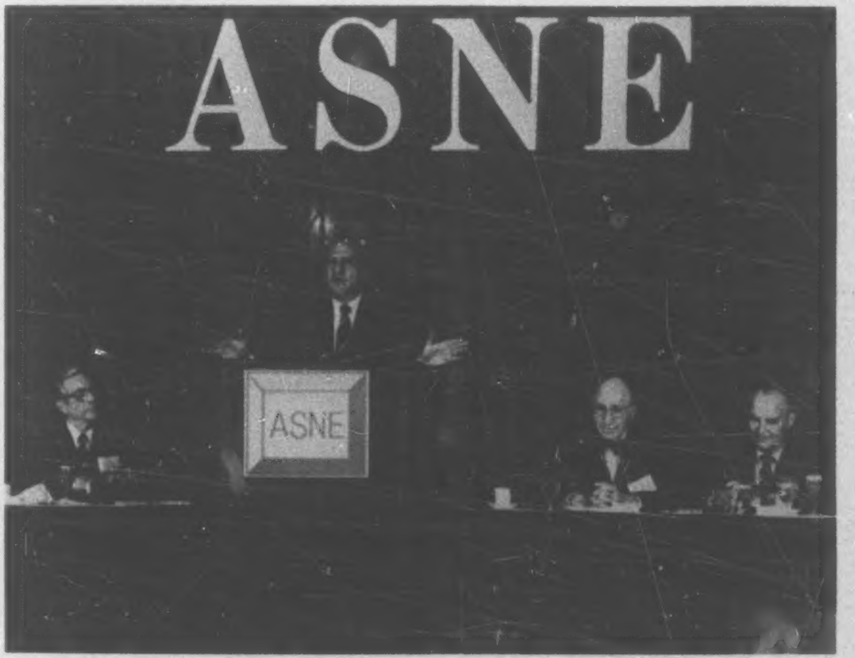
- **Education.** At journalism schools, newspapers suffer from a "poor image," warned Education Committee Chairman John Seigenthaler. Many students "consider starting salaries too low, long-term career opportunities limited, and chances for advancement marginal." As a result, many are opting for more immediately lucrative majors, such as public relations and advertising, he said.

To strengthen the preparation of journalists, editors should support a strong commitment to liberal arts education, said Seigenthaler, editor of the Nashville Tennessean and editorial director of USA Today. Specifically, his committee recommended that ASNE support the requirement of 90-hours of "non-journalism courses" suggested by a committee of the Accrediting Council on Education in Journalism and Mass Communication.

- **Salaries.** The ASNE salary survey showed that while entry-level salaries at smaller papers are low, editorial pay scales are substantially higher at larger papers.

Human Resources Committee chairman Susan Miller reported beginning reporters' salaries are $1,500 to $4,000 below those of beginning schoolteachers in communities with papers of less than 50,000 circulation, about at the same level at papers of 50,000 to 100,000 circulation, and exceed those of schoolteachers in communities with larger papers. The same pattern exists when the editors' salaries are compared with those of school superintendents, said Miller, director of editorial development for Scripps Howard Newspapers.

- **Minority readership.** The main conclusion of ASNE's Readership and Re-



Lee A. Iacocca addresses ASNE as listening (from left) are outgoing President Clark and former ASNE Presidents Norman E. Isaacs and Howard H (Tim) Hays.

search Committee's report on minority readership is that "newspaper editors should not let myths about minority disinterest in newspapers lead them in the wrong direction."

Summarizing existing research rather than initiating new studies, the committee report highlighted prominent researchers' conclusions, including: that income and education are greater indicators of newspaper readership than is race; that "content interests of minorities and non-minorities are more alike than they are different"; and that it is extremely difficult to generalize about Hispanic readership because groups differ, often according to their country of origin.

The committee noted that the growing percentage of minorities in the U.S. population makes understanding minority readership increasingly important for newspapers.

- **Ethics.** In a recent survey, the ASNE Ethics Committee reported, "more than one out of every three editors reported at least one ethics violation occurred at their papers in the past three years," about one sixth said "at least one newsroom employee had been dismissed because of ethics violations," and another 11 percent said at least one had been suspended for ethics violations during the same period.

Of the editors responding, 37 percent said they had a written code of ethics, and 54 percent said they did not. Others were either preparing codes or did not answer the question. Ethics violations of most concern to these editors were: Plagiarism, use of unpublished information for financial gain and discounts on personal purchases.

NEW OFFICERS. ASNE's new president is Michael G. Gartner, a general news executive with Gannett Co. and chairman, editorial director and co-owner of Des Moines-based Midwest Newspapers. He was elected at the annual business meeting for a one-year term.

The new vice president is Katherine Fanning, editor of The Christian Science Monitor; secretary, Edward R. Cony, associate editor of The Wall Street Journal; and treasurer, Loren F. Ghiglione, editor and publisher of The Bristol (Conn.) Press.

Newly elected members of the ASNE board are: For a three-year term, Jo-Ann Huff Albers, editor and publisher of the Chambersburg (Pa.) Public Opinion; and for one-year terms, Larry Allison, editor and senior vice president of The Press-Telegram in Long Beach, Calif., and John R. Finnegan, editor and vice president of the St. Paul Pioneer Press and Dispatch.

—Marcia Ruth

Pentagon activates press pool to cover Libya bombing

An eight-person press pool boarded the aircraft carrier USS America in the Mediterranean Sea April 14 shortly after attack aircraft from that ship and the carrier USS Coral Sea attacked targets in the seaport city of Benghazi, Libya.

At the same time, other fighter-bombers from U.S. bases in Great Britain hit targets in Tripoli.

Correspondents from The New York Times and Associated Press were included in the pool aboard the America. The pool was still aboard April 15.

"In general, (the pool) worked well," said AP Washington Bureau Chief Charles Lewis. The wire representative was Samuel Koo, who is based in Rome. "There was a good pool report" April 15, Lewis said, that contained quotes from the pilots and from the fleet commander.

"We still have to work a little more on our filing," Lewis said. Audio and video material was airlifted from the carrier to Naples, while the print reporters filed over Department of Defense facilities to the Pentagon.

Several weeks earlier, in the first U.S. military operation since the 1983 Grenada invasion, a pool of reporters was on board the USS Saratoga, the Sixth Fleet flagship in the Mediterranean, when action took place between U.S. and Libyan forces.

Eight-person press pools were organized in Rome March 24 and flown from Naples to the carrier. While the pool was aboard that day, several Navy pilots reported possible missile fire in the Gulf of Sidra. The pool was not informed of the unconfirmed reports and was sent back to Naples as previously scheduled.

But later in the day, there were confirmed reports of firing by both sides. The pool was returned to the Saratoga March 26 while the "freedom of navigation" exercise was continuing.

Some journalists complained that the pool should have been informed of the unconfirmed reports of firing and kept aboard the ship, although others praised the Pentagon's handling of reporters during the incident.

Deputy White House Press Secretary Larry M. Speakes said that the hostilities March 24 were in response to Libyan actions, and there was "no way that we could plan to pre-position the pool to be present when this specific action occurred." Speakes was responding to a question to President Reagan posed by William B. Ketter, editor of The Patriot Ledger of Quincy, Mass., at the American Society of Newspaper Editors Convention April 9 in Washington, D.C. Ketter is chairman of the ASNE Press, Bar and Public Affairs Committee.

The response came in the form of a letter sent the same day to then-ASNE President Robert P. Clark.

Speakes noted that Karen DeYoung, a London-based reporter for The Washington Post, was part of the pool and reportedly said she was pleased with the access to air crews involved in the fighting.

A contingency press-pool procedure was devised between the media and the Pentagon after reporters were barred from coverage of the early action in Grenada. There had been three tests of the arrangement [**presstime**, Jan. 1986, p. 48] prior to the March hostilities with Libya. ☐

By the year 2000, 2 out of 3 Americans could be illiterate.

It's true.

Today, 75 million adults... about one American in three, can't read adequately. And by the year 2000, U.S. News & World Report envisions an America with a literacy rate of only 30%.

Before that America comes to be, you can stop it... by joining the fight against illiteracy today.

Coupon-by-machine activity picking up

Although still considered a novelty in the coupon field, automatic dispensing machines are making renewed efforts to carve out a market in coupon distribution.

So far, the number of coupons dispensed by such machines is thought to be so minimal that the Manufacturers Coupon Control Center, which measures coupon redemption nationwide, does not keep track of coupons issued by these devices [**presstime**, Dec. 1984, p. 13].

Last year two companies distributing cents-off coupons in store-based machines filed for bankruptcy. But the remaining three firms in the field say 1986 will be a year for expansion. They are concentrating their efforts on the East and West Coasts.

Two of the three—Promovision Video Display Corp. of New York City and Coupon Systems Inc. of Los Angeles—maintain free-standing machines placed in grocery stores, where customers can select coupons and then redeem them for products.

Currently, Promovision has machines in 145 stores in metropolitan New York, with plans to expand to more than 500 in the next few months. Coupon Systems is now in 117 West Coast Safeways, with plans to expand to other markets in the West, Southwest and Midwest this summer.

The third company, Catalina Marketing Corp. of Los Angeles, bases its coupon selection on the fact that increasing numbers of products carry the Universal Product Code symbol, which scanners tabulate automatically at supermarket checkout counters.

Once a product is scanned, it triggers Catalina's system to dispense a coupon related to the product the customer has just purchased. For example, someone who has just bought diapers may get a coupon for baby food, or somone purchasing Pepsi or 7-Up may be handed a coupon for Coke.

Mockup of coupon from dispenser

Such scanner-linked coupon dispensers already have been installed in about 50 California stores, and Catalina plans to double its activities on the West Coast before reaching into other markets.

Meanwhile, newspapers continue to be the dominant medium for coupons—inching upward from the [illegible] percent level achieved in 1983 to more than 82 percent of total coupon distribution in 1984 and 1985.

Within this 80-percent-plus figure, however, there has been a shift in coupons' positioning in newspapers from daily ROP to Sunday free-standing inserts, which carried more than half of all coupons distributed last year and nearly double the percent of coupons in Sunday inserts in 1981.

Magazines carried 8.6 percent of coupons, having registered a steady decline over the past few years from 11.8 percent in 1981.

In 1985, a total of 179.9 billion coupons were distributed through all media. This compares with 163.2 billion in 1984 and 143 billion in 1983. ☐

Ad plan for postage stamps hits snag

The creation of what had been billed as the "first new advertising medium since television"—ads on postage stamps—may take longer than previously announced.

American Discount Stamps, the Houston-based company that conceived the idea, has yet to corral an advertiser or to establish its announced distribution system through 7-Eleven convenience stores [**presstime**, March 1986, p. 72].

"It's a chicken and egg thing," said a spokesman for Southland Corp., which owns 7-Eleven. "They've got to convince potential advertisers it would be a good buy," he said, "and we want to make sure it's going to fly before making a commitment."

ADS is now predicting summer startup. ☐

Blair tries to reverse Advo losses

John Blair & Co. has continued its restructuring program to counteract the firm's recent financial difficulties punctuated by a net $29-million-plus loss in 1985.

Many of the changes center on its direct-mail firm, Advo-System Inc. Advo and Network Mail, Blair's national direct-mail coupon operation now run by Advo, together make up Blair's Marketing Services segment that lost $30.6 million last year.

One change is the March 12 appointment of Hugh R. Beath, Blair's executive vice president-operations, to the additional responsibilities of chairman and chief executive officer of Advo. Beath succeeds William W. McConnell, who has left the company.

At the same time, Blair said Advo is planning a structural reorganization that will establish four regional divisions, each of which will have its own general manager and support staff. Also planned is installation of a new computer system and what Blair called "several innovative coupon-marketing programs in the months ahead."

Jack W. Fritz, Blair's president and chief executive officer, said the reasons for the heavy losses from Advo, which Blair bought in March 1984, and Network Mail included a one-time charge of nearly $6 million, the "negative impact of a postal rate increase in February 1985, and a significant decline in the profitability of Network Mail" [**presstime**, Oct. 1985, p. 6].

But Fritz said the changes at Advo should "improve significantly that division's overall performance in 1986."

Blair also:

- Completed sale of its free-standing newspaper-coupon-insert business [**presstime**, Jan. 1986, p. 43], its American Printers & Lithographers subsidiary and its Meehan-Tooker web printing subsidiary, and has begun negotiations to sell its remaining web printing subsidiary, Alden Press.
- Completed exchange of $61.7 million worth of debt for new shares of Blair common stock and plans to exchange more new shares for another $13.2 million of debt.
- Began a series of studies to "document consumer attitudes" toward direct mail. ☐

Future of Advertising project starting to yield benefits

BY CRAIG C. STANDEN

The first tangible results of the Future of Advertising project are becoming available to the newspaper business, and they hold promise of significantly improving our competitive position in the advertising business.

Craig C. Standen

At last year's ANPA Convention in Miami, the FOA project was announced jointly by the boards of directors of the Newspaper Advertising Bureau and ANPA. At this year's Convention in San Francisco, FOA Chairman Harold W. Andersen of the Omaha World-Herald and the chairmen of the project's 10 task forces made their first reports to the industry. (See Convention coverage in this issue.)

What I'd like to emphasize here is not FOA's accomplishments so far—although they are considerable—but the fact that the Future of Advertising is a long-range project, that its goals are long-range goals of vital importance to the future of every newspaper and that your commitment is vital to FOA's success.

In the coming months, you will start to receive some of the early fruits of the task force's labors. Let's look at three of them in terms of how you can use them to make your newspaper a better and more profitable advertising medium.

The first, *How to Gain and Retain Readership*, is a manual for publishers and senior newspaper executives on circulation and readership. It is the most complete publication ever put together on the subject, designed to help you apply the collective experience of the newspaper business to your newspaper's readership and circulation programs. It will be available about June 1. You'll receive one copy free, and additional copies will be available at a modest cost. Why not get one for each of your top management people, especially in circulation and editorial, and encourage them to put it to work in their areas of responsibility?

The second, *The Guide to Quality Newspaper Reproduction*, was created under the auspices of the ANPA Technical Committee and produced jointly by ANPA and NAB. It was introduced at the ANPA Convention, where Walter E. Mattson, president of The New York Times Co., called it "the most important production document on newspaper reproduction the newspaper business has ever published." You have probably received a copy by now.

I hope you will order a lot of copies—one or more for each ad agency and major advertiser in your market, and one for each member of your sales and production staff, and encourage them to use it regularly. If you do, you'll not only see better reproduction of the ads in your newspaper, you'll also eventually sell more advertising.

The third, *the standard invoice form* for newspaper advertising billing, is close to being completed by the International Newspaper Financial Executives. Multipaper advertisers (who account for the majority of all newspaper advertising dollars) say that the hours spent deciphering the different invoice formats add to their costs of advertising in newspapers. A voluntary, single-invoice form by newspapers will save these important advertisers important money.

You'll probably receive a copy of the approved version of the invoice form in the next month or two. Changing your billing system so you can use the standard form won't cost you much—but your advertisers will love it.

In each of these three cases, your involvement as publisher, and the involvement of your top management people, can make the difference between the success or failure of these three important steps forward for all newspapers, and especially for your newspaper.

In 1984, America's newspapers proved brilliantly that they could cooperate for the common good by implementing the voluntary Standard Advertising Unit system in less than six months without a hitch.

Starting now, the Future of Advertising project is going to give us many additional opportunities to improve newspapers as an advertising medium and build the future of our business.

Your involvement is essential if we are to make meaningful progress.

Standen, president of the Newspaper Advertising Bureau in New York City, is a regular contributor to **presstime**.

Coupons, suits will be reviewed by ABC board

The Audit Bureau of Circulations Board of Directors expects to consider in June proposals that would allow the same-day promotion of coupons in newspapers and would limit the bureau's costs from lawsuits.

Robert L. Burke, ANPA vice president/industry and public affairs, said the ANPA/Newspaper Advertising Bureau ABC Liaison Committee received that word at a meeting April 9.

The committee had recommended earlier that ABC allow the same-day promotion of newspaper coupons' monetary value [**presstime**, March 1986, p. 51]. Many coupon advertisers have expressed concern that such promotion might cause problems, including the fraudulent use of coupons.

The proposal to limit legal costs, which has undergone several drafts [**presstime**, Feb. 1986, p. 48], would become a bylaw if approved at the ABC board meeting June 11-14.

In a related but separate matter, the committee discussed with ABC representatives what Burke called "an optional appeals procedure" for publishers who want to dispute a decision by ABC's managing director. The ABC board also is expected to consider this proposed procedure, which as currently envisioned would be treated as an experiment.

Burke said the liaison committee recommended an expanded appeals process as a way of discouraging lawsuits by giving publishers a place to turn before they resort to the courts. In a different way, it would help achieve the aim of the proposed bylaw, which is designed to shield ABC, and subsequently its members, from rising litigation costs, he said.

Seminar on service

Customer service will be the topic of a newspaper seminar May 29-30 in Minneapolis.

Sponsored by the International Circulation Managers Association, the seminar will be the organization's first on customer service, which is getting increasing attention at newspapers [presstime, April 1986, p. 18].

GCIU-ITU merger talks end for third time

Merger negotiations between the Graphic Communications International Union and the International Typographical Union collapsed last month—the third such failure involving the two unions in the past two years.

The latest merger talks lasted only three months, having begun in January [presstime, March 1986, p. 22]. They ended April 3 with the GCIU's 40-member general board advising ITU President Robert S. McMichen that it could not meet the ITU's "deadline requirements" for a merger document.

A majority of the five-member ITU Executive Council wanted to hold a mail-ballot membership referendum on the issue before that union's Aug. 9-15 convention in Hershey, Pa. Such a vote by mail would take several months to complete, so the ITU wanted agreement on a merger document with the GCIU by April 15, according to a spokesman for the GCIU.

Despite the latest setback, the door was left open to a possible resumption of merger discussions. The GCIU board's unanimous statement said that following the ITU convention, the GCIU "would be prepared to reopen discussions."

Some union officials are saying, therefore, that the merger discussions are not "dead" but merely "recessed." But one, who asked not to be identified, said the GCIU used the ITU's "deadline requirements" as "an out."

Several labor specialists noted that both unions will be heavily involved in internal matters during the coming months, likely precluding merger discussions. Nominations for international officers will be made at the ITU convention with an election in November. And in the fall of 1987, the nomination process for the election of GCIU officers begins with the election in February 1988.

"The situation is in flux," said Joseph F. Barletta, president of the San Francisco Newspaper Agency and vice chairman of the ANPA Human Resources Committee. "The merger issue isn't going to go away until the rank-and-file ITU mailers are satisfied. Many of ours here in San Francisco are not. My guess is that the issue will get so locked into the election of the ITU officers that when that election is over, the issue will have been resolved."

Neither McMichen nor GCIU President James J. Norton was available for comment. An ITU spokesman said, "The convention is our main concern now."

A spokesman for Norton said, "He's hoping that after the ITU convention, there will be more than sufficient time to achieve this urgently needed merger."

Following notification that the GCIU board did not act on any of the proposed merger documents negotiated by committees from both unions, McMichen issued a statement saying: "We believe there was more than sufficient time (before the scheduled August ITU convention) to iron out whatever minor concerns that may have existed, but we respect the GCIU board's position."

A spokesman for the AFL-CIO, which had encouraged the merger talks, said the federation had no comment on the latest breakdown in discussions.

Leon Olson, president of Bay Area Typographical Union No. 21 in San Francisco, said the development was "extremely unfortunate" and "a disservice to the members of both organizations."

ANPA Vice President/Human Resources Roy W. Anderson said that the failure of the two unions to reach agreement in their third effort "is not a surprise. The political nature of the house of labor has short-circuited the goals of unionism and left an unsettled future for those newspapers dealing with the major unions in our business. The rejection of the Guild/ITU merger and the involvement of the Teamsters since the 1983 ITU convention has accelerated the shift in power from the craft unions to the Teamsters."

At the 1983 ITU convention, Teamsters President Jackie Presser offered to make the ITU a national division of his union.

"The unanswered question in this latest merger failure is difficult to understand," Anderson added. "Why in an era when unions are spending huge financial resources to expand membership and strengthen their bargaining position does a situation develop that runs contrary to these objectives?"

—*Clark Newsom*

St. Louis daily, Guild settle sex bias suit

The St. Louis Post-Dispatch and a local of The Newspaper Guild have reached an out-of-court settlement in a pay equity lawsuit brought by the union.

The St. Louis Guild last year filed a class-action suit in federal District Court charging the newspaper with sex discrimination in its advertising department. The Guild charged the company with maintaining lower pay rates for its inside sales force, most of whom are women, than for its outside salespeople, most of whom are men [presstime, June 1985, p. 88].

Under the settlement, a $23-a-week increase was given telephone sales representatives. ☐

EEOC dismisses Guild charges

The Equal Employment Opportunity Commission has dismissed discrimination charges brought by a local of The Newspaper Guild against The Commercial Appeal of Memphis.

Memphis Guild Local 91 filed charges in late 1984 alleging that the newspaper had discriminated against telemarketing personnel—those who handle retail advertising sales over the telephone—and against classified salespeople. The charges were based on the fact that these workers were paid less than service representatives for advertising accounts.

The union also charged that the newspaper had failed to promote female telemarketing personnel to the job of service representative because of their gender.

The Guild alleged that the company was in violation of both Title VII of the Civil Rights Act and the Equal Pay Act.

EEOC District Director W.S. Grabon said in an April 2 "determination" letter to both sides that there was "no reasonable cause to believe" the union's allegations were true.

In a separate letter, Grabon advised The Commercial Appeal's personnel director, Warren C. Funk, that the EEOC "will not proceed further" with the union's charges because the commission was unable to substantiate the allegations of discrimination. ☐

Recent contract settlements

Cincinnati Enquirer, Teamsters: Three-year agreement covering truck drivers and helpers; retroactive to Sept. 16, 1985.

Cleveland Plain Dealer, Teamsters: Thirty-seven-month agreements covering composing room and mailroom employees; retroactive to Oct. 1, 1984.

Phoenix Gazette and Arizona Republic, GCIU, ITU: Three-year agreements covering pressroom, photo/platemaking, composing room and mailroom employees; retroactive to Oct. 1, 1985.

San Antonio Light, ITU: Three-year agreement covering mailroom employees; retroactive to Aug. 1, 1985.

San Diego Union and Tribune, GCIU, Guild: Three-year agreements covering pressmen and paper handlers (GCIU), and editorial and commercial employees (Guild); retroactive to Aug. 5, 1985, and June 3, 1985, respectively.

Toronto Star, Guild: Seventeen-month agreement covering editorial and commercial employees; retroactive to Aug. 1, 1985.

Yakima (Wash.) Herald-Republic, Guild: Twenty-five-and-a-half-month agreement covering editorial and commercial employees; effective Feb. 14, 1986.

(Details in April and May 1986 ANPA Labor & Personnel Relations Letters.)

NLRB elections

Cincinnati Enquirer, ITU, Teamsters: Mailroom dock workers voted 14-3 in favor of continued representation by Associate Workers Local 7A of the International Typographical Union. Two ballots were cast for Local 100 of the Teamsters, the union that filed the petition for the election, and one was cast for no union.

(NLRB Case No. 9-RC-14838)

Houston Chronicle, GCIU: Photoengravers voted 33-14 against further representation by Local 265 of the Graphic Communications International Union.

(NLRB Case No. 23-RD-578)

Additional arbitration awards

Minneapolis Star and Tribune, Teamsters: Richard John Miller upheld the discharge of a truck driver for excessive tardiness.

New York Post, Guild: Monroe Berkowitz ruled that the company has the right to require employees in the cashier's department to repay shortages so long as it can be shown that those employees were responsible for the shortages in their accounts.

San Diego Union and Tribune, Guild: Sara Adler directed the reinstatement of an advertising department secretary on grounds the secretary had not received promised training before being discharged for poor work performance.

San Diego Union and Tribune, Guild: Robert D. Steinberg ruled that the company did not violate a labor agreement by refusing to pay a daily automobile mileage allowance to an artist who had been transferred to an outlying office.

San Jose Mercury News, ITU: Donald H. Wollett found that the company violated a labor agreement by restricting training on markup/layout terminals to journeymen on a job-security list.

Toronto Globe and Mail, Guild: Richard H. McLaren converted to a seven-month disciplinary suspension the discharge of a circulation district manager for excessive tardiness.

Vernon (British Columbia) Daily News, ITU: H. Allan Hope ruled that composing room workers can be required to work "reasonable" overtime even when a substitute has not been hired.

Victoria (British Columbia) Times-Colonist, Guild: Hope found that the company is entitled to require employees to provide particulars of each absence attributed to illness or disability, but was not entitled to introduce new sick-leave forms that required all employees in every instance to provide detailed medical information as a condition of receiving sick leave and sick pay.

(Full texts are available from the ANPA Human Resources Department at The Newspaper Center, Reston, Va.)

Overline wording did not alter story, arbitrator rules

An arbitrator has ruled that the wording of an overline inserted above a photo accompanying a reporter's story had not "altered" the story within the meaning of a labor agreement.

The dispute between The Sun of Vancouver, British Columbia, and Local 115 of The Newspaper Guild involved a section of the agreement stating that an employee must be consulted prior to the time of publication if the company has decided to alter the factual content of any story written by that employee.

The text of the story involved in the case was published exactly as the grievant had submitted it after changes suggested by his editor. But the grievant contended that the use of the word "terrorist" rather than "guerrilla" in the overline had altered the story and caused an evaporation of the trust the "urban underground" community had in him as a reporter.

"What may be meaningless semantics to some is obviously a matter of substance to others," observed the arbitrator, Donald R. Munroe. "In short, the grievor believed that he had been detrimentally affected as a journalist."

Shortly after the reporter became aware of the overline, he asked to be allowed to write a letter to the editor, for publication in the usual way, in order to dissociate himself from the overline. The request was denied by The Sun's senior editors.

The Guild argued that the word "story" in the labor agreement meant the overall presentation, while the company contended that it was limited to the text of the article.

Munroe held that the company had not altered the factual content of the story within the contemplation and meaning of the labor agreement. He also noted that many editorial judgments that affect the overall presentation of a story are made long after a reporter has left for the day. Those judgments "have long been acknowledged to be the preserve of the editors, not the work of bargaining unit reporters," Munroe said.

The arbitrator added that he had been asked by the union, on grounds of "fairness" and "freedom of expression," to direct the newspaper to publish the grievant's proposed letter to the editor. "I cannot do so," he said, noting that an arbitrator's remedial power can only be exercised on a finding that a labor agreement has been violated. ☐

Partial settlement in Concord case

The Concord (N.H.) Monitor has made an out-of-court settlement with nonnewsroom employees involved in an overtime pay dispute with the U.S. Labor Department's Wage and Hour Division.

The case stems from a division audit covering 54 present and former employees during the period February 1978 through January 1980. The Monitor paid $31,000 in overtime during the period involved, but the division claimed it owed $45,000 more.

The settlement involved 21 clerical employees in the business office and circulation department, who received between $90 and nearly $900 each.

Another 33 editors, reporters and photographers, whom the newspaper claims are professional employees exempt from the overtime requirements of the Fair Labor Standards Act, remain parties to a lawsuit in the U.S. District Court in Concord.

Trial in the case began in January, but was recessed until June 9 [presstime, March 1986, p. 56]. ☐

Judge approves 'comparable worth' agreement

A settlement between Washington state and the American Federation of State, County and Municipal Employees of a so-called "comparable worth" case has been approved by U.S. District Judge Jack E. Tanner in Tacoma.

Tanner had ruled in 1983 that the state discriminated in compensation on the basis of sex when it paid less for predominantly female jobs than for predominantly male jobs requiring equivalent or lesser skills. But his ruling was overturned by the 9th U.S. Circuit Court of Appeals.

Under the settlement, the union agreed to withdraw its petition for a rehearing by the 9th Circuit, and the state agreed to provide pay raises totaling $480 million over the next seven years to state employees in female-dominated jobs. The state legislature had already approved the settlement [presstime, Feb. 1986, p. 56]. Tanner's approval was necessary for AFSCME to withdraw its motion seeking a rehearing of the case. ☐

Philadelphia dailies get injunction against union

A federal judge has granted Philadelphia Newspapers Inc. a permanent restraining order against an independent mailers' union, prohibiting the union from renewing a strike over manning schedules on new Ferag mailroom equipment.

The Newspaper & Magazine Employees Union was one of nine unions that struck the company, publisher of The Philadelphia Inquirer and Philadelphia Daily News, last year [presstime, Nov. 1985, p. 59].

U.S. District Judge Norma L. Shapiro ordered both parties to arbitrate any disputes under the provisions of their labor agreement. She also ordered the union to post a bond of $25,000.

The company has initiated arbitration proceedings against the union for damages suffered as a result of a 30-minute work stoppage March 17 during production of the Daily News. The union had called a meeting during working hours to discuss alleged safety problems.

Meanwhile, Shapiro's March 24 order forbids the union and its members from "engaging in any strike, failing to report for work, engaging in work stoppages or slowdowns, abstaining in whole or in part from the full, faithful and proper performance of their duties of employment." ☐

Court denies review of age-bias ruling

The U.S. Supreme Court has declined to review a decision upholding The Daily Press of Newport News, Va., in a case brought under the federal Age Discrimination in Employment Act.

The 4th U.S. Circuit Court of Appeals ruled last year that the company had not forced the resignation of a circulation department district manager in violation of the act. It overturned a jury's award of $149,000 to the former employee [presstime, Oct. 1985, p. 53].

The appellate court found that the manager's resignation was due to nothing more than "workaday frustrations."

The Supreme Court denied review of the case without comment.

(Bristow v. The Daily Press Inc.) ☐

Survey details journalist trends

Results of a 1982-83 survey about U.S. journalists reveal, in part, the following:

- Most full-time journalists work in the print media, especially for dailies.
- The number of women entering journalism is increasing.
- "Journalism is a younger person's profession"—more and more journalists in their 40s are leaving the field for higher-paying careers.

Authors David H. Weaver and G. Cleveland Wilhoit, professors of journalism at Indiana University, update a 1971 study by John W. C. Johnstone in *The American Journalist: A Portrait of U.S. News People and Their Work.*

The 216-page, hard-cover book is available for $25 from Indiana University Press, 10th and Morton Streets, Bloomington, Ind. 47405.

Compromising ethics to get the story

"Merely because a right exists does not mean that it needs to be exercised indiscriminately," says Tom Goldstein about the First Amendment.

Goldstein, acting professor at the University of California, Berkeley, and a former reporter, draws upon personal experience, surveys and other documentation in his assessment of *The News at Any Cost: How Journalists Compromise Their Ethics to Shape the News.*

The 324-page, hard-cover book is available for $18.95 from Simon and Schuster, Simon & Schuster Building, Rockefeller Center, 1230 Avenue of the Americas, New York, N.Y. 10020.

Government strengthened by vigorous coverage

Vigorous, analytical news coverage of government strengthens that institution, writes Lewis W. Wolfson, professor of communication at American University in Washington, D.C.

A public that is well-informed about the government—"how it works and how it affects them"—is likely to take a participatory role in its processes.

Wolfson's 204-page book, *The Untapped Power of the Press: Explaining Government to the People,* is available in hard-cover for $28.95 from Praeger Publishers, 521 Fifth Ave., New York, N.Y. 10175. ☐

Consumption climbs again in February

Newsprint consumption by all U.S. users increased 1.8 percent in February compared with February 1985, while U.S. daily newspapers' consumption rose 1.5 percent.

At the end of February, newsprint inventories of newspapers in ANPA's statistical sample were estimated at 45 days' supply, compared with 47 days a year earlier. Stocks of North American mills were up about 1.5 percent from the previous year's levels.

The February operating rate for Canadian mills was 94 percent, and for U.S. mills it was 94.9 percent.

Shipments from Canadian mills in February were down 1.3 percent from February 1985 levels. Canadian shipments to the United States decreased 2.4 percent, those within Canada increased 2.6 percent, and those to overseas customers increased 2.2 percent.

Domestic shipments from U.S. mills decreased 2.3 percent, while their shipments to overseas customers declined 7.1 percent.

Newsprint production decreased in February from a year earlier, dropping 2.4 percent for all North American mills. Production also dropped 2.1 percent for the first two months of the year.

Austin brings the state of the art to newspaper publishing

A successful newspaper is a growing newspaper, and growth brings changes.

Changes like new or expanded facilities, automated material handling, electronic pre-press systems, improved printing techniques and updated mailrooms. These are the elements that add efficiency and productivity to a publishing operation.

Austin clients are meeting the challenges of change, as we help them design the systems and install the equipment to bring their operation to the forefront of publishing technology.

We are working every day, with suburban weeklies and metropolitan dailies, upgrading facilities and equipment--from front-end operations to distribution loading docks.

If your operation is ready for change, Austin can help. Contact us at Cleveland, Ohio, 44121, or call one of our offices in major cities worldwide.

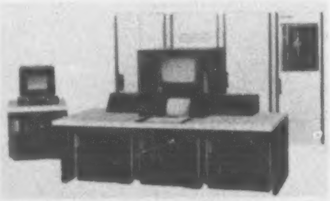
Monotype Lasercomp Express



D.S. America page makeup system

"I think this year's show and conference are the most exciting we've put together" in the past 10 years, said Joseph M. Ungaro, chairman of the committee that is arranging the 58th Annual ANPA Operations Management Conference & Exposition.

Ungaro, president and general manager of Westchester Rockland (N.Y.) Newspapers Inc., said the June 21-25 event in Atlanta, "Interface '86—People, Developments, Quality," will "touch a lot of nerve centers" in the newspaper business, from technology such as pagination and flexographic printing to human issues including managing employees [presstime, Feb. 1986, p. 50].

The five-day Exposition in the Georgia World Congress Center will feature about 240 exhibitors that are scheduled to occupy in excess of 270,000 square feet of net exhibit space—the equivalent of about 10 football fields. That, noted Conference Director Peter P. Romano, would exceed the record 265,000 square feet of last year's show in New Orleans. In all, more than 10,000 attendees are expected, he said.

Although it will be possible to register for the event on site in Atlanta, computerized preregistration is being offered this year for the first time, said Romano, ANPA director/technical services.

Preregistration materials have been mailed to ANPA-member newspapers, exhibitors and others. Deadline for returning the forms is May 23. Those preregistering can also make hotel reservations for one of nine Atlanta hotels in which ANPA has reserved 6,500 rooms.

Registration fee is $35 and includes admittance to the Exposition and Conference.

"The key word is quality and the ability to achieve that quality consistently," said Romano. "I think this year's Conference will be interesting because we're almost at the place in developments, from people to equipment, where we can put all the pieces together in a way that will enable newspapers to increase their competitive edge in the marketplace."

The Conference advance program was to be mailed to ANPA members and others in late April. The final program and other details on the entire trade show will appear in the June issue of presstime.

For the second year, presstime will sponsor a two-mile "fun run" for attendees and their families. The race will take place in downtown Atlanta on Sunday morning, June 22.

Exposition vendors across the country are finalizing their exhibits. With an emphasis on what's new for this year's show, exhibitors surveyed or interviewed indicated they will demonstrate or display the following:

BUSINESS SYSTEMS

A variety of business systems will be available, and many vendors have revised older software to make it compatible with personal computers. This enables mid-size and smaller newspapers to utilize the kinds of editorial, advertising or other programs that at one time were restricted to mainframe computers.

- *Creative Data Systems* is introducing CDS Layout, an enhanced version of an earlier system that works in tandem with COMAR, the firm's accounts-receivable system. The systems are compatible with IBM System/36 and System/38 hardware. CDS also offers software for circulation, total market coverage, accounts receivable and general accounting functions.

- *Concept Publishing Systems* will demonstrate new classified advertising and display advertising systems, both for Macintosh computers. The display ad program also drives phototypesetters and laser printers. In addition, the company will demonstrate an enhanced editorial system.

- *Data Sciences Inc.* will introduce and demonstrate its Papertrak software on an IBM PC/AT. Papertrak, which also can be used with Texas Instruments minicomputers, offers programs for display advertising, accounts payable, payroll, TMC, circulation management and other functions.

- *LAN Systems Inc.* for the first time will release its full accounting system for use on the UNIX-based computer. LAN produces a fully integrated, on-line accounting and business-management system, from TMC to general accounting.

- *Neasi-Weber International*'s ADMARC has been adapted to run on IBM PCs as well as the DEC Micro Vax central computer. ADMARC can produce statistical and demographic breakouts, and automatic price and discount calculations. The program can be run from a single work station or in a network of computers.

- *Ricoh Corp.* will demonstrate for the first time its EDFC-35 data compression, network transmission and communications control system. Data compression enables documents to be transmitted in one minute instead of 15, according to the company. The system utilizes a flat bed rather than drum feed, but it will work with units of either type.

• *Stauffer Media Systems Inc.* will be premiering its newspaper business system on UNIX-based microcomputers. Stauffer offers software to keep track of circulation, advertising, accounts receivable, accounts payable and other business matters.

• *Whalen/Mainstream* will demonstrate a full line of newspaper software on the IBM PC network, including a new accounting package.

FRONT-END, PAGINATION SYSTEMS

Increasingly, developers of front-end systems are producing "intelligent" computer terminals that can work independently as well as be linked in a network with other computers, so that less of a load is put on the central system. Also, increased text and graphics manipulation is available in pagination systems.

• *Atex Inc.* will demonstrate a complete line of prepress and pagination equipment including its new Page Production Node that performs full-page output, graphics manipulation and database management.

• *Compugraphic Corp.* will demonstrate a new PC-based front-end system, Intrepid, for editorial and classified departments. The firm also will be showing the PowerView 5 display ad makeup terminal driving its digitized 8000 typesetter.

• *Cybergraphic Systems Inc.* will demonstrate complete layout software with new high-speed communications between the system and terminals. The terminals can operate in a network configuration as well as independently.

• *Harris Corp.* will demonstrate its new 80286 microprocessor, which the company said has four times the memory and twice the speed of its previous equipment. Harris also will demonstrate a new classified advertising system.

• *Information International Inc.* will have the first public demonstrations of the 2300 Image Network processor, a raster image processing subsystem with database management and graphics manipulation. Also at the booth will be the Electronic Ready Bank, which provides status reports on systems elements, and demonstrations of the firm's system for full-page pagination of text, ads and graphics.

• *Micro-Comm Inc.* will demonstrate its MC-301 front-end system with camera-ready output via laser-jet printer or—for smaller newspapers—on plain paper. Also to be shown is the MC-100 "intelligent" communications controller, with complete automation for computer-to-computer communications via telephone.

• *Monotype Inc.* will exhibit the Lasercomp Blazer and the Lasercomp Express, both of which have new features. The Express is a laser typesetter that can incorporate graphics, line art and halftones. The company also will demonstrate its new dual processor, which can perform concurrent input and output of typesetting jobs.

• *Morris Communications*, a division of Southeastern Newspapers Corp., will demonstrate the new Morris Publishing System installed recently at several of the group's newspapers. The PC-based, front-end system utilizes a high-speed local network with no central file server and has a spelling-check dictionary of 115,000 words. It also has a classified advertising program.

• *Xitron Inc.* will demonstrate Hyperset, a new system that allows direct connection of one or several PCs to one or more typesetters. The company also will demonstrate its new personal computer, the Xitron Turbo XT, in both floppy-disk and hard-disk versions.

OTHER PREPRESS

Quality reproduction, especially in color, continues to be of concern as newspapers strive to offer a consistently good product. Vendors say they are working to improve various electronic and chemical components in order to achieve that consistency.

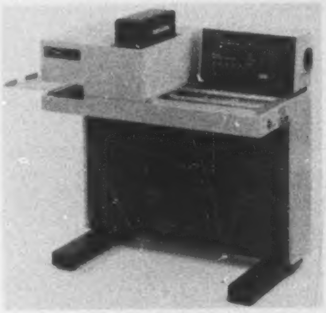
• *Autologic Inc.* will demonstrate a number of products, including its new APPS-1, a pagination and photoimaging system, which can be used to lay out, make up and plate the newspaper with commands on a screen.

• *BASF Corp. Information Systems* will exhibit its line of nyloprint® WD photopolymer letterpress printing plates.

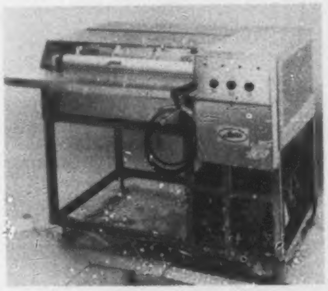
• *Camex Inc.* will demonstrate software enhancements for its Camex Breeze/Supersetter System as well as its new File Server/ Storage System, which maintains a database for everything from raw text files to composed ad files.

• *Chesley F. Carlson Co.* plans to demonstrate the Carlson SharpScan scanner with Sharpshooter, which together receive printing information and calculate exposures for integrated halftone black-and-white exposures, and the Carlson Proofmaster light for color proofing with Kodak Ektacolor Plus film.

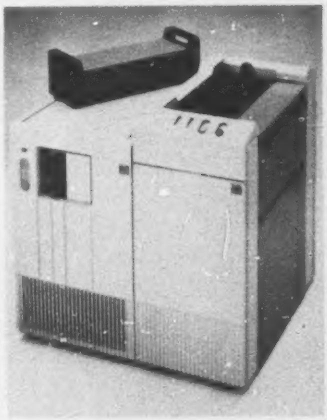
• *D.S. America Inc.* will demonstrate two new products: the Sigmagraph 6000 page makeup system and the SF-222 Monochromatic flatbed scanner. In addition, the firm will demonstrate its SG-608 color scanner and P-617 vacuum contact printer.



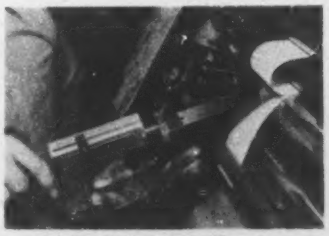
ECRM Autokon 1000 laser graphics system



Master Etching offset plate processor



Xenotron UX Imagesetter



J.E. Doyle Set-Rite roller gauge

Reliable Fire Equipment system

Goss modular press control system

Spectronics analysis system

• *Duarte Register Systems* will demonstrate its pin registration that can go from paste-up to press without the stripping of line copy, screens or solid color negatives. The system, according to the company, "virtually eliminates the remake of plating due to misregister and reduces paper waste. . . ."

• *Dynalith* will introduce a direct print system that includes a control center density probe, vacuum easel and pump, flashlamps, and a safelight. Manufactured by Portage, the system enables the operator to read fine details of a projected image.

• ECRM will demonstrate enhancements to the Autokon 1000 laser graphics system, which electronically "reads and records" photographs, line art and continuous tone art. The system allows for a variety of graphics manipulations, including sharpening detail and deepening tones.

• *Fluorographic Services Inc.* offers new, water-based Flouro AdColors and Color Media Film, designed to add color to comic pages as well as inserts. The film is a high matte surface on which the artist can paint flat tones as well as overpaint and stack tones.

• *W.R. Grace & Co.* will demonstrate a new, automatic flexographic platemaking system. The system, which can make about 60 plates per hour, is designed for medium-size newspapers.

• *High Technology Solutions Inc.* will demonstrate for the first time in the United States the typsetting system selected for production of The People's Daily in Peking. The system features multilanguage editorial capabilities and interactive composition of text and graphics.

• *Imperial Metal and Chemical Co.* will exhibit what it describes as a "non-polluting additive plate developer and finishers which will meet Environmental Protection Agency standards."

• *Master Etching Machine Co.* will show its new platemaking equipment, which was developed to process new plates such as the 3M Onyx.

• *National Machine Co.* will demonstrate its new National CDS-33 automatic coater-dryer-stacker for wipe-on offset plates, as well as its National Universal 33 automatic offset plate processor for processing all brands of presensitized offset plates.

• *nuArc Co. Inc.*, in addition to its line of cameras, platemakers, processors and light tables, is introducing the FT40APNS platemaker which comes equipped with a multi-spectrum lamp. The lamp gives the user wider latitude when exposing plates, proofs and daylight films, the company says.

• *SAT-FAX Inc.*, a new company, will demonstrate a new phototransmitter that is microprocessor-controlled. According to company officials, the transmitter is compatible with every news photo service in the world. The firm also will demonstrate its Portable Newsroom, which features cellular communications including voice, data and pictures as well as data-error correction.

• *Scitex America Corp.* will demonstrate what it describes as a "low cost, entry level" electronic color pre-press system. Known as Response-LS, it is a stripping system with fully interactive page design, layout and color-correction capabilities.

• *Software Consulting Services* will demonstrate a variety of software systems, including Layout 8000, shown on an IBM PC for the first time. The system offers a number of features, including dummy automation, to produce a tighter food section and more precise coupon positioning.

• *Warner MDS Color Corp.* will demonstrate its new Hi-Tech film exposure computer, with complete keyboard and special function keys, which the company has termed "the most user friendly terminal available."

• *Xenotron Inc.* will demonstrate its new UX Imagesetter, consisting of a raster image processor and an imaging recorder with a laser diode. The units can work independently or in tandem. The Imagesetter can simultaneously receive, process and provide output of data, including such computer-generated special effects as circles and tints. The laser diode recorder can image both infrared-sensitive paper and film.

PRESSROOM

In the pressroom, flexographic printing continues to be refined, but there are also new twists to the offset and letterpress processes. In addition, equipment is being offered to eliminate potential health hazards.

• *Armotek Industries Inc.* will exhibit its high-precision, fine-screen, Ultr-A-Lox anilox roller for flexographic presses. The rollers are electronically engraved.

• *Crabtree Vickers (Canada) Ltd.* will demonstrate its new "Civilox" retrofit keyless inking system for letterpress printing. The system, engineered to fit existing printing units, constantly filters and circulates ink and returns unused ink from the rollers to the supply.

• *J.E. Doyle Co.*, a first-time exhibitor, will demonstrate a number of products including the Set-Rite roller gauge, which the firm said helps pressmen set rollers uniformly without guesswork. It also will show the Statikil antistatic spray for presses.

• *Ebway Industries Inc.* will exhibit the HS-3500, a new "zero speed" splicer for paper rolls that operates when the web stops moving. Also to be shown is a new drying system. It has multiple, variable temperature zones and can work with pollution control equipment. The company says the drying system is adaptable to all web presses.

• *Fincor, Incom International Inc.* will introduce a microprocessor-based DC motor controller and press system. The "intelligent" drive is operated with a computer keyboard and can display on a monitor information about its operating condition.

• *Flint Ink Corp.* will conduct ink rub-off tests.

• *FMC Corp.* will introduce a new version of its Automatic Guided Vehicle System, which automatically loads paper rolls onto the press. The vehicle also provides automatic core removal.

• *IVT Colordry Inc.* will exhibit a number of new products, among them a compact dryer for installation on existing presses, which the company said results in brighter, crisper colors and a reduction in smearing for uncoated stocks of paper. In addition, the firm will show a new inking system that delivers a uniform flow of ink to press fountains.

•*M.A.N.-Roland USA Inc.* will show its Colorman 75 double-width offset unit with color deck, its Uniman 4/2 four-color unit—a double-width press aimed at medium-size newspapers—and its Flexoman double-width flexographic press.

• *MGI International Inc.* will exhibit an ink-mist air washer, a paper-dust air washer, and folder enclosures for dust and noise.

• *North American Cerutti Corp.* will show both double- and single-width flexographic presses in a static display.

• *Motter Printing Press Co.* will exhibit the new FX-4 flexographic unit and a new three-color unit, as yet unnamed, in a static display.

• *ONE Corp.* will have a static display of its slitter/rewinder for damaged paper rolls. The apparatus, says the company, enables newspapers to slit newsprint into various widths as the need arises, thus simplifying inventory requirements.

• *R/D Mist Systems* will display its ink suppression and recovery system for letterpress presses. The system operates within the ink roll chambers and captures excess ink when it leaves the impression rollers. The firm says this makes for a cleaner pressroom. It fabricates the system for each individual press.

• *Reliable Fire Equipment Co.* will be showing its firefighting systems for presses and computer rooms. The systems feed carbon dioxide to equipment in the event of a fire.

• *Rockwell International Graphic Systems Division (Goss)* will exhibit its new C700 commercial press unit, a Headliner offset four-color press unit, and its new modular press control system that allows an operator to preset as well as adjust press functions.

• *Ryco Graphic Manufacturing Inc.* will demonstrate its Digital Spray Dampening System, which controls ink and water balance.

• *Semler Industries Inc.* will demonstrate a waste-ink recovery system that filters out paper lint, dust and other solid contaminants, allowing ink to be reclaimed. It will also demonstrate a recovery system for press gear oil.

• *Smith RPM Corp.* will demonstrate its pulsating airless spray dampener, which is electronically controlled, and its ink pump and rail for presses.

• *Spectronics Inc.* will demonstrate a variety of quality-control and production software systems. Included will be its new Press Run QC System, which the firm said helps monitor and control consistent print quality throughout the press run by detecting deviations from the printing standard and allowing for easy, on-press corrections.

• *Stork Contiweb Inc.* will demonstrate for the first time a splicer that the company said ensures automatic reel changing at full production speed.

• *Technidyne Corp.* will demonstrate its Micro TB IC, which is used to measure and control the color, brightness and opacity of newsprint.

• *Web Press Corp.* will offer a static display of its presses, including a Quadra-Color unit and the Atlas web offset press.

• *Windmoeller & Hoelscher/Koenig & Bauer* will have static display of a four-color Journalflex flexographic unit and a black unit.

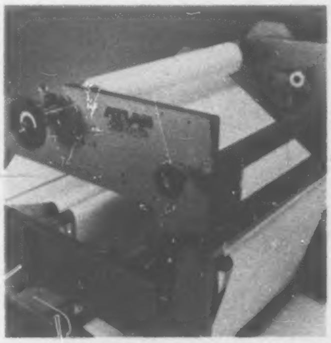
DISTRIBUTION

Handling an avalanche of inserts quickly and efficiently is a mailroom priority, as is keeping track of subscriber lists. Equipment that helps in those areas as well as equipment for quickly bundling odd stacks of newspapers will be displayed in Atlanta.

• *Cheshire/A Xerox Company* will demonstrate its new Cheshire 742 List Management System, its 552 Quarterfolder, a counter-stacker system and two heavy-duty labeling systems. The electronic list management system enables newspapers to keep track of subscribers and to assess them demographically.

• *Diconix Inc.* will exhibit ListComp, a computerized, circulation-list management

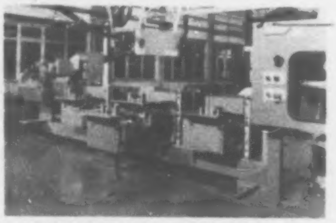
Technidyne opacity testing unit



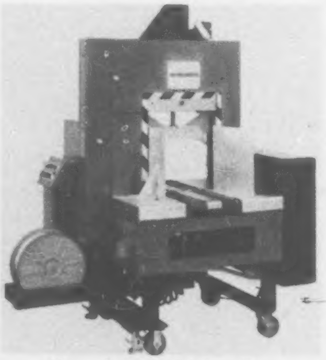
Web Press Corp. Atlas press

Diconix Admark III ink-jet printer

McCain Advertiser inserter



Muller-Martini 308 Biliner inserter



Signode MLN-2A bundler

Spegram Movit roll handler

system and its new Admark III ink-jet imaging address system. The latter is a modular system that can be moved easily and can be used for direct addressing and bar coding.

• *Ferag Inc.* will display its single-copy grip conveyor, Rotosert inserting system and the Rotadisc palletizing and depalletizing system.

• *Gaemmerler (U.S.) Corp.* will demonstrate its microelectronic Rotary Trimmer Model Rs 140/530 for web-fed products.

• *Graphic Management Associates Inc.* will exhibit its new SLS inserter, a high-speed, modular machine with a capacity of 25,000 newspapers per hour. The inserter has a gripper feature for delivery to multi-stacking position so that heavy or difficult packages can be handled. Also to be shown is an upgraded 15-72 inserter.

• *Hall Systems Inc.* will demonstrate, among other products, its Monitor HT counter/stacker, which can count and stack broadsheet products and tabloids at a rate of up to 60 stacks per minute. According to the company, the machine can handle products ranging from a 12-page tabloid to a three-inch-thick inserted package. Hall also will demonstrate its new Tru-Trak, belt-lapped stream conveyor.

• *IDAB Inc.* will demonstrate a variety of equipment, including two new, as-yet unnamed products: a non-contact sensor that uses an air stream to count newspapers, and a heavy-duty stacker that is driven by a microprocessor.

• *Kansa Corp.* will demonstrate its new PS 140 labeler and quarterfolder. The free-standing labeler applies pressure-sensitve labels at a variety of speeds, the company said. It can be operated with the quarterfolder or alone.

• *McCain Manufacturing Corp.* will demonstrate for the first time its new McCain Advertiser, which inserts broadsheet sizes as well as quarterfolds.

• *Muller-Martini Corp.* will demonstrate its 308 Biliner inserting machine, the Tandem Feeder for its 227 inserting machine and its ITM FL-412 high-speed quarterfolder, as well as other stacking and inserting equipment.

• *Signode Corp.* plans to demonstrate its high-speed MLN-2A newspaper bundling system. The firm said it can strap up to 40 bundles per minute, which it claims is 30-percent faster than previous models.

• *Stepper Associates Inc.* is introducing a high-speed plastic packaging and collating system. It encloses newspapers in clear plastic to seal in inserts and coupons, keeping them intact for newstand sales. The system also collates bulky, pre-inserted sections.

• *Spegram Inc.* will be demonstrating the Movit Transportation Co.'s Air-cushion Roll Handler, which makes it possible to move large rolls of paper through tight spaces. In addition, the company will demonstrate the Tolerans Rotary Stitcher and the Tolerans Rotary Quarter Folder.

• *Tingue, Brown & Co.* will exhibit its seamless, one-piece, molded-plastic trucks, known as Poly-Trux, which can be used for various hauling jobs. It also will display conveyor belting and canvas baskets.

PLANT DESIGN

• *The Austin Co.*, an architectural firm, will display color photographs of recently designed newspaper facilities.

• *Lockwood Greene Engineers Inc.*, which offers planning, engineering, architectural and management services to the newspaper industry, will have employees on hand to discuss current trends and issues in planning and designing newspaper facilities.

• *Pellegren Corp.* will display architectural renderings of its current and recently completed newspaper facilities, including a satellite production facility.

MISCELLANEOUS

In addition to the massive equipment displays, a variety of other organizations and companies plan exhibits.

• *Associated Press* is still finalizing its Conference plans but expects to demonstrate its new National Election System, weather wire and Sportstats, an agate listing of sports results.

• *Advertising Media Credit Executive Association*, which helps credit managers improve their techniques and efficiency through an exchange of ideas, will offer books and tapes on the subject.

• *California Polytechnic State University* in San Luis Obispo, which conducts seminars and workshops on printing techniques, will offer educational materials.

• *Midwest Publishing Supply Co.* will show a miniature newspaper facility containing the firm's complete line of furniture for newsrooms, classified advertising departments and production areas, as well as composing room accessories.

• *VU/TEXT Information Services Inc.* will feature its stand-alone electronic library, which uses an AT&T 3B5 Computer. The system can store and retrieve the full text of all articles appearing in the newspaper and gives librarians and/or reporters simultaneous access to material.

Pagination may spur new innovations through 'imaging couples'

BY WILLIAM D. RINEHART

Within the next few years, full electronic pagination will be a proven reality at many newspapers and in the process of being installed at many others. By 1995, practically all dailies will have full-page pagination.

Pagination will mean newspapers will have all pages in electronic disk storage. Once that is accomplished, the newspaper has the ability to reproduce, or "image," the newspaper electronically. That would make possible high-speed devices—known as electronic imaging couples—that can print both sides of a newsprint web simultaneously.

Development of such devices might enable newspaper publishers eventually to abandon the traditional 400-ton press monster and its outrageous capital cost and high labor requirements.

Electronic imaging couples also would enable newspapers to customize content for zones or even subscribers. It also may enable newspapers to use newsprint with lighter basis weight.

A fully paginated newspaper in 1995 might function this way: All pages would be in computer storage. Because the speeds of the pagination system's computer likely will prove too slow to image all pages simultaneously, the new concept of imaging couples would come into play. This concept would require that each page side of the couples have its own magnetic disk storage. The mainframe computer would load the pages electronically into disk storage. The storage device could be a package of magnetic disks, one for each page to be reproduced by the imaging couple.

The imaging-couples system could be designed with the same page capacity of today's conventional press.

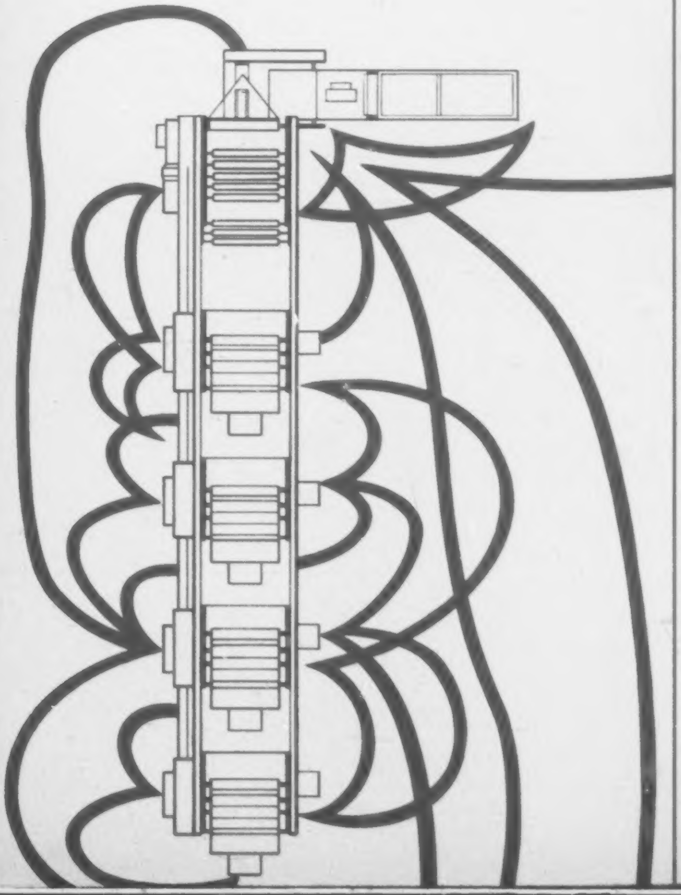
The technology to do all this exists today but would require customized design. Research needs to be done to propel this technology into actual work situations.

There are a number of concepts that need to be looked at—such as high-speed xerography, ink-jet printing and magnetic-reaction ink—any one of which might enable a newspaper to reproduce images at high speeds after receiving signals from the electronic, page-storage disks.

In order to remain competitive, the newspaper business needs to seek out continually advanced technology that will enable a newspaper to serve readers better and advertisers at lower cost. The monster press is one of the areas of newspaper production that basically has not changed.

All-electronic pagination offers an opportunity to develop new reproduction technology that would greatly reduce capital and labor costs. □

Rinehart is ANPA vice president/technical.



ONE PRESS DOESN'T GIVE YOU THE RUN-AROUND BLUES.

Unless you have a Solna Distributor, you're getting the run-around. Unlike other newspaper web presses, The Distributor is designed for easy operation from only one side. In fact, most everything is controlled from one panel right by the folder.

Take a good look at the quality, easy operation and profitability of an orange Solna Distributor. It will cure your run-around blues. Fast.

800 641-4366
(In Missouri, call 816 483-2121. Collect.)

Solna

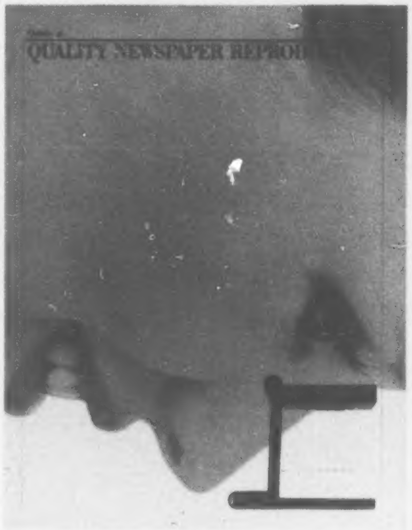
Reproduction guide distributed

Distribution has begun for the new "Guide to Quality Newspaper Reproduction," which is designed to help newspapers and advertisers achieve consistently good reproduction.

Written by the ANPA Technical Committee, the 56-page guide was produced jointly by ANPA and the Newspaper Advertising Bureau [presstime, April 1986, p. 72]. It recommends certain specifications for dot sizes, screen sizes, color separations and ranges for black-and-white halftones.

The book is fully illustrated with color and black-and-white photographs and numerous other graphics.

Each ANPA-member newspaper was sent one copy. Additional copies may be purchased for $5 each for orders up to five; $4 each for orders of six to 10; $3 each for 11 to 50 copies; and $2 each for 51 or more. ☐



TECHNOLOGY CALENDAR

- **DRUPA '86**, the international trade show for the graphic-arts industry, will be May 2-15 in Duesseldorf, West Germany.
- **Type-X** will be May 6-8 at the Hyatt Regency Chicago.
- The **Mycro-Tek Users Group** will meet June 20 at Georgia World Congress Center in Atlanta.
- The **58th Annual ANPA Operations Management Conference & Exposition** will be June 21-25 at the Georgia World Congress Center in Atlanta.
- The **Atex Newspaper Users Group** will meet Aug. 17-20 at the Westin Hotel Utah in Salt Lake City.
- The Society of Photographic Scientists and Engineers will hold its **26th Fall Symposium and Fifth International Conference & Exposition on Electronic Imaging** Oct.13-16 at the Hyatt Regency Crystal City, Arlington, Va.

ANPA's John Harrington (left) and Peter P. Romano (beside Harrington) give a tour of ANPA technical facilities to Irish newspaper-business executives. Three from the delegation are (from left) Joseph C. McGough of Ireland's Advertising Standards Authority, Frank M. Cullen of National Newspapers of Ireland and Cathal O'Caoimh of Independent Newspapers, Dublin.

Rail strike likely averted

The Brotherhood of Locomotive Engineers and management of most U.S. railroads agreed to accept binding federal arbitration offered by the National Mediation Board. The action, the union's first such move since 1953, almost ensures that a strike will not occur.

The BLE had rejected a tentative agreement earlier this year, and both sides returned to the negotiation table [presstime, April 1986, p. 52].

Talks continued in late April between management and other non-operating unions.

Meanwhile, the National Mediation Board held meetings with labor and management in an effort to end a strike that began in early March against the Maine Central Railroad. The Delaware and Hudson and the Boston & Maine also have been affected.

In Canada, negotiations continued between railroads and some shopcraft unions that have had the legal right to strike since early February [presstime, March 1986, p. 45]. ☐

Newspapers cautioned on bus changes

ANPA's Newsprint and Transportation Department suggests that circulation departments using bus transportation for newspaper distribution consult with bus companies on how impending changes in that industry might affect them.

Among recent developments that could adversely affect newspapers is the announcement by Greyhound Lines Inc. that it will reduce some service and close 35 of its 125 bus terminals nationwide by Oct. 1 because of declining ridership [presstime, July 1985, p. 72]. The number of riders dropped to 33 million last year from 54 million in 1980, mainly because of discount airfares.

Greyhound is not abandoning service to the 35 cities but will be able to save money by selling the terminals and leasing back space it needs, or by contracting to independent agents the job of selling bus tickets. In many cases, Greyhound services will move to a suburban location. The company is also in the process of dropping service on some routes.

An official of Trailways Lines Inc. said that firm also has had difficulties since airline deregulation. ☐

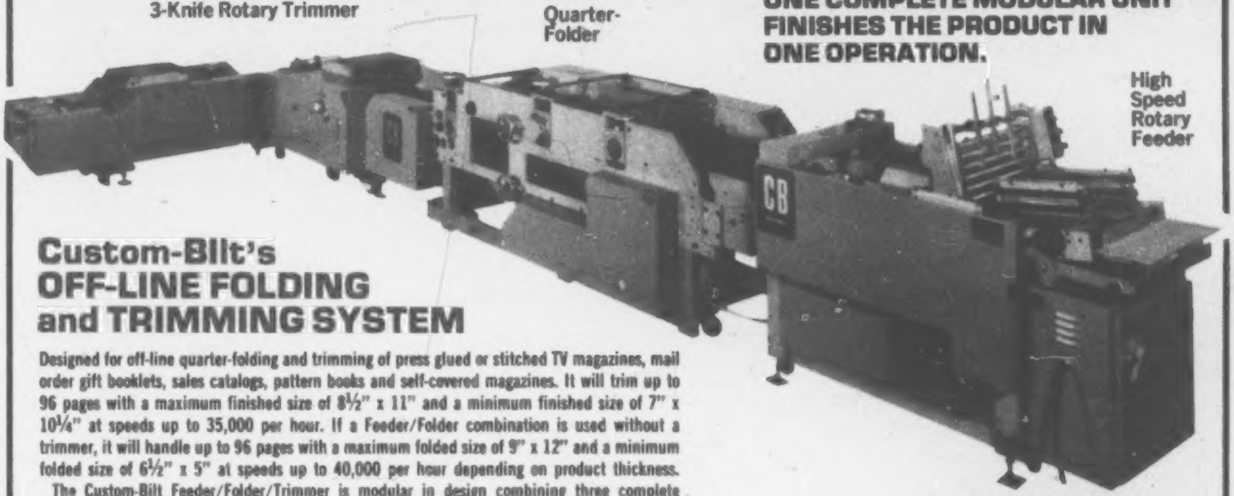
Custom-Bilt can increase your
PRODUCTIVITY...
with a HIGH SPEED Off-Line Operation.

QUARTER-FOLDER with 3-Knife ROTARY TRIMMER/ High Speed FEEDER

ONE COMPLETE MODULAR UNIT FINISHES THE PRODUCT IN ONE OPERATION.



Custom-Bilt's OFF-LINE FOLDING and TRIMMING SYSTEM

Designed for off-line quarter-folding and trimming of press glued or stitched TV magazines, mail order gift booklets, sales catalogs, pattern books and self-covered magazines. It will trim up to 96 pages with a maximum finished size of 8½" x 11" and a minimum finished size of 7" x 10¼" at speeds up to 35,000 per hour. If a Feeder/Folder combination is used without a trimmer, it will handle up to 96 pages with a maximum folded size of 9" x 12" and a minimum folded size of 6½" x 5" at speeds up to 40,000 per hour depending on product thickness.

The Custom-Bilt Feeder/Folder/Trimmer is modular in design combining three complete machines: High Speed Rotary Feeder, Quarter-Folder and 3-Knife High Speed Rotary Trimmer.

Custom-Bilt's OFF-LINE QUARTER FOLDING SYSTEM

The combination High Speed Quarter-Folder/Rotary Feeder is designed for off-line quarter-folding at speeds to 40,000 per hour depending on product thickness. It will produce a folded product up to 96 pages with a minimum folded size of 6½" x 5" to a maximum of 9" x 12". The feeder operates with a continuous rotary action, and the quarter-folder uses the rotary form folding principle. Unique creasing blocks on the Fold Forming Chain assure top speed performance. A single adjusting wheel with a cross-over cleated belt allows the operator to quickly and easily raise or lower the Fold Forming Chain for product thickness.

Experts predict approval for Detroit dailies' JOA

Newspaper analysts and antitrust experts say they expect U.S. Attorney General Edwin Meese III to approve the proposed joint operating arrangement between Detroit's two competing daily newspapers.

It would be the 22nd JOA in the country and the fifth approved since the Newspaper Preservation Act was passed in 1970, legalizing such arrangements if at least one of the newspapers is in "probable danger of financial failure."

How quickly Meese will act on the plan to combine the production, advertising and circulation operations of the Detroit Free Press and The Detroit News depends in large part on any opposition that develops and whether he calls a hearing on the matter.

"If the published reports about the financial conditions of the Detroit newspapers are accurate, it would appear to me to be clear grounds for a joint operating agreement," said Norfolk, Va., antitrust attorney Conrad M. Shumadine. "But joint operating agreements have adverse effects on people with vested interests," he added.

In the past, opposition to proposed JOAs has come from a variety of sources, including newspaper employees, advertisers and competing suburban newspapers.

"If the Seattle experience is any indication, these people tend to fight those joint operating agreements vigorously," said Shumadine.

The JOA between The Seattle Times and the Seattle Post-Intelligencer was the latest to gain approval. The process involved a hearing before an administrative law judge, and 15 months elapsed between the time the plan for the JOA was submitted and its approval by William French Smith, the first attorney general in the Reagan administration. Another 11 months were consumed by litigation by opponents to the plan before the JOA was finally implemented in May 1983.

According to a Justice Department spokesman, after the formal application for the Detroit JOA is filed, a notice will be placed in the Federal Register. This will begin a 30-day period for public comment on whether the JOA should be approved and whether a hearing should be held. An additional 30-day period is then provided for reply comments.

The department's Antitrust Division makes a recommendation to the attorney general at the end of the initial 30-day period, after which public comment is invited for another 30 days on that recommendation. The attorney general then may render a decision or appoint an administrative law judge to conduct a hearing.

Contacted shortly after the April 14 announcement by the two Detroit dailies, Donald C. Kummer, president of Detroit's Council of Newspaper Unions, said there was "too much we don't know" about the plan to take a position on it. "We don't know what their employment policies or practices will be, what numbers of people they look to reduce and what facilities they plan on using," he said.

"Obviously, people are shocked, angry and disappointed," he added. "There has been a lot of pride in putting out both newspapers in the city, and I think the general feeling is that the dollars finally determined what the outcome would be rather than people's efforts." Kummer is chief administrative officer of the Detroit local of the Newspaper Guild, which represents about 900 employees at both papers.

The Free Press

Editorial departments would occupy current offices located three blocks apart.

However, an officer of Detroit Typographical Union No. 18 said his union wants to take a "positive attitude." "What would be the alternative to a joint operating agreement?" Secretary-Treasurer Thomas J. Kelly asked rhetorically. "The demise of the underdog paper, which would be the Free Press," he answered. The local represents more than 350 composing room employees at the two papers.

Richard Aginian, president of Suburban Communications Corp., which publishes 12 twice-weekly papers in the Detroit suburbs, had no immediate comment on the proposed JOA. Aginian also is president of Suburban Newspapers of America.

Most industry watchers said they were not surprised by the announcement and in fact had been expecting it since February when Gannett Co. purchased the Evening News Association, which published The Detroit News.

With the exception of The Detroit News, Gannett has no daily newspapers in fully competitive, two-newspaper cities in its group, observed J. Kendrick Noble Jr., first vice president of PaineWebber Inc.

Both Gannett and Knight-Ridder Newspapers Inc., publisher of the Detroit Free Press, have extensive experience with JOAs, noted Morris J. Levin, a Washington, D.C., attorney knowledgable about JOA matters. Gannett newspapers are parties in JOAs in seven cities and Knight-Ridder in two. Knight-Ridder also holds 49.5 percent of voting stock (and 65 percent of non-voting stock) in The Seattle Times.

There was "an element of surprise" in the announcement "in that Gannett had started taking actions that actually intensified the competitive fight a little bit," said newspaper analyst Bruce Thorp, referring to Gannett's recent move to reduce the price of copies of the News sold outside the metropolitan area from 20 cents to 15 cents, which Knight-Ridder subsequently matched.

According to the announcement by the two companies, both newspapers have sustained heavy losses over the last five years. The operating losses exceeded $35 million for the Free Press (morning, circulation 634,466) and $20 million for the News (all-day, 645,016), according to company officials. "This is a quick way to end those losses and produce some pretty healthy profits," said Thorp, who is affiliated with Lynch, Jones & Ryan in Washington, D.C.

As the newspaper with the greatest losses, the Free Press will file the application for the JOA as a "failing newspaper." Under the plan, both papers would have independent news and editorial departments operated, at least initially, out of buildings they currently occupy three blocks apart in downtown Detroit.

On weekdays, the Free Press would continue to be published in the morning; the News would publish only in the evening, giving up its morning edition. On Saturday and Sunday, just one newspaper would be published. On Saturday, the Free Press would be responsible for breaking-news sections and the News for features; the roles would be reversed on Sunday.

William J. Keating, general counsel of Gannett, would be the chief executive officer of the joint venture, called the Detroit Newspaper Agency.

The proposed contract between the two companies is for 100 years, an unusually long period for such agreements. For the final 95 years, the companies would share profits or losses from the combined operation on a 50-50 basis. For the first five years, it would be on a sliding formula basis beginning with 55 percent for Gannett and 45 percent for Knight-Ridder, reflecting the News' current advantage in Sunday circulation and advertising revenue. *—Margaret Genovese*

Recent acquisitions

Pulitzer Publishing Co. of St. Louis is acquiring the Southtown Economist, Chicago, daily circulation 16,336.

Garden State Newspapers purchased The News of Paterson, N.J., and The Dispatch of Union City, N.J., from Allbritton Communications Co. ☐

Family decisions affect transactions

BUSINESS ROUND-UP

The Pulitzer Publishing Co. continued to be the prize in a struggle between shareholders who want to sell the company to real estate developer A. Alfred Taubman and those who want the family to retain control.

A majority of Pulitzer shareholders voted April 2 in favor of recapitalizing the company under a plan that would involve a massive stock split and a public offering of common stock. The plan calls for allowing current owners to exchange the new common stock on a 1-for-1 basis for shares with 10 votes each and with limited-transferability. At stake are media properties that include the St. Louis Post-Dispatch.

Three shareholders who control 54 percent of Pulitzer Publishing have opposed selling the now privately held company to Taubman [presstime, April 1986, p. 76]. The group that has favored the sale owns about 43 percent.

Taubman, who made his first offer of $500 million in February, has raised the ante. In April, he was offering to buy the company for $450 million in cash and $175 million in a new preferred stock.

Farther west, another family-owned company in the newspaper business announced the sale of its newspapers and cable operation.

Tribune Publishing Co. of Tacoma, Wash., said in April it agreed to sell The Tacoma News Tribune and the triweekly Pierce County Herald to McClatchy Newspapers of Sacramento. The purchase of the 104,133-circulation Tacoma paper gives privately held McClatchy eight dailies, all of them in the West.

McClatchy reportedly agreed to pay $112 million for the newspapers, a figure Tribune Publishing declined to confirm. The Tacoma firm sold its cable operation, serving 76,000 subscribers, to Viacom International Inc. for a price reported to be $105 million. The sales agreements with McClatchy and Viacom must be approved by those company's boards, Tribune Publishing's shareholders and regulatory agencies.

The agreements leave Tribune's telephone answering business, its paging service and some real estate on the market.

Elbert H. Baker, Tribune's chairman, has said the company is being sold for estate-planning purposes [presstime, Nov. 1985, p. 68].

Elsewhere, a family-owned newspaper group has broken up. David R. Dear, president of Dear Publication & Radio Inc., said ownership of The Gleaner of Henderson, Ky., a daily, and three non-dailies went to his brother Walter M. Dear.

David Dear and another brother, Ralph C. Dear, sold the group's remaining three dailies, six weeklies and six shoppers to Thomson Newspapers Inc. of Des Plaines, Ill. Dailies involved in the sale were The Daily Advance of Elizabeth City, N.C., The Sedalia (Mo.) Democrat and The Rensselaer (Ind.) Republican.

In another business development, The Daily Reporter, a legal newspaper in Columbus, Ohio, expanded its coverage and began offering afternoon street sales on April 2. The city has been without an afternoon daily since the beginning of the year when The Columbus Dispatch switched to morning publication following the demise of the Columbus Citizen-Journal [presstime, Feb. 1986, p. 60]. ☐

Minority newsroom employment up, annual ASNE survey shows

Ghiglione leads discussion at April 10 Task Force meeting. Listening are Terri Dickerson-Jones (to his immediate right), ANPA Foundation minority projects coordinator, and Debra A. Castelan of the Institute for Journalism Education.

For the first time since the American Society of Newspaper Editors began its annual survey eight years ago, minority employment in U.S. newsrooms reached 6 percent in 1985.

Also for the first time, the number of U.S. dailies employing no minorities dropped below 60 percent, with 57 percent reporting all-white editorial staffs.

These changes are more striking when measured against the overall growth pattern of newsroom employment. Whereas the total number of newsroom employees has increased 20 percent since 1978, the number of minorities has grown by 50 percent, ASNE reported.

By ASNE's count, there are now 3,402 minorities—blacks, Hispanics, Asian Americans and native Americans—among the total of 53,985 reporters, editors, artists and photographers in U.S. newspaper newsrooms.

The increase verified in the survey "wasn't a surprise," said Loren Ghiglione, outgoing ASNE Minorities Committee chairman, who now chairs the industry-wide Task Force on Minorities in the Newspaper Business. "I assumed the numbers were getting better from what I could see at the job fairs and from people calling me and saying, 'I hired somebody and it worked out,'" said Ghiglione, publisher of The Bristol (Conn.) Press.

Indeed, job fairs along with other efforts grew considerably during Ghiglione's two-year tenure as ASNE minorities chairman. In the current school year, ASNE has conducted 16 job fairs—twice the number of the previous year—and other organizations including the industry-wide task force also have stepped up their efforts in this area [presstime, March 1986, p. 66].

What has also grown is the participation of small and mid-size papers in these events and in other efforts to increase minority hiring.

Long considered the weakest link for minorities in the "farm club" procedure followed by many newsroom employees—moving from small to mid-size to large papers—newspapers under 10,000 circulation accounted for the greatest gains recently in the numbers of papers with minorities. Twenty-four percent of such papers now report having minorities in their newsroom, up from 17 percent in 1985 and double the percentage ASNE reported in 1978.

For small newspapers that need assistance in minority recruitment, ASNE has formed a subcommittee of its main Minorities Committee. It is headed by John F. Greenman, executive news editor of the Akron Beacon Journal, who became active in minority recruiting when he was editor of the Tribune-Chronicle in Warren, Ohio. Succeeding Ghiglione as chairman of the full committee is Judith Clabes, editor of The Kentucky Post in Covington.

The importance of small and mid-size papers as the entry point for minorities was amplified by other reports distributed at the April ASNE convention.

- A Pennsylvania survey directed by Thomas E. Livingston, managing editor of the Philadelphia Daily News, shows that while 4 percent of the state's daily newspaper journalists are non-white, 70 of the 109 minorities are employed at the News and The Philadelphia Inquirer. Excluding them, the percentage of minorities in the newsrooms of Pennsylvania's smaller dailies is less than 1.9 percent.
- According to The Dow Jones Newspaper Fund, 47 percent of the reporters and editors hired by papers of under 10,000 circulation come directly from colleges, a percentage that decreases steadily to less than 8 percent at papers of over 250,000 circulation. ☐

NNA's Mel Street plans to retire

The head of the staff of the National Newspaper Association, W. Melvin Street, has announced he will retire at the end of 1986.

Street, 62, became executive vice president in 1980 when the organization of about 5,000 weekly and daily newspapers was in financial difficulty. NNA President James L. Pate, publisher of the Madill (Okla.) Record, praised Street for leading the organization to "financial stability."

NNA Vice President Richard A. Nafsinger, publisher of Eagle Newspapers of Hood River, Ore., will chair a committee to search for a successor. ☐

Corrections

In the April special report on how newspapers cover foreign news, James S. Keat was incorrectly identified as foreign editor of The Baltimore Sun. Keat is assistant managing editor; Richard P. O'Mara is foreign editor. The story also said Sun reporters traveled along the Amazon River in 1985. This trip took place in 1979.

• • •

The New York Times Magazine is "not" a member of the Sunday Magazine Network. The article on Sunday magazines in the April issue erroneously said the magazine was "now" a member of the network.

• • •

The names of USA Today artists Elys Ibrahim and Julie Stacey were transposed in a cutline in the April issue.

Presstime regrets the errors. ☐

'Facts' book shows newspaper-business growth

The U.S. newspaper industry showed growth last year in several areas, including total employment, number of Sunday papers, Sunday circulation and advertising expenditures in daily newspapers.

Two clouds were a slight decrease in daily circulation and a decline of 14 in the number of daily newspapers, according to preliminary figures.

These data and other statistical information about the newspaper business are compiled in ANPA's "Facts About Newspapers '86," a copy of which is included in this issue of presstime.

Newspaper employment increased for the third consecutive year, up to 453,700 from 440,600 in 1984. Women accounted for nearly 75 percent of the 13,100 increase and now account for almost 41 percent of the total newspaper workforce.

The number of Sunday newspapers rose to an all-time high of 797 from 783 the year before. Sunday circulation increased 2.3 percent, from 57,511,975 to a record 58,816,734.

On the other hand, the number of U.S. dailies declined to 1,674 from 1,688, and daily circulation decreased from a revised 63,081,740 in 1984 to 62,723,438, a drop of 0.6 percent.

The trend toward fewer evening papers and more morning papers continued. Morning papers increased to 482 last year from 458 in 1984, and evening papers decreased to 1,220 from 1,257. (There were 28 "all-day" papers, which were counted in both evening and morning categories but only once in the total.)

The number and circulation of paid and free-circulation weekly newspapers were up in 1985. A total of 7,711 weeklies were counted, up from 7,704 in 1984, with a total circulation of 50,098,000, up from 48,988,801.

Advertising expenditures in daily newspapers also climbed, increasing 8.3 percent to $25.5 billion. Dailies' share of total expenditures was 26.8 percent, the same as the revised figure for 1984. Television's share was down to 21.7 percent from a revised 22.4. Direct mail increased its share, to 16.4 percent from a revised 15.7, as did radio, to 6.8 percent from 6.6 percent.

The annual statistical report also covers Canada. The number of dailies there declined by two to 111, but daily circulation rose from 5,557,932 to 5,620,811.

The number of Canadian morning newspapers increased for the first time since 1983, going from 26 to 30. The number of evening papers continued to decline, dropping from 90 to 84. (There were three all-day papers that were counted in both morning and evening categories but only once in the total.)

Canadian daily newspapers increased their advertising revenues by about $123 million to a total of $1.51 billion. This amounted to a 24.7-percent share, the same as last year, outdistancing the closest competitor, television, whose share declined from 17.3 percent to 17.1.

Additional copies of "Facts About Newspapers" are available from the ANPA Public Affairs Department at The Newspaper Center, Reston, Va. ☐

Proposed UPI sale makes headway in Bankruptcy Court

The proposed sale of United Press International progressed in April with the filing of a reorganization plan and a federal Bankruptcy Court judge's removing yet another obstacle to the sale.

Judge George F. Bason in early April rejected a protest to the UPI plan, which calls for sale of the wire service to Mexican publisher Mario Vázquez-Raña and Houston businessman Joe Russo [presstime, April 1986, p. 76]. The protest had been filed by Douglas F. Ruhe and William E. Geissler, chief stockholders of UPI, who favor selling the wire service to Financial News Network.

A $975-million "conspiracy" suit FNN filed against UPI management and others involved in the sale was pending in U.S. District Court in late April, although a judge had dismissed six of seven counts.

The reorganization plan, in which major creditors would receive 40 cents on the dollar and smaller creditors would be paid off fully, will be reviewed by those creditors through May 12.

Meanwhile, UPI's newspaper and broadcast advisory boards have formed a four-person search committee for a new UPI editorial review panel to oversee both print and electronic news.

Formation of the panel is specified under terms of the sale agreement.

Committee members are Loren Ghiglione, publisher and editor of The Bristol (Conn.) Press; Larry Jinks, senior vice president of Knight-Ridder Newspapers, Miami; George C. Hyde Jr., regional vice president/Florida of Susquehanna Broadcast Group, York, Pa.; and Skip Finley, president and chief operating officer of Albimar Communications, Boston. ☐

A strong advocate of being open with the press

Hicks B. Waldron, chairman and chief executive officer of Avon Products Inc., has a message business reporters are glad to hear.

"Let's invite reporters in," Waldron said in a recent speech before a chapter of the Junior Achievement Club. By talking to the press, U.S. companies can get news about "this fantastic economic system" in front of the public and counter unfavorable reports about business, he said.

Before Waldron asked others to let the press in, he threw Avon's doors wide open.

For 10 months, beginning February 1985, Waldron let N.R. Kleinfield of The New York Times be his shadow. Last Dec. 1, The New York Times Magazine published the results in a massive cover story titled "What It Takes: The Life of a C.E.O."

The fact that Waldron "permitted a reporter an unusually close look at his world makes him unusual," Kleinfield wrote in a sidebar to the story. "But he typifies an evolving breed of C.E.O.'s who have stepped out of their rarified executive offices and into the public eye."

In his speech before the Junior Achievement Club in East Windsor, Conn., Waldron said corporate executives "already live in a fishbowl" with scrutiny by the Internal Revenue Service, Securities and Exchange Commission, Labor Department, and Occupational Safety and Health Administration. "And for every agency of the federal government, there's a counterpart in every state and city where we operate."

"It seems to me that living in a fishbowl is good," he said. "So why should we hesitate to let the press in? It can help our companies and it can help broaden the understanding of free enterprise."

Taking issue with 'accuracy checking'

A March presstime article, "What? Show the Story to a Source—in Advance?" omitted one of the best reasons for showing a news story to a news source before publication.

Such a practice can be a quick way for a city editor or a managing editor to determine which reporters to fire: "Show a story; take a hike." That would be my response to the practice discussed in George Kennedy's article, which suggests that having news sources check stories for accuracy "works in at least four ways that would benefit any newspaper."

But none of those benefits is outweighed by the damage done to a paper's credibility or to the reporter's responsibility.

The recommended practice abrogates the reporter's responsibility to the reader. If the reporter must rely on sources to check for accuracy, then the reporter should get another job. Readers deserve at least that much from a publication.

To belabor the obvious, the practice is too source-oriented. Who knows more about the "facts" of a welfare policy—the bureaucrat administering the policy or the people affected by the policy? Do welfare recipients get advance cracks at the stories, too?

The recommended practice is flawed in the notion that it is supposed to "provide a mechanism for catching many errors before it is too late. After publication is too late."

"Many errors"? Fire the reporter(s).

"After publication is too late"? Most important stories are always incomplete, and therefore inaccurate. That's why papers publish the next day; that's why there are retraction statutes. As journalists, we try to get important stories accurate eventually. But if we adopt the policy that "after publication (of the first story) is too late," we might as well close shop and tell our readers that we're helpless to provide them the slightest notion of what's happening in the world.

Telling people about society is a delicate process and—as a Valley girl might say—an awesome responsibility. Sorry, but we simply cannot shirk any of that responsibility or prostitute our craft by asking news sources to do our jobs for us.

Herb Stentz, dean
School of Journalism and
Mass Communication
Drake University
Des Moines, Iowa

Assessing the state of the unions

The special report by Clark Newsom on "The State of the Unions" (March) was especially well done. Mark Ingham's contribution on "Reducing Employees' Desire for Unions" was also informative.

You have concisely and accurately identified an important trend in our industry. Congratulations on a job well done.

H. Michael Tyson
Vice president, finance & administration
Houston Chronicle

In your March (special report), your major graphic titled "U.S. Newspaper Union Membership 1965-85" (p. 24) is unfortunately mistitled and therefore misleading to your readers.

Even though the figures are from the AFL-CIO, the graph represents U.S. membership in printing industry unions of which only a small portion actually work in newspapers. The graph itself is inaccurate since GCIU membership has not declined at the precipitous rate shown.

What declines have occurred are reflective of nationwide trends such as the aging of the U.S. population. The number of GCIU retirees has grown by almost 50 percent in the last decade. I caution your readership not to assume that membership losses equal union weakness in the industry. It would be equally grievous to assume that the recent precipitous decline in numbers of daily newspapers reflects a weakness of newspapers in general.

It is best to understand that the newspaper industry has experienced a restructuring of major proportions. GCIU itself is a major restructuring of printing industry unions. With our schools for new technology training and a progressive track record in general, GCIU will remain a strong influence in the newspaper industry.

Victor Ciuccio, director
Contract and research department
Graphic Communications
International Union
Washington, D.C.

over-set

Out-of-towners can enjoy Indy 500 news

The Indianapolis Star and The Indianapolis News have a way of giving auto racing fans a "Brickyard" view of the month-long activities that surround the famous 500-mile race.

The newspapers sell special mail subscriptions for May, which culminates with the annual running of the Indianapolis 500.

Readers get details like "who's having trouble with what parts of their car," says Circulation Director Kenneth R. Todd. They also learn about the selection of the race festival queen and her 33 princesses.

Newspapers have been offering the special mail subscriptions "long before I came here," Todd says, and that was 20 years ago.

While the dailies also sell special subscriptions for two-week and four-day periods, the big sellers are the month-long orders. Those subscriptions brought in 8,500 orders last year for the morning Star (circulation, 229,233) and 2,500 for the evening News (130,757).

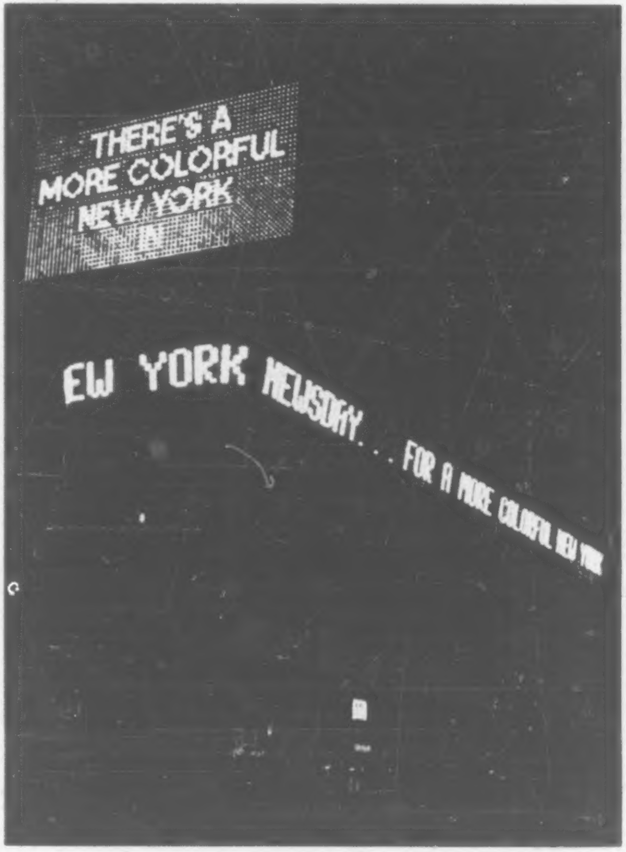
Chronicle Features, San Francisco

"Excuse me sir! Do you have change for a dollar? Miss? Do you have change for... Hey, little boy! Hey you'..."

Newsday



Newsday brings back the 'zipper'

Newsday, the fast-growing Long Island daily that has made a big push into the New York City market, April 2 added its name to the lights of Broadway by relighting the historic news "zipper" wrapped around the One Times Square building. The computer-controlled sign flashes news, sports and weather headlines 16 hours a day.

The sign was first illuminated by The New York Times with a report of the victory of Herbert Hoover in the presidential election of 1928. It went dark after the Times sold the building in 1961, was reinstated in 1965 but turned off again in 1977.

Newspaper numbers

44—number of minutes a-day the typical daily newspaper reader spends reading one or more newspapers.

5—number of strikes at U.S. newspapers in 1985.

41—percent of the total newspaper workforce who are women.

390—number of U.S. and Canadian daily newspapers selling for more than the predominant, 25-cents-a-copy price at the end of 1985.

47—number of daily newspapers in the United States and Canada that are printed in the tabloid format.

President's ASNE 'punch' line

In his appearance April 9 before the American Society of Newspaper Editors, President Reagan got in a good "punch" line.

He spun a story that he attributed to the publisher of The New York Times, "my friend Punch Sulzberger."

According to the President, after Sulzberger visited the White House one day, he called his mother and said, "Mother, today I had lunch at the White House with the President of the United States, the vice president of the United States and the secretary of state."

"Yes, dear," his mother said dryly, "and what did they want?"

It's best to keep moving

New offices of The Wall Street Journal in New York City have an energy-saving feature that has created a lot of conversation—and, one might say, more heat than light.

The offices don't have light switches. Instead, sensors in the ceilings—called an Infracon system—turn on the lights when employees enter their offices, and turn them out when employees leave.

The lights go dark when there is no movement in an office for 12 minutes. But Lawrence A. Armour, director of corporate relations for Dow Jones & Co., says stories about the lights going out while people were sitting at their desks were almost certainly "apocryphal."

"It's possible, of course," he adds. "If someone sits absolutely still for 12 minutes, the lights will go out." But if it were to happen, a simple "wave of the arm" would turn them back on.

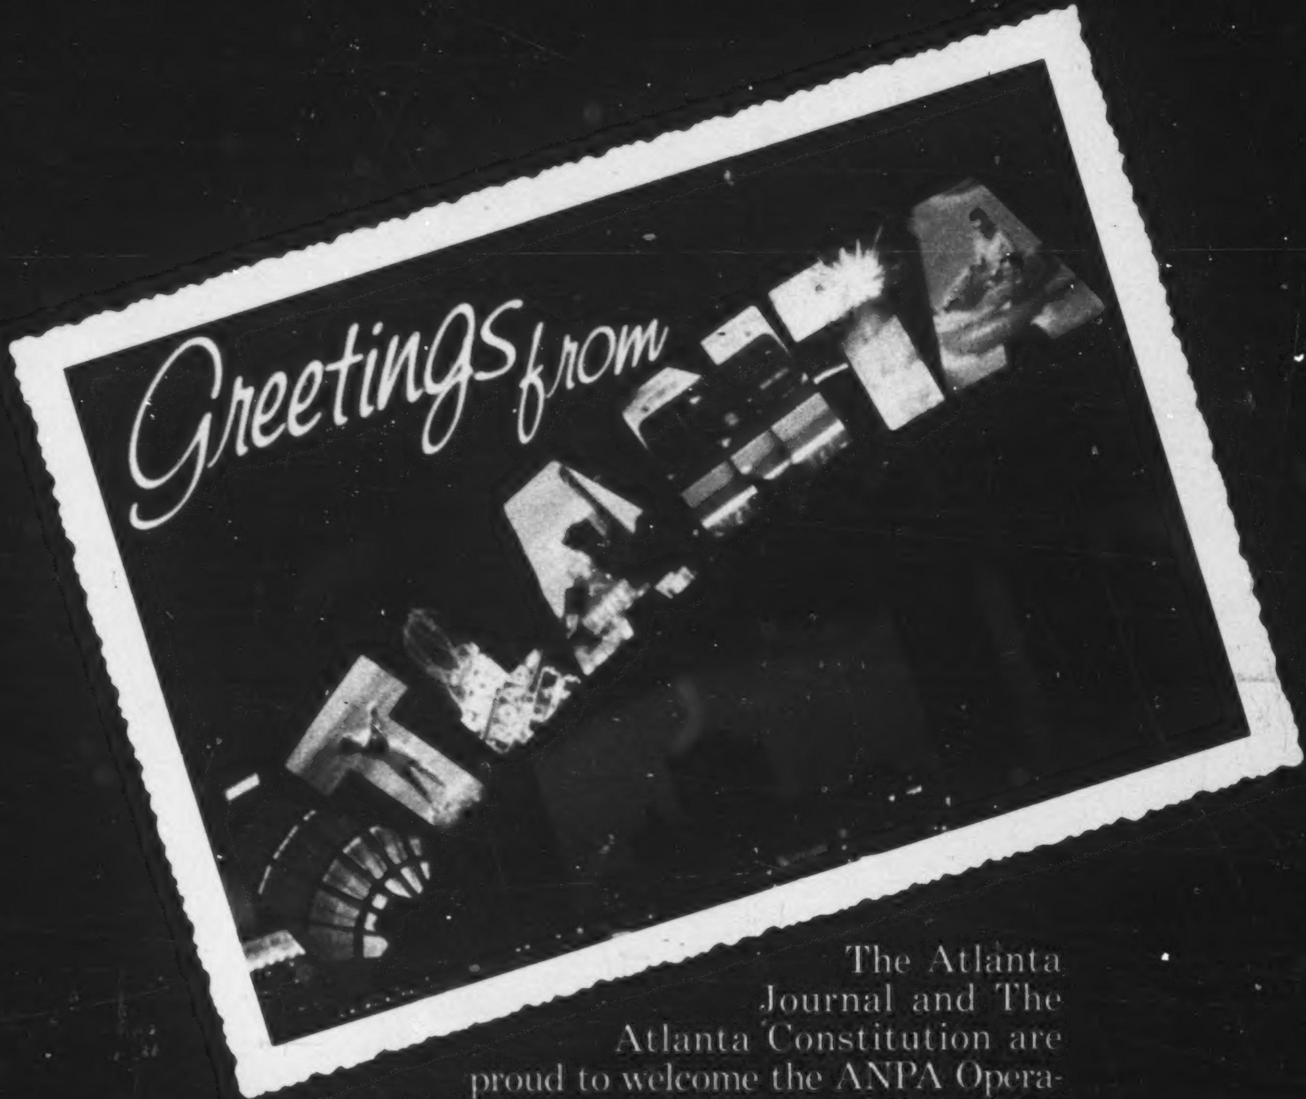
SPECIAL REPORT

Newspaper Production Technology

Preview of ANPA's Conference & Exposition



The Atlanta Journal and The Atlanta Constitution are proud to welcome the ANPA Operations Management Conference and Exposition to our city.

You'll find there's no other city like Atlanta. Our temperate climate, rich history and thriving business community have turned Atlanta into a boom town. And to meet the needs of this vibrant market, the Atlanta Journal and Constitution are continually growing, changing and building for the future. Our new state of the art offset printing facility in Gwinnett County is just one of the ways we're keeping our newspapers strong. And among the fastest growing in America.

So help yourself to all Atlanta has to offer.

The Atlanta Journal
THE ATLANTA CONSTITUTION

CHAIRMAN'S CORNER

Stifling the information flow can be a deadly decision

An event thousands of miles away, by chance sandwiched between ANPA's two big annual meetings, says a lot about why a free press is indispensable if a society is to remain strong and free.

I'm thinking about the secrecy of the Soviet Union in dealing with the Chernobyl nuclear plant disaster—and the effects of that secrecy on its own people and the potential risk it posed to people of neighboring nations as well.

Alvah H. Chapman Jr.

The contrast between the oppressive totalitarian state approach and our own open flow of information could not be more telling.

We've seen our own newspapers digging for information and printing the results in embarrassing situations so often we take it for granted.

And we've just had our own special opportunity to share views and information at our San Francisco Convention—among ourselves and between us and many government and business leaders of our nation. We'll have a massive sharing of technical information at this month's Operations Management Conference & Exposition in Atlanta, too.

The Chernobyl story offers us a graphic reminder that our open system can be indispensable to personal safety as well as to personal liberty and to the general pursuit of the common good.

For us, it's almost inconceivable that officials could know that potentially deadly levels of radiation were moving across wide areas, heavily populated—and not issue warnings for days.

Imagine such a situation without basic information on what's safe to eat and drink, who's missing or dead or in need. It's frightening.

One wonders why any emerging nation would opt for a Chernobyl-syndrome information policy. I can only hope that people throughout the world are pondering the lesson of this event.

A Soviet professor, who was lucky enough to be in the United States when Chernobyl blew, offered a typical party-line comment: "Your system has too much information sometimes."

Maybe, but the end result of having all that information is that we are free.

Our government doesn't decide what we can know and when. We are free. Our mistakes are spread all over our front pages every day. We are free. Our Page Ones are symbolic of freedom's difference.

We newspaper people are privileged to have a fundamental role in demonstrating and protecting that freedom.

I'll see you in Atlanta. There is information to be shared.

Small Newspapers' RECRUITING

With limited budgets and high turnover, the search for talent never ends

BY MARCIA RUTH
presstime staff writer

When John C. Ginn arrived in Jackson, Tenn., in 1973 as publisher of the then-29,000-circulation Jackson Sun, he saw an immediate need to expand both the news and the business staffs.

Aiming to "get as much talent as I could with a limited budget," he called three former professors at the University of Missouri School of Journalism for lists of their 10 best prospects. Interviewing those who got mentioned at least twice, he wound up hiring 11.

A year later, he pulled off a similar heist when he moved to his current job as publisher of the Anderson (S.C.) Independent-Mail (morning, circulation 42,885), shortly after its acquisition by Harte-Hanks Communications Inc.

As is the case with many starting journalists, few of those two Missouri groups remained long-term with their first employers. But during the time that they worked for Ginn's newspapers, the new hires "made meaningful contributions to us. They helped improve the news product significantly."

Such episodes are hardly common in the industry. Few papers have the resources to make such a dramatic turnaround in one year.

But the need for such enterprise, and at times daring, rings true for all small dailies that are committed to upgrading their staffs, despite a relative scarcity of first-rate applicants.

Vigorous recruiting by Aberdeen American News' Beck (foreground) led to hiring of (from left) Circulation Director Bob Jacobson, Editor Harold L. Higgins, Production Director Dan Mastin and Information Systems Director Dale Zalewski.

In recruiting for small papers, "the most important thing is to cover every angle you can think of," says Robert R. Schorman, executive editor of the Messenger-Inquirer (morning, 32,624) in Owensboro, Ky., who is preparing a report on college recruiting for small papers for the Associated Press Managing Editors.

The Dow Jones Newspaper Fund recently conducted a survey on newspaper hiring, and it found that "the larger the paper, the more likely it is that applicants will contact the papers directly for a job," says Thomas E. Engleman, executive director.

At papers with less than 25,000 circulation, only about a third of successful applicants had initiated the application process, while at papers with more than 100,000 circulation, about one half to three quarters contacted the paper on their own.

Instead, small papers often get their hiring leads through want ads. Several newspaper executives contacted subsequent to the survey named Editor & Publisher as a prime want-ad source. Relatively few small papers use recruitment firms, although one such national firm, Youngs Walker, reports a recent increase in executive recruiting by smaller papers.

Next to want ads and direct application, the most important point of contact for small papers are: under 5,000 circulation, newspaper internships; 5-10,000 circulation, college professors; 10-25,000 circulation, tips from other editors; and 25-50,000, recruiting directly from other papers.

Comparable figures are not available for other newspaper departments, but the consensus is that small papers have a harder time finding good people for the business side than for editorial.

For example, at Gannett Co., which has a file of about 5,000 possible newsroom candidates, the smallest papers are advised to "grow their own" for jobs on the business side, says Vivyen J. Ray, manager of staffing and college relations. At Harte-Hanks, which has recently started an editorial job bank, small papers "fend for themselves" when it comes to finding people for other departments, says Robert P. Clark, vice president/news.

But across all departments, the common thread is that many small papers adopt what some executives call "the shotgun approach" or "casting a wide net."

And most executives agree that the process never ends. The smaller the staff, the more a vacancy hurts, and the more tempted an editor or publisher might be to settle for someone from a limited pool of applicants. "You need to be doing it (recruiting) on an ongoing basis, whether you're hiring or not," says Owensboro's Schorman.

CATCH 22. Generally speaking, people who start their careers at small papers fall into two categories: those who are using them as stepping stones, and those who aim to stay.

For editors and publishers, this division poses a catch 22. If they hire the ones whose ambition is to move on, they'll get people who may perform splendidly but then leave. If they look for local students who might be more inclined to stay, they may not be getting the top people coming out of journalism or business programs.

In competition for talent, "the plight of small papers is a pretty serious one," says George P. Kennedy, associate dean of the Missouri School of Journalism. "We attract a lot of students from small towns who don't want to go back."

Part of this reluctance is attributed to small papers' entry-level salaries, which a recent study by the American Society of Newspaper Editors shows to be, on average, below those of public school teachers in their communities.

For others, a major deterrent is some young people's attitude toward small-town newspapering, which they regard as "backwater journalism."

"I often find students want to work for the biggest paper they can," says Schorman."The assumption is that bigger is better." Small papers, he adds, are "associated with unprofessionalism, starvation wages, poor quality work environments," although "clearly that's not always the case."

To attract good people, "smaller newspapers have to work to become known as institutions that (value) high quality," Schorman says.

> *"Promise yourself the person you hire will be better qualified than the person you replace."*

But small papers reaching for such quality must make their peace with the price they'll pay. "At small papers, turnover is a way of life. You cannot prevent it, so you have to look at it positively and take advantage of it," says Stephen Hartgen, managing editor of The Times-News (morning, 20,236) in Twin Falls, Idaho.

"You have to make two promises to make it work: Never hire out of panic, and promise yourself the person you hire will be better qualified than the person you replace." That way, Hartgen says, "You will roll up the quality of your overall news operation very dramatically over the years."

At the Boca Raton (Fla.) News (evening, 14,089), Managing Editor Chris Ledbetter estimates a 30- to 40-percent annual turnover rate, as larger papers in nearby cities such as Fort Lauderdale, Palm Beach and Miami "kind of swoop in on our talent."

Proud of the small daily's sweep of 10 state awards in the recent Florida Society of Newspaper Editors competition, Ledbetter nonetheless admits to some ambivalence. "My biggest fear," she comments, "is all of those newspapers are going to see those names on those awards, and all of those newspapers will be calling my people."

Some newspapers do not view high rates of turnover as an inevitability [**presstime**, Nov. 1983, p. 42]. For many of them, roots in the community are given great weight when applicants' qualifications are assessed.

"We are looking for people who are interested in being a big fish in a little pond," says Max M. Heath, executive editor and vice president of Landmark Community Newspapers Inc., the division of Landmark Communications that over-

One Friday, Kieffer Paper Mills received a call for 3 million AdGuard® jackets...

...the following Tuesday, they delivered to one very relieved production manager.

Kieffer Paper Mills, Inc. filled this rush order for 3 million printed ADGUARD® jackets in March, 1986. Not unusual, considering KPM's customers are in the business of tight deadlines themselves. The jackets can be printed in-house, by a commercial printer, or the finished printed product provided by Kieffer—the choice is yours.

Serving newspapers in major metropolitan markets and small towns alike, KPM is committed to supplying quality products *on schedule.* Maybe that's why their customers keep coming back.

ADGUARD® jackets are used to contain preprints for Total Market Coverage programs and provide additional editorial or advertising space. By prestuffing inserts in durable 60 or 70 lb. basis weight ADGUARD® jackets, your preprints are neatly organized, satisfying your subscribers, advertisers, and your own production staff.

All KPM products are American-made from 100% recycled fibers.

For more information about ADGUARD® jackets or NEWSGUARD® bottom wrap, call or write Kieffer Paper Mills, or see Ken Motsinger at the Atlanta Hilton co-headquarters, during the ANPA Conference.

sees 27 newspapers in 10 states ranging in circulation from 1,700 to 23,000.

"We can't have all people who are 90-day wonders," says Heath. "In community journalism you need some people who will be part of the community."

Many small papers say they are seeking a mix—some who will stay and some who they know are only passing through.

INCENTIVES, TECHNIQUES. For small papers located in cities like Aberdeen, S.D.—which Publisher Robert G. Beck frankly calls "remote"—it helps to be part of a group. "That's really our draw," Beck says of the Knight-Ridder-owned Aberdeen American News (morning, 19,844). "If I owned this newspaper and had no other resource to go to, I would find it (recruiting) more difficult."

Located 280 miles west of Minneapolis-St. Paul and 200 miles south of the state's largest city, Sioux Falls, Aberdeen attracts people because of the opportunity to learn and then move up in the Knight-Ridder organization.

"My pitch is, 'Come work for me, and we will train you. You may not stick around forever, but I'm willing to spend time with you, work with you, and if you do well you'll be promoted out of here,'" he says. "So I admit we're a training ground, and if I can get three good years out of someone who has ambitions to work for The Philadelphia Inquirer, that's my role."

> *"We are looking for people who are interested in being a big fish in a little pond."*

Among the 18 papers of Lee Enterprises Inc., small paper recruiting is enhanced by a strong policy to "promote from within," says Personnel Administrator Sue Sharp. Job openings are posted throughout the company, with existing employees given a two-week jump on outside applicants.

Yet some newspaper executives discount group membership as the major force in attracting good applicants. "The real secret is not money or even being part of a group," says Mary Kay Blake, Gannett's manager of news staff development. A bigger factor, she says, is the degree of "professional challenge" a paper can muster for its entry-level employees.

"The chance to grow, and to grow not just by doing a job but by getting a chance to be exposed to better ways to do it," is critical to small papers' ability to attract and retain good people, she says.

Admittedly lacking the nationwide resources of a company like Gannett—which recruits journalists from 25-30 journalism schools and business-side staff at 30-40 colleges—some independent newspapers say the perception of excellence can lead talented people to their doors.

"We try to develop a reputation that this is a good place to work, that we really care about our craft," says Thomas Schumaker, publisher of the Transcript-Tele-

gram (evening, 23,854) in Holyoke, Mass.

Proud of the places his young staffers go after they leave, Schumaker says, "the other thing that happens is you really can develop a reputation that if you go to work for (a certain) paper, good things will happen to you."

Although no one knows exactly how many small papers have formal recruitment programs—Schumaker, for example, has none—most that do are constantly refining their recruiting techniques.

In Twin Falls, Hartgen doubles as a kind of "baseball scout" for The Times-News' parent company, Howard Publications, whose papers range in circulation from under 5,000 to more than 70,000, with about half under 30,000.

Whenever he travels on business, Hartgen goes a day earlier or stays a day later to interview at local universities, making extensive notes on his lap-size Radio Shack computer. In addition to recruiting from journalism schools, he favors graduates of "small- to mid-size liberal arts colleges" where he says he has found "some real gems."

> *Sometimes "it's just a question of the right applicant being in the right place at the right time."*

This year, Hartgen plans to develop a computerized database, so that when vacancies arise the group's editors and publishers can easily obtain his notes about potential candidates along with their resumes.

On the national level, there is only one computerized, job-referral service for all print journalists—Job Bank, a New Jersey-based service established in 1984. Papers with less than 30,000 circulation comprise about 15 percent of those using the service, says director Debra Bissinger.

At small papers, "openings tend to come up quickly, so they really are hurting if they are down one or two people," Bissinger says. Because such papers "don't have money to fly people in" for interviews, she adds, they often look only in a limited geographic area.

Nancy L. Green is one person who used Job Bank to find her current job: publisher of the Palladium-Item (evening, 21,916) in Richmond, Ind. But for production and advertising personnel, she favors running classified ads in newspapers in nearby, larger cities. With the "only big offset web operation" and the largest sales staff in her community of 40,000, "the numbers of people who would be trained in pre-press, in advertising sales and in art just aren't in our area," says Green.

But with all the different efforts afoot, some say there is still no substitute for fortunate timing. "A lot of people say they keep applications on file for the next opening," notes Peter Fox, editor of the The Journal Times (evening, 35,663) in Racine, Wis. But sometimes, he says, "it's just a question of the right applicant being in the right place at the right time." ☐

Will all those who still doubt the capacity of the IBM System/38 . . . please say nay.

Almost everyone has done an about-face after seeing what publishers are doing with the System 38 from CDS these days. One of our customers is processing 40,000 retail ads plus 60,000 classified ads per month from 12 remote sales offices feeding 5 composition centers for 52 different publications . . . all with sub-second response time . . . all with one System 38 . . . *and that ain't hay.*

GOSS Newspaper Products

THE GOSS MPCS: ONLY A ADVANCED COULD BE SO

The revolutionary new Goss® Modular Press Control System™ (MPCS) — integral to the latest-generation of Headliner Offset® presses — constitutes a quantum leap forward in newspaper productivity. As operationally simple as it is technologically sophisticated, the MPCS provides new capabilities for shorter makeready and reduced waste through computerized presetting and running adjustments.

Redefining user-friendliness, a menu-driven, touch-sensitive work station display is the key to MPCS simplicity. Following a fast self-diagnostic precheck of system software and microprocessors, the MPCS uses computer intelligence to help the operator select, preset and later adjust press functions from the quick-response touch-screen menu. Subsequent color-coded displays quickly confirm input, progress and function achievement — or report unattainable commands and describe the problem.

On the menu-driven, touch-sensitive display, the operator begins to set the press.

Here's what this unique system means to you. In addition to fast makeready and greater manpower efficiency, the flexible, powerful MPCS also produces significant materials savings. For example, inking values are defined across the web based on stored computer information. Paper is similarly conserved, with waste-reducing adjustments made automatically before any paper is used. There is no wasteful guesswork or experimentation.

MPCS advantages don't end there. The system allows better use of pressroom manpower — for example, multiple work stations on a single press permit input by more than one pressman at a time. The sequence of presetting the press closely follows pressroom opera-

By simply touching the MPCS work station display, a single operator can preset press functions. The productivity programmed central computer takes it from there.

Headliner Offset **MPCS**

SYSTEM SO SIMPLE.

The display verifies ink zone settings.

On another couple, a problem is indicated on the display.

The new Goss Modular Press Control System achieves significant technological advancement for the newest Headliner Offset presses (a four-color unit is shown).

tions ... for example, pages can be input as available and the system automatically presets ink zones for each page. Other MPCS benefits: easier circumferential and sidelay adjustments. Running adjustments by plate or page. Specially designed diagnostic features for checkout and maintenance. Library of impositions. Press settings for a frequently used or an interrupted job can be saved and recalled at the operator's command.

There are important initial economies, too. With the building-block design of the MPCS, you order only what you currently require. The MPCS has assured expandability to grow as your requirements and press operations grow. It is easily maintained and accommodates a wide range of peripherals.

Perfected through more than 30 man-years of quality-assured development, the Goss Modular Press Control System makes the Headliner Offset press more than ever the world's pacesetter for newspaper productivity. For more details on MPCS potential in your pressroom, contact Goss Newspaper Products, Graphic Systems Division, Rockwell International, 3100 South Central Avenue, Chicago, IL 60650. Or phone 312-656-8600.

Craig Flournoy and George Rodrigue, Reporters, The Dallas Morning News

▪ When word about the Pulitzers came across the wire Thursday afternoon, April 17, 1986, cheers swept through the newsroom of The Dallas Morning News. It was announced that the Pulitzer Prize for National Reporting had been awarded to Craig Flournoy and George Rodrigue for their 8-part series, "Separate and Unequal: Subsidized Housing in America." This series documented systematic discrimination in subsidized housing across America that has gone unchecked despite legislation, federal regulation and court decisions. Supervised and edited by Howard Swindle, the series was published by The Morning News in February 1985, the culmination of a 14-month investigation that included interviews in 43 East Texas counties and 47 cities nationwide. ▪ As a result of this series, a U.S. House Committee and the Commission on Civil Rights have both ordered investigations into the subsidized housing system. ▪ As the most prestigious award in our industry, this Pulitzer reflects the long-standing commitment of The Dallas Morning News to give our readers journalism of the highest standards every day. ▪ For a copy of this series, call Ralph Langer, Vice President and Executive Editor, at (214) 977-8363. Circ: 390,275 Daily / 521,727 Sunday ▪ Nobody beats The Dallas Morning News in the morning.*

City Papers

As downtowns revitalize, some daily newspapers are targeting the areas with free publications

BY MARGARET GENOVESE
presstime staff writer

While most daily newspapers worry about such things as household penetration and home delivery, a few also are reaching out to readers where they work, shop and play—downtown.

Newspaper companies in cities as diverse as Dayton, Louisville, Phoenix and Sacramento are publishing separate, non-daily, free-distribution downtown newspapers.

No one in the newspaper industry has statistics, but the number of downtown papers published by companies that also publish general circulation dailies apparently is not large. They are all recent phenomena, however, and if they continue to prosper, their fold may increase.

The four identified by presstime are a mixed bag.

City Life, published by Phoenix Newspapers Inc., covers entertainment news almost exclusively.

Around Downtown, published by the Courier-Journal & Louisville Times Co., and The DownTowner, published by Dayton Newspapers Inc., cover a wider range of subjects of interest to people who live and work in the downtown areas of those cities.

And The Sacramento Bee's version, Office Hours, carries news tailored to white-collar workers.

Although aiming at different audiences, the four publications have some similarities. All started in the 1980s all are tabloid format, all are colorful, all operate with small staffs, all publish on a weekday and all take a soft, feature approach to their coverage.

Each is expanding name recognition for its daily affiliate, creating new readers and staking a claim to the downtown advertising market; three out of the four are making money to boot. These publishing efforts coincide with the recent resurgence of American cities and recognize that, for a growing number of Americans, the workplace is as important a community as the one in which they reside.

Lou Gray learns what's happening in Louisville from Around Downtown.

COPING WITH CITY LIFE. The form of newspapering most closely identified with downtowns is the so-called "alternative" weekly, a type of publication that sprang up in the turbulent 1960s and '70s and that is making a comeback in the 1980s catering to "yuppies"—young urban professionals.

In the case of only one of the four downtown papers, the Phoenix Newspapers' City Life, was the existence of an alternative weekly a factor in the decision to enter the market.

"In most markets, if the daily is trying to respond to an alternative weekly, they do it by beefing up their entertainment section" rather than by starting a separate publication, says Robert A. Roth, publisher and editor of the Chicago Reader, an alternative weekly, and president of the Association of Alternative Newsweeklies, which has about 45 members around the country.

But Conrad A. Kloh, director of marketing and sales for Phoenix Newspapers, says one reason his company decided to publish City Life as a separate publication was concern that its target audience includes "a significant group" of non-newspaper readers, generally younger people. In addition, he says, a publication with a cover price is immediately handicapped in competing with a free-distribution publication.

City Life also is the only one of the four publications not reporting a profit, but Kloh is optimistic. Pointing out that it is only two and a half years old, he says the Phoenix newspapers are committed to it. "We are not about to just let it die aborning."

Because its circulation is only about 110,000, compared with 444,467 combined for The Arizona Republic and The Phoenix Gazette, it cannot charge as much for advertising and therefore has to rely on advertising volume, Kloh explains. Although it averages about 60 pages, City Life does not yet have the volume that it needs for profitability, he says.

Today's City Life evolved out of what was begun in 1981 essentially as an advertising vehicle. The format was changed in September 1983 to include a more complete editorial product.

It is still changing. Editor Thomas Hardy Price says the editorial emphasis is shifting with the addition of more "lifestyle" articles. But it is not for-getting its basic function—"letting people know what's happening in town."

Distribution also has been evolving. Until recently, City Life had been included in copies of the Republic and Gazette delivered to homes in the central city. Currently, it is carried only in street-sale copies of the dailies and is given away via racks at about 325 locations in Phoenix and on nearby college campuses and resort areas.

TARGET MARKETING. The Dayton Newspapers central-city paper, The DownTowner, began in 1980 as a form of target marketing. "We were starting to think of ways to break down our market into smaller pieces and serve it better. The downtown seemed a logical place to start," recalls Edward J. O'Neil Jr., former vice president/marketing.

According to O'Neil, the newspapers were able to identify more than 50,000 people who traveled to the central business district and adjacent historic area on a daily basis.

The downtown area also was developing a focal point in the form of Courthouse Square, a "people park" created during redevelopment of the central business district. "There really was a joyous feeling about downtown that we wanted to capture," says O'Neil, now publisher of the Springfield (Ohio) News-Sun.

Similarly, downtown Louisville was experiencing a kind of renaissance when The Courier-Journal and The Louisville Times started their downtown paper in 1983. The city boasts a new arts center and a new glass-enclosed mall, the Galleria. But rather than a desire to reach particular readers, the motivating force behind the creation of Around Downtown was a desire to serve smaller advertisers that could not afford space in the dailies, according to Gregory S. Johnson, features editor of the Louisville papers.

The decision to launch was hastened when the newspapers learned that a suburban weekly newspaper was considering entering the downtown market, too, he says.

Neither newspaper covers city politics nor takes editorial stands.

In Louisville, story length and treatment in the tab are influenced by the realization that people are "probably reading with a sandwich in one hand," says Johnson.

Similarly in Dayton, The Downtowner is "not a hard newspaper," says Editor Jim Nichols.

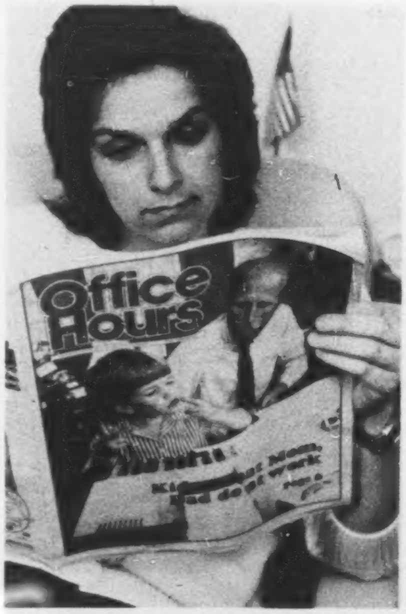
Distribution in both cities is primarily via newsracks placed around downtown. In Louisville, copies also are inserted into street-sale copies of both dailies, and hawkers hand out individual copies on publication day.

"We were starting to think of ways to break down our market into smaller pieces and serve it better."

Retail stores, theaters, hotels and restaurants are major advertisers in both publications.

Contrary to the fears expressed in Phoenix, a 1985 readership study in Louisville revealed that most of the people who read Around Downtown also read the Louisville dailies. Some 68 percent of the adult readers of Around Downtown said they had read either or both of the daily newspapers "yesterday"; 94 percent said they had read either or both dailies "in the past seven days."

OFFICE AUDIENCE. The newest of the downtown papers is also the most demographically targeted. The Sacramento Bee's Office Hours, which published its first biweekly edition March 18, bills itself as "a publication for and about the professional community."



Office Hours is aimed at people like public relations executive Karen Bakula.

Susie Gow

Technically, it is a publication of Neighbors, the zoned editions inserted into the Bee each Thursday. The Bee already publishes a downtown edition of Neighbors. The problem is that a lot of the people who work in Sacramento's downtown offices live in the suburbs and, consequently, don't receive the downtown edition of Neighbors.

Enter Office Hours.

According to Neighbors Publisher Ray Steele Jr., the idea for a publication for office workers was brought home by an executive of McClatchy Newspapers, owner of the Bee, from a meeting of Suburban Newspapers of America. After studying the idea for several months, and consulting with the heads of similar publications in the suburbs of Chicago and Kansas City, the Bee decided it could work in Sacramento.

Whereas the downtown edition of Neighbors carries the typical mix of news about schools, politics and local issues, Office Hours deals only with topics of interest to people who work downtown, explains Steele. Stories in its first editions covered such things as the downtown parking crunch and the corps of airborne traffic reporters that report on rush-hour commuting.

As in the case of the other downtown papers, copies of Office Hours are left in racks in various downtown locations. But unlike the others, copies also are hand-delivered to individual offices.

Prior to publication, a 300-square-block area was canvassed, with offices asked whether they would like to receive the publication. About 22,000 copies are distributed through door-to-door delivery and newsracks. Another 1,500 are handed out by hawkers.

Office Hours also has a slightly different mix of advertisers than the other city papers. In addition to downtown retailers, advertisers include catering services, health and fitness clubs, financial service providers, and office supply houses.

"We projected it would be profitable right away," says Steele. "This is its second month, and it's past the break-even point." The Bee is looking toward expanding the concept to other areas within the next 12 to 18 months.

Where could a publication like Office Hours work? Anywhere there is a high concentration of white-collar workers, says Steele.

Likewise, says Louisville's Johnson, other cities could take a page from Around Downtown. "I can imagine other cities with renaissances in progress . . . where it might be a really going venture." ☐

"EIGHTH WONDER OF THE WORLD"

Mergenthaler's Marvelous Machine Turns 100 This Year

BY MARGARET GENOVESE
presstime staff writer

One hundred years ago, the brainchild of a 32-year-old German immigrant watchmaker, machinist and inventor dramatically changed U.S. newspapering.

The date was July 1886. The place was the composing room of the New York Tribune. A contraption roughly 7 feet tall, by 6 feet wide, by 6 feet deep spit out a line of lead type to be used for the editorial page of the July 3 edition.

So the legend goes, Tribune Publisher Whitelaw Reid, heedless of the fact that it was still fiery hot, grabbed the slug and exclaimed to the inventor: "Ottmar, you've done it again! A line o' type!"

Within 20 years, Ottmar Mergenthaler's "Linotype" machine was in use in every state.

Although the advent of the cold type, photocomposition process in the 1950s has rendered Mergenthaler's hot type method all but obsolete at U.S. newspapers, the centennial of the first commercial use of the Linotype is being marked this year.

To understand how revolutionary was Mergenthaler's invention is to realize that up until then, most newspaper type was painstakingly set by hand—essentially in the same way it had been done since the 1400s, when Johann Gutenberg invented movable type. This method required skilled compositors to pick up individual pieces of type and assemble them in a line.

By mechanizing this process, Mergenthaler's machine allowed pages to be composed four or five times faster. The faster that pages could be composed, the more that could be printed. And the newspaper business was changed forever.

Although it lowered composition costs, the Linotype exacted a toll in human terms: the displacement of thousands of hand compositors.

The Linotype, with one person operating the machine's keyboard, created new type with each line it produced by assembling a row of metal molds, or matrices, into which molten lead was poured. The matrices were then recycled within the machine.

Ottmar Mergenthaler

Inventive inspiration can well up from unlikely sources, and the idea behind the Linotype is a prime example, according to Edmund C. Arnold, a veteran newspaper designer who worked for seven years for what was then called the Mergenthaler Linotype Co.

Arnold says he was told by Mergenthaler's son Herman that the inventor got the idea of using matrices from the wooden molds used to make "springerle"—German Christmas cookies. As a child, Mergenthaler had carved a springerle mold for his stepmother.

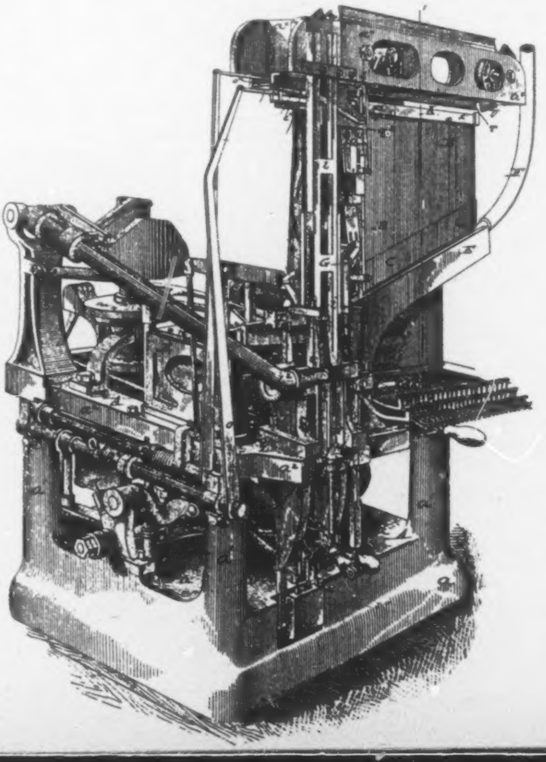
Personally, Mergenthaler was a "very intense kind of person," according to George Corban Goble, who wrote his 1984 doctoral dissertation on the history of the Linotype. A perfectionist, Mergenthaler bridled at the insistence of the syndicate of newspaper publishers backing his company that production of the machine go forward, even though he felt it could be further improved. He left the company that bore his name in 1888, although he continued to contribute ideas to it.

Mergenthalar died in 1899 at his Baltimore home at the age of 45 after a bout with tuberculosis. "He wasn't just a flash in the pan," says Arnold. "If he hadn't died so darn prematurely, he probably would have had an awful lot of patents to his name."

As it was, Mergenthaler had about 60 patents, almost all of them dealing with some aspect of printing, says Goble, assistant professor of journalism at Western Kentucky University.

Mergenthaler received critical acclaim for his invention—according to Goble, Thomas Edison is said to have dubbed it the "Eighth Wonder of the World"—as well as a considerable fortune. As close as Goble has been able to determine, Mergenthaler and his heirs received about $1.5 million from the invention, although much of the royalty money came after his death. Mergenthaler's last surviving child, daughter Pauline, died in March of this year. A granddaughter, his last surviving heir, lives in Washington, D.C.

The Linotype machine, too, is almost at the end of its line. The



The first Linotype was used commercially in 1886.

last Linotype was manufactured in 1972, although it is still possible to purchase matrices and spare parts, according to Robert H. Trenkamp, president of Linotype Co., a division of Allied Corp. and the direct descendant of the original Mergenthaler company. The name Mergenthaler was removed from the company title in 1985 so that all three of Allied's Linotype companies around the world would have the same name.

Ironically, in 1895, Mergenthaler himself had vigorously opposed a proposal that his name be taken from the company title. Doing so, he argued, would "deprive a man who has given to the world one of the most important inventions of the age the credit therefor."

The centennial was marked in May at DRUPA, a massive graphic arts trade show in Dusseldorf, West Germany, with a party sponsored by the Linotype Co. that was attended by Richard von Weizsacker, president of the German Federal Republic.

In the United States, a number of celebrations will be held, including one at the New York Public Library, which houses a mural depicting Mergenthaler, publisher Reid and the Linotype.

In honor of the occasion, Trenkamp says, the company also will unveil a new Linotype product, the Linotronic 500, at the 58th Annual ANPA Operations Management Conference & Exposition June 21-25 in Atlanta.

It is still possible to see Linotypes in action at U.S. newspapers. But The Herald in Nogales, Ariz., may be the only daily still using them. Early models of Mergenthaler's marvelous machine are in the collections of the Smithsonian Institution in Washington, D.C., and the Henry Ford Museum in Dearborn, Mich.

Where does Mergenthaler rank among other 19th century U.S. newspaper inventors? "I would say he probably stands very near the top of the list," says W.W. Frederick Craig, associate professor in the School of Printing at the Rochester Institute of Technology. Mergenthaler's typesetter capped a series of remarkable inventions that helped make newspapers a true mass medium. Among the greats preceding him were:

- Richard M. Hoe, who perfected the first rotary press in the United States in 1847
- Charles Craske, who adapted sterotype plates for newspaper use at the New York Herald in 1854
- William Bullock, who developed the web press in 1856
- Stephen Horgan, who produced the first halftone for a newspaper in 1880. ☐

GREAT NEWS!
THE FIRST BUSINESS SYSTEM THAT WILL FIT ANY SIZE NEWSPAPER!

PRO MACS runs on small and large computers . . . and anything in between!

SO WHAT'S THE SECRET?
PRO MACS is written in PROGRESS, a fourth generation programming language that provides incredible flexibility and ease of use. And PRO MACS runs under the UNIX® operating system for hardware independence!

YOU CHOOSE THE HARDWARE!
LAN Systems' complete accounting and business management system NOW will run on computers such as the IBM PC/AT, Sperry's super micros and Burrough's minis. This is not a small system with limited capabilities. It's the same full functionality LAN has provided for years!

You can start small and PRO MACS will grow with you—no need to discard software as you add to your system. Or if you want to start larger, you have a choice of a single, more powerful system or multiple small systems with automatic hardware backup.

YOU SAVE TWICE!
First, you save on your initial investment, because you keep your software as you move to new hardware. Second, you avoid retraining and typical upgrade headaches.

SAME GREAT SERVICE, SUPPORT!
Some things are too good to change. You still get LAN's unmatched service and support—our on-line diagnostic telephone hotline and 80% of our people assigned to client services.

IT'S NEVER TOO SOON TO SAVE TIME, MONEY!
Call or write today to learn how PRO MACS can save your newspaper time and money!

Quality and service
leaders since 1972

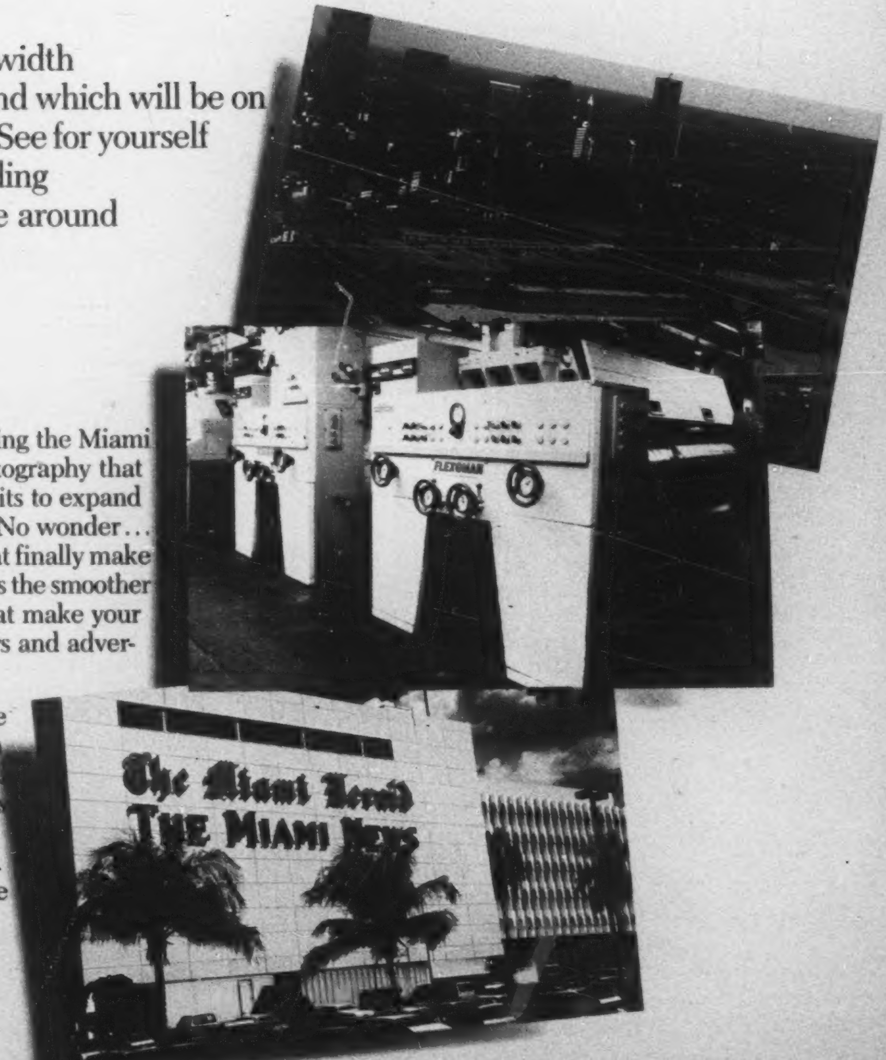
What's the attraction at ANPA?

It's the three new double-width presses from M.A.N.-Roland which will be on display at ANPA this year. See for yourself why these presses are finding unprecedented acceptance around the country.



Flexoman®

This press performed so well during the Miami Herald's production test with flexography that The Herald has ordered more units to expand its flexo capacity to four presses. No wonder… flexo offers the fast-drying inks that finally make newspapers "clean," and it provides the smoother solids and more vibrant colors that make your product more attractive to readers and advertisers alike.

In addition, flexo has proven to be more economical than offset with its lower capital investment, as well as with lower newsprint waste, less maintenance, and lower energy consumption and operating costs. Flexoman: the process of the future is up and running today.

Colorman 75

This is the new heavy duty, double-width offset press for metropolitan dailies. The basic "U" unit can be expanded to print three or four colors within that one unit. In addition to modular design, advanced features include: direct dampening, choice of ink pump or ink fountain system, and Programmable Press Control, a modular and expandable press automation system. And remember that the Colorman 75 can achieve 75,000 pph consistently throughout the run. Tomorrow's press technology is available now with Colorman 75.

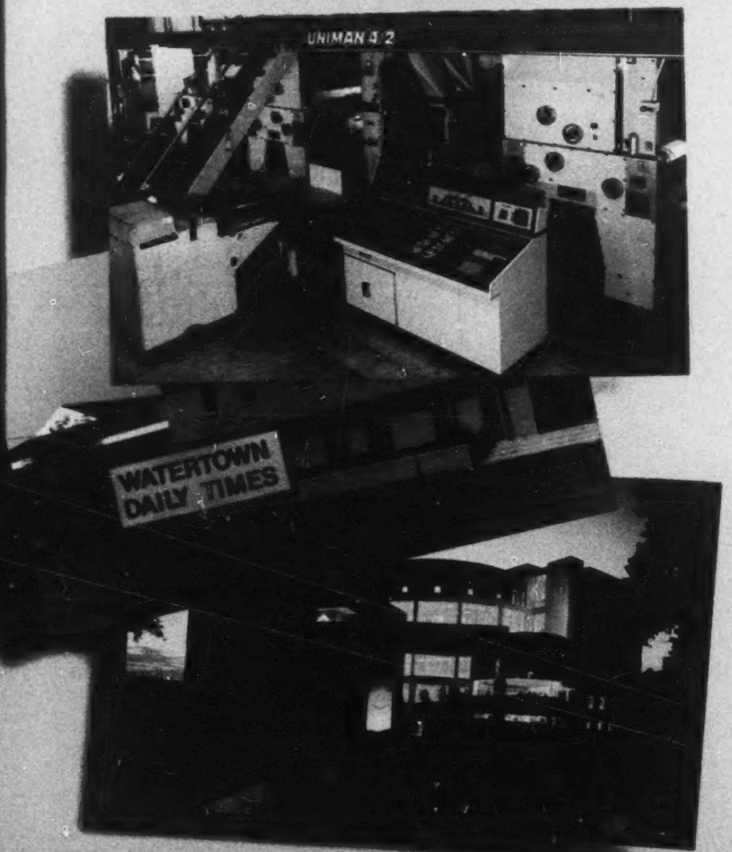
Uniman 4/2

Sales of this press have reached the century mark faster than any other newspaper press ever built. It offers metropolitan press capabilities at a midsize press cost, with a folder that lets you run the daily paper and commercial work. The Uniman 4/2 is now available with a four color "H" unit for printing process color on one unit. Infinite color positioning of black, spot, or full process color increases advertising and editorial flexibility. Even with increased productivity and color versatility, it's still the most affordable double-width offset press available… the best buy for your dollar.



UNIMAN 4/2

NEWSPAPERS AS HISTORY

American Antiquarian Society in Massachusetts offers researchers 3 million 18th and 19th century editions

BY PETER P. DONKER

The written and printed words of early America have been brought together in a Georgian Revival-style brick building in Worcester, Mass.—the home of the American Antiquarian Society.

It is here, on seven miles of shelving on two floors in a climate-controlled environment, that the society keeps one of the finest collections of newspapers in the country, a fact not even generally known among newspaper people.

With 15,000 titles and approximately 3 million issues, the newspaper holdings cover the period from 1704 to 1876.

Because of its later development, the Western part of the United States is covered by a collection that extends to the beginning of the 20th century.

Many of the old newspapers are bound in leather books; later ones are in soft bindings, with more recent additions put in acid-free folders and containers.

With the advent of the computer age, this treasure of information has become available to scholars from coast-to-coast.

A National Endowment for the Humanities grant of $201,987, enabled the society three years ago to begin cataloguing the histories of the newspapers in its collection into a nationally accessible database.

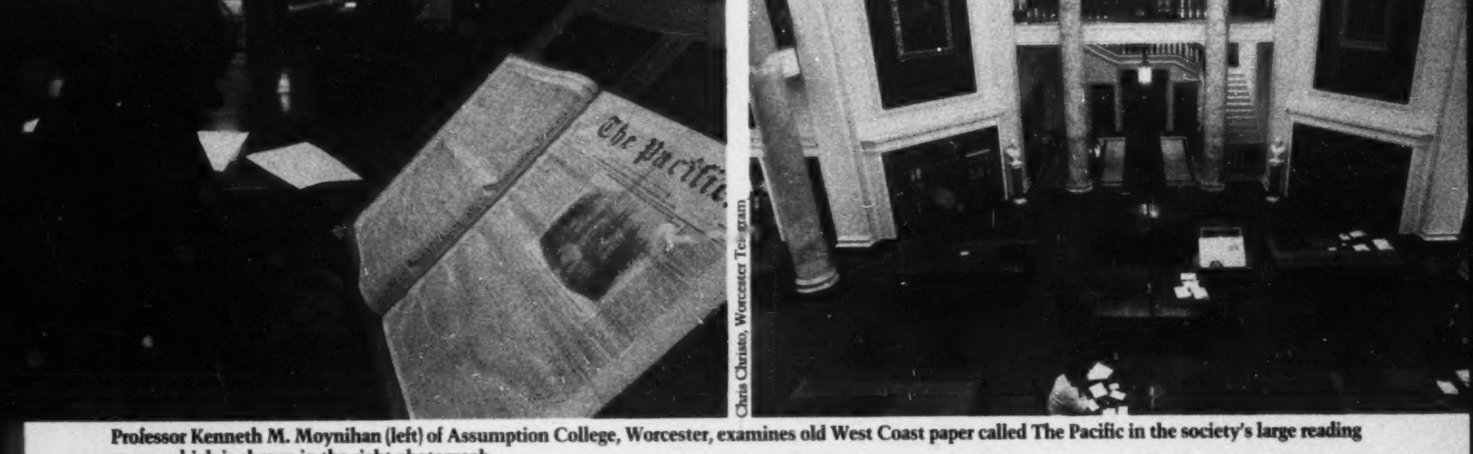
Titled the United States Newspaper Project, for which NEH has made about $2 million available, the venture also involves a number of state libraries and the Library of Congress [presstime, Sept. 1984, p. 13].

Information that is entered into the database records the character of the papers in such ways as name and name changes (in early America, papers changed names frequently), names of publishers and editors, publication dates, political leanings, and the language of publication.

The central receiving point is the Online Computer Library Center Inc. in Dublin, Ohio. With almost every major public library linked to OCLC, the newspaper database can be retrieved from practically any corner of the country. Computer tapes are also made available to the Research Libraries Information Network at Stanford University in California, which serves universities and special libraries.

While the information would seem basic at best, Martha Gunnarson, who conducts the Newspaper Project at the Antiquarian Society, explains that newspapers represent a prime source of material to historians and genealogists.

Donker is arts reporter for the Worcester (Mass.) Telegram.



Chris Christo, Worcester Telegram

Professor Kenneth M. Moynihan (left) of Assumption College, Worcester, examines old West Coast paper called The Pacific in the society's large reading room, which is shown in the right photograph.

"Online will tell them where these papers are available. It will give historians the knowledge about what to find where," she says.

The society's part of the project is about two-thirds finished, Gunnarson says. She expects to make the last computer entry by July of next year, three months before the society celebrates the 175th anniversary of its birth.

Founded in 1812, the society is one of the oldest historical research libraries in the nation. Its holdings are rated second to none through 1820 and extremely strong through 1876. In addition to newspapers, the collection is made up of books, manuscripts, maps, pamphlets, broadsides, periodicals, engravings, lithographs, sheet music, letters, diaries and other printed or written material.

Often the copies of the books, manuscripts and maps are one of a kind, brittle with age and requiring special care. Pages are faded, and many of the works show evidence of heavy reader use.

The collection is the largest of its kind for the first 250 years of what is now the United States. It covers all aspects of American life, from religion, politics and war to trade, agriculture, morals and home life—the roots of our nation.

Although widely known among scholars here and abroad, the importance and uniqueness of the holdings so far have failed to make the Antiquarian Society a household word. Practically all visitors to the buildings are serious researchers. Public browsing is not permitted.

While national in scope and deriving support from private sources and foundations nationwide, including NEH, the society through its Worcester location has always had close ties to the city and derived a major part of its annual budget through local contributions.

The society's first holdings were those of its founder, newspaper and book publisher Isaiah Thomas. A patriot, Thomas (1749-1831) was recognized in the American colonies as a fearless champion of liberty who used his newspaper, The Massachusetts Spy, as a public forum.

After the American revolution, Thomas settled down to become one of the country's most influential and most successful printers, controlling one of the first publishing conglomerates. It consisted of five bookstores, seven newspapers, a magazine and two paper mills.

In addition to being a successful printer, Thomas also was an avid collector of printed materials. To him they represented an important source of information about the young republic he had helped to establish.

He collected books, newspapers, pamphlets and broadsides and used them to write his *History of Printing in America*. Thomas traveled through the colonies and bought up files of other newspapers: the issues of The Boston Evening Post from 1735 and 1775, for $60; of The American Weekly Mercury from 1719 to 1746, $70; of The New York Weekly Journal from 1733 to 1751, $30; and of The Pennsylvania Gazette from 1735 to 1755, $180. The acquisitions are part of the society's collection, as is one of Thomas' 12 printing presses.

The Antiquarian Society today counts 150 newspaper companies and individuals working for newspapers as having contributed more than $500,000 to the society. ☐

The Best Just Got Better!

Announcing the addition of The Orange County Register, The St. Petersburg Times and Independent, and The Queensland newspapers.

Newspapers large and small have found a cost-effective way to electronically store their clipping files. They use DataTimes to install, support and market their electronic library. Some of these libraries are in-house systems, others run on service bureau computers. All utilize BASIS™, the industry's fastest, most comprehensive search and retrieval software, developed by Battelle Laboratories, the world's largest research and development organization.

DataTimes is designed to interface with almost any editorial system including DEC, Atex, SII, CSI and Hastech. DataTimes even offers optical disk technology for maximum cost saving of clipping file storage. The DataTimes electronic library allows reporters and editors to retrieve information in seconds from their own desks.

These newspapers have found DataTimes to be more cost-effective, reliable and usable than their old clipping files. A better newspaper is the result.

Join these prestigious newspapers and become one of America's Newspapers Online.

WIRE SERVICE

Newspapers have been able to adopt some of the wire services' innovative systems to their own use, mainly in the transmission and reception of pictures

BY C. DAVID RAMBO
presstime staff writer

Wire service technological innovations have given newspapers faster, better and cheaper reception of wire material. They also have yielded equipment that newspapers have put to their own uses.

The focus of many such offshoots is photography—mainly systems helping newspapers get photos from the field to the news desk. Included are portable picture-transmission machines, picture receivers and, on the horizon for many newspapers, "electronic darkrooms" that convert pictures to digital format and permit computer storage, cropping and enhancement.

There also are developments that facilitate a newspaper's movement of its own copy. For example, an Associated Press-developed system enables newspapers to send electronic copies of stories to other points, such as other newspapers under the same ownership.

These byproducts emanate from wire-service research and development facilities.

For example, the AP's technical facility in East Brunswick, N.J., usually has five or six research projects under way at any given time, AP officials say. The facility, which employs 75-80 people, is considered the "nerve center" for developing and manufacturing AP communications equipment. It also serves as a training center.

Today, much of the activity at such wire-service research centers focuses on the electronic darkroom—digital picture technology that is expected to burst onto the scene at many newspapers in the not-too-distant future.

Electronic picture handling "will go through the radical changes in the next three years that the news operation went through in the early '70s," says Richard G. Atkins, AP director of communications.

He observes that photo technology in the newspaper business has changed little over the last four decades. "The time of (photo) transmission is the same as it was 10 years ago," he notes.

The electronic darkroom is "the single-biggest improvement that we can make in picture quality for newspapers," according to Atkins. AP has an electronic darkroom in New York and will install others in Los Angeles, Chicago and Washington, D.C.

Although AP makes its research findings available to members of the news cooperative, it is "unlikely" that a newspaper itself would install such an elaborate and costly system at this time, he says. Other newspaper vendors apparently believe that time is coming, however, because Atkins notes that several firms other than wire services are developing similar devices.

United Press International is another wire service that has been engaged in digital picture research. Its cooperative effort with Litton Industries halted a few years ago when UPI's financial difficulties intensified, says Ted Majeski, vice president for UPI Newspictures.

However, UPI is using an electronic darkroom in its Washington headquarters that was a product of that research with Litton, he says.

UP AND RUNNING. While digital pictures are a thing of the future for newspapers, among the foremost of current wire-service equipment used by newspapers are portable picture transmitters. Photographers can use them to send facsimiles of photographs to their home office.

UPI in the early 1970s was the first to introduce the portable-typewriter-size transmitter and make it available to newspapers for purchase. Majeski says his company's machine was manufactured at UPI technical facilities in Dallas until about four years ago.

AP's models include a transmitter with a color drum that enables photographers to send color prints via telephone line back to the office.

Atkins says the unit also can serve newspapers as "a cheap way of producing color separations." For that purpose, the black-and-white copies of the picture—filtered for the magenta, yellow and cyan negatives—are sent directly to a printer.

Another wire service active in development of transmitting devices is Agence France-Presse, which is expanding its photo service in the United States [presstime, Nov. 1985, p. 69].

John E. Minting, AFP technical manager for the Americas, says the organization's picture transmitter used for black-and-white photography eliminates a big step required by other systems—producing a print. The AFP-designed machine, built by a Swedish firm, is able to convert a *negative* into bits for digital transmission to editors over a phone line.

"The trends are away from the typical analog techniques" that rely on a range of sounds to produce picture images, and toward "digital movement of photos" aided by computers, Minting says. An advantage will be faster transmission.

Moreover, Minting says, the system double-checks for problem spots on a picture. If for some reason part of a photo is distorted in transmission, the computerized system will make corrections "so you get perfect pictures," he adds.

Advancements also are being made on the picture-receiving end at newspapers.

AFP unveiled at the 1985 ANPA Operations Management Conference & Exposition its Pixar, a photo-receiving device that electronically stores on a disk an entire day's wirephoto transmissions. The machine permits an editor to call up each photo, crop and enhance as desired, and then send pictures to a printer or a pagination system. Thus, it eliminates the need

TECHNOLOGY

AP

Anchorage Times photographer Doug VanReeth, stringing for AP, uses portable transmitter in Unalakleet, Alaska, to send photos of Iditarad Trail dog sled race.

for a photo printer to run continuously.

This machine by itself is not necessarily a boon to newspapers independent of their wire-service usage. But a next-generation model recently developed at AFP facilities in Paris could be. Minting says this machine, called Impact, is like the Pixar except it will provide up to 24 input/output ports so that newspapers "can bring in a number of pictures at one time" from various sources.

Also, AP has introduced a Dataphoto Receiver that allows newspapers to receive photos from various sources regardless of transmission codes.

FACILITATING COPY FLOW. Another of the side benefits newspapers derive from wire service technology involves reception of material from the so-called supplemental news services like that of the Los Angeles Times/Washington Post. Instead of having to rely on the mail or some other time-consuming delivery system, newspapers receive much supplementals' copy over the reliable phone-line and satellite delivery systems that bring them the day's AP and UPI reports.

Another system of use to newspapers is AP's "electronic carbon" program. That program in basic form allows editors at AP-member newspapers to send to AP, at the touch of a button, stories of interest to a broader audience. Atkins says the system, which uses a telephone modem driven by a microprocessor, can be programmed to send a newspaper's stories elsewhere—to a co-owned paper, for example.

Another wire service, Canadian Press, has recently developed personal-computer software that will allow newspapers to receive the CP wire and possibly material from other sources.

Edward C. Fudurich, CP vice president of communications, says small newspapers especially could benefit from the system.

Other wire service developments from which newspapers independently have benefited include:

- A news graphics computer jointly developed by AP and Computer News Graphics of Cinnaminson, N.J., that allows newspapers to produce graphics. Dailies using the system so far include The Dallas Morning News, Dallas Times Herald and Daily News of New York City.
- SatPac, an AP service that allows satellite earth receiving stations located at newspapers to be converted to two-way, send-and-receive operations. SatPac enables newspapers to communicate with non-wire-service parties on satellite air time that is less expensive than land telephone lines.
- DatAPort, a commercial AP service that allows newspapers and other companies to establish their own one-way satellite transmission network. The system is designed to provide a low-cost way of sending relatively small amounts of information by satellite.

Experts say that as the wire services continue to refine existing systems and develop new ones to keep up with changing technology, the list of indirect benefits to newspapers will grow. ☐

Canadian Press has recently developed personal-computer software that will allow newspapers to receive the CP wire and possibly material from other sources. Small newspapers especially could benefit.

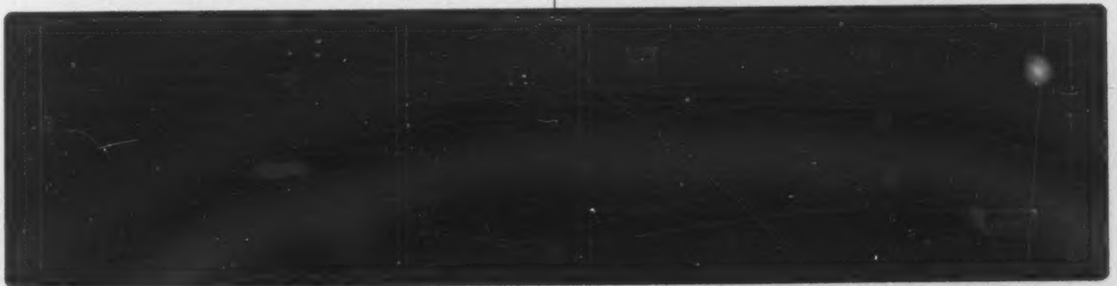
The Newspaper Scanner
RZ 200-CM

EASIER OPERATION

We've taken the guesswork out of scanning with the world's first on-line previewer, that lets the operator watch a video soft proof that responds to the scanner's control. When the picture looks good on the screen, it'll look good on press! Even without the monitor, our scanners are the worlds easiest to run — the complex knowledge required to operate other scanners is programmed in RZ scanners to deliver consistent, brilliant color with minimum operator experience.

Royal Zenith is the first scanner designed to solve the problems of newspaper color. That's why there are about twice as many RZ scanners in U.S. and Canadian newspapers as any other. Yet every Royal Zenith *also* delivers the razor sharpness and subtle color quality demanded by top commercial printers.

Color in newspapers used to be difficult and unreliable, ordinary scanners were never intended for newspaper use, Royal Zenith has advanced the art of scanner design to make newspaper color better, easier, faster and



All controls are key-operated, thanks to microprocessor technology. Multiple program storage speeds learning and allows preprogramming for different printing processes, emulsion types, etc.

200-S COLOR SCANNER

more reliable than anything you've ever dreamed of.

PHOTOGRAPHIC CONTROL

All scanners compensate for *printing* problems but only RZ's unique *photographic* controls can give you good results from photos that are too dark, too light, or have an unwanted color cast. The 200-S will even scan from color negatives — for greater flexibility in meeting short deadlines.

RELIABILITY

RZ scanners work on a unique self stabilizing principle that uses 75% less hardware and eliminates 90% of conventional problems! Most parts can be replaced by the operator, so you'll have less downtime and lower service costs.

EXPERIENCE

While other scanners can take months to install, RZ installations average less than 10 days, proved in nearly 100 newspapers. And our specialized newspaper training shows you how to separate the best color you've ever printed, with the least amount of difficulty.

EXPANDABILITY

With the RZ 200-S, you have more than the best Newspaper Scanner. You have the ideal input/output station for the pagination system that may be in your future. Including readiness to be retrofitted for optional laser dot generation.

Why do more newspapers choose Royal Zenith scanners than any others? You've read some of the reasons. For the rest, contact Royal Zenith Scanner Division.

RZ Royal Zenith

With the exclusive 200-CM On-Line Video Previewer, the appearance of your paper color, ink density, ink hue, dot gain and trapping are simulated far better than any chemical proof. Control changes appear on the screen in just seconds.

This ad was separated on a Royal Zenith 200-S Modular Color Scanner System.

Post-Retirement Benefits

Some newspapers are giving their retirees added benefits such as supplemental health insurance

BY PATRICIA P. RENFROE

Many human resource managers at newspapers believe that, increasingly, retired employees will receive company benefits besides pensions.

It's already happening at a few papers, either because the benefits have been stipulated in labor contracts or because management has felt a need to provide such things as supplemental health insurance and life insurance for retirees.

Some people predict that court decisions or legislation will speed the trend toward greater benefits for the retiree. And managers agree that regardless of whether a newspaper is now offering such benefits, caution and prudent planning are required if it expects to control future costs.

"The fear," says Carr Lucas, Cox Enterprises' manager of compensation, "is that in the future, the government may enact legislation which would make employers the primary supplier of retiree health care and allow the government to be the secondary supplier."

This would certainly increase costs drastically and could endanger long-term economic growth, many executives say.

In a recent report, "Post-Retirement Health Care Benefits," reference is made to the fact that health-care costs have risen approximately three times as much as the consumer price index since 1965.

The report, prepared by the Atlanta consulting firm Tillinghast, Nelson and Warren, points out that there have been concomitant increases in the number of Americans over 65 and in life expectancy of retirees. The authors project that when these factors are considered in light of continued reduction of federal funding for Medicare, legislation requiring employers to provide extended benefits is almost inevitable.

According to the report, failure to examine carefully the aggregate potential liabilities for post-retirement health care is dangerous. Employers will be shocked to learn that "the cost of post-retirement health benefits for many individual employers will exceed the cost of their pension benefits," it adds.

A government study found that in 1983, 6.9-million retirees and their dependents were covered by their previous employers' health insurance plans.

Consultants in the field urge employers to evaluate potential funding liabilities and possible legislative requirements.

Even if such a drastic reversal of roles as suggested by Lucas of Cox Enterprises does not take place, a number of executives agree with the Tillinghast report that post-retirement benefits will cease to be an elective action of employers.

Fear of losing control over such decisions has been fed by court rulings that benefits become vested rights of retirees. In September 1984, the U.S. District Court in Northern Ohio ruled in *Hansen v. White Farm Equipment* that a "proper rule of federal common law should be that an employer may not invoke a termination clause to cut off the benefits of a

WHAT'S BLACK AND WHITE AND YELLOW ALL OVER?

THE CHRONICLE

A newspaper that needs the strike coverage of Mutual Insurance.

A lot of revenue is lost when a strike hits a newspaper. The product isn't being delivered. Or isn't being printed at all. That's why more and more ANPA-member newspapers are turning to The Mutual Insurance Company of Hamilton, Bermuda, for the protection that strike insurance provides.

A strike insurance policy from Mutual covers net profits, fixed charges, and ordinary business expenses in the event of a full or partial strike, to keep your paper in the black even when it's yellowing on the dock. It also provides for extra security to protect both personnel and physical plant. As unionization and resistance to automation increase, the protection that Mutual's strike insurance provides is now more valuable than ever.

Mutual offers strike insurance only once a year, with coverage effective from July 1st through June 30th, so contact Mutual immediately to qualify.

Three of the nation's most prestigious journalism awards...

THE PULITZER PRIZE.

Chicago Tribune Editorial Page Editor, *Jack Fuller,* has received the 1986 Pulitzer Prize for Editorial Writing, the Tribune's third Pulitzer in the past four years, and its twelfth overall.

THE ROBERT F. KENNEDY AWARDS GRAND PRIZE.

The Chicago Tribune received the Robert F. Kennedy Award for outstanding coverage of the problems of the disadvantaged, with its series *The American Millstone.* The series won first prize in the print journalism category, and the Grand Prize, from among all media winners.

THE SIGMA DELTA CHI DISTINGUISHED SERVICE AWARD.

The Society for Professional Journalists, Sigma Delta Chi, awarded its Distinguished Service Award in the Washington Correspondence category to *James O'Shea* and *Nicholas Horrock* of the Tribune's Washington Bureau for their series on charges of waste and fraud among Pentagon contractors.

A great city deserves a great newspaper.

Chicago Tribune

former employee who has retired."

While that case was not appealed, a similar one, *Musto v. American General Corp.*, is under appeal at the 6th U.S. Circuit Court of Appeals. The company is seeking reversal of a lower court's decision that health-care benefits were vested upon retirement, despite findings that the employer had reserved the right to amend or rescind promised benefits in several documents shared with employees.

IN THE CONTRACT. Newspapers offering post-retirement benefits do so in some cases because of labor agreements. However, such offerings are limited. For example, a sample of 118 dailies with white-collar contracts found that only 13 have agreed to provide such benefits.

The coverage ranges from the same afforded active employees, to Medicare supplemental coverage for retirees and their spouses.

The criteria for coverage outlined in some contracts with the International Typographical Union and The Newspaper Guild depend upon attaining a certain age (from 55 to 65) and a certain number of years in service (from a minimum of 10 to a maximum of 25). For example, at the Portland (Maine) Press Herald and Evening Express, the complete cost of the Blue Cross-Blue Shield Companion Plan is paid for those who retired after Oct. 31, 1973, and who are 65 and have 25 years of full-time, continuous service. Spouses are not covered.

On the other hand, at the Kennebec Journal of Augusta, Maine, eligible dependents of those taking early retirement at 55 may be covered.

The ITU contract at the Rocky Mountain News of Denver states that "present employees 65 years of age and over on the attrition list, upon retirement, will receive the same hospital coverage provided such employees still working at the trade, under the terms of this agreement, for the life of the retirees."

However, some other newspapers with unions have adopted a different course of action. At The Seattle Times, Personnel Manager Thomas L. Bryan says the paper has taken careful steps to avoid offering health care as a post-retirement benefit to the newspaper's largely unionized workforce.

POSITIVE SIDE. Despite what many people perceive as negative possibilities, some newspapers are not waiting for union, legislative or court pressure but already are offering health-care benefits to retirees.

> *"Diminishing worries about health-care costs is one way to reward former employees."*

"Rewarding employees for long service by protecting them and their dependents during retirement" is why Ottaway Newspapers Inc. recently began its voluntary program. According to Richard A. Myers, vice president for newspaper operations, "Employees who have been loyal to the newspaper should be able to enjoy retirement, and diminishing worries about health-care costs is one way to reward former employees."

An additional benefit, according to Myers, is improved morale of active employees who see the company is truly concerned about their future.

Neither Myers nor Cox's Lucas see profound impacts on the bottom line because of the retirement benefits offered by their companies.

Myers says his company's age mix is excellent, and the number of retirees is not expected to grow at a rapid rate.

Lucas points out that when Cox Communications and Cox Enterprises were merged, benefits became an area to revise. As a result of careful work and negotiation, Cox was able to institute cost-containment factors in active and retiree benefit programs.

Specifically, the new coverage plan includes mandatory second opinions in surgical cases and out-patient surgery where medically feasible. There's also a penalty for use of an emergency room in non-emergency situations: The insured in such instances must pay 70 percent of the bill instead of only 20 percent. In turn, the company is now providing dental care and will pay an employee 50 percent, up to $500, of any savings resulting from a billing error he or she spots.

The company's cost of providing health insurance for early retirees will be $70

Hard Versus Soft News: What's the Best Fit for Your Market?

The "mix" of newspaper content affects readership. Knowing the order of importance of national and international news, local news, sports, business, and other content types in your market can help your newspaper understand adult information needs.

monthly for an individual, $180 for an early retiree with one dependent, and $250 for those with two or more dependents. Supplemental medical coverage for retirees 65 and over are estimated to cost $30 monthly.

There are similarities in the voluntary plans being offered by various newspaper companies. They range from full payment of health care for retirees and spouses until age 65 and then fully paid Medicare supplemental benefits, to shared costs for such benefits.

In some places, such as the Alexandria (La.) Daily Town Talk, the only benefit for retirees 65 and older is Medicare supplemental coverage. However, spouses are covered by regular health-care plans until 65, after which they also receive supplemental coverage. A. N. (Nelder) Dawson, director of personnel and employee relations, points out that the supplemental care is not "that expensive to the company but provides great assistance to the retiree." He acknowleges that coverage for spouses will be more costly to the company until they reach 65.

How post-retirement health-care coverage is funded is key, some say, to a newspaper's future economic stability. Several newspaper executives interviewed say they fund these benefit payments out of the general operating budget. But others express concern about this practice and note they are looking at alternatives.

Dawson explains that the Daily Town Talk has been cautious with funding, having established a trust fund for retiree coverage—similar to the pension trust fund. Ottaway's coverage is also self-funded, while Cox's is split-funded, whereby the company pays minimum premiums for administrative costs and the claims are paid out of a company bank account.

OTHER BENEFITS. Although many papers have been reluctant to offer medical benefits to retirees, they show no reluctance to be supportive through other activities.

Bryan says The Seattle Times is involved in development and implementation of a benefits package called "In Pursuit of Living." Offered under this umbrella may be workshops for retirees on such matters as dieting and stress.

Many newspapers also provide free or reduced subscription rates to retirees; continue their membership in credit unions; fund the production of retiree newsletters; include them in company-wide social events, and, in some cases, sponsor special functions for retirees.

Costs of doing so are relatively low, human resource managers say. Yet the value to those who have left the workforce can be great, they add, because retirees often lament the loss of social contact and seek further involvement with the newspaper.

The Des Moines Register uses this retiree desire for involvement in a fashion that is mutually beneficial. Retirees conduct tours of the newspaper. For doing so, they receive lunch at the paper. Sue Tempero, employee relations director, believes the company gains qualified and enthusiastic tour guides, and the retirees gain through maintaining friendships and contact with the newspaper.

The challenge for newspaper employers is to reward a lifetime of loyalty in such a way as to be helpful to the retiree while still protecting the financial viability of the newspaper. ☐

"OUTSTANDING COLOR SEPARATIONS IN 30-45 MINUTES FOR UNDER $25,000 . . . THAT'S FRONT PAGE NEWS."

John Troutt, publisher of the Jonesboro Sun

Nearly 80 newspapers now print process color with the Digi-Colour System/DC-4000.

Like the Jonesboro Sun, newspapers have realized they need quality four-color separations, but that most available systems are terribly expensive. Now, thanks to Digi-Colour, they're discovering they don't have to pay a king's ransom to get great color separations on fast turns to meet tight deadlines. (Furthermore, the Digi-Colour system is easy to operate and maintain.)

At Inland we'd like to provide you with more information about this exciting and reliable technology and how after extensive research we decided to distribute Digi-Colour. In fact, we're so impressed with Digi-Colour that we installed the system in a daily newspaper that we ourselves own . . . the Kansas City Kansan.

Please call Inland at 1-800-255-6746 and ask for Craig Murray. He'll provide you with more information on why, if you're "scanning" the market for cost-efficient color separation systems, you should take a hard look at Digi-Colour for under $25,000.

Music critic Donal Henahan and the staff of The New York Times win Pulitzer Prizes for 1986

1918 The New York Times, "for the most disinterested and meritorious public service rendered by an American newspaper"—complete and accurate coverage of the news of the war.

1923 Alva Johnston, for distinguished reporting of scientific news.

1926 Edward M. Kingsbury, for the most distinguished editorial of the year, on the Hundred Neediest Cases.

1930 Russell Owen, for graphic news dispatches from the Byrd Antarctic Expedition.

1932 Walter Duranty, for dispassionate interpretive reporting of the news from Russia.

1934 Frederick T. Birchall, for unbiased reporting of the news from Germany.

1935 Arthur Krock, for distinguished correspondence, impartial and analytical Washington coverage.

1936 Lauren D. Lyman, for distinguished reporting: a world beat on the departure of the Lindberghs for England.

1937 Anne O'Hare McCormick, for distinguished foreign correspondence: dispatches and special articles from Europe.

1937 William L. Laurence, for distinguished reporting of the Tercentenary Celebration at Harvard, shared with four other reporters.

1938 Arthur Krock, for distinguished Washington correspondence.

1940 Otto D. Tolischus, for articles from Berlin explaining the economic and ideological background of war-engaged Germany.

1941 The New York Times, special citation "for the public education value of its foreign news reports, exemplified by its scope, by its excellence of writing, presentation and supplementary background information, illustration and interpretation."

1942 Louis Stark, for distinguished reporting of important labor stories.

1943 Hanson W. Baldwin, for a series of articles reporting a tour of the Pacific battle areas.

1944 The New York Times, "for the most disinterested and meritorious service rendered by an American newspaper"—a survey of the teaching of American history.

1945 James B. Reston, for news dispatches and interpretive articles on the Dumbarton Oaks Security Conference.

1946 Arnaldo Cortesi, for distinguished correspondence from Buenos Aires.

1946 William L. Laurence, for his eyewitness account of the atomic bombing of Nagasaki and articles on the atomic bomb.

1947 Brooks Atkinson, for a distinguished series of articles on Russia.

1949 C. P. Trussell, for "consistent excellence in covering the national scene from Washington."

1950 Meyer Berger, for "a distinguished example of local reporting"—an article on the killing of 13 people by a berserk gunman.

1951 Arthur Krock, a special commendation for his exclusive interview with President Truman as "the outstanding instance of national reporting in 1950."

1951 Cyrus L. Sulzberger, special citation for exclusive interview with Archbishop Stepinac of Yugoslavia.

1952 Anthony H. Leviero, for distinguished reporting on national affairs.

1953 The New York Times, special citation for its Sunday Review of the Week Section, which "for 17 years has brought enlightenment and intelligent commentary to its readers."

1955 Harrison E. Salisbury, for a series of articles based on his six years in Russia.

1955 Arthur Krock, a special citation for distinguished correspondence from Washington.

1956 Arthur Daley, for his sports column, "Sports of The Times."

1957 James B. Reston, for distinguished reporting from Washington.

1958 The New York Times, for its distinguished coverage of foreign news.

1960 A. M. Rosenthal, for perceptive and authoritative reporting from Poland.

1963 Anthony Lewis, for his distinguished reporting of the proceedings of the United States Supreme Court.

1964 David Halberstam, for his distinguished reporting from South Vietnam.

1968 J. Anthony Lukas, for "a distinguished example of local reporting"—an article on a murdered 18-year-old girl and the two different lives she led.

1970 Ada Louise Huxtable, architecture critic, for distinguished criticism.

1971 Harold C. Schonberg, music critic, for distinguished criticism.

1972 The New York Times, "for a distinguished example of meritorious public service by a newspaper through the use of its journalistic resources"—publication of the Pentagon Papers.

1973 Max Frankel, for his coverage of President Nixon's visit to China, a distinguished example of reporting on international affairs.

1974 Hedrick Smith, for his coverage of the Soviet Union in 1973, a distinguished example of reporting of foreign affairs.

1976 Sydney H. Schanberg, for his coverage of the fall of Cambodia, a distinguished example of reporting on foreign affairs.

1976 Walter W. ("Red") Smith, for his Sports of The Times column, an example of distinguished criticism.

1978 Henry Kamm, chief Asian diplomatic correspondent, for calling attention to the plight of Indochinese refugees, an outstanding example of reporting on foreign affairs.

1978 Walter Kerr, Sunday drama critic, for an outstanding example of distinguished criticism.

1978 William Safire, Op-Ed Page columnist, for his columns on the Bert Lance affair, an example of distinguished commentary.

1979 Russell Baker, for his "Observer" column, an example of distinguished commentary.

1981 Dave Anderson, for his Sports of The Times column. An example of distinguished commentary.

1981 John M. Crewdson, for his coverage of illegal aliens and immigration. A distinguished example of reporting on national affairs.

1982 John Darnton, bureau chief, Warsaw, for his coverage of the crisis in Poland. A distinguished example of international reporting.

1982 Jack Rosenthal, deputy editorial page editor. A distinguished example of editorial page writing.

1983 Thomas L. Friedman, for his coverage of the war in Lebanon. A distinguished example of international reporting.

1983 Nan Robertson, for her article in The New York Times Magazine on her experience with toxic shock syndrome. A distinguished example of feature writing.

1984 Paul Goldberger, architecture critic, for distinguished criticism.

1984 John Noble Wilford for reporting on a wide variety of scientific topics of national importance.

1986 Donal Henahan, music critic, for distinguished criticism.

1986 The New York Times for explanatory journalism: a series of articles on the Strategic Defense Initiative, the "Star Wars" program.

The New York Times and members of its staff have won 56 Pulitzer awards. More than any other newspaper.

THE NATION'S NEWSPAPER

USA TODAY

VIA SATELLITE

The average daily paid circulation of USA TODAY is now up to 1,417,077* – a hefty 11% increase over a year ago.

In a little more than 3 years, USA TODAY has truly become The Nation's Newspaper.

*Total average daily paid circulation, including single copy, customer delivery and bulk (blue chip) sales for the six-month period ending March 28, 1986, as compiled by USA TODAY from ABC publisher's statements, subject to audit

We've Just Taken Facsimile Transmission To New Heights (And Widths Too).

Scanning and transmitting newspaper pages via satellite or other communication channels has just entered a new age of efficiency.

The new DATRAX 760 facsimile laser platemaker and data system offers a combination of advantages never before available to newspaper and commercial printers contemplating facsimile and computer-to-plate interfaces.

New Datrax 760. Larger 40" × 27" Format.

With this big new platemaking format, you can process a number of different-sized formats, including tabloids, double trucks and even larger images. The DATRAX 760 memory can hold up to 16 format sizes and locations at once.

Higher Resolution: Accurate To 1/19 Point.

The DATRAX 760 maintains faithful high fidelity reproduction no matter what size plate is being processed. 100-line screen materials are reproduced within a 5 to 95% highlight/shadow range. 120-line and higher screen capabilities are optional.

Broader Computer-To-Plate Compatibility.

The system's output platemaker will be compatible with a variety of electronic publication systems. Text pages being composed electronically but without graphics capability can be merged with the graphics scanned on a DATRAX 760 Reader. Or complete electronically composed pages with graphics may be sent directly from the computer to the DATRAX 760 to produce a lithographic printing plate, and/or Lasermask™ film.

Greater Choice Among High And Low Data Rate Channels.

High data rate channels such as satellite/earth station or microwave systems can be accommodated as easily as low data rate channels such as telephone lines. Interfaces to standard European and North American channels are available.

Lower Maintenance And Operational Costs.

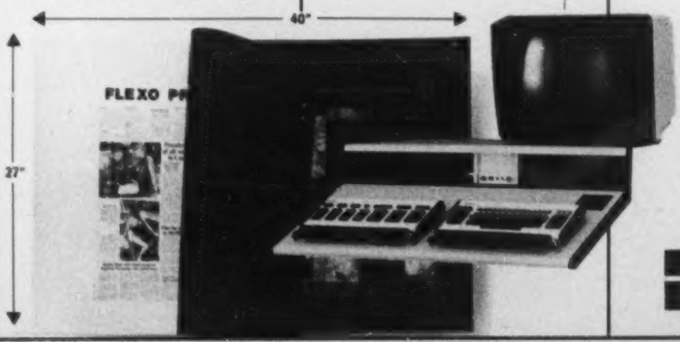
Due to the distinctive design features of the DATRAX system, great savings over competitive systems can easily be achieved. For example, routine operation of the solid state YAG laser requires only that an inexpensive krypton lamp be replaced while other systems require periodic replacement of the entire laser. The krypton lamp can be replaced in about ten minutes compared to several hours of highly-skilled labor required to replace other lasers.

Our Lasermask™ film images directly onto inexpensive uncoated aluminum lithographic plates and provides a stable, reliable and readily available page record at the same time. No electronic storage or retransmission is required.

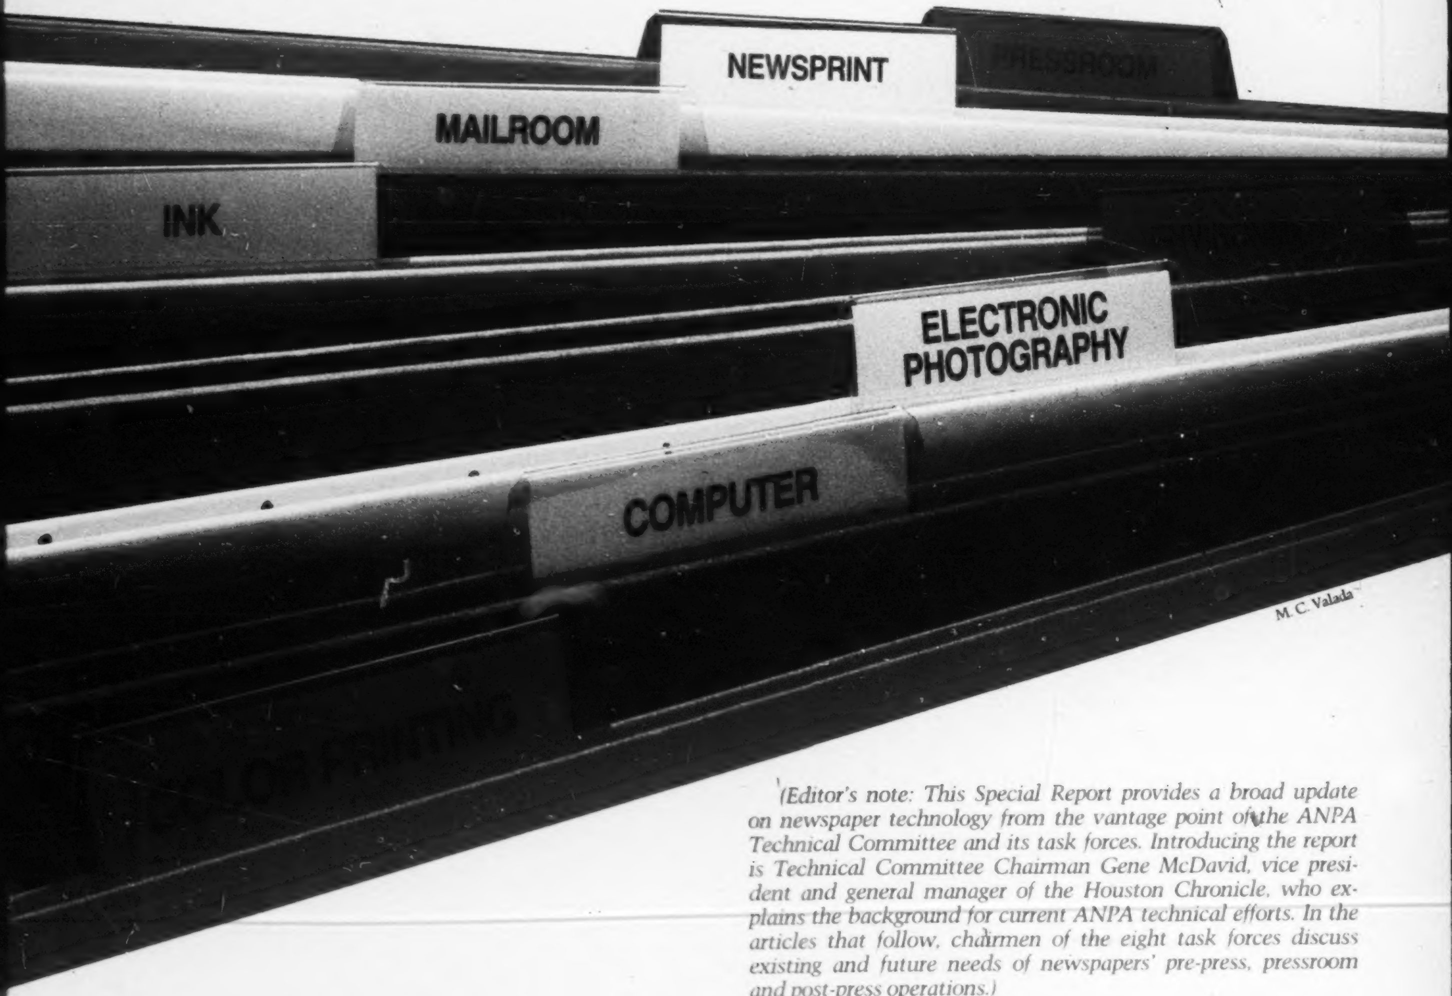
Higher Reliability.

The DATRAX 760 is the next generation of our 2417 system, which has proven highly reliable in daily use for over five years at such publications as *The New York Times* and *The New York Daily News*. Everything we have learned from our highly successful experience with the 2417 has gone into making the new 760 a system with improved accuracy and reliability.

To find out more about the considerable advantages of the new DATRAX 760, call us at 201-438-4550 or write us at Crosfield Electronics, Inc., 480 Central Avenue, East Rutherford, NJ 07073.



Crosfield Electronics, Inc.



M. C. Valada

Newspaper Technology Marches On

Improving printing quality is the latest in a series of industry goals covering all phases of production

(Editor's note: This Special Report provides a broad update on newspaper technology from the vantage point of the ANPA Technical Committee and its task forces. Introducing the report is Technical Committee Chairman Gene McDavid, vice president and general manager of the Houston Chronicle, who explains the background for current ANPA technical efforts. In the articles that follow, chairmen of the eight task forces discuss existing and future needs of newspapers' pre-press, pressroom and post-press operations.)

BY GENE McDAVID

In the past 15 years, new technology has dramatically increased the control management has over newspaper operations.

This has led to a softening of departmental lines that separate newspapers' diverse functions. No longer can decisions be made that affect only one department. The computer systems we have in place now interconnect virtually all operations. Hence, the need is greater than ever to consider every department when making changes and planning for the future.

Gene McDavid

The ANPA Technical Committee, fostering new concepts and procedures in newspaper technology, is a leading force in that regard.

Its task force structure lends itself well to the contemporary needs of our business. When a job needs to be done, the resources are gathered, plans made, people recruited and the job completed. Then the task force is deactivated, giving way to new challenges.

For example, the New Press Task Force was assembled in 1979 to investigate alternative printing technologies. It spurred

The ANPA Technical Committee's master blueprint for action was drawn up seven years ago, and the Association's current activities in newspaper technology flow from that document.

the adaptation of flexography to newspaper publishing. The group has been disbanded, although some of its responsibilities have been absorbed by the Direct and Offset Printing Developments Task Force—a panel that was created earlier this year by the merger of separate task forces on direct-plate printing and offset printing.

Most recently, an Electronic Photography/Graphics Task Force was formed to facilitate newspapers' use of the emerging technology that will enable them to make halftones and color separations from video images.

The Technical Committee's master blueprint for action was drawn up seven years ago, and the Association's current activities in newspaper technology flow from that document.

The foundation for most of today's work was laid when the ANPA Board of Directors appointed a panel in 1979 to determine "what the goals and objectives of ANPA should be in light of the rapidly changing technology affecting our business, and how best to proceed with the research and services necessary to achieve these goals and objectives in the future."

Among the panel's recommendations were that ANPA:

- Be a prime source of authoritative information regarding all phases of newspaper technology
- Provide electronic and computer staff expertise for member consultation and communication
- Assist newspapers in satellite communications
- Take a lead role in ensuring that distribution technology is flexible and reliable
- Seek to ensure the availability of high-quality newsprint at an affordable price
- Recognize, develop and encourage projects offering cost savings and quick pay-backs in light of increasing competition from other media, as well as among newspapers
- Concentrate technical research efforts on development of *concepts* that could be passed on to the private sector for early and full development.

The panel developed specific suggestions for programs and activities that ANPA's Technical Committee and technical staff should explore on behalf of the newspaper business in the 1980s.

Special emphasis was placed on distribution and mailroom systems. The consensus was that, along with electronics, these "post-press" systems would demand utmost attention in ensuing years. A number of specific projects were identified: evaluating mailroom equipment and procedures, among them inserting; improving bundle counting, control and distribution; improving distribution vehicles; devising new ways to handle, store, retrieve and label newspapers; dealing with "tailored" newspapers, including zoned editions; examining ways to deliver copies to apartments; and developing an efficient single-copy vending machine.

The panel directed the committee and staff to encourage vendor involvement in these and other areas, and to maintain a close relationship with the scientific and educational communities so as to obtain a high level of research and development into new newspaper technologies.

- Producing and continually updating manuals covering every phase of newspaper production; responding to telephone and mail inquiries; and making available Technical Advisory Service consultations in such areas as systems and industrial engineering, facilities planning, personnel evaluation, computer science and software, distribution, materials handling and control, and electronics
- Assisting on matters pertaining to the Occupational Safety and Health Administration and other regulatory concerns
- Increasing "hands-on" training for newspaper personnel, with emphasis on ways to achieve optimum use of equipment
- Testing newsprint and ink.

I believe you will agree that the objectives set forth in 1979 have stood the test of time. They represent, in large measure, the challenges we are now facing.

Franz Sinkovits (at control panel) of The Daily Herald in Arlington Heights, Ill., participates in ANPA Advanced Offset Press Operations seminar.

If the 1979 report were to be prepared today, one addition probably would be made: the dedication of the Technical Committee to printing quality—a focal point for our work in the year ahead.

As the following articles by task force chairmen show, the Technical Committee is well-positioned to carry out many programs on which newspaper operations in the United States and Canada so heavily depend.

A Quest for Computer Standards And Customer Entry of Ads

BY BILL GULLEDGE

Continuing decreases in the cost of information-systems technology is accelerating the proliferation of computer technology in the newspaper business.

Over the past few years, the focus of the Computer Task Force and of the computer applications arm of the ANPA Technical Research Department has shifted away from developing and providing products to the newspaper industry, such as ReQuestDB. Now the emphasis is on alerting the industry to emerging issues and on developing standards and guidelines to facilitate newspaper use of information-systems technology.

Currently the task group is working on two projects:

- Investigation of standards for a "page description language" to facilitate image processing and image transfer
- Investigation of systems for remote classified-ad data entry, a project being led by the Association of Newspaper Classified Advertising Managers [presstime, May 1986, p. 43].

In the first of these areas—standards for a page description language—the task force is working with other industry groups to identify work that has been done to develop a standard language to define in computer terms "images"—pages of graphic images stored in the computer in digital form.

Without such a standard, each vendor could develop its own software-based approach to image storage and transfer. If this happens, systems or software at newspapers will be tied to particular vendors and even to particular pieces of hardware. Over time, the newspaper industry will see higher cost for hardware and system support.

If the industry can develop a standard, these systems likely will be more independent of particular equipment, reducing newspapers' cost of hardware, software and computer support.

The task force expects to be the eventual coordination point for the industry in proposing such guidelines for standards.

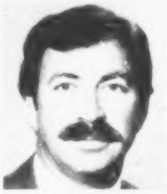
Steven Schwarz

Employee of Tempo Advertising Inc. uses remote-entry classified system called AD-STAR developed for The Star-Ledger of Newark.

In the second project, the panel is looking at what various newspapers are doing to provide customers, such as ad agencies, direct access into their classified-ad systems for ad input and/or inquiry. The objective is not to shift the burden of data entry from the newspaper to the customer. Rather, it is to provide a higher level of service by giving customers more flexibility in deadlines for submitting their ad copy.

Several newspapers, including The New York Times, The Star-Ledger of Newark, the San Jose Mercury News, The Dallas Morning News, The Philadelphia Inquirer and the Philadelphia Daily News, are already experimenting with systems of this type. And the technology is here to make these systems cost-effective.

The task force expects to provide information to ANPA-member newspapers to facilitate the development and implementation of such systems.



Gulledge is vice president/information services of Harte-Hanks Communications Inc.

Electronic Photography and Graphics Are Moving into the Limelight

BY LOUIS J. FRANCONERI

The Electronic Photography/Graphics Task Force is the newest subgroup of the ANPA Technical Committee. Its goal is to foster development of new electronic computer systems and associated devices that can process graphic materials for daily newspaper operations.

The tremendous and relatively recent explosion of the use of color and graphics in newspapers requires significant new technology to process this information expeditiously and in a cost-effective manner.

The proposed foundation for this new type of computer system is based upon principles developed from newspaper experience with text-processing systems. But we are also incorporating futuristic hardware and software tools for graphics application.

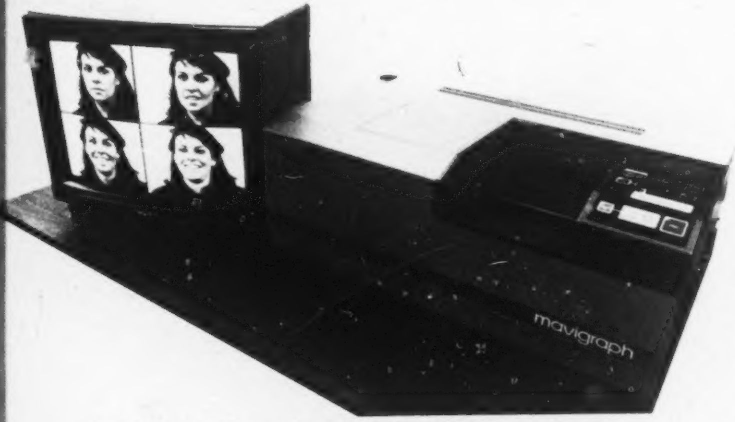
One of the major objectives of the new system is to eliminate the need for conventional film and to use electronic technology to replace the cumbersome mechanicals with overlays that are now required to reproduce complicated artwork.

In the future, photographers will be using video and/or digital cameras to capture images [presstime, March 1986, p. 62]. These pictures will then be transmitted electronically from the field back to the newsroom, where picture editors will review them on so-called "intelligent" color terminals.

Newspaper artists, meantime, will be creating illustrations on personal computers with graphic packages, and press operators will be verifying color-printing quality electronically.

The proposed design, or "architecture," of the new kind of system encompasses three major areas: capturing material, both local and remote; manipulating it for sizing, location and quality considerations; and sending it to appropriate "output" devices. The "final link" in this sequence eventually will be a full-page pagination system.

The new system will accommodate the entire spectrum of



Sony's Mavigraph produces still photographs from video images.

graphics applications, ranging from color photographs to sophisticated artwork. It will enable the user to expedite tremendously the time required to process this information. In addition, operating expenses will decrease while quality will increase.

Regarding costs, one of the major elements of the graphics system will be to provide newspapers' creative personnel with potent electronic tools that make them the end producers of artwork. This will eliminate interim paste-up and other production requirements, and substantially reduce costs of raw materials.

The task force is currently studying the major criteria of the system's architecture, including transmission and network requirements. The group is also providing direction and information to potential vendor developers. In this regard, it is our hope that at least one vendor will exhibit portions of such a system, or even an infant system, at the Atlanta Exposition.

Franconeri is vice president/operations of The Baltimore Sun.

Research Conducted on Inks Will Make a Lasting Impression

BY GENE McDAVID

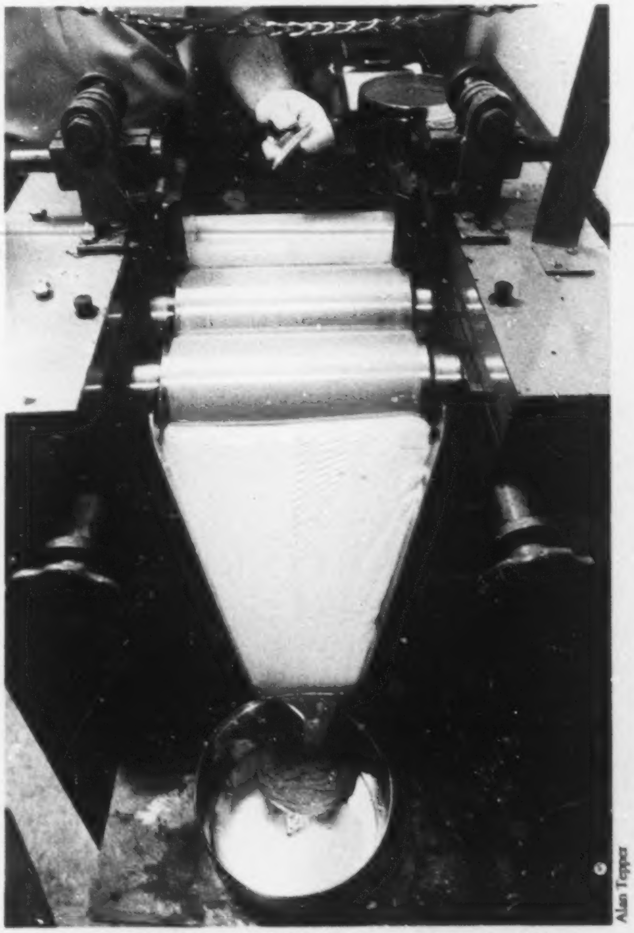
News ink has been on everyone's mind during the past year. The "hazard communication" standard, also known as the "right-to-know rule," caused the newspaper business to switch to treated-oil inks. The low rub-off version of these new inks has proved difficult to run on newspaper presses and has caused the ink companies to go back to the research laboratories for answers [presstime, Feb. 1986, p. 51].

The task force has been encouraging the ink manufacturers and other companies to work on new ink formulations, and it has invited interested parties to avail themselves of the ANPA research facilities for testing. All of the major ink companies—J.M. Huber, Flint Ink, U.S. Printing Ink and General Printing Ink—have taken advantage of this offer and are working cooperatively with ANPA's Technical Research Department to develop good low-rub inks. Other companies such as Saranda, Eastman Chemical and Chemoxy have also tested inks at The Newspaper Center laboratory.

The task force is continuing to develop non-petroleum-based black and color ink, known generally as ANPA-INK®, for both letterpress and offset printing. New versions of the ink are being tested on various presses at newspapers. A recent test using a soybean-based oil ink was very successful on the Goss Urbanite press of The Free Lance-Star in Fredericksburg, Va. In late May, a new ANPA-INK ink was to be tested on the Goss Metro press at the Houston Chronicle. If another oil shortage occurs, these ink formulations could be substituted immediately for oil-based inks.

The task force also is looking at completely new water-based ink technology. This research is in its infancy, far from being ready for daily publication. But if successful, its first application would be for letterpress presses, then, in turn, flexographic and offset printing. The new TKS flexographic press now being installed at ANPA will be used in some of the research.

Another important task force project is the ink/paper relationship research concerning rub-off. This will begin in late fall and probably will continue for several years. Using standard inks, we hope to define paper characteristics that affect rub-off; using standard newsprint, we hope to define ink characteristics



© Alan Tepper

New ink formulations have flowed from new government regulations.

that affect it. We will work with all current ink manufacturers and newsprint suppliers on this important project.

The last major goal of the task force is to develop tests for the new ANPA color ink book. (See the report of the Combined Color and Black-and-White Standardization Task Force, facing page.) All of the color inks now being manufactured are formulated with treated oils. This means that new standards must be used for reference and test inks so that parameters are defined.

The Technical Research Department has acquired a color computer to assist in this development. Strength and shade can be defined by a spectral curve, and color samples can be matched to standards. Limits are expected to be established by the end of this year.

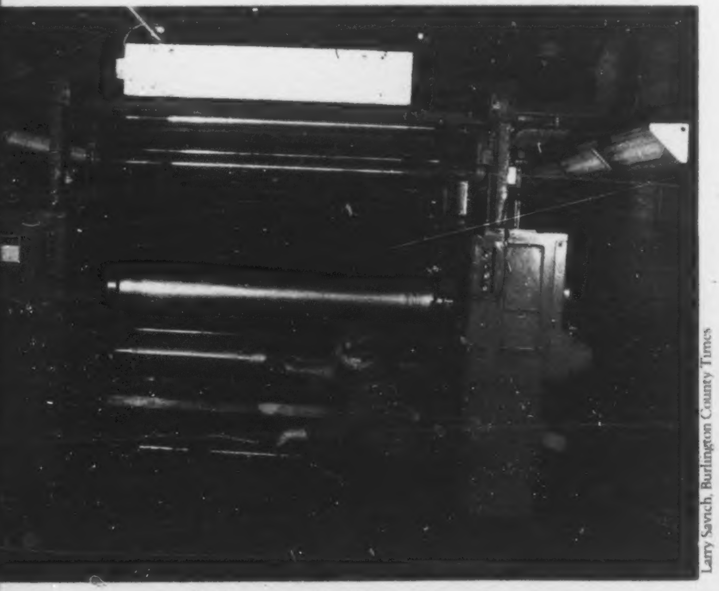
Newspapers must use good quality products to satisfy advertisers' and readers' desires for quality reproduction in both color and black-and-white printing. Thus, research into ink and the ink/paper relationship has never been more important.

ANPA Research Will Help Assess Flexo's Future in Pressrooms

BY MINOR J. WARD

The Direct and Offset Printing Developments Task Force is charged with promoting research and development into all methods of newspaper printing—traditional letterpress, now-dominant offset and newcomer flexography.

The task force is the result of a consolidation earlier this year of the Direct Printing Task Force and the Offset Printing Development Task Force. The aim was to eliminate duplication of effort and to improve coordination of all printing research. With the consolidation, we expect to accelerate research activity that is designed to improve and/or standardize newspaper printing methods.



Larry Savich, Burlington County Times

Pressman rubs down one of Burlington County Times' two ceramic anilox rollers. Installation and use of the rollers has contributed to industry knowledge of anilox offset printing.

The panel is seeking ways to improve letterpress printing through research into the characteristics of plastic plates and improved plate lockup. We're also looking at new ink formulations and other raw materials that could result in better printing in both black-and-white and color.

Experimentation with anilox offset printing is continuing, and the results to date are promising. The addition of a second ceramic anilox roller to the press of the Burlington County Times in Willingboro, N.J., and various new equipment for applying the fountain solution have given us more knowledge of this important process. Soon, The New York Times will have two Goss Metro units operating with the Goss anilox system. The task force is monitoring this project closely.

Tokyo Kikai Seisakusho Ltd. donated a TKS press unit to the ANPA Technical Research Department to be converted for use in flexography research. Conversion is under way and should be completed by the end of the summer.

Research will then begin on finding the best combination(s) of plates, paper, ink, under packing, etc., to determine compatibility, tolerances and the effect of each on printing quality. We hope to involve as many manufacturers and vendors of these materials as possible.

A plan for comprehensive, systematic research will be developed in conjunction with the Flexo Users Group. The users group will also serve as a conduit to convey the experiences and problems associated with this technology from various newspapers around the country.

At the Pressroom Options II Symposium in Chicago earlier this year (presstime, April 1986, p. 70), several speakers said that flexography is here to stay as a means of printing newspapers, but the process was not seen as an outright replacement for offset.

Boykin Wright, vice president/operations of The Miami Herald Publishing Co., reported that visitors to the Herald frequently comment that the newspaper seems to be using a special, bright newsprint on its M.A.N.-Roland flexographic presses.

Wright said this is not the case—that the same kind of newsprint is also run on the Herald's letterpress and offset units. A key reason the flexo black and flexo color look cleaner and sharper is the absence of ink "set-off" from the pipe rollers. With offset printing, he noted, there is constant set-off that causes the printed page to take on a gray cast.

Among other areas of task force interest is the problem of tinting and toning. ANPA's Technical Research Department is investigating the cause. A questionnaire has been developed that will enlist the assistance of all newspapers in solving this problem.

Another task force project seeks to define acceptable newspaper printing quality by soliciting the views of a number of experts and merging their opinions.

The task force is also considering new ways to put images on newsprint or other substrates (media) directly from computer storage. This project is more conceptual than others, but we're hopeful our activities can serve as a stimulant for future research by newspaper equipment manufacturers.

Ward is president of the Atlanta Journal and Constitution.

Newsprint Has a Big Impact On Quality and Profits

BY JAMES J. ROGERS

Until recently, the major concern about newsprint was with its mechanical properties. Runability was the watchword. When one considers that a change in waste of only one-fourth of 1 percent on 20,000 tons will affect the bottom line by $50,000, one can appreciate the deep interest a CEO has in waste and runability.

Today, there is increasing pressure on newspapers to become equally knowledgeable about the effect newsprint optical properties have on the visual perception of the printed page [presstime, Oct. 1985, p. 24].

As newspapers strive to attract national advertising, they have become aware of the tremendous variation in printing quality of tear sheets that an advertiser receives from across the country. Much of that variation is a result of extremes in optical properties of newsprint from different mills.

Having recognized the importance of these properties, members of the Newsprint Quality Improvements Task Force are beginning to contact various suppliers and to discuss target guidelines that might be used universally.

ANPA's Kleintop demonstrates test for newsprint thickness.

While it is hoped that these guidelines will be accepted, it should be clearly understood that each publisher will have to meet with his or her suppliers and jointly determine how tight the range of guidelines can be.

Doris Kleintop and her newsprint-testing staff at ANPA test about 1,600 samples of newsprint each year. In the past, much of that work has been done on reliable but antiquated testing apparatus. The task force is working to bring that part of The Newspaper Center lab into the 21st century. Progress is slow for two reasons: Test equipment is expensive, and each item must be tested extensively in the lab before it is accepted.

Because a large portion of a newspaper's budget is spent on newsprint, and most of us rely on the quality reports from ANPA to tell us how good or bad our newsprint is, the task force believes that a modern laboratory that can give quick turnaround on reports is essential. Some new equipment has been purchased. More is needed.

Much work has been done by ANPA in developing a number of quick and inexpensive procedures enabling newspapers to conduct in-house tests of newsprint and other materials used in printing. A loose-leaf manual outlining these procedures is expected to be available next year. In the meantime, member-newspapers may write Kleintop for information on testing newsprint brightness using a digital densitometer; grammage (basis weight) using a balancing scale or by the so-called "yield method" (counting the number of copies per roll and factoring in the amount of waste); oil absorption; and ink rub-off.

The task force also looks for and monitors any innovative ideas that can reduce the cost or improve the quality of newsprint. Using kenaf fibers in newsprint manufacturing, for example, still holds a great deal of interest. Although some progress has been made, significant tonnage of kenaf newsprint is not yet available [presstime, April 1986, p. 67].

Rogers is business manager and director of production of The Oregonian in Portland.

Making It Easier for Advertisers To Put Color Ads in Newspapers

BY CHARLES R. BLEVINS

For a long time, many national advertisers and ad agencies have had the perceptions that newspapers are too difficult for national advertisers to use and that newspapers are not a color medium. The Combined Color and Black-and-White Standardization Task Force is doing something about both misconceptions.

The task force set out to reduce the time and effort needed for advertisers and agencies to prepare material for insertion in newspapers, and to reduce the confusion at the agency/advertiser level as to what material reproduces well in newspapers.

Another goal was to improve the consistency of advertising reproduction.

The *Guide to Quality Newspaper Reproduction*, a 56-page manual, was the result of efforts by the task force and the Newspaper Advertising Bureau to address these concerns. (See story, p. 89.) Published in April, it will be included in an NAB campaign designed to generate more color advertising.

The guide is intended to be distributed to local and national advertisers, agencies, copy preparation firms, engravers, newspaper sales people on a

Maintaining color quality is essential.

local and national basis, and personnel involved in newspaper reproduction.

The voluntary, suggested standards for both black-and-white and color materials, if followed by newspapers and advertisers, should result in good quality printing, more consistent reproduction of ads, lower cost to national advertisers for copy preparation, and less confusion at the agency and engraver levels.

Using this guide should make us all winners. The advertisers will get better reproduction at less copy preparation cost, and newspapers can expect a bigger piece of the national buy.

Another project of the task force has been to update ANPA's AdPro® and AD-LITHO™ color ink books [presstime, Oct. 1985, p. 28]. The timing is fortunate. ANPA was almost out of the previously printed color books, advertisers were requesting colors that were not in those books, and government regulations caused the ink companies to stop using untreated oils and certain pigments in their inks. Any one of these reasons would have been ample reason to reprint.

One result of the task force's work was combining the two existing books, but with different mixing formulas for offset and letterpress printing. With only one book for color ink specifications, the cost and confusion associated with ordering color ads in different newspapers will be reduced.

The task force was assisted by the National Association of Printing Ink Manufacturers, which researched ink sales records, and by the American Association of Advertising Agencies, which gave us a window into its members' current needs. This allowed the task force to review suggested additions as well as the colors contained in the existing books.

The new book will incorporate some new, high-usage spot colors, including a brilliant red and other strong colors. Some unused colors will be deleted.

The task force did extensive process-color evaluations to make sure the current set of process colors resulted in the best range of the color spectrum and was consistent with the separations provided by national agencies. The process color inks in the new book reflect the change to inks with treated oils, which changed the hue slightly but maintained the color balance.

Titled *ANPA-COLOR™ AD-LITHO™/AdPro®*, the new book will be available in October of this year, with an implementation date of January 1987 for the new color standards. The book will be used as another element in the aggressive national sales effort for color advertising being conducted by the newspaper industry.

Blevins is vice president/production of Gannett Co.

Mailroom Delivers a Bundle Of Major Production Issues

BY JAMES A. COOPER

The post-press area is where the most dramatic changes in newspaper operations will take place over the next few years.

Post-press, or "mailroom" as many people refer to it, is currently being hard-pressed to handle preprints, zone distribution, Sunday packaging, bundle counting, and subscriber and non-subscriber lists. Other demands will be placed upon it in the near future.

The top five post-press problems—as determined by results of a questionnaire ANPA sent to member newspapers—are inserting volume, inserting speed, counting and accountability of bundles, zoning, and preprint storage and retrieval. Newspapers with large Sunday editions also expressed a need for a collating and/or wrapping device to keep the package in one piece for vending machines and street sales.

The next step for the Post-Press Packaging and Distribution Task Force was to identify equipment currently available for post-press operations, and to list each category of equipment and the equipment's capabilities. This information is now available from the ANPA Technical Research Department.

To stimulate ideas and interest in solving distribution problems, an ANPA "white paper" describing newspaper-business requirements was sent to vendors of post-press equipment and to manufacturers of high-speed equipment in the packaging industry. This paper has produced some intriguing inquiries that are being pursued by ANPA engineers. In addition, several vendors have made presentations to the task force about equipment being developed to address some of the problems.

Carrie Beth Tucker, Houston Chronicle

Harris hopper loader boosts production in Houston Chronicle mailroom.

The task force is trying to respond as quickly as possible to newspapers' post-press problems by examining several approaches.

The first involves the ANPA Technical Research Department. It will develop distribution systems and criteria to address the most pressing needs of the membership. This work will involve original research where necessary, liaison with manufacturers, investigation of technology used in other industries that might be adaptable to the newspaper business, and—where practical—cooperative research with manufacturers.

ANPA researchers will look at improved systems for bundle counting and accountability, storage and retrieval of preprints using automation where feasible, automated loading of inserts into hoppers, skid loading, demographic distribution and single-copy packaging. The research group also will explore a system to integrate all phases of post-press packaging, as well as distribution automation for newspapers of various sizes.

The task force will investigate existing equipment and will gather and publish information about how newspapers are using it. Member newspapers are encouraged to contact the task force with unique problems or with information about new and innovative solutions to particular problems.

ANPA is planning a symposium on distribution systems in Chicago next year. It will provide information on the latest in post-press technology and give members and vendors a forum to discuss particular problems.

To sum up, the post-press area of newspapering is ripe for the same kind of sophisticated change as occurred in the pre-press area in the 1970s and early '80s. The ever-increasing flood of inserts and the difficulties in handling them must be high on any newspaper's list of problems to be solved. It is entirely possible that the post-press area of the future will be a sophisticated distribution center able to package newspapers and inserts on request from individual subscribers, simply by pushing the right buttons.

The immediate future, however, holds a significant challenge for newspapers, vendors and researchers if we are to solve newspapers' many post-press problems. It will be a slow, steady process to reach our ultimate goals.

Cooper is assistant vice president/operations of The Washington Post.

Newspapers Pay Heed to Job Hazards And to the Health of Their Workers

BY MICHAEL STERN

Since passage of the Occupational Safety and Health Act in 1970, newspapers, like all businesses, have become more aware of the range of hazards their employees may encounter on the job. OSHA and subsequent government regulations have increased corporate responsibility for worker exposure to direct and indirect environmental hazards.

ANPA and its Environmental Task Force have helped many newspapers meet this added responsibility.

For example, not long after the Syracuse newspapers had made the switch from electric typewriters to video display terminals, copy editors and other VDT users began to express concern about eyestrain, backaches and the possibility of exposure to radiation. ANPA, at the company's request, monitored the VDTs and found that they posed no health problems. Association experts also conducted an ergonomic study to determine how employee discomfort could be minimized during extended hours at the terminals. (See story, p. 47.) The benefits can be seen in the newsrooms of the Herald-Journal and The Post-Standard today: comfortable new chairs and subdued lighting purchased and installed based on ANPA's recommendations.

This is but one instance of how ANPA and the task force have helped newspapers by providing information, advice and services on environmental issues that vitally affect newspapers.

The task force, a broad-based panel whose members include a lawyer, two physicians, two certified safety and health professionals, and an administrator, is dealing with problems ranging from how to improve safety in the workplace to the proper disposal of waste ink and employee "wellness."

This year, one of the most important problems facing the task force involves response to the federal "hazard communication" standard and other employee "right to know" provisions.

The federal standard became effective last November for manufacturers and distributors of hazardous chemicals, and last month for users [presstime, May 1986, p. 60]. It requires proper labeling of chemical containers and training employees in their proper use.

In response to the new standard, the task force developed:

- A video or slide presentation titled "What's It All About," which newspaper managers are using to inform their employees about the standard
- A loose-leaf information package called "HAZPAK," which reviews all the requirements of the hazard communication regulations and how to implement them. One copy of "HAZPAK" has been sent to each ANPA-member newspaper.

Growing numbers of such government rules and of employee requests for information about workplace equipment and chemicals also have resulted in greater demand for ANPA's Environmental Surveillance Service.

In 1979, the surveillance service staff consisted of one person. Now it has six industrial hygienists who perform noise surveys, VDT radiation monitoring, ergonomic assessments, safety inspections, air monitoring and industrial hygiene surveillance for airborne chemical exposure—all for a very modest fee.

These same professionals are available for consultation and to serve as expert witnesses in environmental litigation.

Because environmental regulations and requirements are still expanding, the task force expects the surveillance service to keep growing, too.

Employer concern about employee health and safety also is affected by soaring health care costs and insurance rates.

In recent years, the traditional focus on curing illness has given way to a new emphasis on prevention and early detection of disease, management of chronic illnesses and promotion of good health practices. There's also a growing awareness of the impact

Steven M. Smith of ANPA's environmental staff checks pressroom air.

non-medical factors like lifestyle, behavior and stress can have on the incidence of employee disease and mortality.

The task force is helping newspapers deal with these trends in corporate health care by developing an ANPA wellness program [presstime, May 1986, p. 44]. In the near future, ANPA will be offering a basic outline explaining how members can launch wellness programs as well as supplemental information for newspapers that want to get more deeply involved. Drug and alcohol rehabilitation and the disease AIDS are some of the topics that will be covered in the package. ANPA's accident reporting program will be expanded to help members monitor the effect of their wellness programs on accident rates, absenteeism and overall employee health.

With more landfills closing their gates and other disposal facilities becoming more cautious about handling hazardous materials, waste-ink disposal has emerged as yet another vexing—and costly—problem.

Although the newspaper industry has taken great pains to eliminate the use of ink that contains hazardous substances, waste ink is likely to become contaminated with solvent and fountain solutions, and it's difficult to determine the chemical makeup of the final waste mixture that leaves the plant.

The Environmental Task Force and the Newspaper Ink Study and Research Task Force are working together to resolve this problem. We'll be examining and reporting on commercially available waste-disposal systems small enough to use in a newspaper plant, plus other disposal methods.

Member newspapers that may need laboratory analysis of ink or other chemicals, or collection of industrial hygiene samples in their plants, should consider taking advantage of the ANPA's fully-equipped, analytical laboratory at The Newspaper Center.

Asbestos in the workplace also is receiving task force attention. We're developing an information pamphlet that will tell newspapers how to comply with OSHA regulations for the removal or encapsulation of asbestos materials. The pamphlet will list names and addresses of firms licensed to remove and dispose of asbestos.

Many of these issues will be addressed at ANPA's annual Health and Safety Symposium Oct. 2-3 at the Marriott Hotel in Denver.

The task force will continue helping members with interpretation, consultation and advice on local, state and federal environmental regulations. It expects its heaviest emphasis in the next year will be on right-to-know laws and waste disposal. ☐

Stern is production manager of the Herald-Journal and The Post-Standard in Syracuse.

"Our Pulitzer Prize photos deserved the best color inks"

Says Mell Kilpatrick (left), Production Manager with Bob Johnson (center), Pressroom Superintendent, and Rich Blanco, Assistant Pressroom Superintendent The Orange County Register, winner of the 1985 Pulitzer Prize for News Photography.

"We published 187 color photos of the 1984 Olympic Games which won the 1985 Pulitzer Prize for News Photography. Those photos deserved the best reproduction which was made possible by our commitment to color excellence. And that includes our color inks from U.S. Printing Ink. We began running U.S. Printing Inks when we changed over to color in 1980. Since then we have been very pleased with their uniformly excellent performance."

We are happy that Mell Kilpatrick and his production team are pleased with U.S. inks. And we're proud of the way our inks demonstrate their quality on the pages of The Orange County Register. There you'll see strong, clean colors, fresh-looking halftones, smooth laydown of solids with minimum ruboff, linting and picking. Scuff resistance is excellent, too!

Don't your color photos deserve the best inks?

Reasons To Trust Your Instincts

1 Because System Integrators has been at the forefront of the computer-aided publishing industry for more than 12 years.

2 Because more than 70% of the top 100 U.S. newspapers that have purchased publishing systems in the last three years have chosen System Integrators.

3 Because we consistently offer the industry's most advanced technology.

4 Because our annual software subscription program ensures your system is kept state-of-the-art for less than half the cost of our competitors' plans.

5 Because all our systems are made failsafe by fault-tolerant Tandem™ architecture, the computer industry's most reliable solution.

TANDEM

6 Because an SII System/55 can save you more than $50,000 per year in energy costs.

7 Because we are committed to maintaining the best-trained customer service organization in the industry.

™Tandem and GUARDIAN are trademarks of Tandem Computers Incorporated.

8 Because an SII system is the foundation for our fully integrated line of Sierra Pagination and display ad products.

9 Because we have installed more than 160 publishing systems worldwide in newspapers with circulations ranging from 9,000 to more than 1 million.

10 Because our customers include the Los Angeles Times, The Washington Post, Chicago Tribune, The Miami Herald, J.C. Penney Company and Reuters Limited.

11 Because our systems are supported by the Tandem GUARDIAN™ operating system, you can save up to 50% of your staff's system operations time.

12 Because our systems are configured for real-world deadline conditions—to deliver you the quickest response times possible.

13 Because the System/25 and System/55 can support newspapers needing as few as 16 or as many as 1200 terminals.

14 Because the System/55 occupies less than one-third the floor space of our competitors' systems, offering major savings in real estate and computer room costs.

15 Because we offer the strongest post-installation support available, dedicating a manager to your site throughout the life of your system.

16 Because every time you've ever settled for second best, that's exactly what you got.

17 Because our offices in the U.S., Germany, the U.K. and Australia support systems at many prestigious newspapers and news services worldwide.

18 Because your ownership of an SII system tells your readers, your advertisers and your stockholders that you're committed to the highest standards of quality.

19 Because in 1986, SII will deliver the industry's most advanced Pagination and display advertising products.

20 Because you need more than a computer in your computer room. You need a stable, experienced, well-managed company on your team. And if that's what your instincts have been telling you— they're right.

VDTs

Safety no longer dominates concern about computer terminals, as ease of use, comfort and environment are emphasized

BY CLARK NEWSOM
presstime labor writer

When video display terminals began arriving at newspapers in the 1970s, users were so intent on learning the system that little thought was given to ergonomics—the relationship between people and machines.

Next, the principal question surrounding the new devices was whether they were safe to use. Again, how to comfortably fit worker to machine was secondary.

Today, although there are still sporadic debates over questions of VDT safety, nearly all reports have declared them safe, and the focus of attention has shifted toward improving the working conditions of those who use the devices.

VDT safety "is not a concern or an issue" at The Pantagraph of Bloomington, Ill., reports Personnel Manager Michael L. Meece. What is a concern is ergonomics. "We listen to employees and try out their suggestions," Meece says.

Beginning mostly in this decade, those in-house suggestions, along with recommendations from experts including ANPA's environmental specialists, have led newspapers to increase use of adjustable chairs, louver lighting to avoid reflections, drapes and shades to filter outside light, static-free carpeting, wrist rests, adjustable pedestals, and a whole catalogue full of other ideas and devices designed to make working at a terminal a more pleasant experience.

"When VDTs first came in, we didn't know where the problems were," says Michael G. Manfro, safety and environmental affairs manager for the Los Angeles Times. "We're paying a lot more attention to work stations."

Indeed, newspapers are overcoming the glare and reflection problems on screens that bedeviled them in the beginning of the VDT age. Spurring the changes were employee complaints about headaches, eyestrain and back pain and, in some cases, union demands.

Manufacturers, too, made changes such as moveable keyboards to make a day in front of the tube more bearable. In fact, there are so many VDT-related products coming on the market that "you can't give in to everything," says Manfro of the Times. "You have to be selective."

As at many newspapers, the Worcester (Mass.) Telegram and Gazette found their chief problem was glare. For one thing, there was excessive glare from white Formica desk tops. The bright, shiny surface "was a disaster" for lighting, says Harry T. Whitin, assistant to the publisher. The tops were resurfaced with a simulated wood grain.

Parabolic louvers were installed on ceiling fixtures to reduce glare from them and to redirect light. Walls were repainted with flat, neutral colors. "We restructured the work environment so that natural light was not as big a factor," Whitin says. Windows were covered with adjustable vertical blinds.

In the composing room, interior windows were frosted to cut down on reflective light.

There was one thing that "didn't work out," Whitin says. Glare-filter screens were purchased for the VDTs, but "the users didn't like them and pulled them out. We found them in wastebaskets. They cut down on clarity, the users said."

INVOLVING USERS. Glare wasn't the only problem faced by VDT users. Although the list of problems is varied, one constant seems to have emerged from the effort to resolve them: for best results, involve the users in the search for solutions.

In Worcester, a nine-member committee of representatives from the news, circulation, classified advertising and production departments selected adjusta-

The Beaver County Times' newsroom is ergonomically designed.

ble chairs for each VDT station. Because the terminals were fixed in place, "we had to adjust the user instead of the terminal," Whitin says.

At The Mail Tribune of Medford, Ore., a committee of newsroom employees selected chairs with no arms. They are being used in all departments.

The Record of Hackensack, N.J., which has about 300 VDTs, is another newspaper that involved employees in the introduction of terminals.

"We feel people adapt to change with greater ease when they are involved in the process," says Alvin Miller, vice president/business. "It was the most important factor that made our conversion successful."

"We created task forces, principally in editorial, where employees experimented with different models of VDTs before we locked ourselves into a particular one," Miller says. The employees also tried out a variety of chairs.

"We talk about and address any problems or questions employees bring up," Miller says. "As an example, when there were questions about radiation, we tested every VDT in the company and posted the results. When there was a question of glare, we brought in shields and let people try them. If they liked them, they kept them. We let them decide what was best for them."

The Morning Call in Allentown, Pa., takes a similar approach. The advice from President and Publisher Bernard C. Stinner is to "work with and listen to" employees. The Call's current labor agreement with The Newspaper Guild is one of the few that provides for a VDT committee [presstime, May 1983, p. 54].

In addition to musculo-skeletal com-

An ergonomics study checklist

The VDT ergonomics study performed by ANPA environmental specialists includes:

- Illumination readings in foot candles of the general work area and individual work stations
- Luminance readings of the keyboard
- Contrast ratios comparing the keys, keyboard and document with a screen of text
- Contrast ratios comparing the screen characters with the background
- Contrast ratios comparing various far-afield objects with a screen of text
- Light reflection characteristics of desk surfaces, walls, floors and ceilings
- Ergonomic evaluations of chairs and work stations
- Ergonomic evaluations of various terminal features.

The study also includes an examination of miscellaneous ergonomic factors, including floor coverings, partitions, wall color and coverings, window coverings, light fixtures, VDT maintenance and cleaning, ceiling composition, desk blotters, internal windows, reflective room furnishings, employee training, and VDT positioning.

TWO PROUD

For the second year in a row, Inquirer staffers have been awarded two coveted Pulitzer Prizes.

This year we are honored that Inquirer writer Arthur Howe has been recognized for his articles on the massive mixups by the IRS in processing income tax returns.

We're equally pleased that Inquirer photographer Tom Gralish's compelling look at the city's street people has received such high praise.

We're no less proud of all of our staff; they have brought this newspaper ten Pulitzer Prizes since 1975.

The Philadelphia Inquirer
A Knight-Ridder Newspaper

plaints that are being rectified by proper seating, eyestrain is a common complaint.

In reaction, The Mail Tribune of Medford encourages "frequent rest breaks," says Tudy A. Schiveley, administrator/personnel and public services.

Beyond breaks, Manfro of the Los Angeles Times says his newspaper emphasizes proper eyeglasses. "The Times has an overall vision-care program that seems to satisfy the problem," he says.

The Record of Hackensack also instituted a company-paid vision-care program that covers, among other things, new eyeglasses every two years.

OUTSIDE HELP. To solve their work environment problems, some newspapers have relied on professional help. For example, the Beaver County Times in Beaver, Pa., carried out a number of suggestions made by environmental specialists from ANPA's Technical Research Department.

"The first thing we did was paint the walls with a flat finish, mostly earth tones," says James R. Miller, treasurer and operations manager.

All walls in the accounting, classified advertising, display advertising and news departments were painted.

Opaque drapes were installed along the west side of the building to reduce outside glare, and parabolic louvers were installed on all overhead light fixtures in the newsroom and classified advertising department and in certain areas in accounting and display advertising. The louvers are designed to direct light straight down and avoid reflections on the VDT screens.

Miller says there have been no complaints related to the paper's 57 terminals since the changes were made.

Changes also were made at The Virginian-Pilot and The Ledger-Star of Norfolk following a 1983 inspection by ANPA specialists, reports Randy Jessee, assistant to the executive editor. For instance, lighting wattage was reduced and fixture diffusers were installed after the newsroom was found to be "overlit," he says.

Although newspapers vary widely in size and in the age of their facilities, ANPA's ergonomics studies are tailored to meet the unique needs of individual papers, says Richard W. Neergaard, ANPA manager/environmental services.

The average project, including a detailed written report, usually requires ANPA staff to spend two to five days in the plant and four to eight days in the offices of The Newspaper Center at Reston, Va. Cost is $250 a day, plus expenses for transportation, lodging and meals.

Another source on VDT issues is the Washington, D.C.-based Center for Office Technology, a coalition of employers, manufacturers and associations, including ANPA, interested in promoting effective use of office technology. A booklet prepared by COT titled "Working with Displays—A Practical Guide for VDT Users," is being mailed this month to all ANPA-member newspapers.

The outlook for the newspaper office environment is one of receding problems, the experts say. "We have identified the majority of concerns," notes Manfro of the Los Angeles Times. "Now we have to address them in a realistic manner. For example, we cannot design an entire room for everybody. Some people will need special lighting." ☐

From Sale To Linage Analysis.

CJ/ADVERTISING™ integrates all steps of the advertising process — order entry and rating, sales rep reporting, contract management billing, aging and receivables handling, ad statistics and reporting.

It shows performance by territory or account. Because it's online, managers can easily see where they made money, what products did best and how much preprints impacted sales. They can compare current figures to previous forecasts and check them against actual year-to-date figures. Online information and up-to-the-minute reports are available by revenue, linage, SAUs or whatever type of units you want to use.

When CJ/AD TRACKING,™ CJ/LAYOUT™ and CJ/CLASSIFIED™ are brought online, comprehensive control of the full advertising and production cycle begins. These three systems are tightly coupled to CJ/ADVERTISING — a unique design option which allows all of them to share the most current up-to-date information.

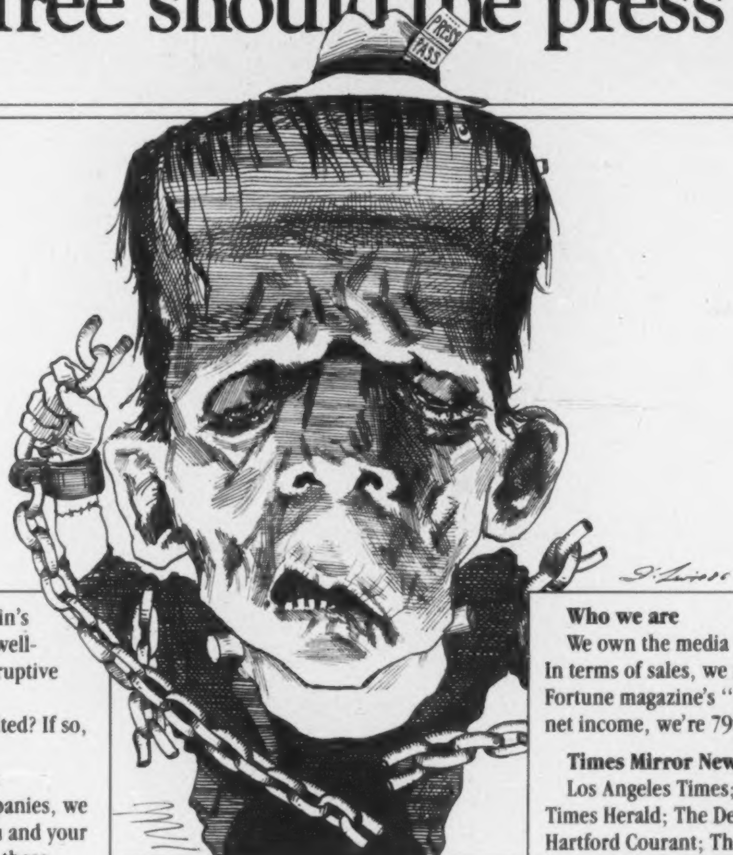
"The People & The Press," Ad #6 in a series

How free should the press be?



Is a free press Frankenstein's monster in disguise—a well-meaning but socially disruptive force?

Should its freedoms be limited? If so, where should the limits be?

As one of America's largest newspaper-based media companies, we felt we had to know what you and your fellow citizens thought about these questions, so we hired an expert to find out.

Between April and December, 1985, Gallup pollsters conducted over 4000 interviews on our behalf, asked nearly two dozen press freedom-related questions, and found:

- In general, the public values a free press, thinks its freedoms should take precedence over government prerogatives...but not over individual and community rights.
- Specifically, 54% think it should be difficult for government to stop news stories from being published; 26% disagree.
- 78% think reporters should be allowed to keep their sources confidential; 15% disagree.
- 42% think government should require the press to cover all sides of controversial issues; 48% disagree.
- 51% think government should outlaw election predictions; 42% disagree.
- 67% think the press should pay damages if a story turns out to be false; 19% disagree.

What do you think?

The primary purpose of this ad is to engage you in a dialogue about press issues—a dialogue that will strengthen the relationship between the press and the people it serves.

To that end, we'd like to know how free you think the press should be. Write our chairman, Robert Erburu, Times Mirror, Times Mirror Square, Suite 100, Los Angeles, CA 90053.

He's also the person to write for a summary of our "People & The Press" investigation or our new annual report. Or you can call our public affairs people at (213) 972-3946.

Who we are

We own the media properties below. In terms of sales, we rank 139th among Fortune magazine's "500." In terms of net income, we're 79th.

Times Mirror Newspapers:
Los Angeles Times; Newsday; Dallas Times Herald; The Denver Post; The Hartford Courant; The Morning Call (Allentown, PA); The Stamford Advocate and Greenwich Time (Connecticut).

Times Mirror Magazines:
Popular Science; Outdoor Life; Golf Magazine; Ski Magazine; The Sporting News.

Times Mirror TV Stations:
KDFW, Dallas; KTBC, Austin; KTVI, St. Louis; WVTM, Birmingham (AL).

Times Mirror Cable:
Fifty cable TV systems serve 300 communities in 15 northeastern, western and southwestern states.

Times Mirror Publishing:
Matthew Bender & Co., law books; C.V. Mosby, medical and college publishers; Year Book Medical Publishers, medical publications; Harry N. Abrams, art books; Mirror Systems, computer software; Learning International, training programs; Jeppesen Sanderson, flight information and training.

We're interested in what you think.

Mary Jane Haeselich

From secretary to vice president/production of Milwaukee's dailies

BY MARCIA RUTH
presstime staff writer

Not many secretaries think they will rise to become vice presidents of major corporations.

And 30 years ago, Mary Jane Haeselich was no exception.

"Never in my wildest imagination did I dream I would hold the position to which I reported as a secretary in 1956," says Haeselich, now a vice president of Newspapers Inc., the Newspaper Division of The Journal Co. that publishes The Milwaukee Journal and Milwaukee Sentinel.

Not only did she become a professional without a college degree, but she did it as a woman in the newspaper department most traditionally known as a "man's world"—production.

"She's a remarkable woman," says Robert A. Kahlor, president of Newspapers Inc. and the last of a chain of three vice presidents for whom she worked as a secretary.

It was Kahlor, who joined the company in 1972, who urged her into management in 1977. "It became obvious to me that she had potential to do a lot more than be a secretary," he says. "She just kept reaching out for more responsibility, and as she reached out for more, I was just happy to let her have more."

"It wasn't my idea" to take the job Kahlor offered as administrative assistant for production, says Haeselich, 54. Despite the fact that she had been elected managing editor of her high school newspaper and was offered a scholarship on graduation, she had continued to follow her father's philosophy that "women didn't have to go to college because there was always a secretarial job out there."

But her drive to excel shone through her work in that "traditional" role. "Read," an early mentor had advised her and read she did—everything that crossed her desk in 21 years as secretary to vice presidents for production.

"She learned the business from the bottom up," says Charles Koeble, vice president for circulation. "If she didn't understand what she was typing, she asked questions or got a book."

And as she moved up through the ranks—production superintendent in 1978, production coordinator in 1982, production manager in 1984 and her current post in 1985—she demonstrated that understanding wasn't all she did.

"She's a self-starter," says Kenneth W. Adams, senior vice president for operations. "She's very thorough. She's a perfectionist. If you give her a project, it is done on time and it is done completely."

While Haeselich was climbing the management ladder, the Milwaukee dailies were engaged in a pioneering venture into a form of direct lithography that premixed water with ink.

With the increasing pace of technological change, the job of production superintendent was divided into two parts in 1980. Concentrating on pre-press functions, Haeselich oversaw the selection and implementation of a computerized system for ad layout and a laser color scanner.

Now as vice president/production, she is responsible for the operations of eight departments staffed by more than 500 full-time employees: composing room, ad services, camera/platemaking, photo, art, paper and ink, mailroom, and pressroom.

Keeping up with rapid changes in production technology, Haeselich notes, is "almost a full-time job."

In evaluating new proposals, she cautions that everything must be both "upgradable" and "integrated" with the entire system, not act as a "boat anchor."

And always, one basic philosophy drives her decisions: "We believe our production department is first and foremost a service department."

That spirit accounts for her being widely regarded by Journal executives not only as someone who knows her stuff but also as someone who is "easy to work with."

Sentinel Managing Editor Trueman E. Farris Jr. claims his paper's "production department and editorial department have probably the best and closest working relationship on any daily newspaper," and a good share of the credit goes to Haeselich.

"She understands that teamwork counts," says circulation's Koeble, who particularly appreciates her "consumer-oriented" attitude when he talks with his counterparts at other papers. "I always come away feeling good because one of the problems they seem to have is an inability to communicate with the production department," he says.

As William F. Share, senior vice president/marketing, puts it: "She's right there marching with us."

The inevitable question—"What does it mean to be a woman in production and a former secretary in a field where most executives rose through other ranks?"—elicits what Haeselich calls her "stock answer": "I could have turned it into a problem if I had wanted to, but I didn't do that."

Haeselich, who is single, is a lifelong resident of Milwaukee. ☐

Austin brings the state of the art to newspaper publishing

A successful newspaper is a growing newspaper, and growth brings changes.

Changes like new or expanded facilities, automated material handling, electronic pre-press systems, improved printing techniques and updated mailrooms. These are the elements that add efficiency and productivity to a publishing operation.

Austin clients are meeting the challenges of change, as we help them design the systems and install the equipment to bring their operation to the forefront of publishing technology.

We are working every day, with suburban weeklies and metropolitan dailies, upgrading facilities and equipment--from front-end operations to distribution loading docks.

If your operation is ready for change, Austin can help. Contact us at Cleveland, Ohio, 44121, or call one of our offices in major cities worldwide.

Press debate may start anew at UN

BY DANA BULLEN

After a billion words (it seems) have been spilled at UNESCO in debate of a New World Information Order, we may be condemned to start over again at the United Nations in New York.

This is not a thrilling prospect. It seems to reflect an assessment by supporters of more radical proposals for a "new order" for news media that they haven't done as well as they'd like at the United Nations Educational, Scientific and Cultural Organization in Paris. There's some cheer in this—but not very much.

Vigilance in Paris remains essential. The minute a free press turns away, those seeking restrictions on news media will see an opening and try to exploit it. So what we're talking about at the UN is really a "second front" in the same war.

The new arena is the 69-nation UN Committee on Information. This is chaired by Willi Schlegel of East Germany. He was elected last year almost by default when the West failed to come up with a credible candidate. For the rest of the year, the committee engaged in endless wrangling. The final outcome was not encouraging.

Crushing Western objections in a series of lopsided votes, the committee approved a resolution precisely refusing to accept the consensus language accepted at UNESCO describing a "new order" in communications as an "evolving" and "continuous" process—rather than something to be mandated or imposed.

The resolution, which subsequently went forward through the UN system to eventual approval by the General Assembly, calls for "establishment" of a "new order," hails efforts of UNESCO toward "clarification, elaboration and application" of this concept, emphasizes a role for public information in promoting "universal disarmament," supports efforts to "implement" a 1978 Mass Media Declaration, requests UNESCO studies on the socioeconomic and cultural impact of new communication technology, etc.

Not a single Western country voted for the resolution.

The Committee on Information takes up these issues again on June 23 at a two-week 1986 "substantive" session.

At this point, it looks like a donnybrook in the making.

The first item on the agenda is:

"Promotion of the establishment of a new, more just and more effective world information and communication order intended to strengthen peace and international understanding and based on the free circulation and wider and better balanced dissemination of information."

Hints as to what this will include were seen at a recent round table on a "new order" held by UNESCO and the UN in Copenhagen.

Soviet and East German participants tried to introduce language on the imperatives under a "new order" for journalists to foster peace, disarmament, mutual understanding, etc. Schlegel, the Information Committee chairman, indicated in a closing speech that he was taking back to New York a renewed determination to pursue such "practical aspects" as norms and ethics, the relationship between freedom and responsibilities of communicators, the link between the NWIO and a New International Economic Order, and the like.

He said he certainly would follow the suggestion of an East German observer at the meeting (Professor Wolfgang Kleinwachter of Karl Marx University) that the UN Information Committee invite the heads of other United Nations committees to coordinate their work on such things as satellite monitoring, transborder data flow and activity of "transnational corporations."

This is an agenda that news media, both print and broadcast, ignore at their peril.

"I get the feeling I'm attending a wedding reception at which UNESCO is marrying off its ugly daughter to the UN Information Committee," said K. Prescott Low, publisher of The Patriot Ledger in Quincy, Mass. Low attended the Copenhagen round table as an observer for Inter American Press Association.

Moderate Third World participants at the round table looked the other way when Soviet bloc speakers served up ideology. When their turn came, they focused on more practical needs in their own regions. The annotated agenda prepared by UNESCO showed some welcome awareness of concerns over licensing of journalists and other restrictive ideas.

In Paris, meanwhile, a high UNESCO official commented:

"When countries lose a battle somewhere in the UN system, they are strongly tempted to take it up again elsewhere. Maybe UNESCO is losing credibility on the communications issue, but the risk is that it will flare up elsewhere, starting from square one."

We all know the saying that those who fail to heed history are condemned to relive it.

A decade has been wasted at UNESCO climbing these same mountains. Let's hope wiser men at the UN see the folly of doing it all over again.

In place of rhetoric about duties and restrictions, why not put forward an approach at the UN—or wherever communications issues are discussed—that:

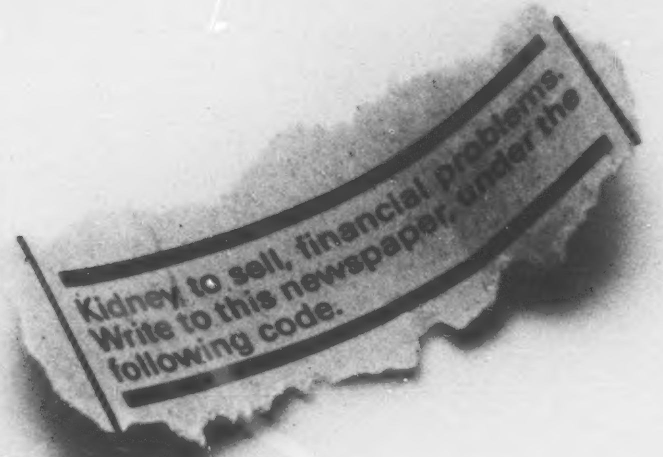
- Rejects rather than ignores widespread censorship in the world
- Promotes the free flow of news as mandated by Article 19 of the 1948 Universal Declaration of Human Rights instead of bending and limiting it
- Opposes shutting down newspapers or turning off radio stations for reporting what angers somebody in power
- Allocates resources at least evenly between independent and government media, rather than exclusively for the latter
- Opposes channeling of all incoming news to a country through a government-run "national news agency," blocking direct access by news media.

And why—the greatest need of all—why don't we find a way to stop the killing, kidnapping and jailing of journalists?

This would be an agenda for action worthy of the great principles of the United Nations. ☐

Bullen is executive director of the World Press Freedom Committee at The Newspaper Center in Reston, Va.

WE BROKE THE BIG ONE



Kidney to sell, financial problems. Write to this newspaper, under the following code.

translation of an ad from a Brazilian newspaper

WE DISCOVERED A KIDNEY DISEASE TRANSPLANTS WON'T CURE AND WON THE PULITZER PRIZE FOR SPECIALIZED REPORTING.

When two Pittsburgh Press reporters began investigating organ transplants, they found a pattern of greed and corruption that spread from Pittsburgh and other U.S. cities all the way around the world.

Andrew Schneider and Mary Pat Flaherty found that poor people in foreign countries were willing to sell a healthy kidney for cash—or to pay off a gambling debt. They found doctors willing to bend hospital policy so that the richest, not the sickest, patients got kidney transplants. And in the middle they found brokers, people bartering kidneys for profit.

Their series, "The Challenge of a Miracle: Selling the Gift," drew worldwide public attention. The ensuing controversy helped prompt reforms of the international transplant system that continue today.

And this effort has been honored with the Pulitzer Prize for Specialized Reporting.

For more than a century, Scripps Howard papers have broken stories that have led to improvements in their communities and across the nation. We've uncovered scandals, exposed problems, led the fight for responsive government, care for the needy and concern for quality of life. Scripps Howard has won 30 Pulitzers over the years.

The Pittsburgh Press has just made it 31.

WE BREAK THE BIG ONES.

REGULATIONS

Most experts at world conference affirm that VDTs are safe

Varying opinions emerged from the approximately 300 scientific papers presented at the first international conference devoted to video display terminals and health.

About 1,200 people from 25 countries—including scientists, academics, government officials and labor representatives—gathered in Stockholm, Sweden, for the May 12-15 conference titled "Work with Display Units."

"The overwhelming message from the scientists . . . was that VDTs are safe for all workers, including pregnant women," said Renee Ross, executive director of the Center for Office Technology in Washington, D.C. COT is a national coalition of employers, manufacturers and associations, including ANPA, interested in promoting effective use of office technology.

"There were a few reports on possible biological effects of electromagnetic fields that indicate further research is required, and we encourage such research," Ross said.

In her presentation at the conference, Ross cited educational advances made in the United States as the key to effective use of VDTs. "The public controversy surrounding VDT use has had the negative effect of overstating the concerns of VDT users and often understating efforts to address those concerns," she said. "Yet, this public discussion has a positive side. It has increased awareness of potential problems, and this awareness is resulting in improved effective use of video displays."

A paper on developing a trade union strategy on VDT ergonomics was presented by David J. Eisen, director of research and information for The Newspaper Guild, and David LeGrande, health and safety director of the Communications Workers of America.

"The most significant development at the conference from our viewpoint was a statement adopted by 36 trade union representatives from eight countries calling for the development and installation of protection against the magnetic field of Very Low Frequency radiation from VDTs," Eisen said.

"This statement was agreed upon in the light of reports submitted to the conference showing fetal damage to laboratory animals from VLF magnetic field emissions, in one case duplicating typical radiation from VDTs," he added.

Eisen said the union statement pointed out that Swedish scientists have recommended such protection and that Scandinavian manufacturers "have already developed great reduction of such emissions by a device employing countervailing fields. The device involves wire coils attached to the yoke (neck) of the tube, which generates emissions that block magnetic field emissions."

The statement "also called for accelerated research and the universal right of pregnant operators to transfer to other work," Eisen said. He noted that conference reports on epidemiological studies of VDT operators, "while subject to conflicting evaluations and interpretations, showed some evidence of higher birth abnormalities among operators. The trade union representatives were not saying that VDTs are an established pregnancy hazard, only that until the final evidence is in, minimal and inexpensive precautionary measures must be taken."

Ross of COT said that epidemiological reports from Canada, Sweden, Finland and Norway "all found VDTs to be safe for pregnant workers." She said a report on a Swedish study of laboratory mice "was very encouraging because the new data showed no statistical significance."

Another attendee, Deborah S. Meyer, public information director for 9 to 5, the National Association of Working Women, said, "We left feeling there is still a lot of controversy over whether VDTs affect pregnancy. Those questions are still very much alive. On the other hand, there is agreement on other questions, such as the fact that intensive use can cause stress and that work breaks alleviate that stress."

Prior to the Stockholm symposium, an environmental safety specialist told the annual meeting of the Bethesda, Md.-based National Council on Radiation Protection and Measurements that radiation emissions from VDTs are within the safe range.

George M. Wilkening, director of environmental health at AT&T Bell Laboratories in Murray Hill, N.J., said that the problems associated with VDTs appear to be related to job design and workplace ergonomics. (See story, p. 47.)

Wilkening is chairman of the council's Ad Hoc Group on Video Display Terminals, which has been evaluating existing scientific data on VDT emissions. On the question of safety for pregnant operators, Wilkening said the group reviewed data on so-called "clusters" of birth defects and found the occurrences were within statistical norms.

The chairman said the group agreed with a statement issued earlier this year by the National Swedish Board of Occupational Safety and Health that said preliminary results of experiments on mice were "statistically insignificant" [**presstime**, March 1986, p. 43].

Wilkening said additional evaluations of existing studies of VDTs should be made and experiments should be repeated "to make doubly sure" emissions are at safe levels. —*Clark Newsom*

REGULATORY NOTES

- The Senate May 22 confirmed John A. Pendergrass to **head the Occupational Safety and Health Administration**. Pendergrass, an industrial hygienist, was manager of hazards awareness products for 3M Co. The post has been vacant since July 1985.

- The Federal Communications Commission has granted Owosso Broadcasting Co. another extension of time, to March 1, 1987, to **sell either WOAP-AM-FM or The Argus-Press** in Owosso, Mich.

Owosso Broadcasting and 15 other co-located newspaper/broadcast combinations were ordered by the FCC to be broken up under its 1975 cross-ownership rules. According to the FCC, Owosso is the only one that has not yet complied [**presstime**, April 1980, p. 16].

Objections raised to Detroit JOA

By late May, the proposed joint operating arrangement between Detroit's two competing daily newspapers had prompted about a dozen comments to the Justice Department, most of them opposed to the plan.

Opposition comments include one from an official of the United Auto Workers union requesting that a hearing be held, three written by individuals using the letterhead of the Detroit Free Press and one from a non-daily newspaper in North Dakota.

The Free Press and The Detroit News formally submitted their JOA application May 9 to Attorney General Edwin Meese III [**presstime**, May 1986, p. 86].

At press time, the Justice Department had not yet published the announcement in the Federal Register that begins the official 30-day public comment period.

There have been two other recent developments relating to JOAs.

- A bill was introduced April 16 in the U.S. Senate to amend the Newspaper Preservation Act, the 1970 law that legalizes JOAs.

The measure is intended to eliminate "ambiguities" in the law that have had a "chilling effect" on the competitive practices of some JOA newspapers, said Donald B. Holbrook, lawyer for the Newspaper Agency Corp. of Salt Lake City. Questions have arisen over the involvement of JOA newspapers in electronic publishing and total-market-coverage programs.

S 2314 provides that the act may not be construed as prohibiting any activity by a JOA newspaper that lawfully could be engaged in by a non-JOA newspaper.

- Gov. George R. Ariyoshi April 22 signed into law a measure revoking Hawaii's version of the Newspaper Preservation Act.

The Honolulu Advertiser and the Honolulu Star-Bulletin are partners in a JOA. Curtis K. Uno, general counsel to the Hawaii Newspaper Agency, said the action will have no effect on that arrangement because the agency "continues to operate under the shelter of the federal Newspaper Preservation Act."

The state law, enacted in 1972, had been the frequent target of repeal attempts.

COURTS

2 libel countersuits pay off for newspapers

Two newspapers recently recovered money in libel countersuits.

A Charleston, W.Va., lawyer May 3 agreed to pay The Charleston Gazette $12,500 to settle a suit it had filed against him. The Gazette had charged Stanley Preiser with malicious prosecution and abuse of process after libel suits he filed against the paper on behalf of three former Charleston policemen were dropped [**presstime**, May 1985, p. 6].

Preiser also agreed to drop a $13-million lawsuit he filed in U.S. District Court against the Gazette and Publisher W.E. Chilton III over an editorial.

In the second case, a county judge April 9 ordered Morton R. Shankman, a former New York lawyer, to pay $25,000 in attorneys' fees and $97 in court costs to The Sun-Tattler of Hollywood, Fla.

The newspaper had moved to recover the costs after a circuit judge dismissed a $1-million libel suit filed by Shankman against the paper and a former reporter.

COURT BRIEFS

- A Massachusetts Superior Court judge **dismissed a $3.6-million libel suit** filed by former Massachusetts Gov. Edward J. King against The Boston Globe.

In granting the newspaper's motion for summary judgment, Judge James P. Lynch said April 30 that six of the seven items at issue—an editorial, three editorial cartoons and two columns—were constitutionally protected opinion. He said the seventh item, an article, contained a false statement but was not defamatory.

- An **antitrust suit** filed by three current or former subscribers against the Daily Sun of Lewiston, Maine, was **dismissed** April 10 by agreement of the parties.

The individuals had claimed that inclusion of a new Sunday edition in the weekly home-delivery subscription price was an illegal tying arrangement [**presstime**, Sept. 1985, p. 36].

LEGISLATION

How tax bill would affect newspapers

The massive tax overhaul bill expected to be considered by the Senate early this month has a number of provisions of interest to newspaper executives. For the most part, however, the bill does not single out newspapers for special treatment.

Among other things, the measure approved May 7 by the Senate Finance Committee would:

- Repeal the investment tax credit
- Change the accelerated cost-recovery system
- Reduce from 100 percent to 80 percent the portion of business meal and entertainment expenses that can be deducted
- Make several changes in employee benefits, including: reinstatement of exclusions for employer-provided educational assistance and group legal services; requirement that participants in an employer-sponsored pension plan be fully vested within five years; and termination of tax-deductible Individual Retirement Account investments except for employees not covered by a pension plan.

Although the bill does not limit deductibility of advertising expenses, Martin Casey, ANPA manager/government and international affairs, cautioned that the controversial proposal could resurface [**presstime**, April 1986, p. 46].

"When the Senate considers tax reform, people who want to preserve some element of current tax law will be grasping for anything which would raise the money necessary to pay for their amendment," he said. "Someone might think of denying a portion of deductions for advertising expenses."

Neither the Senate Finance Committee bill nor the tax bill passed by the House of Representatives last year would amortize newspaper deductions for circulation expenses. Several of the tax-revision bills introduced last year included such a provision.

The Senate committee bill would permit the Houston Endowment to retain ownership of the Houston Chronicle. The endowment currently is under a 1989 deadline to divest 50 percent of its holdings in the paper, pursuant to a 1969 law [**presstime**, Aug. 1984, p. 38].

FCC gives Bell companies open line to offer new services

The recent decision of the Federal Communications Commission to allow regional Bell telephone companies to offer new services without having to set up separate subsidiaries has provoked a wealth of comment.

The FCC's May 15 ruling, on a 4-0 vote, means the phone companies eventually will be able to offer such electronic services as voice-message storage systems and fire alarms through the telephone.

In following its path toward total deregulation of the telephone system, however, the FCC appears to be on a collision course with federal Judge Harold H. Greene, who presided over the court case resulting in the breakup of the Bell system on Jan. 1, 1984. Greene requires the Bell regionals to file separate requests for each new service they wish to offer. Without his approval, any new "enhanced" systems approved by the FCC could not proceed.

FCC Chairman Mark S. Fowler said the relaxation of the separate-subsidiary requirement will open up numerous new technological services to telephone users, "all for pennies a day." But others, including ANPA, have argued that the Bell companies will be tempted to subsidize their new services at the expense of competing companies unless proper safeguards are in place.

ANPA experts are analyzing the FCC's action and its possible implications for the provision in the divestiture consent decree that bars the regionals indefinitely from offering information services over their own lines.

The new rules are not scheduled to go into effect until Feb. 1, 1988, by which time the phone companies will have to adopt new accounting rules and provide equal access to other firms to assure that the new services are not being subsidized. The FCC said, however, it may approve specific "enhanced" services before then. ☐

IPI receives mixed report on freedom

Despite evidence of increasing press freedom in some countries, the 35th General Assembly of the International Press Institute in Vienna, Austria, in May heard warnings of harsh restrictions in others.

Desmond Tutu, 1984 Nobel Laureate and recently designated Anglican archbishop of Cape Town, charged in his keynote address that the South African press had "sold its soul" for financial gain. He said members of the press accepted government restrictions on reporting about racial unrest and probable changes in the country's segregation policy of apartheid.

A notable exception, he said, is Anthony Heard, editor of the Cape Times who in late May received the Golden Pen of Freedom award at the 39th Congress of the International Federation of Newspaper Publishers in Lisbon, Portugal [**presstime**, March 1986, p. 45].

Attracting particular interest at the IPI meeting was a panel session on the "right of reply," which has become a controversial issue in many countries. In the Western Hemisphere, government requirements that newspapers provide "right of reply" to people angered by press coverage are before the Inter-American Court of Human Rights [**presstime**, Feb. 1986, p. 39].

One of IPI's six resolutions warned that "there can be serious dangers in such laws."

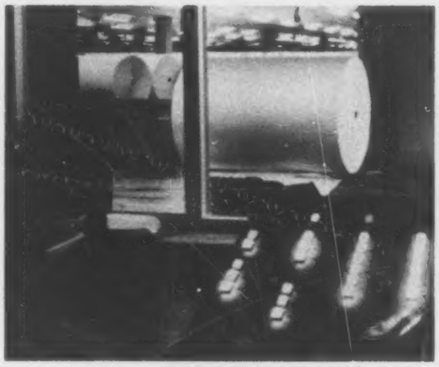
Other resolutions criticized the Soviet Union for withholding news on the nuclear accident at Chernobyl and South Africa for press "harassment."

Noting positive developments, IPI lauded both the "landmark" decision of the Inter-American court against licensing of journalists and the recent progress toward press freedom in many Latin American countries.

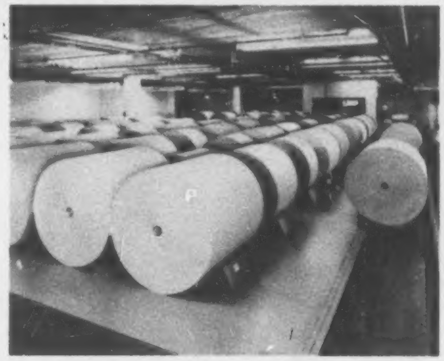
Juan Luis Cebrian, editor of El Pais in Madrid, Spain, was elected new IPI chairman. He succeeded Richard H. Leonard, who recently retired as editor of The Milwaukee Journal.

Also elected were three new vice chairmen: David Laventhol, senior vice president of The Times Mirror Co. and chairman of Newsday, Trygve Ramberg, editor of Aftenposten in Oslo, Norway, and Yosoji Kobayashi, president of Yomuri Shimbun in Tokyo. ☐

An Automatic Approach To Newsprint Roll Handling.



With today's trend towards automation, Webb automatic newsprint roll handling systems are fast becoming a key area for trimming production costs in the newspaper industry. From wrapped roll storage to the reel stands, time and efficiency are critical when handling the necessary tonnage of paper rolls to meet daily production schedules. Webb newsprint roll handling systems feature state-of-the-art equipment and controls ranging from simple gull wing conveyors to sophisticated AGVS (automatic guided vehicle systems). With basic information from the customer, Webb can custom-design a cost efficient, automatic system including preliminary concepts, rough pricing, and project scheduling. Innovative experience has earned Jervis B. Webb an unparalleled, worldwide reputation of quality and reliability in newsprint roll handling.



For more information on paper and newsprint roll handling systems call our Material Handling Hotline: 313/553-1220.

Many newspapers seem willing to accept new ad locations

How many newspaper executives would accept vertical ads on both sides of a page, with copy sandwiched in the middle?

According to preliminary results of a recent survey, 85 percent of publishers, 76 percent of ad directors and 71 percent of editors at U.S. dailies would accept such a configuration.

The Pricing and Positioning Task Force of the Future of Advertising Committee, which conducted the survey, is still tabulating the complete results. The task force is planning to throw its support behind new ad positions acceptable to most news executives, said Chairman Jerome Tilis.

The effort at increasing flexibility in the positioning of advertisements is a response to increasing demands of advertisers that newspapers be more creative in their approach to ad placement [presstime, Nov. 1985, p. 29].

"We will try to identify those positions that stand the greatest likelihood of, if not universal, at least very broad support," said Tilis, president of the Detroit Free Press. "Then we would propose to start a sales effort using these new positions."

To give news executives an idea of how different configurations might look in their newspapers, task force member Michael J. Davies, publisher and editor of The Hartford Courant, had a 12-page mock-up—illustrating 12 of 27 possible positions—distributed with the questionnaire.

Publishers and the top news and ad executives were polled on whether they were: (1) already using each new position, (2) haven't used it but would be willing to, (3) might accept it under certain conditions, or (4) would not be willing to consider it.

"Quite surprisingly, there was more of an agreement than we anticipated," said Uldis Grava, vice president and director of marketing services of the Newspaper Advertising Bureau, who is overseeing the survey for the task force. "We thought the editorial people would be dead set against 'island' positions and so on, but everybody was willing to look at the picture as a whole, not just their self interest."

For example, figures released so far also show that:

- 77 percent of publishers and ad directors and 67 percent of editors would consider small ads in the middle of the stock tables
- 80 percent of publishers, 75 percent of ad directors and 71 percent of editors would consider reserving a quarter-page spot on the first page of the business section for a particular advertiser
- 65 percent of publishers, 68 percent of ad directors and 41 percent of editors would consider an "island" position on page 3.

"The main point is that the newspaper business is finally ready to talk about a lot of ideas that might have been rejected out of hand a few years ago and that advertisers might find exciting," said Tilis. ☐

Advo purchase offer clouded by lawsuit of rival bidder

A New York investment firm has agreed to buy what was described as a controlling interest in Advo-System Inc. from John Blair & Co.

Blair said that after the $10-million transaction, which could occur in early July, it will distribute the remaining Advo equity in the form of stock to shareholders.

The agreement calls for sale of what Blair called one-sixth of the equity in Advo to Warburg, Pincus Capital Partners, a limited partnership. This 16.7-percent share was called "controlling" because under the agreement, Warburg, Pincus would own Advo's preferred stock and would be entitled to elect a majority of the Advo Board of Directors.

A Warburg, Pincus spokesman said day-to-day operation of the direct-mail firm "will remain in the hands of [Advo's] present management."

But there is a cloud over the deal in the form of a lawsuit filed by another company that wants to buy all of Blair's assets. Macfadden Holdings Inc., which in April offered to buy Blair & Co. for $287.5 million, filed its suit in Delaware Chancery Court to block the Warburg, Pincus deal.

In making its bid for Blair, Macfadden said it planned to sell off Advo to another party [presstime, May 1986, p. 59].

Blair opposed the Macfadden offer, telling stockholders it did not represent the company's current market value, especially as pertains to Advo. Blair President Jack W. Fritz said Advo is worth "tens of millions of dollars," while the Macfadden offer called for selling Advo "for the ridiculous sum of $100,000."

Blair said it will "vigorously oppose" the lawsuit.

"We remain committed to maximizing the value of Advo for our stockholders," Fritz said. The Warburg, Pincus sale and distribution of the remainder of Advo are "the best way to achieve this," he added.

The Warburg, Pincus spokesman said his organization has major holdings in various large and small firms. One of them is SFN Companies Inc. of Glenview, Ill., a holding company for a number of publishing and communications firms including the educational publisher Scott, Foresman & Co.

Blair officials said they are continuing to explore "alternative transactions with several interested parties for the remainder of Blair so as to maximize the value for Blair's stockholders." ☐

We pioneered one of the first Advertising Management and Accounts Receivable Control Systems for the newspaper industry and we continue to set the standard.

That's why six of the top ten newspapers chose Neasi-Weber's Admarc System to manage their complex advertising schedules, to control revenues, and to provide sales reporting unequalled in the industry. In fact, Admarc manages more advertising revenue nationwide than any other system in existence. Our customers are our best salesforce.

Come talk to us at ANPA—Booth 3153 or contact Jim Chapman for the inside story.

Ad-agency mergers will affect newspapers

BY CRAIG C. STANDEN

What will the current wave of advertising agency mega-mergers mean to newspapers? Before gazing into a *very* clouded crystal ball, let's start with some background.

The first thing to remember is that the agency mergers are a response to the wave of mergers that have taken place and continue to take place among their clients—both in American business and in businesses around the Free World—and to the growth of multinational companies.

Craig C. Standen

In the United States alone, three billion-dollar-plus advertisers—Procter & Gamble, RJR Nabisco and Philip Morris—account for approximately 10 percent of national consumer advertising. Today's Philip Morris combines in one company what used to be four large corporations, each a major advertiser: Philip Morris (Marlboro, Virginia Slims and other tobacco brands), Miller Beer, Seven-Up, and General Foods (Maxwell House, Post cereals plus two dozen other well-known brands). P&G and RJR Nabisco are just as diversified in the range and variety of their products.

Companies like these tend to consolidate their advertising in a small number of agencies—and they want their agencies to be just as big and diversified as they themselves are. Accordingly, agencies have been getting bigger—partly by internal growth but mostly by merger and acquisition—so as to offer clients a complete list of services to match their needs in marketing, advertising, media buying, direct marketing, research, public relations and sales promotion.

On a global scale, the growth of large multinational companies has fostered the growth of large international ad agencies. Many of these giant companies want to use a single-minded marketing strategy for each product all over the world, and an easy way to do this is to use the same ad agency all over the world.

So, what effect will these giant advertisers and giant agencies have on newspapers and newspaper advertising?

We've never had to deal with a $7.5-billion agency before, and there will almost certainly be some unforeseen fallout from these mega-mergers. But here are some things that might happen.

1. Account changes. Some of what "falls out" will be accounts, big accounts. They will leave the mega-agencies because of conflicts with other advertisers in the same product or service categories.

The Colgate-Palmolive-Peet Co. was one of Ted Bates' original accounts when the agency was founded in 1940. Last year, Colgate spent about $100 million through Bates and its subsidiaries, but now that Bates has been acquired by Saatchi & Saatchi (a Procter & Gamble agency), Colgate is expected to take these billings to other agenices.

When BBDO merged with Doyle Dane Bernbach and Needham Harper Worldwide to form a $5-billion super-agency, BBDO resigned the $80-million Stroh's Beer account so that the new combined agency could keep Needham's Anheuser-Busch beer business.

For newspapers, these shifts in major accounts and reorganizations of agency media departments will in many cases mean the end of long-established relationships between the newspapers' sales organizations and the people who do the media planning and buying for advertisers and their agencies.

Newspapers and their national sales organizations will have to work extra-hard to establish similar strong relationships with the new buyers and planners. And they will find media decision makers harder to reach.

2. More concentrated media decision-making. The 1984 NAB report, "Advertising's Next Quarter Century," predicted that by 1997, 10 international superagencies would place 25 percent of all world advertising billings. We've already passed that percentage in only two years. With the most recent mergers, the top 10 agencies will account for approximately 35 percent of worldwide billings—and the top 10 domestic agencies will account for almost half of all U.S. agency billings.

That is a telling fact, one which will make our newspaper selling job more difficult.

As the bureau's Leo Bogart said at the recent ANPA Convention in San Francisco, "We have a smaller number of significant targets, ensconced behind corporate battlements that are harder and harder to penetrate. The guardians at the gates of the packaged goods empires have grown up with TV, and their hides have been hardened into armor plating that protects them from any new ideas about media."

Reaching and influencing these increasingly hard-to-reach agency and advertiser people, at higher and higher levels within their companies, are problems being attacked from several different angles by the Future of Advertising Project [**presstime**, May 1986, p. 50]. They certainly are problems we must solve if we are going to accomplish our goal of increasing newspapers' share of national advertising.

3. More pressure on advertising rates. As major advertisers become larger and larger, and as they concentrate more and more of their dollars in a few big agencies, we can expect to see more pressure on media advertising rates.

General Motors, which spent more than $700 million in media advertising last year, recently hired a top agency media director and put him in charge of the company's media operations. Part of his job is to increase GM's advertising efficiency by reducing the company's media costs.

One way GM is doing this is by buying media on a corporate basis, where the company can negotiate a single "buy" for all its product lines no matter what agencies are involved. The company is saying, in effect, "If we agree to buy advertising for several of our cars in a number of your publications, or on a number of your programs, what will you do for us in return?"

Because General Motors wants to be able to plan its marketing activities over a two- to three-year period, the company is interested not only in obtaining the most advertising for its $700 million but also in getting a long-term commitment on price stability from the media.

Similarly, RJR Nabisco does all its print media planning and buying internally, and recently it moved all its broadcast planning and buying to Ohlmeyer Communications, a subsidiary of Nabisco.

This trend is almost certain to accelerate in the next couple of years, and we can expect growing pressure from these major advertisers on our rates—especially on the differential between our national and local rates.

It's too early to tell in what other ways newspapers will be affected by the agency consolidations, but these three are pretty good bets. ☐

Standen, president of the Newspaper Advertising Bureau in New York City, is a regular contributor to **presstime**.

THE ADS FROM OUTER SPACE ARE COMING.

Look up. A dream come true is orbiting 22,300 miles above your head. It's the high tech cornerstone of the AD/SAT Network, a satellite that delivers ads directly to your newspaper. At the speed of light.

It all starts with one solitary piece of repro material from an advertising agency, and ends moments later at newspapers across America as a facsimile that's a dead ringer for the original. No missing, mangled or delayed ads. No missed insertions. No lost revenue. Plus the bonus of an on-line message system that, for the first time, links ad agencies, newspapers and their representatives.

This fall the AD/SAT Network goes operational, serving advertising agencies and demonstration newspapers.

For years it's been your dream. Now it's your reality. And it's time for you to join the Network. For full details, contact AD/SAT, 540 Madison Avenue, 36th floor, New York 10022. Phone (212) 872-1491.

AD/SAT

We deliver newspaper ads at the speed of light.

Advertising

Ad invoice standardization advances . . .

Nearly two years after the U.S. newspaper business voluntarily adopted the expanded Standard Advertising Unit system, or SAU®, it is on the brink of another round of standardization. A Standard Advertising Invoice, or SAI, was endorsed May 17 by the board of directors of the International Newspaper Financial Executives.

The SAI form was developed by INFE's Advertising Liaison Committee [presstime, March 1986, p. 51]. According to Chairman Donald W. Kearney Jr., the next step is for representatives of INFE and other industry organizations to work with the Newspaper Advertising Bureau's Future of Advertising Committee to decide upon a "reasonable implementation date."

In addition, INFE will develop promotional literature on the SAI similar to that distributed prior to the implementation of the SAU system, said Kearney, assistant controller of The New York Times.

The invoice approved by INFE contains 29 standard elements. Each is numbered on the face of the form and described on the back. Newspapers will have the option of using a horizontal or a vertical format, Kearney said. They also may add elements, so long as the SAI numbering system is not changed, he said.

According to INFE, the standard invoice is designed to make it easier for advertisers and ad agencies to make multi-market newspaper buys.

. . . As does standardization of research guidelines

Standardization received yet another boost with the May announcement of standardized retail research guidelines.

Two years in the making, the guidelines were developed in response to requests from the National Retail Merchants Association that newspapers simplify and standardize their retail research.

The agreement was worked out between NRMA and the International Newspaper Advertising and Marketing Executives.

Also participating in developing the guidelines was the Newspaper Research Council [presstime, May 1986, p. 67]. ☐

Postal

TMC rules change

With restrictive new postal rules on the way, many daily newspapers that mail total-market-coverage publications second-class are busy changing their delivery methods. The new rules, effective June 8, require that the publications have a separate mailing permit.

Some newspapers had been mailing non-subscriber issues under the same permit used for their regular, paid issues. Because many of the non-subscriber copies by themselves cannot qualify for a separate permit, they will be disallowed from second-class service.

ANPA Assistant General Counsel Tonda F. Rush said newspapers are reacting to the problem in diverse ways.

Some are shifting to third-class delivery. Some are going to a carrier system. Some are using a postal rule whereby a publication becomes eligible for second-class mail if more than half of its recipients have "requested" it. Some even are trying to restructure their TMC programs so as to qualify under the revised second-class regulations.

No matter which route they choose, there are high hurdles.

Third-class mail is out of the question for some newspapers because of size restrictions. Current regulations allow a maximum size of 11½-by-13½-by-¾ inches for each piece, which is smaller than many newspapers can accommodate. ANPA has asked USPS to change the size restrictions, and Rush said changes may be in the offing—but likely not in time to meet the June 8 deadline.

Another problem is that third-class generally is more expensive than second-class. Robert D. Fairchild, business manager of The Spokesman-Review and Spokane Chronicle, said that to mail two recent issues of his newspapers' TMC publication, third-class would have increased costs 46 percent one time and 61 percent the other. Fairchild said they will use third-class service only until fall, when a carrier system will be launched.

USPS changed the rules at the urging of Advo-System Inc., the direct-mail firm against which many daily newspapers compete for advertising preprints. ANPA's appeal of the Postal Service action is pending in the 4th U.S. Circuit Court of Appeals, Richmond, Va. [presstime, May 1986, p. 64]. ☐

State and Local

Legislatures place limits on libel suits

Washington has become the first state to place a cap on libel awards. The Vermont legislature has passed a bill aimed at limiting frivolous libel suits, and a similar bill may be passed in Oklahoma this month.

The Washington law, which becomes effective June 11, limits the non-economic damages a libel plaintiff can recover for "injury to reputation and humiliation" by applying a formula that takes into account the person's life expectancy and the state's annual average wage.

While defamation actions are not specifically mentioned in the law, the Senate defeated a floor amendment that would have specifically exempted actions in libel or slander. "It's going to be interesting to see what happens to Washington's new cap on damages, particularly when that cap is applied to defamation," said Paul R. Conrad, executive director of Allied Daily Newspapers in Tacoma. Conrad said the law "is likely to be challenged in the next session of the legislature or in the courts."

Some newspaper executives have been calling for the enactment of such legislation [presstime, April 1986, p. 9].

In Vermont, the approved legislation would allow courts to award costs and "reasonable" attorney's fees to prevailing defendants in a defamation suit if a court finds the action was "frivolous and without merit." The bill was awaiting the governor's signature in late May.

In Oklahoma, Ben Blackstock, executive vice president of the state press association, said he is "optimistic" the legislature will pass a bill before adjourning June 12 to limit punitive damages and allow the prevailing party in a libel suit to collect up to $10,000 in legal expenses [presstime, April 1986, p. 36]. The limit on punitive damages would not exceed 50 percent of actual damages. The cap could be lifted if the plaintiff proved by clear and convincing evidence there had been "wanton and reckless disregard" by the defendant.

In a related development, Georgia has enacted a law effective July 1 that extends the time period for publishing a retraction from three days to seven days. If a defendant complies with a written request for a retraction, the plaintiff is not entitled to punitive damages. ☐

We Put It All Together

...an Apple compatible family with the simplicity, speed and low cost of plain paper laser printing for both text and display advertising production.

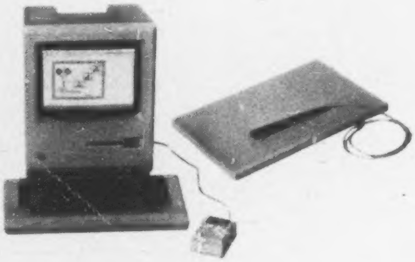
Only Concept permits the same Apple LaserWriter printer to produce professional display ad work and fully hyphenated and justified text.

Concept doesn't just sell personal computer hardware and programs. First, we tailor them specially for publishing. Then we provide intensive, hands-on training. That means increased productivity and lower operating costs right away.

The Concept Starter System shown here is a complete publication production system, consisting of an Apple Macintosh display ad terminal, an Apple //e text terminal and a LaserWriter, driven by both the Mac and Apple //e.

Want a network? Concept has been installing proven Local Area Network publishing systems for years. Corvus LANs with storage capacity of up to 126 megabytes can link as many as 63 Apples. Or perhaps you wish to grow into a network of personal computers later. No problem. Easy growth is one of the many attractions of a Concept System.

Save on Service. Concept Systems help pay for themselves when it comes to service. Since proven and tested personal computer hardware is used, component failures are rare. When they do occur, use of simple modular components means you can handle most repairs yourself. Service contracts are also available from Honeywell Inc., or maintenance arrangements can be made with your local Apple dealer.



Display Ad Composition

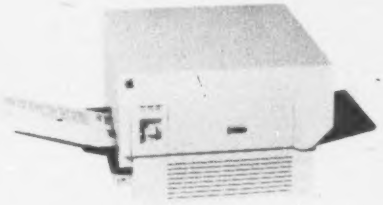
Concept offers two Apple Macintosh composition packages -- AdNet and AdNet Plus.

AdNet Plus links the power and ease of use of the Apple Macintosh computer to LaserWriter or typesetter output. Type can be condensed or expanded with point sizes ranging from 6 to 120 point, with 1/10th of a point increments. Type leading is equally variable. Group formatting enables high speed composition of complex ads. Ads are displayed in actual size or may be reduced to view an entire page.

AdNet offers a lower-cost alternative to those seeking high-speed ad composition with LaserWriter output. AdNet makes full use of the LaserWriter's power. Screens, tints, borders and graphics are all complete when the ad emerges from the LaserWriter. AdNet also utilizes a graphics tablet and pen to enhance handling of line art and precise composition tasks.

AdNet and AdNet Plus both feature Macintosh computers equipped with hard disks that greatly increase the Mac's operating speed while providing 10 or 20 megabytes of memory.

AdNet and AdNet Plus both feature new concepts in ad composition. There is no computer language to learn; no memorizing complicated coding. The systems are so fast and easy, that operators can begin producing complex ads the first day they use them.



LaserWriter

The Apple LaserWriter has earned its place as a professional publisher's output device. This ad, for instance, was composed on Concept equipped Apple computers and typeset on a LaserWriter.

The LaserWriter, linked to Concept Publishing Systems, is an attractive, low-cost alternative to conventional output devices, with many attractive features:

- Output quality is crisp, clear, and particularly suited to newsprint reproduction. Users find printed output in their newspapers better than that of some phototypesetters.
- Concept drives the LaserWriter at 216 lines of typeset text per minute. Effective throughput speed is even faster, as there is no film development or drying time.
- A Concept System using an Apple LaserWriter quickly pays for itself, thanks both to its low price and because it uses no costly phototypesetting film or developing chemicals.

Editorial Networks

Concept's NewsSet software turns an Apple //e personal computer into an integrated publishing tool. The same Apple //e used for text entry and editing can drive the LaserWriter, producing fully hyphenated and justified text automatically. NewsSet can vary LaserWriter type and leading by one-tenth of a point, in type sizes ranging from one to more than 700 points.

Editing is via user-defined, flexible directories. NewsSet uses mnemonic commands and user defined typesetting formats. That helps make it easy to learn and fast to use.

Hyphenation and justification take place automatically during LaserWriter typesetting, or can be performed on screen, during the editing process. Concept's unique hyphenation program is extremely accurate and very fast. A 4,000 character story can H&J in as little as 5 seconds.

21 dailies cited for best driving records

Twenty-one U.S. and Canadian daily newspapers were named award winners for the best 1985 safety records of their newspaper delivery vehicles in the annual Safe Driving Campaign sponsored by ANPA and the International Circulation Managers Association.

The awards are made to the three newspapers with the best safety records, based on miles traveled, in each of seven divisions.

In addition, a Certificate of Merit is presented to each newspaper that had no reportable accidents during the year.

The 619 newspapers participating in the 1985 campaign operated 12,429 vehicles a total of 279,509,390 miles and achieved an accident rate of 1.52 per 100,000 miles.

During the 45-year history of the campaign, participating newspapers have recorded more than 8 billion miles of driving and experienced an overall accident rate of only 1.73 per 100,000 miles. The campaign has two principal goals: to reduce fatalities and injuries, and to reduce insurance premiums for vehicles used in newspaper delivery [presstime, June 1985, p. 82].

Winners for 1985, being notified by letter, were:

Private motor carrier division

Group A: Newspapers with daily circulation up to 20,000; 65 newspapers operated 241 vehicles 3,938,046 miles with 50 accidents.

- First place: **Agana (Guam) Pacific Daily News** operated 13 vehicles 230,547 miles without an accident.
- Second place: **Ironwood (Mich.) Daily Globe** operated five vehicles 191,650 miles without an accident.
- Third place: **Canon City (Colo.) Daily Record** operated 12 vehicles 112,320 miles without an accident.

Group B: Newspapers with daily circulation 20,001 to 50,000; 134 newspapers operated 1,044 vehicles 21,484,474 miles with 317 accidents.

- First place: **Pasadena (Calif.) Star-News** operated 17 vehicles 943,076 miles without an accident.
- Second place: **Casper (Wyo.) Star-Tribune** operated six vehicles 577,380 miles without an accident.
- Third place: **Joplin (Mo.) Globe** operated nine vehicles 314,870 miles without an accident.

Group C: Newspapers with daily circulation 50,001 to 100,000; 66 newspapers operated 687 vehicles 15,503,708 miles with 365 accidents.

- First place: **Lubbock (Texas) Avalanche-Journal** operated 20 vehicles 789,620 miles without an accident.
- Second place: **Fayetteville (N.C.) Observer and Times** operated eight vehicles 224,601 miles without an accident.
- Third place: **Saint John (New Brunswick) Telegram-Journal and Evening Times-Globe** operated nine vehicles 197,110 miles with one accident.

Group D: Newspapers with daily circulation in excess of 100,000; 197 newspapers operated 6,211 vehicles 139,403,412 miles with 3,236 accidents.

- First place: **Houston Chronicle** operated 22 vehicles 1,499,299 miles with two accidents.
- Second place: **Orlando (Fla.) Sentinel** operated 30 vehicles 1,175,849 miles with two accidents.
- Third place: **Toronto Globe and Mail** operated 11 vehicles 460,776 miles with one accident.

Contract motor carrier division

Group A: Newspapers with daily circulation up to 25,000; 99 newspapers operated 1,439 vehicles 26,169,785 miles with 51 accidents.

- First place: **Wausau (Wis.) Daily Herald** operated 24 vehicles 883,222 miles without an accident.
- Second place: **Marion (Ind.) Chronicle Tribune** operated nine vehicles 830,807 miles without an accident.
- Third place: **Lufkin (Texas) Daily News** operated 37 vehicles 809,048 miles without an accident.

Group B: Newspapers with daily circulation 25,001 to 100,000; 81 newspapers operated 1,815 vehicles 41,723,686 miles with 57 accidents.

- First place: **Alexandria (La.) Daily Town Talk** operated 116 vehicles 2,405,676 miles without an accident.
- Second place: **Rockford (Ill.) Register Star** operated 99 vehicles 2,368,112 miles without an accident.
- Third place: **Muncie (Ind.) Star and Evening Press** operated 78 vehicles 1,999,243 miles without an accident.

Group C: Newspapers with daily circulation in excess of 100,000; 35 newspapers operated 992 vehicles 31,286,279 miles with 184 accidents.

- First place: **Flint (Mich.) Journal** operated 45 vehicles 1,153,818 miles without an accident.
- Second place: **Houston Post** operated 12 vehicles 922,838 miles without an accident.
- Third place: **Lancaster (Pa.) Intelligencer Journal and New Era** operated 64 vehicles 850,700 miles without an accident. ☐

You don't have to be a computer wizard to use Papertrak.™

At Data Sciences we understand that you're a newspaper expert, not a computer expert. We understand that you want a computer system to solve problems, not create them.

That's why we designed a computer software family which is easy to learn, and easy to use—Papertrak.™

Papertrak™ has the power to handle **Circulation Management, TMC, Display Advertising and General Accounting.**

Your personnel can be trained and running on this system in a matter of hours.

If Papertrak™ sounds too good to be true, call us for a free hands-on demonstration today. Decide for yourself just how easy the Papertrak™ system will be to use—for everybody.

U.S. lashes out against intelligence stories, leaks

The Reagan administration in May stepped up its attack against the press for publishing sensitive government information and against government officials for leaking such information to the press.

In late May, White House spokesman Larry M. Speakes said the Central Intelligence Agency was reviewing a story carried May 21 in The Washington Post about the activities of Ronald W. Pelton, a former employee of the National Security Agency who is on trial in Baltimore for espionage.

William J. Casey

In its story, the Post said William J. Casey, director of central intelligence, had threatened to seek prosecution of the newspaper if it published an earlier version of the story, scheduled for publication May 4. The Post also said President Reagan had telephoned Katharine Graham, chairman of The Washington Post Co., urging that the story not be carried.

The story was postponed until May 21, and Executive Editor Benjamn C. Bradlee was quoted as saying the Post had decided to withhold some information.

At press time, neither the Post nor the CIA would comment on the agency's review of the Post's story.

However, on May 19, Casey said he had asked the Justice Department to investigate an NBC News broadcast about Pelton's activities. He charged that statements made in the broadcast, "if true," violated a 1950 federal law against publishing classified information concerning U.S. communications intelligence activities.

A Justice Department spokesman said the agency's Criminal Division is studying the issue. The 1950 law to which Casey referred has never been used to prosecute the press.

Tensions between the press and the administration began to escalate early in the month when Casey discussed with the Justice Department the possibility of prosecuting, apparently under the same federal statute, five news organizations—The New York Times, The Washington Post, The Washington Times, Time and Newsweek.

Casey specifically objected to reporting on U.S. intelligence interception of communications between Tripoli and the Libyan diplomatic mission in East Berlin.

The press was not the only target in the administration's attack on unauthorized disclosure of government information. On May 16, State Department speech writer Spencer C. Warren was fired, reportedly for leaking a classified diplomatic cable to the press. His was the second such firing recently. In late April, Michael E. Pillsbury, an assistant undersecretary of defense, was fired after being suspected of leaking information to the press on an administration plan to provide Stinger missiles to Angolan and Afghan rebels. ☐

Next round coming up in selection of space journalist

A 15-member national selection panel will begin work "no sooner than this fall" to select five finalists from 40 regional nominees competing to be the first journalist in space, said Jack Bass, a spokesman for the Journalist-in-Space Project.

The last of the 40 nominees selected by five regional panels of working journalists and representatives of the Association of Schools of Journalism and Mass Communication were named May 14.

Meanwhile, ANPA has urged the President's Commission on the Space Shuttle Accident to use "caution" in considering any recommendation to President Reagan that the civilian-in-space program be ended or suspended.

In a May 16 letter to commission Chairman William P. Rogers, ANPA Executive Vice President Jerry W. Friedheim said, "We are interested in preserving the ability of American journalists to be in and to report from space on the shuttle, from future space stations and in whatever other ways may evolve.

"Even if the nation's space activities are essentially 'government' activities, civilian journalists should not be precluded from reporting to the public from space any more than they are precluded from reporting on earth-bound government activities."

The first journalist in space and a backup will be selected from the five finalists by officials of the National Aeronautics and Space Administration [presstime, March 1986, p. 51].

The Journalist-in-Space Project is part of NASA's Space Flight Participant Program. ☐

Speaking of LAT-WP . . .

"The Times-Post service has contributed depth and illumination to our pages. The best features and situation stories are of a higher quality than we can usually get from any other source, and now and then a spot news story fills what would have been a serious gap."

Quality and commitment: The most advanced news technology.

"We don't get bylines like editorial people," observes Brad Martin, a Kansas City technician whose job is to help keep The Associated Press news and photo reports moving to members. "The recognition comes from your co-workers and the members who depend on you."

Readers and listeners may not know Martin, who started as an AP office boy and grew up with its technology. Yet without the dedication of Martin and his 500 colleagues in AP's communications department — driving extra miles to fix a member's printer, working 12-hour days to wire a bureau at a political convention, or keeping up with the latest satellite technology — there would be no access to the world's most comprehensive news report.

AP pioneered the use of modern technology in the news business. It was the first to use computers and video terminals to send news. It was the first to send laser-scanned pictures and the first to own a satellite transponder. Its research and development staff in East Brunswick, N.J., continues work on more "firsts."

Technicians like Brad Martin make this advanced system work, bringing the miracle of instant news and picture transmission from around the world to the thousands of member newspapers and broadcasters who own AP.

"All the people I know in the communications department are committed to the AP. In communications, there is no halfway."

AP Associated Press
Quality. Commitment.

Disasters prompt flood of media calls to scientist referral service

When disaster struck the space shuttle Challenger in January and a Soviet nuclear power plant in May, the media faced a common problem—lack of reliable, timely information.

Many journalists adopted the same solution: They called the Media Resource Service of the Scientists' Institute for Public Information.

Normally receiving about 50 calls a week on a variety of topics, the switchboard of the New York-based center was swamped within minutes of the first alerts, with journalists seeking sources of information.

MRS is so pleased with its success that it is taking the service on the road with a series of seminars in an effort to expand its use even further.

In the first week after Chernobyl, MRS fielded 127 calls, up from the previous record of 97 after the Challenger explosion and the earlier record of 84 after the Union Carbide chemical leak in Bhopal, India.

MRS was established in 1980 to improve the quality of reporting on science and technology. Operating like a hotline, the service has on file the names of more than 20,000 experts in science, technology and medicine. Journalists who call are not given information on their topics but are referred to expert sources [presstime, Dec. 1985, p. 8].

Although about half of the calls immediately following the major disasters were from television reporters on deadline, more than half of regular MRS users worked for newspapers.

In addition to improving the quality of science reporting, the service appears to have improved the image of the press among scientists.

A 1985 survey shows that of 200 scientists returning a questionnaire about stories for which they had been interviewed, 85 percent said the information had been reported accurately. Eighty-nine percent said the interview "was of help to the public in understanding science/technology."

The scientists rated as "excellent" 61 percent of the stories for which they were interviewed, and they said 21 percent were "good."

In 1985 and early 1986, one third of journalists' questions concerned health and medicine. Twenty percent of the calls were on environmental issues and nearly 10 percent on social science and psychology.

Other areas in which help was sought included: life sciences, high technology, energy, agriculture, military technology and national security, natural disasters, and weather.

Over the past few years, MRS officials have noticed a shift in the types of experts requested.

"We still get a lot of calls on medicine and chemicals," said Director Fred Jerome, "but there has definitely been an increase in the broadened scope of science." This includes applications of science and technology in such areas as national security, criminology, computers, medical ethics, energy policy, and child health and development.

Last month, MRS launched the first of what is planned as a series of seminars for journalists through state and regional press associations. A panel of experts sponsored by the Texas Daily Press Association May 15 focused on Acquired Immune Deficiency Syndrome (AIDS) and the proposed Strategic Defense Initiative, also known as "Star Wars." Topics are expected to vary at other times with other groups.

The Media Resource Service chooses panelists representing diverse points of view. The host group selects the topics, which are expected to vary. The seminars are funded by a grant from the National Science Foundation. A parallel series for journalists working for radio or television stations is funded by the Carnegie Foundation.

State or regional associations interested in such programs should contact Jerome or Diane Jukofsky at MRS, 355 Lexington Ave., New York, N.Y. 10017; (800) 223-1730 or (212) 661-9110. □

Accrediting council opens up

The Accrediting Council on Education in Journalism and Mass Communications has taken a preliminary vote to open more of its deliberations to the press and public. Currently, ACEJMC closes its meetings when discussing whether to accredit individual schools.

The council also is addressing issues concerning its composition, financial support and curriculum standards for journalism students.

At the organization's semiannual meeting April 20-21 in San Francisco, ACEJMC President Joseph W. Shoquist called for more openness. "It's always bothered me that this journalistic group has found it necessary to conduct any of its business in private," said Shoquist, new dean of the College of Journalism at the University of South Carolina and former managing editor-special projects of The Milwaukee Journal.

The council put off final action on the issue until its October meeting in Chicago. This will allow consultation with the U.S. Department of Education and the Council on Postsecondary Accreditation, both of which recognize ACEJMC as the accrediting agency for journalism programs at U.S. colleges.

ACEJMC currently has petitions for re-recognition pending before the two bodies. DOE's National Advisory Committee on Accreditation and Institutional Eligibility will hear ACEJMC's petition Sept. 22-23 in Washington, D.C. COPA will have its hearing Sept. 29 in Chicago.

Shoquist predicted the accrediting council will retain its recognition. When last reviewed by DOE in 1983, ACEJMC was granted a less-than-full term of recognition and had to change several of its procedures after a challenge by Boston University. Shoquist said he knows of no challenge coming up this year.

However, in what was his last council meeting as presiding officer, Shoquist said the organization has some serious matters to resolve, particularly its composition.

With the exception of three public members, ACEJMC members are organizations of journalism professionals and educators. The council has been criticized in some quarters as being dominated by newspaper interests. Half of the council's 20 member organizations on the professional side are newspaper-oriented.

"Given the state of journalism education today, in which about 20 percent of the students are in news-editorial, and the state of the media, in which newspapers are only one element out of many media, I don't believe the council can continue to justify the kind of makeup we have," Shoquist said.

John M. Lavine

Joseph W. Shoquist

At the meeting, the council heard a spokesman for the broadcast industry propose that membership be proportionate to the sequence enrollment in journalism and mass communication schools.

According to the latest enrollment survey conducted by Paul V. Peterson for the Association for Education in Journalism and Mass Communication, advertising sequences had the largest percentage of graduates in 1985, 20.4 percent, followed by news-editorial, 20.3; radio-TV general, 17.1; and public relations 12.8.

The council took no final action but agreed that Shoquist should appoint a committee to develop a plan for "proportionate" representation. In a subsequent interview, Shoquist said it will be up to that committee to determine whether to base a plan on sequence enrollment or some other measurement.

The question of restructuring has been a controversial one for some time. A previous proposal to reduce sharply the voting power of newspaper organizations was withdrawn after protests from the newspaper business.

The new committee will meet June 8-9 in Minneapolis and prepare a proposal for discussion at the Aug. 3-6 convention of AEJMC, a national organization of journalism educators.

> *"I don't believe the council can continue to justify the kind of makeup we have."*

Shoquist named John M. Lavine, who represents Inland Daily Press Association, to head the committee. Lavine, publisher/editor of the Lavine Newspaper Group of Chippewa Falls, Wis., was elected new ACEJMC president at the meeting. Also elected were Vice President Walter Bunge, director of the School of Journalism at Ohio State University; and Treasurer Vernon A. Keel, director of the School of Communication at the University of North Dakota.

The Lavine committee also will address the question of financial support. The council has never had a fee structure, and voluntary contributions from member organizations range from $500 to $10,000 a year, according to Shoquist. "I believe there has to be a minimum membership fee that is reasonable," he said.

The council also addressed another controversial subject—compliance with its curriculum standard that requires journalism majors to take at least 90 semester hours in courses outside of journalism and mass communication. At least 65 of these hours must be in liberal arts and sciences.

The council adopted, with some modifications, a proposal of the American Society of Newspaper Editors, which has pushed for a strong liberal arts component in journalism education [**presstime**, Jan. 1986, p. 56].

Schools now will be required to report the number of credit hours taken in non-journalism courses and in liberal arts, sciences and social sciences by all members of each graduating class in the two years before an accreditation visit. The council will establish procedures for verifying the accuracy of the report.

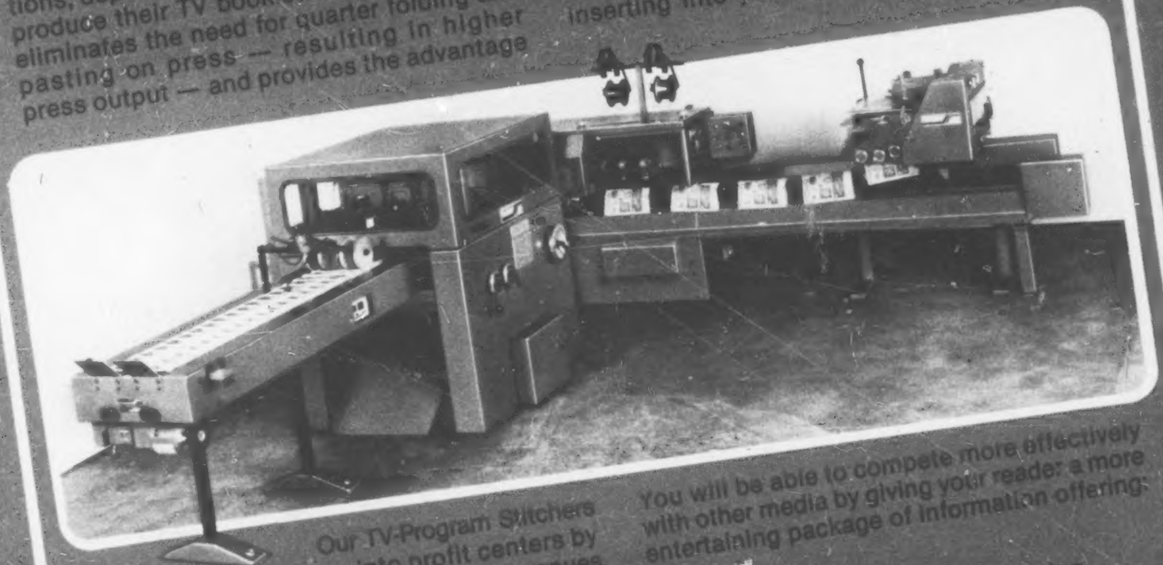
The council granted full accreditation or reaccreditation to journalism programs at 24 schools. Among those accredited were first-timers Howard University in Washington, D.C. and Southern Mississippi University in Hattiesburg; and Marquette University in Milwaukee, which had lost its accreditation in 1970. Three other schools were granted provisional accreditation, giving them one year to correct deficiencies.

Denied accreditation or reaccreditation were the journalism programs of the University of Miami, Tennessee Tech University and the University of Wisconsin-Eau Claire. *—Margaret Genovese*

MULLER-MARTINI

YOUR NUMBER 1 SOURCE FOR TV-PROGRAM STITCHERS

More and more newspapers, of all circulations, depend on Muller-Martini Stitchers to produce their TV booklet. Off-line stitching eliminates the need for quarter folding and pasting on press — resulting in higher press output — and provides the advantage of adding a separate, glossy cover. There is a choice of machines for 7,200, 10,000, 12,000 booklets per hour — folded, stitched and trimmed, ready for inserting into your newspaper.



Our TV-Program Stitchers are turning mailrooms into profit centers by boosting circulation and advertising revenues. You will be able to compete more effectively with other media by giving your reader a more entertaining package of information offering:

- **TV Programs** — to build circulation, increase retail advertising, generate continuing readership with features such as contests, TV columns, crossword puzzles
- **Commercial Work** — comic books, travel and shopping guides, real estate, recipe, diet and other special interest booklets
- **TMC Packages** — the TV-Program Stitcher can also be used for combining inserts into packages arranged by zip code or carrier route

Users of Muller-Martini Stitchers will tell you how simple they are to run. Existing mailroom personnel can produce your own TV booklet between press runs.

ADDS VERSATILITY — TURNS YOUR MAILROOM INTO A PROFIT CENTER

NOW, 4 COLOR ELECTRONIC SCANNER UNDER $10,000

MAKE IN HOUSE SEPARATED NEGATIVES IN 6 MINUTES AT $1.80 EACH. READY TO EXPOSE TO PRE-SENSITIZED PLATE AND PRINT. NO DARKROOM, DEVELOPERS OR RUNNING WATER

Finally, a technological breakthrough that creates a profitable alternative to expensive 4 color printing and cuts both time and cost of color separations so low anyone can now do quality color work.

Use any piece of color material as art, even color photos that have already been printed. The separations are so fast and inexpensive, you can even print short run jobs that were never before economical like: BOOKLETS, CATALOGS, BROCHURES, NEWSLETTERS, PRODUCT FLYERS AND DIRECT MAIL PIECES.....ALL IN FULL COLOR.

You can even create single color halftone negatives from full tone photos...line negatives from line copy...and re-screen printed halftones.

The key to the utter simplicity and amazing versatility of the 7900 Offset Color Scanner is the development, by Eklund research, of the 3155 Electronic Negative Film. Although it looks like the traditional photographic film, it is unaffected by light... even bright sunlight. 3155 film can only be imaged electronically, thus doing away with darkroom, developers, running water and the potential for under or over development. The result is an extremely simple operation. Just choose the color and touch a button. In 6 minutes the scanner will deliver your finished electronic film negative ready to expose and print.

Consumption increases, but production slows

Newsprint consumption by all U.S. users increased 4.2 percent in April, and U.S. daily newspapers' consumption rose 4.6 percent compared with April 1985 levels.

For the first four months, consumption was up 2.9 percent for all U.S. users and 3.4 percent for U.S. dailies.

At the end of April, newsprint inventories of newspapers in ANPA's statistical sample were estimated at 43 days' supply compared with 49 days a year earlier.

Shipments from Canadian mills were 5.9-percent above those of April 1985. Canadian shipments to the United States increased 8.2 percent, those within Canada increased 14.2 percent, and those to overseas customers decreased 9 percent.

Domestic shipments from U.S. mills increased 3.6 percent, but U.S. shipments overseas were down about 24 percent.

North American newsprint production increased in April from year-earlier levels by 4.4 percent. For the first four months of the year, however, production was down 1.2 percent.

(r) = revised (p) = preliminary

James River Corp. takes control of Crown Zellerbach

James River Corp. said it acquired about 93 percent of the outstanding shares of Crown Zellerbach Corp.

The $800-million transaction gives James River control of Crown Zellerbach's paper, packaging and distribution operations and makes it the nation's fourth-largest paper company.

The company will retain the Crown Zellerbach name for mills and plants it acquired. Those include the Port Angeles, Wash., and Wauna, Ore., newsprint mills.

As part of a separate offer, Crown Zellerbach's timber, container and computer-supplies businesses will come under control of financier Sir James Goldsmith of Great Britain [presstime, Aug. 1985, p. 58]. ☐

British Columbia mills, two unions reach labor agreement

A two-year labor agreement has been reached between four British Columbia newsprint mills and two unions—the Canadian Paperworkers Union and the Pulp, Paper & Woodworkers of Canada.

The new contract takes effect July 1. It calls for no pay increase in the first year and a 3-percent increase in the second, which would bring the base rate to $14.48 (Canadian) an hour from the current $14.08 [presstime, April 1986, p. 67].

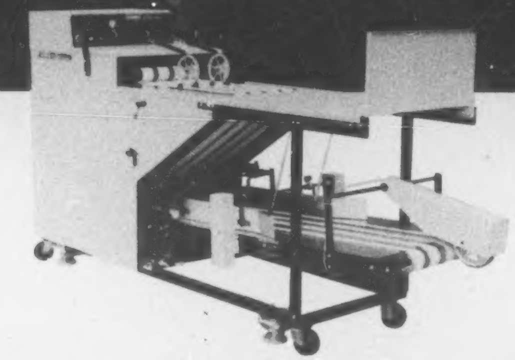
Meanwhile, the United Paperworkers International Union is negotiating with Garden State Paper Co. in Pomona, Calif., where the contract expired April 30. ☐

Two new machines planned, another shuts down

The newsprint company F.F. Soucy Inc. has proposed adding a 175,000 metric-tons-a-year newsprint machine at its Rivière-du-Loup mill in Quebec. And CIP Inc. plans to install a new newsprint machine at its Gatineau, Quebec, mill, with a start-up date of January 1987. The new machine will increase capacity by 60,000 metric tons a year.

But Abitibi-Price Inc. confirmed that one newsprint machine at its Iroquois Falls, Ontario, plant is shut down for good. The 55,000 metric-tons-a-year unit has been idle more than a year. ☐

"BALDWIN, WE NEED A FAST, SIMPLE, RELIABLE COUNTER-STACKER."



"GREAT—AND WE ALSO LIKE YOUR PRICE!"

When speed, flexibility, accuracy and price count, Baldwin Count-O-Veyors still stack up the best.

Our three models handle 96-page broadsheet, and 48-page tabloid, quarterfold or digest. Delivery can be open-edge or folded-edge leading.

The Model 105 can run at 30,000 PPH; the Model 106 handles speeds of 60,000 PPH.

For accuracy in counting, the Model 108 electronically senses each paper entering the stack, at press speeds as high as 60,000 PPH.

More than 2,000 Baldwin Count-O-Veyors are at work today around the world. Call or write us today, and we'll send you full information on these affordable, proven ways to keep your pressroom efficiency high.

Atlanta set for ANPA show

For the third time this decade, Atlanta's sprawling Georgia World Congress Center will be the site of ANPA's Operations Management Conference & Exposition. And with a record amount of exhibit floor space expected to be filled, only such a spacious structure could house the event.

The theme for this year's 58th annual version of the ANPA trade show, which runs June 21-25, is "Interface '86: People—Developments—Quality."

Peter P. Romano, ANPA director/technical services and Conference director, said more than 250 exhibitors have signed up for floor space in excess of 270,000 square feet [presstime, May 1986, p. 78]. That would make it the largest ANPA trade show yet in terms of net exhibit space occupied. (See list of exhibitors and booth numbers, p. 84.) Attendance should be about 10,000, Romano added.

The OMCE Committee, under the chairmanship of Joseph M. Ungaro, president and general manager of Westchester Rockland Newspapers in White Plains, N.Y., has assembled a program consisting of three general sessions and 16 workshops (three of which pertain to production of college newspapers).

The general sessions scheduled from 9-10:50 a.m. on June 23, 24 and 25 will examine people and management issues,

Program for 58th ANPA Operations Management Conference & Exposition

Monday, June 23

General Session—9 a.m.-10:50 a.m.

Chairman: **Joseph M. Ungaro,** president and general manager, Westchester Rockland Newspapers Inc., White Plains, N.Y.

Welcoming Address: **David E. Easterly,** president, Cox-Newspapers, Atlanta

Address by ANPA Chairman and President Alvah H. Chapman Jr., chairman and chief executive officer, Knight-Ridder Inc., Miami

Theme: People and Management

Speakers

"Effective Management for the Eighties," Judith E. Merriott, manager/communications, Saturn Corp./subsidiary of General Motors Corp., Troy, Mich.

"Hiring Your Next Production Managers," Melvin P. Reid, president, Byron Harless, Reid and Associates, Jacksonville

"Team Building—What Kind of Management Is Needed for the Total Electronic Newspaper," Gary A. Kleinhenn, quality circles manager, Detroit Free Press

Five Concurrent Workshops—11 a.m.-12:30 p.m.

- *Workshop I:* **Managing Telecommunications (It's More Than Just Phones)**

Moderator: **David A. Sjosten,** vice president and general manager, Worcester (Mass.) Telegram *and* The Evening Gazette

Panelists: **Frank J. Schoff Jr.,** director/telecommunications, Tribune Co., Chicago; **Carleta Vineys,** manager/telecommunications, San Francisco Newspaper Agency; **Helen Waicunas,** manager/telecommunications, The Hartford Courant; **Deborah Walker,** telecommunications systems specialist, ANPA; **Patrick A. DeFilio,** account executive/national, Southern New England Telephone Co., New Haven, Conn.; **Robert R. Rowell,** vice president/operations, Press-Telegram, Long Beach, Calif.

- *Workshop II:* **Management Asks the Tough Questions About Flexo**

Moderator: **Homer E. Taylor Jr.,** vice president/manufacturing and supply, Scripps Howard, Cincinnati

Panelists: **Dott. Lorenzo Jorio,** managing director, Il Gazzettino, Venice, Italy; **Thomas O. Might,** vice president/production, The Washington Post; **J. A. Riggs Jr.,** senior vice president/operations, The New York Times; **Ralph S. Roth,** vice president/production, Knight-Ridder Inc., Miami

- *Workshop III:* **PCs—Panacea or Pandemonium**

Moderator: **Kenneth F. Chevis,** director/information systems, Los Angeles Times

Panelists: **Donald P. Ruthig,** office of systems analyst, Advance Office Systems Group, Los Angeles Times; **C. S. Wood,** vice president/manufacturing, Suburban Communications Corp., Livonia, Mich.; **Peggy Thompson,** director/technology and services, The Hearst Corp., New York City

- *Workshop IV:* **Drugs and AIDS in the Workplace**

Moderator: **Dr. Howard R. Brown,** medical director, The New York Times

Panelists: **John T. Spran,** vice president/employee relations, News and Sun-Sentinel Co., Fort Lauderdale; **Dr. David Sohn,** medical director, The Laboratory for Chromotography, Flushing, N.Y.; **Dr. James O. Mason,** director, Centers for Disease Control, Atlanta; **Stuart H. Bompey,** senior partner, Baer, Marks and Upham, New York City

- *Workshop V:* **Facing Building Expansion**

Moderator: **Minor J. Ward,** president, Atlanta Journal and Constitution

Panelists: **Harold J. Brown Jr.,** vice president/operations, Atlanta Journal and Constitution; **Donald T. O'Neill,** production director, The Boston Globe; **Thomas E. Rice,** vice president/operations, Dallas Times Herald; **W. Scott Sherman,** production manager, The Orlando Sentinel

Tuesday, June 24

General Session—9 a.m.-10:50 a.m.

Chairman: **Larry D. Strutton,** executive vice president/operations, Los Angeles Times

Presentations: Editor & Publisher Exhibition Awards, Kodak "Run for the Money" International Newspaper Color Reproductions Contest Awards

Theme: The Quest for Quality

Introduction of the new ANPA/Newspaper Advertising Bureau publication: Guide to Quality Newspaper Reproduction, Walter E. Mattson, president and chief operating officer, The New York Times Co.

Quality and Success: Today's major issue, Harold W. Andersen, chairman and chief executive officer, Omaha World Herald Co.

Payback on Quality, Charles M. Kinsolving Jr., vice president, marketing/new technology, NAB, New York City

Quality Control Manager, The Keystone to Quality, Gene Bell, vice president/production director, Chicago Tribune

Commercial Printers Do It All The Time—and Better, James T. Sullivan, president, magazine group, R. R. Donnelley & Sons Co., Chicago meeting demands for quality, and developments in technology.

Concurrent workshops following the general sessions will cover a variety of issues, from building expansion and mailroom quality to drugs and AIDS in the workplace. (See program details below.)

Exposition hours are 11 a.m.-6 p.m. on June 21 and 22 and noon-6 p.m. June 23-25.

Conference preregistration was available for the first time this year, and about 4,000 people took advantage of the service. Preregistration deadline was May 23.

Registration also will be available in the main entrance concourse of the World Congress Center in downtown Atlanta. Hours will be 10 a.m.-6 p.m. June 21 and 22, and 8 a.m.-6 p.m. June 23-25. Admission to all Conference sessions, workshops and the Exposition is included in the $35 registration fee, as is an exhibitors' guide and program directory.

ANPA has reserved blocks of rooms in nine Atlanta hotels that are offering reduced rates to Conference-goers. They are the Atlanta Hilton and Towers and the Atlanta Marriott Marquis, co-headquarters hotels; Atlanta Marriott Downtown, Holiday Inn Downtown, Hotel Ibis, Hyatt Regency Atlanta, Omni International Atlanta, the Ritz-Carlton Atlanta and the Westin Peachtree Plaza Hotel.

Hotel reservations may be made by calling the ANPA Housing Bureau at (404) 521-6630.

Complimentary shuttle buses will serve eight of the nine hotels and the World Congress Center, operating from 10 a.m. to 6:30 p.m. June 21 and 22, and from 8 a.m. to 6:30 p.m. June 23-25. Buses will not stop at the Omni International, which is located across the street from the Congress Center.

Hertz is the official car rental agency for the event and is offering special rates. For reservations, call (800) 654-2200 and tell the agent the rental is in connection with

Four Concurrent Workshops—11 a.m.-12:30 p.m.

• *Workshop I:* Pre-Press Quality: Newsroom to Negative

Moderator: **Michael J. Bella,** vice president/production, The Times Journal Co., Springfield, Va.

Panelists: **Mark Mikolajczyk,** production/operations manager, The Cincinnati Enquirer; **Francis Przybylek,** production manager, The Times-Journal Co., Springfield, Va.; **Michael Przybylek,** production director, USA Today, Arlington, Va.; **Ian M. Pittendreigh,** director of operations, The London (Ontario) Free Press

• *Workshop II:* Color Separation and Graphics: Perceptions and Prerogatives

Moderator: **Robert C. Hacker,** professor/coordinator of Newspaper Program, Rochester Institute of Technology

Panelists: **Kenneth K. Kniceley,** production director, Charleston (W.Va.) Newspapers; **Marvin Sussman,** production quality assurance manager, Newsday, Long Island, N.Y.; **William DeMarco,** manager/pre-press, business development, Case-Hoyt Corp., Rochester; **Robert C. Holt III,** director of photographic technology, St. Louis Post-Dispatch

• *Workshop III:* Print Quality

Moderator: **Charles R. Blevins,** vice president/production, Gannett Co., Arlington, Va.

Panelists: **Robert L. Moyer,** vice president/operations, Small Newspapers Inc., Kankakee, Ill.; **Richard Malone,** pressroom manager, Chicago Tribune; Paul T. Lynch, quality control manager, The Record, Hackensack, N.J.; **Thomas J. Shafer,** director of field operations, USA Today, Arlington, Va.

• *Workshop IV:* Quality in the Mailroom

Moderator: **Debra Romaine,** manager/mailroom, Times Publishing Co., St. Petersburg

Panelists: **Danny J. Collins,** production director, The News and Observer and The Raleigh (N.C.) Times; **Jim L. Davis,** mailroom manager, Houston Chronicle; **Robert F. Murphy,** production director, The Record, Hackensack, N.J.; **Glen E. Nardi,** production director, Philadelphia Newspapers Inc.; **Jay G. Swardenski,** distribution director, The New York Times

Wednesday, June 25

General Session—9 a.m.-10:50 a.m.

Chairman: **Norman P. Dusseault,** vice president/assistant general manager, Times Publishing Co., St. Petersburg

Theme: Developments—Directions

Pagination: Where Do We Stand? (Q & A)

Moderator: **Joseph M. Ungaro,** president and general manager, Westchester Rockland Newspapers Inc., White Plains, N.Y.

Respondents: **Eric Wolferman,** executive editor, The Reporter, Lansdale, Pa.; **Larry Allison,** senior vice president, Press-Telegram, Long Beach, Calif.; **James N. Longson,** vice president/corporate development, Chicago Tribune Co.; **Robert Gilbert,** assistant managing editor/systems and technology, The Miami Herald

Making Pagination Pay: William R. Hogan, vice president and general manager, The Arizona Republic and The Phoenix Gazette

Pagination Through Ad-Make-up Systems: Jonathan Seybold, president, Seybold Publications, Malibu, Calif.

Electronic Graphics System: Louis J. Franconeri, vice president/operations, The Baltimore Sun

AdSat On the Move: Roy Hodgson, president and chief executive officer, British Printing and Communications Corp., U.S. Division, New York City

Four Concurrent Workshops—11 a.m.-12:30 p.m.

• *Workshop I:* Output Devices

Moderator: **Ralph E. Eary,** national director of production and engineering, Scripps Howard, Cincinnati

Panelists/Vendors: **Paul H. McGarrell,** vice president, Volt Information Sciences, Autologic Inc., Newbury Park, Calif.; **Brian Lacey,** managing director, Monotype International, Surrey, England; **Lou P. Tortora,** director of marketing and product management, Linotype Co., Hauppauge, N.Y.; **Stephen J. Dupree,** marketing manager, Newspaper Systems Division, Compugraphic Corp., Wilmington, Mass.

Panelists/Users: **Pete Walker,** production director, Rocky Mountain News, Denver; **W. Scott Sherman,** production manager, The Orlando Sentinel; **Charles J. P. Gallager,** production director, Daily Press and Observer-Dispatch, Utica, N.Y.; **Thomas J. Corcoran Jr.,** production director, The Sun-Tattler, Hollywood, Fla.

• *Workshop II:* Ad Makeup Systems—A Candid Look

Moderator: **Michael D. Williams,** director/production, The Pittsburgh Press

Panelists: **Richard E. Brodowski,** asst. vice president/operations, and systems director, Press-Telegram, Long Beach, Calif.; **Terry E. Sturgeon,** director of production, Booth Newspapers, Grand Rapids, Mich.; **Michael L. Pearson,** production manager/pre-press, Chicago Tribune; **John Blaney,** manager/information systems, The Globe and Mail, Toronto

• *Workshop III:* Getting Your Sunday Paper Out the Door and Delivered

Moderator: **Frank J. Savino,** vice president/marketing, The Record, Hackensack, N.J.

Panelists: **Donald A. Nizen,** vice president/circulation, Knight-Ridder Inc., Miami; **Benjamin Hayes,** insert manager, Times Publishing Co., St. Petersburg; **Frank M. Manzon,** vice president/circulation, The Washington Post; **George Martin Jr.,** senior vice president/circulation, The Denver Post

• *Workshop IV:* Newsprint Handling—Pulling for AGVs

Moderator: **James H. Norris,** vice president/operations, Newsday, Long Island, N.Y.

Panelists: **Curtis Bok,** production manager, Minneapolis Star and Tribune; **Joseph L. Donth,** director/data processing, Fort Worth Star-Telegram; **Ralph E. Imhof,** plant manager, St. Petersburg Times and Evening Independent; **Jouko Nurmela,** vice president/production, Sanoma Corp., Helsinki, Finland

the Conference & Exposition.

Bus service is available for the 11-mile trip between Hartsfield Atlanta International Airport and the downtown hotels. Tickets are $6 one way and $11 round trip. A $2 discount coupon for a round-trip ticket was mailed with pre-Conference material.

In addition to the formal program, some special events are on tap. On Sunday, June 22, a two-mile presstime Fun Run will take place at 7:30 a.m., starting and finishing in front of the Marriott Marquis. All registrants who complete the two-mile run or walk will receive a presstime T-shirt, and the top three finishers among the men and the women will get awards. Fun Run registration will be 10 a.m.-6 p.m. June 21 in the entrance concourse of the World Congress Center, and just prior to the race at the starting point.

and these newspapers rely on Fincor Press Drives.

Today Fincor has more than 3100 double-width press drives either on edition or on order around the world. We help print some of the most famous mastheads in journalism and also some of the not-so-famous. Fincor is the leading supplier of press drive systems to the printing industry because we build reliable equipment that avoids costly downtime. It's that simple.

We also provide the kind of service that newspapers, large or small, have to have. Competent Fincor technicians, on call around the clock, to rush technical assistance or vital parts wherever or whenever they're needed.

There are other Fincor products and services, such as Single-Width Press Drives, Ink and Dampener Controls, Press Conveyor and Mailroom Drives; Custom Engineered Systems, Maintenance Contracts and Customer Training Seminars.

Want to know more about the leading supplier of drives to the newspaper industry? Contact:

Survey shows record expenditures, topping $1 billion

For the first time, the billion-dollar mark has been exceeded in ANPA's annual survey of newspapers' capital expenditures.

The 475 North American newspaper plants responding to the new survey said they invested just over $1 billion in plant expansion, modernization and new equipment in 1985, and they projected slightly higher spending this year. (See charts, facing page.)

However, comparisons must take into account the fact that the complement of respondents changes from year to year. The number in this decade has fluctuated between a high of 495 respondents in 1981 to a low of 387 last year, when 1984 spending of $677.7 million and projected 1985 spending of $971.4 million were reported [**presstime**, May 1985, p. 66].

In all, 456 U.S. and 19 Canadian newspaper plants responded to the new survey, compared with 369 and 18, respectively, a year ago. Each of the approximately 1,100 plants printing ANPA-member newspapers was provided with a copy of the survey questionnaire.

In 1985, newspapers participating in the survey spent $362.6 million on plant expansion and modernization, and they estimate they will spend $361.9 million for these purposes this year.

Respondents reported they spent $666.3 million for new equipment in 1985, and 1986 spending in this category was put at $734.7 million.

The largest portion of the equipment purchases involves the pressroom—$227.1 million in 1985 and a projected $274.8 million this year. Front-end systems for editorial, classified-ad and advertising departments ranked second with $88.5 million in '85 and an anticipated $117.3 million in '86.

Spending for other types of computers—business (accounting and circulation) systems, personal computers and library systems—totaled $52.7 million last year and is expected to be $48.3 million this year.

Divided into four categories instead of two, the computer area was modified in the new survey to reflect trends in equipment purchases.

In another change, the category of color scanners and color separation equipment was added for the latest survey. In this area, respondents spent $10.5 million in 1985 and expect to spend $13.7 million in 1986.

The survey also indicated:

- Outlays for telecommunications equipment (excluding telephone and radio systems) totaled $9.2 million last year but are projected to drop considerably—to just over $3 million—in 1986.
- A lesser decline is signaled for telephone and radio systems—from $24.3 million spent in 1985 to $21.3 million projected for '86.
- A large increase is projected for the category of energy, power and security-management systems—from $4.5 million spent last year to an estimated $12 million this year. ☐

CAN YOU MEASURE THE QUALITY OF YOUR NEWSPRINT?

IF YOU CAN'T FILL IN THE BLANKS, YOU PROBABLY AREN'T GETTING THE NEWSPRINT YOU NEED.

Quality printing demands quality newsprint . . . especially for quality color reproduction.

Today's increasing demands for color, by advertisers and consumers, require greater control of newsprint brightness, opacity and color. And now you have it.

Technidyne's MICRO TB-1C allows everyone to clearly communicate these values with real numbers that everyone understands. The simple-to-operate MICRO TB-1C provides accurate, reliable, standard measurements . . . a common language. Every time.

Newspapers can order quality newsprint with confidence, and check those orders when they arrive. Mills know what to produce. Exactly. Everyone will be talking the same language. At last!

Contact us today for more information or a demonstration. Or visit us at the ANPA Show, Booth #3503.

CARY FLYING PASTERS

BUILT-IN INFEED AND TENSION CONTROL INCREASES PRODUCTION UP TO 40%

Cary reliability means you can have up to 16 pasters on a single-width press. Cary Pasters are easily retrofitted or are available with new presses.

Cary Pasters compliment newspaper presses in construction and simplicity and are easily maintained by press mechanics.

Our world-wide field service team provides experienced start-up training and back-up. Quotations, including turnkey installations, to suit your requirements.

Over 500 Units In Operation! There is an installation near you, and we can arrange a visit. Call or write for complete details.

Harris Graphics, AM International to merge

Harris Graphics Corp. has agreed to merge with AM International Inc. in a transaction worth an estimated $246 million. AM International will offer Harris Graphics stockholders $22 a share until June 13.

The move was unanimously approved by the boards of directors of both companies.

Fred Baker, a spokesman for Harris Graphics, said the deal announced May 9 should be completed by mid-summer, at which time Harris Graphics Corp.'s name would become Harris Graphics Group.

Baker said the move won't drastically alter the company's day to day operations.

Melbourne, Fla.-based Harris Graphics was spun off from Harris Corp. three years ago. Initially, Harris Graphics was privately held, but for the past 18 months its stock has been publicly traded.

Harris Graphics is the largest manufacturer of web offset presses in the United States. The company makes mailroom, bindery and color preprinting equipment as well.

AM International, headquartered in Chicago, manufactures imaging and reproduction graphics equipment. A federal bankruptcy judge approved the company's reorganization plans in October 1984, and a company spokeswoman said the company has been healthy financially since [presstime, Nov. 1984, p. 47]. ☐

Second printing likely for quality-reproduction guide

As best sellers go, it's not quite in the same league as a new James Michener novel, but the newly published *Guide to Quality Newspaper Reproduction* is a hot item indeed.

According to Peter P. Romano, ANPA director/technical services, nearly 11,000 copies have been sold, and about 6,000 other copies have been distributed on a complimentary basis. With orders still coming in, Romano said a second printing beyond the initial 20,000 copies is likely.

Large quantities of the 56-page, four-color books have been purchased by some newspapers and newspaper groups, such as The New York Times, which ordered 1,000; Gannett Co., 300; the South Bend (Ind.) Tribune (100); The Times-Picayune/The States-Item, New Orleans (70); and The Daily Mail and The Charleston (W. Va.) Gazette (50).

The guides are being used for a variety of purposes. In some cases, newspapers are purchasing them to send to advertisers, while others are obtaining them for their own executives, photo staffs, and promotion, advertising and editorial art departments.

"There's really nothing there that hasn't been put in writing before, but it's never been put into such an attractive package," commented Albert Starr, advertising director for the Charleston dailies. "The sample advertisements are good because they show what it's possible to do with the right copy and the right reproduction."

Starr said he would be distributing the guide to advertising agencies in Charleston as well as to advertising and editorial staffers at the two newspapers. "It's hard to get good reproduction when you begin with bad copy," he noted.

Charles R. Blevins, vice president/production for Gannett, also said the guide is useful to sell advertisers on the best way to use newspapers and to help the editorial side achieve better reproduction. On the latter score, he said: "There's a lot there that would be helpful. For example, if you were working with feature pictures, it contains information for setting the right background, and it shows creative ways of working with photographs."

Blevins is a member of an ANPA Technical Committee task force that was deeply involved in writing the book. (See story, p. 41.)

Prepared by ANPA and the Newspaper Advertising Bureau, the publication offers suggestions on reproduction basics including artwork, photography, cropping, typography, layout and ad sizes. Also included are suggested guidelines on subjects ranging from basic color theory and spot color to color halftones and color separation proofs [presstime, May 1986, p. 84].

The guide also contains a glossary of printing and reproduction terminology, a bibliography of reading material about printing and the graphic arts, and recommended standards for newspaper advertising materials.

The price list for the guides is: $5 each for one to five copies; $4 each for six to 10 copies; $3 each for 11 to 50 copies; and $2 each for 51 or more copies.

To order, complete and return the order blank bound into this issue of presstime. Or contact Romano at The Newspaper Center, Reston, Va.; (703) 648-1215. ☐

PERFECT REPRODUCTION

Lockwood Greene understands the reproduction needs of the printing industry. Working with you to establish all project requirements and priorities, our professionals can devise specific solutions tailored to every situation — from new construction to expansions and modernizations.

Our single source of design responsibility ensures a logical transition throughout each phase of an assignment, resulting in a totally suitable, successful project — completed on time and within budget.

We are Lockwood Greene. We've been designing America's workplace for over a century and a half.

TECHNOLOGY NOTES

- Hell Graphic Systems Inc. of West Germany has signed an agreement with Crosfield Electronics Ltd. of Great Britain to **standardize the exchange of data** between their electronic image-processing systems.

The agreement provides for the exchange of high-resolution, color-image data between Hell's Chromacom and Crosfield's Studio 800 electronic page-composition systems.

Industry observers believe it is the first such standardization between competing prepress manufacturers.

- Additional efforts to **standardize digital data** from electronic imaging systems are under way. The National Printing Equipment and Supply Association Inc. has formed a committee of major suppliers of such equipment, and application is planned to the American National Standards Institute to start the formal process of establishing voluntary national standards.

According to a spokesman for the association, such manufacturers as Hell Graphics, Crosfield, Scitex America Corp., Eikonix and others are participating in the standardization process. The spokesman said this move was in response to requests from equipment users for the transfer of color picture data from one system to another.

- Crosfield Electronics also is in the news for its **acquisition of Hastech Inc.**, a major supplier of front-end and pagination systems.

The acquisition by Crosfield and its parent, De La Rue Co. p.l.c. of Great Britain, was approved by stockholders in April. The new company will be known as Crosfield Hastech.

- Flint Ink Corp. **purchased the assets of Capitol Printing Ink Co.** Capitol, based in Washington, D.C., will continue to operate under that name but it will act as a subsidiary of Flint.

Capitol manufactures web offset inks and commercial sheet-fed inks and has nine plants on the East Coast, the South and the Midwest.

With the acquisition, Flint, a manufacturer of newspaper and other inks, now has 45 plants in the United States and Mexico.

TECHNOLOGY CALENDAR

- **TypeView '86,** a briefing on typesetting trends, will be conducted by the National Composition Association June 11 at the Adams Mark Hotel in Philadelphia.

- The **Mycro-Tek Users Group** will meet June 20 at the Georgia World Congress Center in Atlanta.

- The **58th Annual ANPA Operations Management Conference & Exposition** will be June 21-25 at the Georgia World Congress Center in Atlanta.

- Printing Industries of Mid-America Inc. will sponsor **Mid-America Printing Exposition '86** June 22-24 at the Cervantes Convention Center in St. Louis.

- The **Atex Newspaper Users Group** will meet Aug. 17-20 at the Westin Hotel Utah in Salt Lake City.

- Seybold Seminars will hold its first **Desktop Publishing Conference and Trade Show** Sept. 3-6 at the Hyatt Regency San Francisco.

- The Flexographic Technical Association will sponsor a **Prepress Seminar** Sept. 10-11 at the Rochester Institute of Technology.

- The **48th Annual New England Newspaper Operations Conference** (formerly NE Newspaper Mechnical Conferrence) will be Sept. 25-28 at the Sheraton Islander Hotel and Conference Center in Newport, R.I.

- **Graphic Arts Marketing Information Services 20th Anniversary Meeting** will be Oct. 1-3 at the St. Paul Hotel in St. Paul. GAMIS is affiliated with Printing Industries of America.

- The Society of Photographic Scientists and Engineers will hold its **26th Fall Symposium and 5th International Conference & Exposition on Electronic Imaging** Oct. 13-16 at the Hyatt Regency Crystal City in Arlington, Va.

- The **International Newspaper Conversions Group** will meet Oct. 15-17 at the Capital Hilton in Washington, D.C.

- **Graph Expo '86 East** will be Oct. 19-22 at the Philadelphia Civic Center.

- The National Printing Equipment and Supply Association will hold its **Print Outlook** conference Dec. 1-2 at the Hyatt Regency Capitol Hill in Washington, D.C.

- Expoconsul International will sponsor a **Microcomputer Graphics Show and Conference** Dec. 17-19 at the Jacob K. Javits Convention Center in New York City.

Norfolk Southern increases offer for Conrail

Norfolk Southern Corp. increased its purchase offer for Conrail by $700 million to $1.9 billion. However, the company said it will not pursue its plan to acquire the government-owned railroad beyond the current session of Congress.

Before Norfolk Southern increased its bid, Conrail Acquisition Corp. did likewise, raising its offer from $1.65 billion to $1.8 billion.

CAC comprises two New York investment firms, Allen & Co. and First Boston Corp. CAC said it would continue Conrail operations under current management [**presstime**, April 1986, p. 59].

Conrail on April 1 marked its 10th anniversary as an operating railroad. It has achieved five straight years of profitability, earning $442 million in net income last year and $500 million in 1984. ☐

Strike called off against 3 railroads

A strike by the Brotherhood of Maintenance of Way Employees against three railroads—the Maine Central, Delaware and Hudson, and Boston & Maine—was called off in May when President Reagan appointed a special emergency board.

A 60-day cooling-off period is in effect until mid-July. The President's action came as the strike spread to the Richmond, Fredericksburg & Potomac Railroad and to Conrail [**presstime**, May 1986, p. 84].) ☐

Trucking deregulation bill introduced

Legislation recently was introduced to eliminate government rate and entry controls over the nation's trucking industry effective Oct. 1, 1987.

The bill, S2240, also would eliminate as of July 1, 1990, the industry's antitrust immunity that permits carriers to meet the set freight rates. Government oversight for safety, insurance and cargo liability would be retained and transferred to the Department of Transportation.

Similar legislation was introduced in the House last year. ☐

Average growth seen for reporting jobs

Job prospects for reporters and correspondents have not changed in the past two years, according to the U.S. Department of Labor's newly-released 1986-87 edition of the *Occupational Outlook Handbook*.

The department's Bureau of Labor Statistics updates the book every two years to reflect changes in the economy and the outlook since the previous edition. As in the 1984-85 edition, BLS said the employment of reporters and correspondents is expected to grow "about as fast" as the average for all occupations through the mid-1990s [presstime, Nov. 1984, p. 52].

Occupational Outlook Handbook
1986-87 Edition

Reporters and correspondents held about 69,000 jobs in 1984, BLS reported. Nearly three of every four worked for newspapers.

The government report said that the need to replace experienced reporters and correspondents who leave the occupation each year will account for the vast majority of all job openings. "Compared to other professional workers," BLS said, "a somewhat larger proportion of reporters and correspondents transfer to other occupations—reflecting the somewhat stressful and hectic nature of the job. Some people decide they don't like the lifestyle and transfer to other occupations where their skills are valuable, especially public relations and advertising work."

In a change from two years ago, the report noted that some big-city dailies may increase the size of their reporting staffs, although competition for reporting jobs on large metropolitan newspapers will be keen.

Persons without at least a bachelor's degree in journalism will face increasingly stiff competition for entry-level jobs, BLS said, noting that newspapers in small towns and suburban areas offer the most opportunities for beginning reporters.

The bureau expects enrollments in journalism education programs to continue rising "moderately" through the mid-1990s. Because of this, college teaching opportunities are expected to be good for those with a Ph.D. degree and practical reporting experience, and for some "highly qualified" reporters with a master's degree.

Each year, BLS noted, thousands of people with college degrees in English, journalism, communications and the liberal arts seek writing and editing jobs. Many end up in other occupations because the number of qualified people "greatly exceeds" the number of positions available, "despite the high turnover" in writing and editing jobs.

In newspaper production areas, BLS noted that computerized equipment has shifted much of the work away from traditional craft occupations to photocomposition occupations "that require little more than competent keyboarding skills." At the same time, however, BLS said newspapers will provide more new jobs for compositors and typesetters than any other sector of the printing industry. But composing and typesetting jobs with lower skill requirements will grow at the expense of traditional craft jobs.

In a change from the 1984-85 report, BLS said that employment of printing press operators is expected to grow about as fast as the average for all occupations through the mid-1990s. Two years ago, this type of employment was expected to grow slower than the average. The new report said that the increased use of color will contribute to job growth. Employment of photoengraving workers is expected to decline.

Overall, both BLS and The Conference Board in New York City, a privately funded research organization, predicted that the largest job growth during the rest of the century will be in the service industries.

"More and more, employment will focus on maintaining and increasing the quality of life—with more services, and not so much more goods," said Audrey Freedman, executive director of The Conference Board's Human Resources Program.

"Printing and publishing is the only manufacturing industry that is still growing," Freedman said. *—Clark Newsom*

Discharge upheld in drug-related arbitration

A cocaine-addicted employee in the circulation department of The Seattle Times was properly discharged for theft of company funds, an arbitrator has ruled.

The grievant was a district adviser responsible for supervising carriers and collecting subscription payments from them. He was fired Aug. 20, 1985, after confessing to the assistant circulation manager that he had taken about $2,500 from the company to support a cocaine habit and could not replace the money before the theft would be discovered.

He also admitted to taking $300 in January 1985 and $900 in May of that year. On those occasions, however, he replaced the money before routine accounting procedures would have discovered the shortages.

Arbitrator Philip Kienast noted that subsequent to his discharge, the grievant entered and successfully completed a drug treatment program. He also made arrangements to repay the money he took.

The Pacific Northwest Newspaper Guild, the grievant's representative, contended that the company violated a provision in the labor agreement prohibiting the discharge of an employee because of, among other things, "the presence of any sensory, mental, or physical handicap." The union argued that the grievant was mentally handicapped by his cocaine addiction, and that the theft was related to the handicap.

The company, however, pointed out that the grievant had not been discharged for cocaine addiction but for theft.

Arbitrator Kienast said that while the labor agreement requires the employer to accommodate employees with handicaps, "it does not require it to accommodate thieves."

Kienast, a professor at the University of Washington's Graduate School of Business Administration, also found that the grievant was not entitled to some $20,000 in dismissal pay.

The labor agreement provides for dismissal pay except in cases where an employee is discharged for "gross misconduct."

"In the arbitrator's opinion," Kienast said, "if theft extending over the time and for the amounts involved here is not gross misconduct, it is hard to conceive what would constitute gross misconduct." ☐

Washington Post must pay Guild for dues lost, court rules

A federal appellate court has ruled that The Washington Post must reimburse Local 35 of The Newspaper Guild for dues lost as a result of the newspaper's advising four columnists incorrectly that they were exempt from coverage under a labor agreement.

The decision by the U.S. Court of Appeals, District of Columbia Circuit, upheld an earlier ruling by Arbitrator Seymour Strongin who ordered the payment of more than $8,000 in dues in 1983 after he found the newspaper had violated the labor agreement [presstime, Jan. 1984, p. 51].

The Post went to the appellate court after a lower court upheld Strongin's award. On appeal, the newspaper did not challenge the arbitrator's finding that the columnists were covered by the agreement. Instead, it contended that the Labor Management Relations Act precludes an arbitrator from ordering an employer to reimburse a union for dues lost as a consequence of a breach of contract.

Section 302 of the act generally forbids an employer from paying money to a labor organization. The court, however, noted there are some limited exceptions to that general prohibition. One exception permits deductions of dues from wages with the written permission of employees. Another allows for payments in satisfaction of an arbitrator's award.

The court ruled that if one exception is applicable, the general prohibition "does not operate." Although one exception would not permit the payment of dues, another one would, and "thus the payment is lawful."

"The rule we adopt in this case, although novel in the sense that we have not previously addressed the question, is straightforward and grounded in practical reality," the court said. "The Post, as the arbitrator found, violated the terms of the collective bargaining agreement. The Guild suffered as a consequence of that breach. The arbitrator properly determined that the Post should compensate the Guild for that breach."

(The Washington Post v. Washington-Baltimore Newspaper Guild, USCA DC No. 85-5193)

NLRB upholds California daily on wage issue

The National Labor Relations Board has affirmed an administrative law judge's dismissal of allegations that the Ventura County (Calif.) Star-Free Press in Ventura violated the Taft-Hartley Act by unilaterally withholding so-called "step" wage increases from editorial department employees.

Charges in the case were filed by an affiliate of the Graphic Communications International Union.

The judge found, and the board agreed, that the union had waived any right it may have had to bargain over the increases by failing to demand bargaining in a timely manner [presstime, Jan. 1986, p. 61].

"We have carefully examined the record and find no basis for reversing the findings," the board said.

(Ventura County Star-Free Press, 279 NLRB No. 64)

NLRB elections

Cincinnati Suburban Press, Guild: Editorial employees of the group of 19 weeklies voted 24-19 against representation by Local 9 of The Newspaper Guild.

Work stoppages hit newspapers in Philadelphia and Victoria, B.C.

The U.S. District Court in Philadelphia May 7 issued a temporary restraining order against an independent mailers' union at The Philadelphia Inquirer and Philadelphia Daily News prohibiting interference with production of the Inquirer.

Judge Norma L. Shapiro had issued an order earlier against the Newspaper & Magazine Employees Union as a result of a 30-minute work stoppage during production of the Daily News [presstime, May 1986, p. 74]. The latest order resulted from an April 23 work slowdown involving the Inquirer and arising from a dispute over job assignments.

The company will seek damages from the union through arbitration.

There also was a two-hour work stoppage April 9 by members of Pressmen's Union No. 16, a subsidiary of the Graphic Communications International Union. The union admitted it was liable for $35,000 in damages resulting from a delay in publication of the Inquirer. The money will become payable in the event of another work stoppage during the life of the labor agreement which expires in 1989. The April 9 dispute involved a union protest over apprentices working as journeymen.

Elsewhere, members of the International Typographical Union refused to work for nearly seven hours March 24 at the Victoria (British Columbia) Times-Colonist during a jurisdictional dispute with The Newspaper Guild over the handling of classified advertising. The ITU members returned to work after a meeting with officials of the province's labor relations board.

The dispute, which was resolved in favor of the ITU, did not prevent publication and distribution of the Times-Colonist. □

Court affirms decision upholding Guild on strike paper

Local 120 of The Newspaper Guild did not violate a labor agreement with The Wilkes-Barre (Pa.) Times Leader by preparing to publish a competing paper before striking the newspaper, according to a federal judge who has affirmed an arbitrator's earlier decision.

Arbitrator Robert F. Koretz had ruled in 1984 that the labor agreement was no longer in effect when the union struck the newspaper on Oct. 6, 1978, and began publishing a paper called the Citizens' Voice [presstime, Aug. 1984, p. 50].

The Times Leader subsequently filed a motion in U.S. District Court in Scranton seeking to overturn Koretz's decision, and the court remanded the dispute to Koretz on the issue of whether the union's prestrike preparation to publish the Citizens' Voice violated the agreement.

Koretz issued his supplemental opinion Jan. 3, 1986, upholding the union. The Times Leader again asked the court to set aside the decision, but on April 11 U.S. District Judge William J. Nealon Jr. denied the company's request.

The Times Leader is appealing Nealon's ruling.

(Wilkes-Barre Publishing Co. v. Newspaper Guild of Wilkes-Barre, Local 120 et al., USDC MD Pa. No. 79-1181 Civil) □

Judge overturns ruling on union membership

An arbitration award based on an unlawful provision in a labor agreement between The Daily Star of Oneonta, N.Y., and Utica Typographical Union No. 62 has been overturned by a federal judge.

The dispute involved a section of the agreement stating that the composing room foreman must be a member of the union.

Arbitrator Francis P. Mulderry had upheld the union's position that the newspaper violated the agreement when it permitted the foreman to do bargaining-unit work following his suspension from membership in the union because he stopped paying dues.

Acting on a motion by The Daily Star, U.S. District Judge Howard G. Munson found the so-called "members only" provision was illegal and granted the newspaper's request to vacate the award.

(The Oneonta Daily Star and Utica Typographical Union No. 62, USDC NDNY No. 85-CV-957) □

SOME NEWSPAPERS ARE ONLY PRINTING HALF THE STORY.

The papers that don't use Western Lithotech in the plateroom. They save a few pennies here and there and pay the price of quality. From plates going blind to total press stops.

But quality newspapers know the whole story. Because they depend on the *total systems* supplier that has been the leader for over 60 years. Depend on the famous plate names . . . Front Page . . . Metro Express . . . Final Edition . . . and more. On the industry's best chemistry and hardest working processors.

Plus Newstek,™ the new extra long run plate system designed for sharp 4-color inserts and supplements.

All backed by the most responsive technical team in the business.

Get the whole story.

Court dismisses Cleveland printers' suit

The 6th U.S. Circuit Court of Appeals has upheld dismissal of an antitrust suit filed by a group of former printers at the now-defunct Cleveland Press.

The printers alleged that the closing of the Joseph Cole-owned paper in 1982 and the purchase of certain of its assets by The Plain Dealer of Cleveland was part of a conspiracy to deprive them of a contract guarantee of lifetime employment.

U.S. District Judge Ann Aldrich ruled that the printers had not proved they were the targets of alleged antitrust violations [presstime, April 1985, p. 54].

New law mandates health-plan coverage for beneficiaries

Beginning in July, most employers will be required to offer continued health-plan benefits to certain former plan participants and their dependents who previously would not have been covered.

The extended coverage is required by the Consolidated Omnibus Budget Reconciliation Act signed April 7 by President Reagan.

Employers with fewer than 20 employees are not affected by the act.

The new law requires the sponsor of a group health plan to offer continued coverage on a self-pay basis to dependents of an employee who dies.

There also are other "qualifying events" that can trigger continued coverage to employees and dependents who otherwise would have lost it, such as an employee's termination of employment for reasons other than gross misconduct and the divorce or legal separation of an employee.

In the case of termination of employment, coverage ends after 18 months. In all other cases, coverage ends 36 months after the qualifying event.

Extended coverage also ends if a beneficiary fails to pay the required premium or becomes covered under another health plan.

Health plans are permitted to charge beneficiaries a premium not to exceed 102 percent of the regular premium.

The main problem employers will have with the law "is setting up the administrative system to notify and keep track of dependents," said Robert E. Brophy, vice president of human resources for Scripps Howard in Cincinnati. ☐

Pension premium rises

The annual premium paid by single-employer pension plans to the Pension Benefit Guaranty Corp. has been increased from $2.60 to $8.50 per year per participant for plan years beginning after Dec. 31, 1985.

PBGC is the government agency that assumes liabilities of pension plans that are terminated [presstime, March 1982, p. 4].

The increase was mandated by the Single-Employer Pension Plan Amendments Act of 1986, signed April 7 by President Reagan.

The legislation made no changes in multiemployer plans. ☐

Legislators active in workers' compensation changes

More than 230 new state laws covering nearly every aspect of workers' compensation were enacted in 1985, the U.S. Chamber of Commerce reported.

The chamber's new *Analysis of Workers' Compensation Laws* said that maximum benefits increased in 46 states last year. Forty-one states and the District of Columbia now provide for the automatic adjustment of maximums annually, based on the average weekly wage in a given state.

Although workers' compensation laws initially had no specific provisions for occupational diseases, now all states recognize responsibility for them, the report noted.

The difficulty of distinguishing between work-related permanent hearing loss and loss of hearing caused by nonoccupational factors has resulted in enactment of special provisions in 16 states, seven of which reduce benefits for loss caused by aging, the chamber noted.

U.S. employers now spend more than $22 billion annually to insure or self-insure their work injury risks, the report noted [presstime, July 1985, p. 12]. The analysis "is most timely in view of renewed interest in recapturing effective control" over costs, said Deborah D. Cumberland, assistant manager in the chamber's Office of Special Projects.

The 46-page report contains 16 detailed charts comparing key provisions in state laws.

Copies are available at $12 each from the U.S. Chamber of Commerce, 1615 H St. N.W., Washington, D.C. 20062; (301) 468-5128. ☐

Independent union may affiliate with GCIU

The leadership of an independent union at Dow Jones & Co., publisher of The Wall Street Journal and other publications, will vote June 14 on whether to approve an affiliation agreement with the Graphic Communications International Union.

The board of directors of the Independent Association of Publishers' Employees Inc. voted 18 to 5 in April to seek affiliation with the GCIU rather than with The Newspaper Guild, the International Typographical Union or the Communications Workers of America. An affiliation proposal was worked out at a May 6 meeting in New York City between representatives of the IAPE and the GCIU.

IAPE President Eric Frankland said that if two-thirds of the board members present and voting approve the agreement, it will be submitted to the membership this fall. An affiliation must be approved by two-thirds of the members, he said.

Frankland said the independent union, which was founded in 1937, represents about 2,000 Dow Jones employees in facilities across the country. ☐

The X-Rite B318 Sets You Free!

X-Rite B318 Battery-Powered Color Reflection Densitometer

Free to operate anywhere. Free from worries about accuracy & reliability.

The X-Rite B318 is no ordinary densitometer. It's our new battery-powered color reflection densitometer with all the traditional quality and performance features of our standard densitometers. Plus the convenience of being totally portable.

Powered by four rechargeable Ni-Cad batteries, the X-Rite B318 is ready to perform with superb accuracy wherever . . . and whenever it's needed. Yet this compact unit is only 7 inches long by 3 inches wide.

Using long-life batteries, the B318 allows approximately 1000 measurements per charge, and the batteries are designed to last for over 500 charges.

What's more, the B318 gives you a lot of extras that don't cost extra. Like the "low battery indicator" to let you know when it's time to recharge the unit. Then there's the battery charger/eliminator. By connecting it to an AC power source, you gain the added convenience of using the densitometer while the batteries recharge or operating the instrument without the batteries.

And perhaps the best news of all is the B318's low list price—only $1295.

For more information about our complete line of graphic arts densitometers, please contact us or your nearest X-Rite Dealer today!

Two more family-owned newspaper companies sold

BUSINESS ROUND-UP

Two longstanding family newspaper dynasties came to an end in May with the sale of the Bingham family's newspapers in Louisville and the Jackson family's in New Haven, Conn. Combined, the sales fetched nearly $500 million, and the Louisville price alone was said by analysts to be the largest ever paid for a newspaper property.

Gannett Co. on May 19 announced the purchase of The Courier-Journal and The Louisville Times for about $300 million.

Two days later, Ingersoll Publications announced the purchase of the New Haven Register and the Journal-Courier. Depending on stock evaluations and property appraisals, the price was between $170 million and $200 million, said Lionel Stewart Jackson Sr., chairman of Jackson Newspapers Inc.

Barry Bingham Sr., 80, who controls 95 percent of the family voting stock, said he was forced to sell because his three children, Barry Jr., Sallie and Eleanor, could not resolve their bitter disputes over the holdings. Three generations of Binghams had owned the newspapers.

One man's tragedy is another's triumph. In buying the venerable Louisville papers, Allen H. Neuharth, 62, Gannett's chairman, completed his third major newspaper purchase within a year. Neuharth outbid competitors in purchasing the Des Moines Register and Tribune Co. last fall for $200 million and the Evening News Association of Detroit in February for $717 million, an acquisition that included several broadcast properties in addition to the metro paper [**presstime**, Oct. 1985, p. 60].

A day after Neuharth exuberantly referred to his three most recent acquisitions as the "triple crown," he stunned his colleagues by announcing at Gannett's annual meeting that he will step down as chief executive officer while remaining as chairman. John J. Curley, 47, will move up to CEO from chief operating officer, and he will continue to serve the Arlington, Va.-based company as president.

With the Louisville acquisitions, Gannett—the largest newspaper group in the United States—owns 93 dailies and 40 non-dailies, plus eight television stations, 15 radio stations and the largest outdoor advertising operation in North America.

The company has not announced how it will pay for the Louisville deal, but if it finances the $300 million, its long-term debt will climb toward the billion-dollar mark. Yet many newspaper analysts said they feel this is hardly more than a minor annoyance for the prosperous corporation and its ample cash flow.

According to several analysts, however, Gannett paid an excessively high price. John Morton of Lynch, Jones & Ryan in Washington, D.C., said he had put the value of the Louisville newspapers at between $150 to $200 million. And according to a source quoted by The New York Times, Gannett's offer was $40 million higher than that of the next-closest bidder, The Washington Post Co. The only other bidder was the Tribune Co. of Chicago.

Many observers are anticipating staff cutbacks in Louisville. In Rochester, Gannett runs a morning and evening news operation—combined circulation 230,000—with a news staff of slightly over 200; the 296,000-circulation Louisville papers have 314 on the news-side payroll.

The Newspaper Guild has begun a campaign to organize newsroom employees there, a move the union said came at the invitation of several reporters.

Analyst Bruce Thorp, also of Lynch, Jones & Ryan, estimated the purchase will reduce Gannett's earnings by 8 cents a share by the end of this year and 12 cents a share by the end of 1987. But by 1990, he predicted, the Louisville papers will begin to contribute to Gannett's profits, as local profits work their way up and interest expense on the money borrowed goes down.

Some analysts also raised eyebrows about the $170 million to $200 million paid for the New Haven papers—about three and a half to four times their combined annual revenue. The 90,618-circulation Register had been in the Jackson family since 1895, and the 37,829-circulation Journal-Courier since 1926.

Lionel Stewart Jackson Jr., who will remain as president and publisher of the newspapers, did not say why the family had decided to sell after three generations of family ownership.

Ingersoll Publications, which has headquarters in Lakeville, Conn., already owned 114 U.S. newspapers, including 27 dailies. Excluding the New Haven sale, it has invested more than $300 million in newspaper acquisitions in recent years.

In other newspaper-business activity:

• One day after members of the Pulitzer family moved to assure that ownership of the St. Louis Post-Dispatch and other media properties would remain in the family, an outsider who has offered to buy Pulitzer Publishing Co. sued the firm.

Taubman Media Inc. of Detroit, in a lawsuit filed May 21 in a state court in St. Louis, is seeking $150 million in damages. The suit alleges that the Pulitzers persuaded dissident family members not to honor an option that Taubman holds to buy a 20.6-percent share of the Pulitzer holdings for $100 million. Taubman has offered $625 million for the entire company [**presstime**, May 1986, p. 87].

HALL SYSTEMS, INC.

A SCRIPPS HOWARD COMPANY

HALL 24400 Sperry Drive, Westlake, OH 44145 216-835-0700 • Telex: 985-258 zer 3d, Michael E. Pulitzer and David E. Moore, who control 57 percent of Pulitzer company stock—purchased another 22 percent May 14 from their nephews. Then on May 20, they agreed to a settlement with the remaining family holdouts—Kate Davis Pulitzer Quesada and other relatives. This settlement, if it holds up, would keep 100 percent of the company stock in Pulitzer family hands.

Taubman claims the Pulitzers induced the Quesadas not to honor his option to buy, a charge the company denies.

- Also in St. Louis, a new daily folded after publishing only a week. One of the partners in the Daily News venture was Jeffrey M. Gluck, who last year was forced from his position of publisher of the St. Louis Globe-Democrat after the newspaper declared bankruptcy [presstime, Jan. 1986, p. 62].

- In Washington state, another family newspaper dispute erupted. Phoebe Cowles, owner of 12.2 percent of Cowles Publishing Co. in Spokane, filed suit asking that she receive a "fair return" on her investment, or that a trust controlling her shares be broken up and that she be allowed to sell the stock at a fair price.

Cowles Publishing Co., which includes The Spokesman-Review and Spokane Chronicle and other holdings, is worth an estimated $225 million, according to a company spokesman.

- News Corp., Rupert Murdoch's international communications company, said it plans to ease its current financial burden by selling its shares of publicly traded Reuters stock. Murdoch's firm owned a 7.7-percent block of the international news service. Murdoch's rapidly expanding company, which has incurred about $3 billion in debt, expects to receive about $200 million in the transaction.

—Gene Goltz

Minority hiring efforts gain speed

Vivyen J. Ray, manager of staffing and college relations of Gannett Co. Inc., addresses seminar.

Increasing support for minority employment at U.S. newspapers became more evident in May on several fronts.

Executives of 24 newspapers attended a seminar on the subject at the American Press Institute in Reston, Va., and ANPA Foundation published a "how-to" manual. Both initiatives were products of the Task Force on Minorities in the Newspaper Business, formed more than a year ago by a wide range of newspaper associations [presstime, May 1986, p. 88]. In addition, the National Association of Black Journalists announced plans to move its national headquarters to The Newspaper Center in Reston this fall.

Following the May 18-19 seminar, sponsored by API in cooperation with ANPA Foundation and the task force, API Director Frank Quine said the discussion could be summed up in the words of one publisher who said after the seminar he had a "two-word mandate": "Do it."

"There are no more excuses," Quine said the publisher remarked.

While particulars of the discussions were not disclosed, Quine said participants saw minority hiring as a "two-tiered" problem. Most of those attending already have a sizable number of minorities in entry-level positions on their staffs and are looking at moving them up, he said, but many other papers (primarily small ones) have little or no minority staffing at any level.

The manual is primarily directed toward such newspapers.

Billed in the introduction as "neither the last word nor the first alarm," the 28-page publication outlines ways to recruit, hire, train, promote and provide staff development for minority employees.

According to Foundation Chairman and President Edwin L. Heminger, editor and publisher of The Courier in Findlay, Ohio, the manual is a "key first step" in the Foundation's five-year plan to increase minority employment in all departments of U.S. newspapers.

The Foundation has distributed copies of the booklet to the task force, to publishers of ANPA member-newspapers and to members of the Newspaper Personnel Relations Association.

Additional copies of "Recruiting and Retaining Newspaper Minority Employees" can be purchased for $5 each from the Foundation.

Also in May:

- The Foundation said July 25 is the application deadline for its next group of minority fellowships. Paying tuition, travel and board for minorities to attend management seminars, the fellowships are designed to increase opportunities for minorities in newspaper management.

Denise Johnson

- The American Society of Newspaper Editors appointed a new minority affairs director, Denise Johnson, who has been a copy editor for the St. Paul Pioneer Press and Dispatch. A former NABJ vice president, Johnson is a graduate of Carleton College in Northfield, Minn., and of the Institute for Journalism Education's Editing Program for Minority Journalists. She replaces ASNE's first minority affairs director, Carl E. Morris, who resigned. ☐

Truce set on common classifieds

Thirteen separately owned weekly newspapers in Minnesota have signed an agreement with state Attorney General Hubert H. Humphrey III, ending an antitrust investigation into their commonly produced and distributed classified advertising supplement.

Humphrey's office had charged that the newspapers were engaged in price fixing and territorial allocation in violation of state antitrust law.

An attorney for the newspapers, Mark R. Anfinson, said they "vehemently disagree" with the attorney general's allegation but decided not to challenge it because of the legal costs involved. To resolve the dispute, they signed an "assurance of discontinuance" in which they agreed to refrain from such practices in the future.

The newspapers, all in west central Minnesota, were the first in the state to start a joint classified section, known as the Minnesota Western Peach, in 1966. It got its name from the peach-colored newsprint on which it originally was printed.

Since entering into the agreement, the group has altered its operations to address the attorney general's concerns. Anfinson declined to provide specifics but said the Minnesota Newspaper Association will sponsor a seminar this month to explain the changes for other newspapers in the state that produce similar, common classified sections. The seminar fees will help defray the legal costs incurred by the newspapers during the state investigation.

According to Anfinson, the probe resulted from a complaint lodged by a participant in the advertising arrangement. Anfinson was unaware of any other government investigation of common classified sections.

UPI may be out of Chapter 11 soon

By the second week of this month, United Press International could be out of Chapter 11 bankruptcy and under ownership of Mexican publisher Mario Vazquez-Rana and Houston businessman Joe Russo.

UPI's creditors in late May were examining a reorganization plan on which they were to cast approving or disapproving votes by June 9. A "confirmation hearing" is scheduled June 10 in U.S. Bankruptcy Court, Washington, D.C., where Judge George F. Bason may formally discharge the wire service from bankruptcy, a UPI spokesman said. Ownership would change hands three days later.

Under terms of the reorganization plan, creditors to whom UPI owes less than $3,000 would be paid off in full, as would all employees who are due work-related reimbursements. Creditors owed more than $3,000 would receive 40-50 cents on the dollar, depending on final plan terms.

Creditors received the final reorganization plan after Bason approved its submission to them May 12. His decision followed word that Vazquez-Rana, UPI management, current UPI owners Douglas F. Ruhe and William E. Geissler, and competing UPI bidder Financial News Network had agreed to settle out of court a series of lawsuits threatening the sale [**presstime**, May 1986, p. 89]. The parties reached final agreement May 20.

Recent acquisitions

Thomson Newspapers Inc. of Des Plaines, Ill., acquired the Mexico (Mo.) Ledger, daily circulation 10,996.

The Lorain (Ohio) Journal Co. acquired The Lake County Telegraph, Painesville, Ohio, daily circulation 15,352, which was then merged with the Lake County News-Herald of Willoughby, Ohio. Both newspapers are part of the Horvitz Newspaper Group, Valley View, Ohio.

Ingersoll Publications Co. of Lakeville, Conn., acquired The Tribune Chronicle of Warren, Ohio, daily circulation 41,936.

Media Mix Associated Enterprises Inc. of San Diego, acquired the Vista Morning Press of San Marcos, Calif., daily circulation 5,019, from Morris Newspaper Corp. of Savannah.

Boone Newspapers Inc. of Tuscaloosa, Ala., acquired The Troy (Ala.) Messenger, daily circulation 3,500.

Leslie Zygmond of Helena, Mont., acquired The Tiller and Toiler of Larned, Kan., daily circulation 2,805.

The Observer Publishing Co. of Washington, Pa., acquired two Pennsylvania dailies: the Democratic Messenger of Waynesburg, daily circulation 5,021, and The Daily Herald of Monongahela, circulation 4,357.

Metro Sunday plans syndication to help local magazines

Metropolitan Sunday Newspapers has announced a three-step program to broaden the content of locally edited Sunday magazines.

Starting this month, Metro Sunday will syndicate several articles from the local magazines to its full network of 45 magazines. Reprinting will be at the option of the local magazines, whose combined circulation is about 21 million.

Also participating in the MSN Syndication Service is the newly redesigned magazine of the Los Angeles Times, which is not a member of the Metro Sunday network that sells national advertising for its members [**presstime**, April 1986, p. 12].

Beginning in the fall, Metro Sunday plans two other initiatives to augment the locally oriented content of the magazines. According to Alexis Parks, director of corporate communications and special projects, Metro Sunday will include excerpts from current non-fiction books and will commission articles by nationally prominent writers.

Creative marketing topic of fall seminar

The ANPA Circulation and Readership Committee and five other media groups will hold a "Creative Marketing Strategies Conference" Oct. 16-17 at the Hyatt Regency O'Hare, Chicago.

The event will focus on ways of satisfying reader and advertiser needs. Topics to be covered include single-copy sales, promotion, weekday-versus-weekend circulation and targeting markets.

Chairman of an industry-wide committee planning the conference is USA Today President Thomas Curley.

Corrections

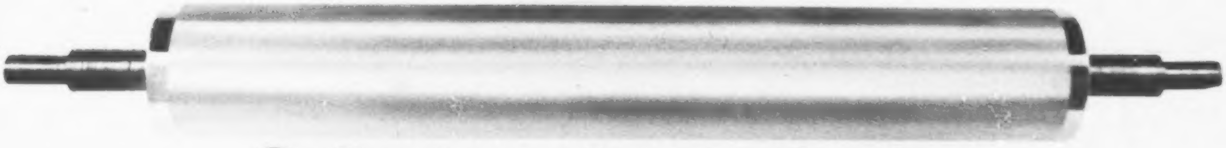
In the May article about newspapers in New Zealand, because of an editing error, the full name and title were omitted for Mike Robson, managing director of Independent Newspapers Ltd.

• • •

A former ANPA Foundation employee, Darlene Green, was incorrectly identified in a cutline in the May issue (p. 88) as Debra A. Castelan of the Institute for Journalism Education.

Presstime regrets the errors.

Armotek's ULTR-A-LOX™ precision engraving system delivers perfectly identical anilox cylinders for newsprinting.



Cylinder after cylinder.

First time.

On time.

Every time.

Armotek's exclusive ULTR-A-LOX cylinder engraving system can meet your most demanding newspaper printing requirements for anilox cylinders from 5″ to 22″ in diameter and up to 200″ in length. Using the most technologically advanced equipment, we draw on our more than 20 years of engraving experience to carefully control every production step.

First, our electronically-controlled Polishmaster machine cuts and polishes each cylinder to exacting tolerances of diameter (±.0002″), surface roundness (±.0005″) and planetary surface (±.0003″), to ensure the optimum cylinder/flexo plate interface.

Next, the cylinder is electronically engraved under computer control with incredible accuracy and repeatability. Cell volume is perfectly identical, cell after cell...for absolutely uniform ink delivery from two cylinders, or twenty-two.

Then, in the final production step, the surface of every cylinder is protected with a high-density chrome plating to minimize abrasion and reduce doctor blade wear. What's more, ULTR-A-LOX anilox cylinders give you more press runs because their engraved surfaces are made from super-hard copper (twice as hard, in fact, as conventional engraving surfaces).

When you want truly outstanding quality, look to Armotek for the very best in anilox cylinders. We do it right the first time, every time.

CIP's $½ billion Quality Enhancement Program specifically addresses the needs of today's newspaper publisher and commercial printer. This program is designed to ensure that CIP's newsprint and groundwood specialty products continue to meet the ever-increasing quality needs of our customers.

The highlight of this quality program is a new high-speed, technologically-advanced paper machine at the Gatineau newsprint mill. It will provide CIP's customers with high quality newsprint to meet the requirements of today's new printing processes. This new paper machine will be featured at the ANPA Operations Management Conference and Exposition in Atlanta.

Come talk to us about quality. We speak your language.

CIP customer discusses quality with Gatineau mill Manager, Keith Simpson.

CIP representatives will be on hand at the ANPA Operations Management Conference and Exposition in Atlanta, June 21-25 (exhibit #1645). Let us tell you, and show you, how CIP's three newsprint mills, 17 paper machines and 5500 employees are keeping in step with your business.

Should you miss the conference, CIP would be pleased to send you more information on its $½ billion commitment to quality enhancement.

GOSS SINGLE-WIDTH PRESSES

Goss Community Press

Goss Four-High Community Press

Goss Urbanite Press

DESIGNED TO MAXIMIZE PRODUCTIVITY.

For 100 years, we have been designing web presses to improve print productivity and quality.

The Goss Community® Family–With over 15,000 units installed, it is the most popular web offset press in the world. Depending on your choice of folder, the Community can print at speeds up to 16,000, 18,500 or 25,000 cph. Offered with a wide range of cutoffs, Community units can be floor-mounted, stacked or in four-high configurations for color and web lead versatility and, with auxiliaries, heatset capability.

The flexible Goss Urbanite®–Printing up to 50,000 cph, the Urbanite has a worldwide reputation for delivering award-winning color and performance. Over 5,000 installed units in floor-mounted or stacked-unit arrangements testify to its flexibility for the black-and-white or color printing required by newspapers and contract printers.

Goss presses are backed by reliable, responsive Goss service and support, from installation through the life of the press. Contact Goss Single-Width Products, Graphic Systems Division, Rockwell International, 3100 South Central Ave., Chicago, IL 60650. 312-656-8600.

Telecommunications—Uzal H. Martz Jr., Pottsville (Pa.) Republican; Robert M. Johnson, Newsday, Long Island, N.Y.

Audit—Edward W. Estlow, Scripps Howard, Denver

Executive—Alvah H. Chapman Jr., Knight-Ridder Inc., Miami

Nominating—Richard J. V. Johnson, Houston Chronicle

ANPA chairmen or vice chairmen on panels operated jointly with other associations are:

ANPA/American Bar Association Task Force—Katharine P. Darrow, The New York Times Co., co-chairman

ANPA/NAB Audit Bureau of Circulations Liaison—Edward W. Estlow, Scripps Howard, Denver, chairman

ANPA/NAB Joint Postal Task Force—Donald E. Newhouse, The Star-Ledger, Newark, N.J., chairman

Joint Standing Committee of ANPA/Canadian Pulp and Paper Association Technical Section—Gene Falk, San Jose Mercury News, vice chairman

*Appointments take effect following the Operations Management Conference & Exposition June 21-25 in Atlanta. All other appointments took effect April 23 at the end of the San Francisco Convention.

Now it costs less to be associated with Hertz.

$34.00 A DAY

ACROSS THE USA*

Hertz introduces new, low daily rates for ANPA members.

Now your ANPA membership can get you a really terrific rate on a wide range of Hertz cars. From the fuel-efficient Ford Escort to the roomy Ford LTD.

CAR CLASS	NEW DAILY RATE
Subcompact	$34
Compact	$37
Mid-size	$39
Full-size, 2 door	$41
Full-size, 4 door	$43

And in some cases (weekly or weekend rentals, for example), you may even get lower rates than the ones you see here.

So call Hertz at 1-800-654-2200 for details and reservations.

Hertz

The #1 way to rent a car.™

Hertz rents Fords and other fine cars.

---

*Refueling service charge, taxes, optional CDW, PAI, and PEC (where available), not included. Cars must be returned to renting city. Available at all corporate and participating licensee locations except in Alaska and in Manhattan from 3PM Friday to 3PM Sunday and during certain holiday periods. Rates slightly higher in New York City area.

ANPA News

Gene Goltz joins presstime as staff writer

Gene Goltz has joined presstime, replacing Barbara Friedman, who resigned.

Gene Goltz

Goltz started his newspaper career more than 20 years ago as a reporter for a small weekly in Iowa. He subsequently worked for The Houston Post, the Detroit Free Press, The Dayton Daily News, The Washington Times and other dailies.

Goltz received a Pulitzer Prize in 1965 for coverage of city-hall corruption while working at the Post and shared in another Pulitzer in 1968 for the Free Press' coverage of the 1967 Detroit riot. He also has received two Heywood Broun awards and was a Nieman Fellow at Harvard University. ☐

Two names transposed in 'Facts' book list

The 1986 "Facts About Newspapers" booklet transposed two names in the listing of the 20 largest-circulation U.S. newspaper companies.

As of Sept. 30, 1985, Dow Jones & Co. was the fifth largest company; The Times Mirror Co. was the sixth.

Only the names were transposed. The statistics relevant to the fifth and sixth largest companies were published in the proper sequence. ☐

UNESCO debate affected foreign coverage

Your special report in presstime, April issue, on the rise in foreign news coverage was excellent. UNESCO was pleased, too, to see a reference to our 1985 report used as a source to show the percentage of foreign news coverage in major U.S. papers.

However . . . the article failed to cite the ongoing debate over a New World Information and Communication Order within UNESCO during the past decade as a contributing factor in raising the awareness of American journalists to the drawbacks of U.S. media coverage of foreign news in the past.

The very phrase, "going beyond 'coups and earthquakes' reporting," used in the drop-head of the article, is an echo of the complaints Third World spokesmen made years ago about Western coverage of their countries. At first, U.S. news executives, the wire services especially, denied there was any deficiency in the coverage. But then, as the debate evolved and the complaint came into focus—that the reporting was being done through Western eyes and by Western news standards only—the position began to shift. Today, that validity of that aspect of the complaints is acknowledged and changes such as the presstime article depicts—increased breadth and depth of foreign coverage—are the result.

Indicative of this change were the remarks of the AP's Lou Boccardi in Tokyo in late 1984, quoted in Asahi Shimbun: "One thing that the UNESCO debate has done, and I think it is useful, is that it has made us all the more aware and sensitive to the cultural differences in different parts of the world." Prominent among those differences is the way people view information and the media.

Or, as Leonard Sussman of Freedom House put it last May upon the occasion of receiving the 1985 Columbia Journalism Alumni Award, in a truly milestone speech: "Diversity in news and entertainment—in print, on the cable, in the fibres, on the dish—diversity is second only to the First Amendment as a guarantee of freedom."

Chief, public information-USA
UNESCO
New York, N.Y.

Exchange program

I would like to express personal gratitude and that of the Journalism Department at Cal Poly State University for the excellent editor-professor exchange program initiated by the ANPA Foundation.

I went to work as a consultant/writing coach at the Tucson Citizen for one week this past summer. The experience exceeded expectations. I trained reporters, critiqued the paper on a daily basis and shared story ideas with the editors. The perspective I gained was shared with my students in the writing classes. I believe the experience was enriching both to myself and the students.

The Citizen sent its managing editor, Dale Walton, to our campus for a week. Mr. Walton acted as a resource person in writing classes and was very informative in brainstorming sessions with the staff of the campus daily.

We found the program to be very worthwhile and would not hesitate to participate in it again.

Nishan Havandjian
Associate professor, Journalism Dept.
California Polytechnic State University
San Luis Obispo, Calif.

Covering foreign news

Your article in presstime (April) on coverage of foreign news is excellent.

You have tracked down the many aspects of the story, and that was not easy. Apparently, my instinctive feeling that the new figures are exaggerated was borne out, but not as exaggerated as I guessed. I'm glad you set it all down. It reads like a definitive piece on this complex subject.

Leonard R. Sussman
Executive director
Freedom House
New York, N.Y.

Accuracy checking

Re: George Kennedy's piece (March) on showing stories to the source before publishing. I've done it for years. Not every story, of course, but when I think there is any chance that I've misunderstood anything.

Sometimes I've taken the story to the source myself, and whenever a source has asked about a story, I've offered him the story to read in full.

I think it's a good idea; could only help, can't hurt. I'd rather discover error before publication than after, and I don't need to prove to anybody that I can print what I want to.

Harry Church, publisher
Lebanon (Ill.) Advertiser

Hoechst

over-set

There goes the bird cage liner

If the newspapers are piling up in the house and you're in Saudi Arabia, think twice before you throw them away.

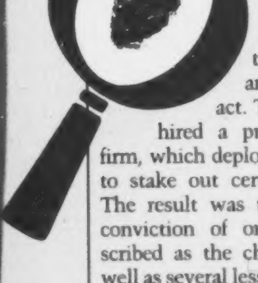
According to the Saudi Gazette, Saudi Arabia's chief religious authority has decided that Arabic newspapers cannot be thrown into the garbage. Nor can they be flushed down the toilet.

The reason given was that most Arabic papers usually contain verses from the Koran, the Islamic holy book, and sayings of the Prophet Muhammad; disposing of newspapers in either of those ways would suggest disrespect for holy writings.

An unanswered question is what can be done with the papers.

Putting the lid on newsrack thefts

It's a common-enough problem. Someone puts the requisite coins in a newsrack, removes not just one but a whole stack of papers, and then resells them.



The Natchez (Miss.) Democrat last year lost an estimated $40,000 to such thefts, and it decided to act. The newspaper hired a private security firm, which deployed three men to stake out certain locations. The result was the arrest and conviction of one person described as the chief culprit, as well as several lesser offenders.

"It cost us a couple thousand bucks (to hire the security firm)," says John Kliebenstein, circulation manager. "They caught this guy in two months."

Davies of the Courant (left) hosts Davies, his Canadian namesake.

Historic newspapers in U.S. and Canada are run by Michael Davies

Publisher Michael Davies, meet Publisher Michael Davies. They did. Twice.

The Michael Davies who is editor and publisher of The Hartford Courant first met with his namesake, the owner and publisher of the Kingston Whig-Standard, on Feb. 25 in that Ontario city. On May 5, Canada's Davies paid a visit to Connecticut's Davies.

The latter had initiated the exchange program when he noticed the same-name situation in a trade publication.

Besides the name and publisher title, they have something else in common—a newspaper legacy. The Whig-Standard, which began daily publication in 1849, is the oldest daily in Canada. The Hartford Courant claims to be the oldest continuously published newspaper in North America, tracing its history directly to The Courant, founded as a weekly in 1764. It became a daily in 1837.

Newspaper numbers

19.2—estimated percentage of U.S. newspaper employees who are represented by unions.

23—number of National Labor Relations Board elections conducted at U.S. newspapers in 1985, 14 of which were lost by unions.

1,186—number of U.S. daily newspapers owned by groups at the end of 1985 (compared with 489 that are independently owned).

8,750,597—number of tons of newsprint used by U.S. daily newspapers in 1985 (a record).

382—number of U.S. and Canadian Sunday newspapers selling for more than 50 cents a copy in 1985.

306—number of U.S. and Canadian newspapers selling for more than 25 cents in 1985 (reflecting 63-percent increase from 1984).

25—percentage of total Canadian ad revenues captured by Canadian daily newspapers.

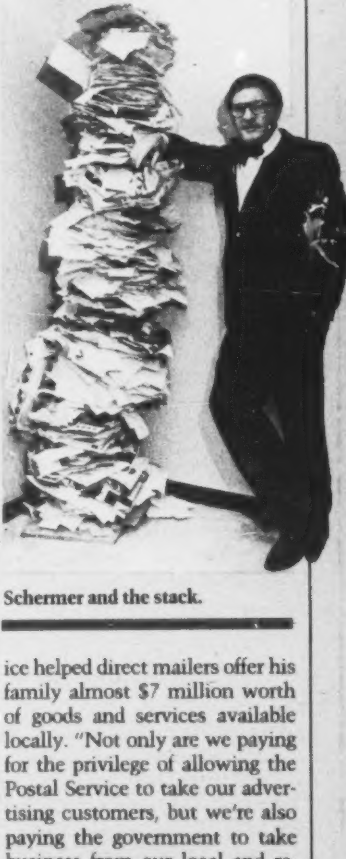
A new look (up) at junk mail

For those who have wondered whether a year's "junk mail" could exceed a normal person's height and weight, the president and CEO of Lee Enterprises Inc. has an answer: "Yes."

Towering over 6 feet and weighing 175.8 pounds are the 1,403 pieces of third-class mail Lloyd G. Schermer received at his Davenport, Iowa, home.

Postage came to $397.47—an estimated $330 less than what it would have cost to send the same amount of mail first-class.

What particularly annoys Schermer is that the Postal Service helped direct mailers offer his family almost $7 million worth of goods and services available locally. "Not only are we paying for the privilege of allowing the Postal Service to take our advertising customers, but we're also paying the government to take business from our local and regional retailers," he says.



Schermer and the stack.

Mycro-Tek Innovations:

New Systems, Upgrades and Add-Ons That Won't Send You Back To Square One.

▬ You've played the game before. The our-tech-is-higher-than-your-tech game. Or the "off-the-shelf" hardware and software gambit. It may come from your boldest competitor, your systems analyst, or a consultant. But it's enough to strike panic into the heart of any publisher.

You think your operation could be more efficient with a new product. You want to be more efficient. You *have* to be competitive. But keep in mind that new state-of-the-art systems require new state-of-the-art software which may not be compatible with your present equipment. And service and support may still be in the learning stages. Before you're through, you'll have invested a tidy sum in the name of high technology.

Mycro-Tek creates new systems too. But our new systems are designed for compatibility. So you build on your capabilities gradually, while your profit margin grows. And you don't have to spend a fortune adding to your present system. With a Mycro-Tek system you know exactly where you're going. Into the future.

Not back to square one ▬

WHAT'S BLACK AND WHITE AND

ALL OVER?

A newspaper that needs the strike coverage of Mutual Insurance.

A lot of revenue is lost when a strike hits a newspaper. The product isn't being delivered. Or isn't being printed at all. That's why more and more ANPA-member newspapers are turning to The Mutual Insurance Company of Hamilton, Bermuda, for the protection that strike insurance provides.

A strike insurance policy from Mutual covers net profits, fixed charges, and ordinary business expenses in the event of a full or partial strike, to keep your paper in the black even when it's yellowing on the dock. It also provides for extra security to protect both personnel and physical plant. As unionization and resistance to automation increase, the protection that Mutual's strike insurance provides is now more valuable than ever.

Mutual offers strike insurance only once a year, with coverage effective from July 1st through June 30th, so contact Mutual immediately to qualify.

CHAIRMAN'S CORNER

Focus of ANPA's technical efforts has been right on target

I was pleased to see so many newspaper executives and newspaper suppliers last month at ANPA's Operations Management Conference & Exposition. We were able to see there a good portion of our technological future.

These new and improved systems on display in Atlanta all were designed by talented suppliers to help newspapers remain competitive and productive through increased efficiency—and with an improved final product. It is useful for us to recall that the ideas for many of those new and improved systems first took shape on the drawing boards of our Association.

Alvah H. Chapman Jr.

Over the years, in fact, ANPA has initiated research and development of most of the technical advances that now are commonplace throughout the business. Our technical experts were instrumental in development of offset printing for newspapers, photo-plastic letterpress plates, VDT editing and DI-LITHO™ printing, to name a few.

At Atlanta we saw several newspaper flexographic presses on display. ANPA developed the first newspaper-flexo test press eight years ago.

More recently, ANPA acted as a catalyst for the research that led to development of some of the electronic photography systems that were highlights of this year's Exposition.

Your Technical Committee, made up of newspaper executives from across the country, and your ANPA technical research staff are continuing to work to keep our business contemporary and competitive. They regularly look at our technology, determine where it is, and consider where it should be in the future [**presstime**, June 1986, p. 36]. And we keep this never-ending process moving.

Over the years, our focus has been right on target. None of us could have accomplished as much, or as well, had we limited ourselves to individual efforts.

And once the inevitable new systems come on line in our plants, ANPA technical trainers carry the benefits one step further with comprehensive seminars. If you aren't using this compact, economical, targeted training, you are missing real value.

Hands-on technical seminars are held regularly at The Newspaper Center in Reston, Va. They cover such topics as color-scanner operations, advanced offset press operations, quality control, color separations and camera techniques. Seminars targeted at topical concerns or problems also are scheduled periodically.

The annual Exposition, our training programs and our catalytic research projects are just a few of the ways ANPA is furthering the positive evolution of our business and the steady improvement of our service to readers and advertisers. My special thanks go to all who are helping. Others should also let them know their efforts are appreciated. Better yet, join in their work.

El Paso Herald-Post
El Paso Herald
County attorney arrested

WHAT'S THE POWER OF THE PRINTED WORD IF PEOPLE CAN'T READ?

The statistics were overwhelming: nearly one-third of the over-25 population of El Paso, Texas was functionally illiterate.

The El Paso Herald-Post's response was to launch "Year of the Printed Word," a literacy program for both children and adults. With a grant from Scripps Howard, the newspaper hired a literacy campaign coordinator, carried features and in-depth reports, began a weekly literacy column and commissioned a daily comic strip to help parents teach preschoolers to read.

The Herald-Post has staged a 24-hour readathon, enlisted volunteers for tutoring, formed a business consortium for literacy and helped organize the free distribution of books, with 200,000 already on hand from New York publishers. The campaign has encouraged new programs, lent support to existing efforts, brought groups together, and gained the cooperation of the broadcast media in reaching people who are illiterate.

Battling illiteracy is a long, slow process. But "Year of the Printed Word" is a promising start. The El Paso Herald-Post hopes the successes and failures of its program can serve as a model for other newspapers, spearheading a national campaign against illiteracy.

That's the power of the printed word.

COMPUTERS AID SINGLE-COPY SALES

Software helps eliminate guesswork in deciding number of papers to leave at vending machines, other outlets

BY GENE GOLTZ
presstime staff writer

A handful of North American newspapers have pioneered in the use of computers to predict single-copy sales, and circulation managers at those newspapers are virtually unanimous in praise of the system. They say the computer technology has cut costs, reduced returns and resulted in better overall circulation efficiency.

Although such programs are used at fewer than a dozen newspapers, that number is expected to grow in the near future. "All of a sudden it's become a hot item. We are constantly getting calls from people asking how we do this," says Donald L. Hollomon, circulation director of The Columbus (Ga.) Enquirer and The Columbus Ledger, whose use of a computer system for single-copy sales dates from 1977.

Hollomon and other employees wrote the software in Columbus. With it, the computer stores circulation sales data covering the previous five weeks for each of the Enquirer and Ledger's 380 newsracks and other outlets. The computer averages those figures for each location for each day of the week, and circulation drivers make their drops accordingly.

The computer also keeps track of returns, stolen copies, money collected—in Hollomon's words, "everything."

The Courier-Journal and The Louisville Times in November began testing a circulation computer program for some street sales. Richard A. Cox, single-copy sales manager, says it has worked so well the company hopes to expand the system to its entire circulation area.

To do so, however, the Louisville newspapers must first sell the idea to their independent contractors who deliver the papers. Contractors will naturally resist a system that takes away their control over how many papers to draw, Cox notes. But the computer system results in fewer unsold or returned papers, and Cox believes the advantages are so great that the system will almost sell itself.

"We love it. In fact, we project we'll have 95 percent of the racks in the computer system by the end of next year," Cox says. "We think as we expand and show it to (the contract carriers), they'll voluntarily take it."

The computer can outperform a mediocre human distributor, and "if you have a good person on the rack, the computer does it quicker and cheaper," Cox says.

Both computer suppliers and their newspaper customers find it difficult to quantify exactly how much "cheaper" a computer can do the job, however.

Circulation Director James N. Manaugh says that after The Times-Herald Record in Middleton, N.Y., developed its software program, single-copy sales increased 5 percent and returns dropped 10 percent. In Columbus, Holloman says that with the computer, the Enquirer and Ledger are saving about four hours a week in the time required to make the estimates of how many papers to drop per outlet.

From the vendors' side, Jerry Martinez, newspaper systems manager for Collier-Jackson Inc. of Tampa, says costs of commercially available software vary from newspaper to newspaper.

Collier-Jackson is one of at least a dozen computer companies around the country that sell generic programs for single-copy sales. The programs are tailored to fit the individual paper's particular needs and circumstances, hence the variance in costs.

Observers note that most newspapers that have adapted computers for estimating single-copy sales already use the computer to keep circulation lists and billing, so there is no major start-up cost in adding to the computer's chores.

Circulation software tells Columbus, Ga., newspapers how many copies to leave in each rack.

HOW THEY WORK. The computer systems being used to estimate single-copy sales have certain differences, but all operate in a generally similar fashion.

According to those who use them, the computers can do things humans simply cannot do.

Louisville's Cox points out, for example, that buying patterns at a single newsrack are never exact. Mrs. Smith may buy a paper at rack A one day and at rack B the next. The third day she buys none. "A human," he says, "can't predict that." But a human can predict the range of copies that will sell from that rack daily, based on experience. If a rack sells, say, three to five papers a day, the computer can be programmed to order three copies, or six copies or any number depending on how many returns a newspaper is willing to accept.

All the computer-oriented newsrack programs have provisions for extraordinary days. For example, in Louisville, if there were a 12-inch snowfall, Cox would disregard the sales history for that day. The trucks would be late in delivering the papers, and many customers would not come out on the street to buy. In such a case, the circulation manager or the distributor would make an educated guess as to how many papers to leave.

Similarly, if a delivery truck breaks down, or if a newsrack is broken, "by one stroke of the key on your computer you can disregard the previous sales history and enter an entire new program" for that particular truck or newsrack, Cox says.

Some other systems, including the one in Columbus, also disregard unusual sales days. Holloman says his system will adjust to a marked deviation from the norm only after that deviation is recorded for two straight weeks.

The computer also "learns." In football season, when interest in the sports page surges, single-copy sales rise. Holloman says the computer is programmed to increase the number of papers distributed at the street-sales outlets during the season.

The Times Herald-Record in Middletown uses a four-week history of sales as a basis for its average. If, for instance, the computer was counting sales on a Wednesday, as each Wednesday arrived the Wednesday five weeks earlier would be dropped out of calculations.

In determining the number of papers to drop at a particular box, The Times Herald-Record adds an extra 6 to 8 percent of the average as a cushion.

In its variation on a theme, The Orlando Sentinel monitors sales over five weeks but gives more value to the most recent three weeks. The Sentinel uses the three-week average unless there's an unusual statistical blip that would call for use of the five-week figure. If, for instance, a drought in Orlando had caused streets to give way and houses to disappear into massive sinkholes (which occurred about a year ago)—resulting in heavy single-copy sales on a particular day the previous week—the five-week average would be employed.

Single-copy sales account for about 31 percent of The Times Herald-Record's daily circulation of 77,787; in Orlando the Sentinel's single-copy sales are 24 percent of the paper's 263,865 circulation.

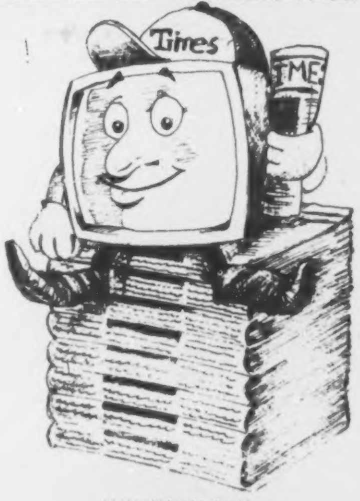
And in both locations, the computer keeps track of thousands of individual newsstand copies daily. The Sentinel has 3,000 single-copy outlets, meaning the computer predicts the sales 21,000 times a week (seven days times 3,000 outlets). The Times Herald-Record has 600 outlets, requiring 4,200 predictions a week.

For a computer, it's easy, but for a human, it would be mind-boggling to make such computations.

The parent companies of the Orlando and Middletown dailies—respectively, the Tribune Co. of Chicago and Ottaway Newspapers Inc. of Campbell Hall, N.Y.—are considering such computer systems for other newspapers they own. ☐

The computer system results in fewer unsold or returned papers, and Cox believes the advantages are so great that the system will almost sell itself to independent contractors.

A Healthy Newspaper Needs Increased Circulation. Papertrak™ is the Answer.



The more you know about your current and potential subscriber base, the better you can do your job.

If you know who your subscribers are, you can:

1) develop Total Market Coverage products (TMC) to sell to your advertisers
2) devise strategies to increase your circulation base

To manage all this information, you need a total computer solution—Papertrak, from Data Sciences, Inc. The Papertrak family of software offers computerized solutions for **Circulation Management** and **TMC**, as well as solutions for **Display Advertising** and **General Accounting.**

To get more information or to arrange a free hands on demonstration, please call or write today. **800-826-7245**

MEDIA THINK TANKS

The press is under increased scrutiny from scholarly organizations that examine ethics, credibility, policy issues

BY MARGARET GENOVESE
presstime staff writer

Can regular accuracy audits result in fewer credibility problems for newspapers? How well do the news media report on the arms race? Does TV news give newspapers a bad name?

Examination of these and other questions has accelerated in the 1970s and '80s with creation of about a dozen organizations whose mission, at least in part, is to study the news media.

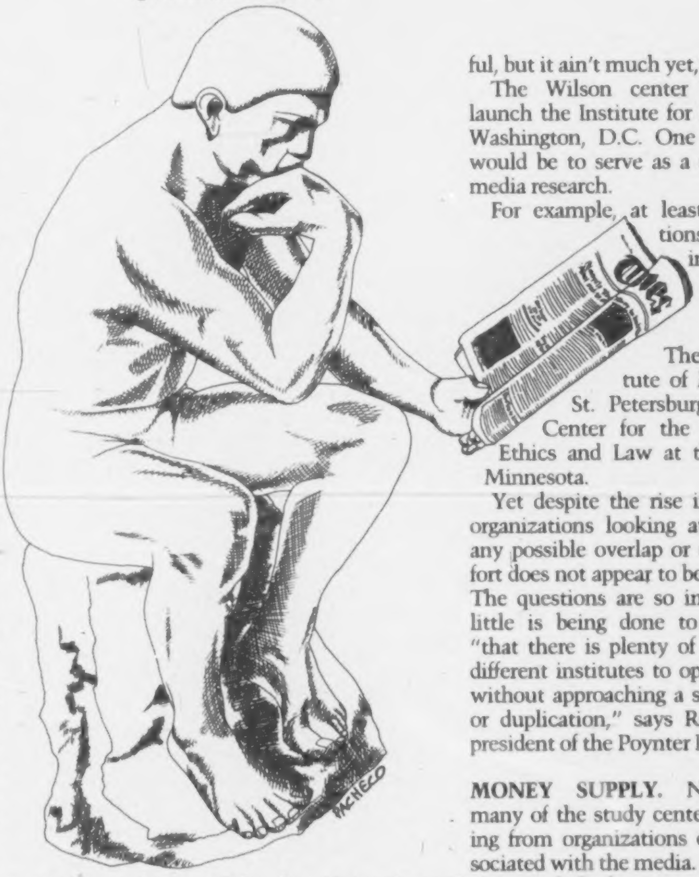
Almost all are producing scads of reports. Many also conduct conferences on media topics. Most are on college campuses. A lot have highfalutin titles. Some are supported financially and in other ways by the media.

Stephen Hess senior fellow and press/politics scholar at The Brookings Institution, a widely known public policy "think tank" in Washington, D.C., says the recent growth in what could be loosely labeled "media think tanks" represents "the beginnings of social scientists' taking the press seriously. This has been definitely lacking."

Ten years ago, it was possible to attend the John F. Kennedy School of Government at Harvard University without hearing a word about the role of the press in the political process, says Hess. This September in Cambridge, Mass., the JFK school will open its new Center on the Press, Politics and Public Policy.

Many get their funding from organizations or individuals associated with the media.

It was the absence of a high-level institution devoted exclusively to studying press issues and problems that prompted establishment of the Gannett Center for Media Studies at Columbia University. Until the Gannett center opened its doors on the New York City campus in March 1985, anyone who wanted to study the media "had to be at the back of the bus at other kinds of think tanks," says Director Everette E. Dennis.



Peter Braestrup, editor of the Wilson Quarterly at the Smithsonian Institution's Woodrow Wilson International Center for Scholars, says formation of the Gannett and Harvard centers are "encouraging signs of new interest."

But he cautions against exaggerating the importance of the growth spurt. "It may be the beginning of something useful, but it ain't much yet," he says.

The Wilson center itself hopes to launch the Institute for Media Studies in Washington, D.C. One of its functions would be to serve as a clearinghouse for media research.

For example, at least three organizations are now delving into journalism ethics: the Gannett center, the Ethics Center of The Poynter Institute of Media Studies in St. Petersburg, and the Silha Center for the Study of Media Ethics and Law at the University of Minnesota.

Yet despite the rise in the number of organizations looking at media matters, any possible overlap or duplication of effort does not appear to be a major concern. The questions are so important—and so little is being done to explore them—"that there is plenty of room for several different institutes to operate in this area without approaching a situation of waste or duplication," says Robert J. Haiman, president of the Poynter Institute.

MONEY SUPPLY. Not surprisingly, many of the study centers get their funding from organizations or individuals associated with the media.

Annual budgets range from several thousand to several million dollars. Fund raising is going on for some, including Northwestern University's recently announced Institute for Modern Communications, which is trying to assemble a $25-million financial base.

The richest so far is the Gannett center, which is financed by a single source—a $15-million, five-year grant from the Gannett Foundation.

Several others also have major media contributors. The Silha center received a $350,000 endowment from former Cowles Media Co. Chairman Otto Silha and his wife, Helen. The Harvard center will bear the name of Joan Shorenstein Barone, a journalist whose family donated $5 million in her memory.

Other-than-media sources also are tapped for financial assistance. New York University's Center for War, Peace and the News Media, for instance, is funded by the Carnegie Corp. of New York City and the W. Alton Jones Foundation of Charlottesville, Va.

The Program for Information Resources Policy, another Harvard University offshoot that explores media issues, is supported financially by about 100 "affiliates," ranging from Copley Newspapers, The New York Times and the media firm Lee Enterprises Inc., to the Central Intelligence Agency, the National Security Agency and the U.S. Postal Rate Commission. This intriguing combination of funding sources reflects the fact that the news media constitute only one of the areas of interest for the program.

Several other research institutes also look broadly at "information" or "communication" issues, rather than narrowly at issues as they affect the media alone.

PROGRAM RUNDOWN. Besides being the richest media think tank, the Gannett center also is generally viewed as the most ambitious. It has three major divisions—a residential fellows program, a conferences and seminars program, and a new-technology program aimed at acquainting journalism educators with advances in technology.

Sponsoring research and then publishing the findings is an activity of most, if not all, of the institutes. Publications may be historical or descriptive, contain recommendations for action, critique news coverage, or advocate a position on a media issue. Among them:

- A paper, "Changes in the Information Industries—Their Strategic Implications for Newspapers," issued by Harvard's Program for Information Resources Policy
- A newsletter, "Deadline," published by NYU's Center for War, Peace, and the News Media, which contains reviews of media reports on the arms race and U.S.-Soviet relations
- A paper, "Cable Television and the First Amendment," issued by the Media Institute—a business-oriented center in Washington, D.C., sponsored in part by the press—advocating that cable television should have the same First Amendment rights as newspapers
- A paper, "An Ethical Audit," published by the Gannett center, with suggestions on how to measure the accuracy of newspaper articles.

> *"There is plenty of room for several different institutes to operate in this area."*

Organizing conferences is the second major activity of the organizations.

For example, a second University of Minnesota think tank in Minneapolis—the Media Management and Economics Research Center—recently held a conference for media executives on managing creative employees. It was funded by ANPA Foundation.

The Poynter Institute's Ethics Center combines the two functions. It typically conducts a seminar on a major media topic, then publishes a transcript of the proceedings in book form. The latest is *Believing the News,* which discusses a theory by Creed Black, chairman and publisher of the Lexington (Ky.) Herald-Leader, that television is chiefly to blame for newspapers' credibility problems.

News professionals are frequently invited to participate in such conferences. Some of the institutes also provide working journalists with research opportunities. Others are limited to sponsoring research by their own faculty, students and staff.

By no means are these newer centers the only places media study is being conducted. Some of the older, more broadly based think tanks also conduct media research. The Aspen Institute in Colorado has a Program on Communications and Society. The Brookings Institution has press scholar Hess on board. The American Enterprise Institute in Washington, D.C., the Rand Corp. in Santa Monica, Calif., and The Twentieth Century Fund in New York City also conduct media research projects.

In addition, many media-related organizations engaged in such things as training also study press issues from time to time.

Clearly, there is no dearth of forums to address the many contemporary issues involving the news media. All in all, says the Gannett center's Dennis, "It's a marvelous time to be in the catbird's seat, looking at media issues and problems." ☐

The growing list of organizations that study media

Organizations that specialize in studying media issues include:

College-based or College-affiliated Media Study Institutes

Center on the Press, Politics and Public Policy, Harvard University, Cambridge, Mass.
Center for Telecommunications and Information Studies, Columbia University, New York City
Center for War, Peace and the News Media, New York University
Gannett Center for Media Studies, Columbia University
Institute of Bill of Rights Law, College of William and Mary, Williamsburg, Va.
Institute for Modern Communications, Northwestern University, Chicago
Media Management and Economics Research Center, University of Minnesota, Minneapolis
Program for Information Resources Policy, Harvard University
Research Program on Communications Policy, Massachusetts Institute of Technology, Cambridge
Silha Center for the Study of Media Ethics and Law, University of Minnesota
Washington Program in Communications Policy (affiliated with the Annenberg schools of communications at the University of Pennsylvania and the University of Southern California), Washington, D.C.
Centre for Mass Media Studies, University of Western Ontario
McLuhan Program in Culture and Technology, University of Toronto

Independent Media Study Institutes

Ethics Center, The Poynter Institute for Media Studies, St. Petersburg
Freedom of Expression Foundation, Washington, D.C.
The Media Institute, Washington, D.C.

ON FEB. 27, 1986
THE GRAND RAPIDS PRESS
SCOOPED THE WORLD.

The reporters and editors were hardly aware of it.
The wire services ignored it. Nobody called.

But on that date the Grand Rapids Press
made publishing history: They became the first
to run a display ad produced completely electronically.

Many have promised it,
a few have designed systems that do part of it.
Only the Camex Supersetter at the Grand Rapids Press
did it all—the type, halftones, artwork, reverses,
text rotations and hand-drawn shapes—
composed, made up, and set in one piece,
on one system.

The new era is here. Call us to find out how
Supersetter can get you into it.

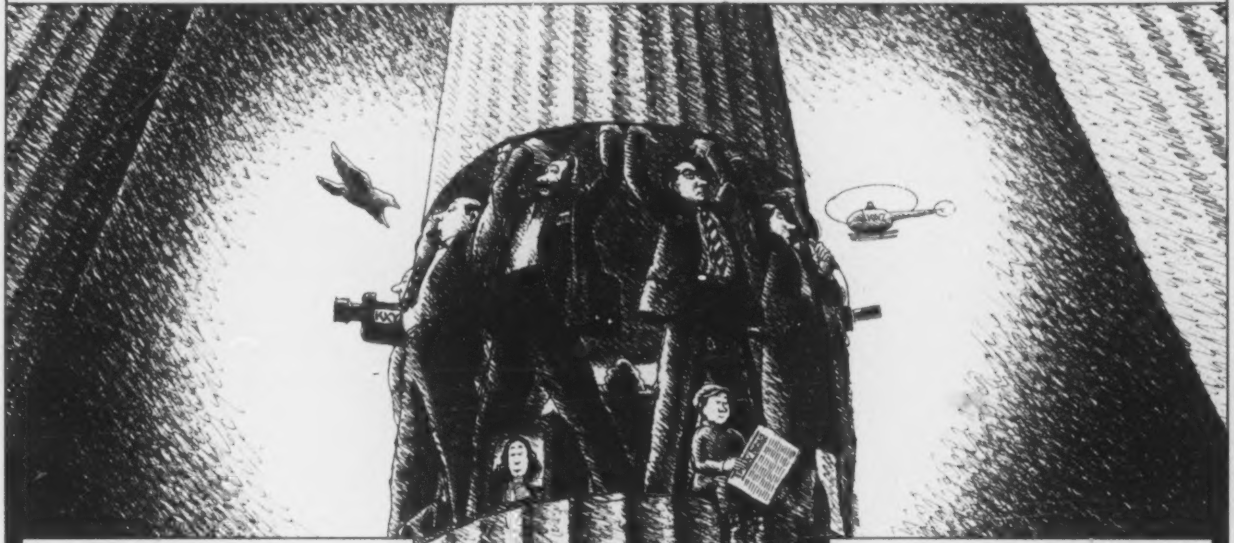
"The People & The Press," Ad #7 in a series

Does a free press strengthen democracy?



That's the acid test, isn't it? The ultimate "worth" question. What else is a free press for, finally?

At our request, Gallup pollsters recently put that question to a national sample of American citizens. It was part of a comprehensive investigation of public attitudes toward the press.

And the answer was a heartening "yes."

54% thought a free press strengthened democracy; 23% thought it hurt democracy; 13% said neither; and 10% didn't know.

Among people who knew a lot about the press, 58% thought it strengthened democracy; 22% thought it hurt; 16% said neither; and 4% didn't know.

Also heartening, those who said a free press strengthened democracy were as likely to be youthful Democratic women as venerable Republican men.

People from all social and political groups responded affirmatively. They disagreed on lots of press issues, but not on this one.

What do you think?

The primary purpose of our investigation — and the ads and Times Mirror Forums that discuss it — is to learn more about how people like you see our business.

To that end, we'd like to learn your views of press issues, especially your opinion about a free press's contribution to democracy.

Please send them to our chairman, Robert Erburu, Times Mirror, Times Mirror Square, Suite 100, Los Angeles, CA 90053.

He's also the person to write for a summary of our investigation or our new annual report. Or you can call our public affairs people at (213) 97[illegible]946.

Who we are

We own the media properties to your right. In terms of sales, we rank 135th among Fortune magazine's current "500." In terms of net income, we're 70th.

Times Mirror Newspapers:
Los Angeles Times; Newsday; Dallas Times Herald; The Denver Post; The Hartford Courant; The Morning Call (Allentown, PA); The Stamford Advocate and Greenwich Time (Connecticut).

'GUT FEELING' NOT GOOD ENOUGH

Managers beef up their skills to interview job applicants

BY CLARK NEWSOM
presstime labor writer

> *"It's pretty easy to teach people what not to ask. It's tougher to train them how to listen," one personnel specialist observes.*

Employers are well aware that federal and state laws prohibit discrimination in employment on the basis of race, color, sex, religion, national origin and age. Yet the process of interviewing job applicants is a tricky one, and general familiarity with the anti-discrimination laws is not enough to keep an employer out of trouble, according to specialists in personnel relations.

"There is increasing concern about legal aspects," says Terry T. Travelstead, vice president/personnel of USA Today in Arlington, Va.

The trends are "watching your Ps and Qs more than before" and "more emphasis on training supervisors how to interview," says Bobby G. Reid, personnel director of Morris Communications Corp. in Augusta, Ga.

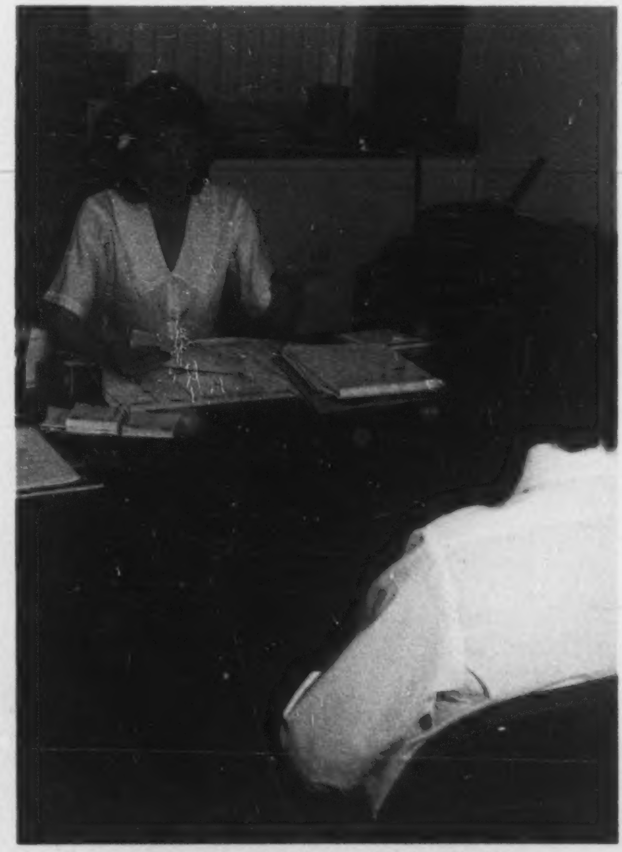
There also is another reason for increased emphasis on interviewing skills.

"Interviewing has become much more important because it's difficult to get information from former employers," says Gerri Cordle, vice president and director of employee relations at The Orlando Sentinel. Some companies have grown reluctant to give out extensive information as a result of lawsuits job seekers have brought against previous employers over information that was given out in reference checks [**presstime**, Dec. 1985, p. 22].

To assist interviewers, experts in the field have developed checklists of what may be asked of a job applicant—and what may not be asked. (See lists, p. 14.)

However, Travelstead of USA Today observes: "It's pretty easy to teach people what not to ask. It's tougher to train them how to listen." Interviewers need "good instincts" and need to take the time necessary to conduct an interview even with the pressure of operational demands, she says.

While personnel specialists who screen people and make recommendations to the people that hire are usually skilled interviewers, many of the supervisors and department heads that make the hiring decisions are not. For that reason, newspapers are devoting resources to training in this area.



Queries posed to candidates should relate directly to the job.

TRAINING DESCRIBED. The Orlando Sentinel has an interviewing skills program in which supervisors list six major responsibilities of a job in their department. Then they list the skills needed to carry out those responsibilities and develop questions pertaining to the skills. "If the question doesn't relate to the skills, then you shouldn't be asking it," says Cordle. "That takes care of all the Equal Employment Opportunity Commission issues."

Another expert who conducts sessions for mid-level newspaper managers recommends a similar procedure called "target interviewing." Marge E. Bratcher, assistant director of The Poynter Institute for Media Studies in St. Petersburg, says, "You start with a job description and target seven to 10 of the critical elements of the job." Non-traditional questions are then structured in a way that will try to determine how people have performed in past jobs.

For example, for a supervisory job in the pressroom, a question might be: "How did you handle a breakdown of equipment in the pressroom at a critical time?" to find out how a person reacted under pressure. "The questions are totally job-related and legally defensible," Bratcher says.

Several newspaper groups are taking their interviewing programs into the field. San Antonio-based Harte-Hanks Communications Inc. uses a company-designed supervisory training program that includes interviewing workshops that run about five hours. The company has a network of about 20 on-site trainers that has developed over several years, says Floyd Whellan, senior corporate director of human resources.

"The feedback has been positive," says Whellan. "People have commented that they have become more efficient and effective in interviewing."

Morris Communications' "Managing Employee Performance" program will soon include a daylong session devoted to interviewing, according to William I. Beauchamp, corporate training director. The sessions will feature a videotape titled "More Than a Gut Feeling," which is produced by American Media in Des Moines and which highlights interviewing techniques and involves role-modeling.

Gannett Co. is already using "More Than a Gut Feeling." The presentation is one of the components of an interviewing workshop available to all of the company's newspapers, broadcast stations and other operations.

The "Picking People" program at Gannett also includes a leader's guide and participant's manual for advance reading. It is designed as a four-hour workshop with the option to go a full day. The workshop is normally conducted by a personnel specialist but can be handled by any department head "who has good platform and interviewing skills," says Ed Baron, director of training and development.

The company's interviewing workshop, which began last March, "is one of a series that we're doing on personnel management," Baron says. "The feedback we're getting is that it's what they needed."

Charles E. Smith Jr., director of human resources for Gannett's Morning News and Evening Journal in Wilmington, Del., says the interviewing workshop is mandatory for all managers and supervisors at the Wilmington papers. The program "put organization and structure into the training program we had," Smith says. "It's practical, realistic and meaningful."

The New York Times Regional Newspaper Group, which includes 23 dailies in the South, also has a program to teach supervisors and managers how to do effective interviewing. During the two-day, on-site sessions, participants are coached in such interviewing skills as asking open-ended questions—that is, questions that cannot be answered with a "yes" or "no."

When hiring a key manager, some companies, including Harte-Hanks, use an outside industrial psychologist to conduct an "assessment" interview as a supplement to the in-house interviewing process.

But most say they do not go that route. "Rather than using an outside consultant," says Cordle of Orlando, "our philosophy is that we train our managers and prefer they use their skills." ☐

How to Avoid Asking the Wrong Questions

Clarine (Charlie) White, personnel director of the Sarasota (Fla.) Herald-Tribune, advises interviewers to ask themselves two broad questions when seeking information from job applicants:

1. Will the answers to this question, if used in making a selection, have the disparate effect of screening out minorities and/or members of one sex?

2. Is this information really needed to judge an applicant's competence or qualifications for the job in question?

"If you cannot answer 'no' to No. 1 and 'yes' to No. 2, don't ask the questions," she says.

Patricia P. Renfroe, ANPA manager/personnel relations, uses a quiz in presentations to state and national newspaper associations on how to select employees legally. For example, you may ask an applicant if he or she has been convicted of a crime, but you may not inquire about arrests. An arrest is not an indication of guilt, she notes, and historically minorities have suffered proportionately more arrests than others.

Renfroe says the question that usually ignites the most discussion relates to national origin. While it is improper to ask where an applicant was born, it is within bounds to ask whether he or she has a permanent immigration visa or "green card."

Personnel experts say that among the specific questions that **can** be legally asked are:

- "Are you between 18 and 70 years of age? If not, state your age." The Age Discrimination in Employment Act prohibits discrimination on the basis of age against individuals who are between the ages of 40 and 70. In this question, you have not asked specific age within the protected group.
- "Do you have any impairments, physical, mental or medical, that would interfere with your ability to perform the job for which you have applied?" This is a job-related question, not a general question.
- "What foreign languages do you speak?" But do not ask where the individual learned the language because it may identify national origin.
- "Have you ever served in the armed forces of the United States?" This question relates to experience.
- "Can you work overtime on short notice?" If used, this question must be asked of both men and women.

Among the questions that should **not** be asked are:

- "Where were you born?" This is a question that will show national origin.
- "What is your marital status?" This is not a job-related question, and the information cannot be used as a hiring criterion.
- "What is the name of your nearest of kin?" This question may show national origin if the name differs from that of the applicant.
- "If you served in the armed forces during wartime, which war?" The answer would indicate age.
- "What clubs, societies or lodges have you joined?" Answers could provide information regarding national origin or religion.
- "How many children do you have?" Because men are not usually asked this question, it is generally viewed as discriminatory.

ANPA's Renfroe points out that a newspaper may refuse to hire a homosexual, except in a few states and cities that have laws prohibiting discrimination against homosexuals. In those areas that do not have such laws, she says, it is permissible to ask whether a person is homosexual.

She also notes that pregnant women may not be refused employment unless there is clear evidence that the work will endanger their health, and that employment may not be refused to a woman because the job requires extensive travel.

Which supplier of newspaper publishing systems has seen the most dynamic growth in the past three years?

Newspaper imaging.

Chemco has been serving the newspaper business for almost 100 years. We've seen a lot of changes, many of the most interesting of them coming from Chemco's own research and development.

Beginning as Powers Photoengraving in 1899 with quality engravings for New York City newspapers, we followed up by introducing, in the 1920s, the first roll film camera; then we pioneered in powderless etching machines. Still later came Chemco's contributions during the conversion from hot type to photocomposition.

More recently we brought you a laser-imaged phototypesetting paper

'Don Mario's' Dilemmas

Mexican publisher Mario Vázquez-Raña *has the double chore of battling personal controversy while rebuilding* UPI

BY ANDRES OPPENHEIMER

© 1986 The Miami Herald

(Editor's note: Since he emerged last autumn as the probable owner of UPI, Mario Vázquez-Raña has increasingly been the focus of media attention throughout the hemisphere. This article by Andres Oppenheimer of The Miami Herald is based, among other things, on six hours of interviews with Vázquez-Raña. It originally appeared in the May 19, 1986, edition of the Herald and is reprinted with permission. Typical of the charged debate that has swirled around Vázquez-Raña, this piece drew some criticism from Pieter VanBennekom, UPI vice president for Mexico, Central America and the Caribbean. VanBennekom told **presstime** *that Oppenheimer mistakenly identifies Eduardo Garcia Valseca in the story as "El Coronelito," son of the founder of the El Sol de Mexico newspaper group, when in fact "El Coronelito" was Eduardo's half brother, Jose Alberto. Oppenheimer responded there is "no question" that Vázquez-Raña was referring to Eduardo in that part of the story on "El Coronelito." Jose Alberto, Oppenheimer said, had been dead for a year when Oppenheimer interviewed Vázquez-Raña.)*

Mario Vázquez-Raña, the Mexican press lord, denounces the "jealous dwarfs" who say bad things about him.

"Lies, pure lies," he says. In his hire are 50 bodyguards. His penthouse office is a 27,000-square-foot private fortress with a personal barbershop, a punching-bag gym and a 26-seat movie theater. A gourmet chef manages his kitchen.

Don Mario, as his 11,000 employees call him, is the newspaper tycoon who promises to breathe new life into, if not resuscitate, financially ailing United Press International. (See story, facing page.)

To much of America, this is no trivial matter. UPI is America's second-largest news agency. Some 860 newspapers and 3,300 radio and television stations convey UPI news to the public.

Never before has such a major American wire service functioned under foreign ownership. Publishers are hopeful. They also are nervous. For in Mexico, Mario Vázquez-Raña is no stranger to dispute and controversy.

UPI

Vázquez-Raña (right) and Houston businessman Joe Russo celebrate their momentous purchase.

In six hours of conversations (in early May), Don Mario said he is not buying UPI as a front man for the Mexican government or his friend Luis Echeverria, the former president.

There is no secret Mexican plot, he said, to use the influential wire service to enhance his country's image.

Nor is there any secret, he professed, to how he rose from manager of his family's furniture business to fame as international Olympic sports functionary and—now—media mogul.

Vázquez-Raña, 53, says his critics make up all sorts of things to discredit him. "I've been investigated over and over, and the only thing they've come up with are rumors that are born out of envy from jealous dwarfs," he said.

The latest flap: the mysterious death of his critic Carlos Loret de Mola. Vázquez-Raña says the death was a car accident, pure and simple.

Early last February, two peasants found the naked bodies of Loret de Mola, 64, and his secretary, a 29-year-old woman. They found them lying next to Loret de Mola's charred Mercedes about 600 yards below a desolate mountain road leading to the sea resort of Ixtapa-Zihuatanejo.

Loret de Mola, a former governor of Yucatan, was a firebrand political author. At the time of his death, he was writing a book about the events that led to Vázquez Raña's control of the El Sol newspaper chain.

COVER-UP? The dead man's son says his father's manuscript disappeared.

"My father died in very mysterious circumstances," said Rafael Loret de Mola, a Mexico City journalist. He vows to complete his father's book.

Loret de Mola's death came only a year after an assassin shot and killed another well-known Mexican journalist, Manuel Buendia, a columnist for El Exelsior newspaper. The gunman caught him from behind in a parking lot. That murder set off a political scandal in Mexico.

Loret de Mola's son now says the government is covering up his father's death to prevent another political storm.

What seems to be clear is that Loret de Mola's Mercedes went off a sharp curve and plunged into a ravine. The two peasants discovered the bodies sprawled in the underbrush. They notified authorities in a nearby town. The bodies were buried in unmarked graves.

When relatives heard about an accident, started looking for the pair and found the graves, questions began to arise:

Why, the son wanted to know, were the graves unmarked when both victims had identification papers?

And what happened some few hours before the deaths when Loret de Mola Sr. stopped his car at a military post? Military authorities are not saying, the son says.

The government, pressed by the relatives, exhumed the bodies and conducted autopsies. Tests showed that both victims died, the government asserted, with "acute" amounts of alcohol in their blood.

'ABSURD' REPORT. Loret de Mola Jr. said the report is absurd.

"My father never drank. There are thousands of friends of his who can testify about that. That report was either fabricated, or they injected alcohol into my father's corpse before doing the autopsy."

Loret de Mola Jr. said that, since he first denounced the alleged cover-up, he has received anonymous threats, and sometimes strangers follow him on the streets.

"I'm not saying that my father was murdered," Loret de Mola Jr. said. "I'm only saying there are enough questions to open an investigation, and that the case shouldn't have been closed."

At an Inter American Press Association conference (March 3-6 in Salvador, Brazil), U.S. editors asked Don Mario about the matter. He promised a full investigation.

When asked about it again recently, he took a brown briefcase from a drawer and pulled out dozens of reports and photographs. "I had 17 of my star reporters investigating the case full-time for several weeks, and I can say that I now have a pretty good idea of how this man died," he said.

The journalist was drunk, as was his secretary, Don Mario said. A recent avalanche had narrowed the 21-foot-wide mountain road. The driver, simply follow-

Vázquez-Raña Takes Over UPI, Outlines Plan for Improvement

Mario Vázquez-Raña, who took control of United Press International June 11, the day after a U.S. Bankruptcy Court in Washington, D.C., released the wire service from Chapter 11 bankruptcy, has begun to lay out his plans for the wire service

The Mexican publisher owns about 90 percent of UPI, while a partner, Houston businessman Joe Russo, owns about 10 percent. Purchase price for the company was about $40 million [presstime, June 1986, p. 102].

From that amount, about $15 million will be pumped into UPI for capital investment and operations; $11.5 million will be used to settle claims for back taxes, bank debt, pension fund obligations, legal fees and other costs; about $9.5 million will be paid to large unsecured creditors, representing about 45 cents on every dollar owed; $1.5 million will go to pay in full unsecured creditors owed less than $3,000; and $2.25 million will pay back wages and other employee claims.

In an open letter sent to subscribers the day he assumed ownership, Vázquez-Raña discussed his plans for UPI. Portions of that letter follow:

"We will announce shortly new directions and goals for New UPI. . . . The overriding objective will be to improve the quality of the UPI editorial report, probe deeper into the news, expand our sports coverage, expand our reporting on the arts, culture and entertainment, strengthen our international financial coverage, and increase the quality of the news picture network. . . .

"In the near term, our efforts at improvement will be limited by existing constraints. But we are totally committed to a major and rapid modernization and rebuilding effort, and we hope that within 12 months we will be well along the road to completing this task.

"We are fully committed to the establishment of a worldwide communications system, linked by a global satellite network, as well as to the installation, in as few months as possible, of a computer system for the rapid distribution of news in all areas.

"In the international arena, we hope it will be possible for UPI to have news bureaus or correspondents in all countries around the world. . . .

"In the United States, we will bolster our coverage of those areas neglected in the past because of economic circumstances . . . even the remotest corners of the nation.

"On the business side, the use of modern financial techniques and the knowledge of the administrative process is basic to the well-being of any corporation. We will reorganize UPI as necessary to insure that it is at least as well run as any other news organization.

"On the editorial side, valuable new editors will be added to the existing ones who will remain with me, so that together, they can aid in the building of New UPI. We will ask the most prestigious names in the business to accept membership on an editorial board to help us achieve UPI's goal of becoming the most valuable news and information collection and distribution resource of the information age.

"Reflecting our subscriber base, a very high percentage of the members of this board obviously will come from the United States.

"We will quickly take steps to win back those of our star reporters and editors who left the agency for economic reasons, but we will also hire new reporters and editors who will bring the background, the expertise, and the talent required for the challenges of the future.

"We will try to meet the unique news and information needs of the print media, radio and television, electronic data base publishers and individual users who wish to be informed of what is happening in their areas of interest with the combination of speed, accuracy and insight that only an international news agency can deliver.

"Throughout the purchase process, in over 100 interviews that I have given to all of those who asked me, I have realized there is a degree of concern about a Mexican purchasing an international news agency headquartered in the United States.

"On this subject, let me again be unequivocal: I have no interest or intention of using the news agency to further any personal ambition, to favor any person, any cause, any region or any country.

"You may rest assured that UPI will strengthen the American tradition of press freedom through an implacable defense of the principle of the free flow of information around the world. . . ."

ing his lane, accidentally drove off and fell to his doom, he said. The car exploded, burning and hurling out the bodies.

The peasants didn't find them until they were badly decomposed. The small town's authorities feared epidemics, he said, and that's why the bodies were buried promptly in unmarked graves.

It was only later that police went back and searched the site. They found a woman's purse with a .22-caliber pistol, a vibrator and her IDs. Loret de Mola's wallet was found nearby.

'EL CORONELITO'. Don Mario says his critics are using the accident to resurrect old stories about his alleged ties to former president Echeverria. Among those he blames is "El Coronelito," the Little Colonel.

He is Eduardo Garcia Valseca, 37, the son of the late Col. Jose Garcia Valseca, the founder of the El Sol de Mexico newspaper chain. The government took over the chain in 1972, after the old colonel ran into heavy debts with government banks.

Don Mario now owns that chain. He bought it from the government in 1976 for $12.8 million and a commitment to assume the firm's $78 million in debts. (UPI's Washington office says the figure was $84 million. *ed.*)

Don Mario prides himself on his financial success. He dramatically turned around the chain's finances in six months. The $78 million in debts disappeared. The company is debt-free today, he says.

The chain grew from 34 to 62 publications with a combined daily circulation of 2.1 million. His publications now account for 27.5 percent of all the paper used by Mexican newspapers and magazines.

But El Coronelito is skeptical. He says Don Mario is merely the manager for Echeverria's vast fortune, "and that's something that everybody knows."

If Don Mario was such a magnificent administrator that he could eliminate a $78 million debt in six months, "I would nominate him for president of Mexico," he said. "He would be the only man capable of solving Mexico's ($100 billion) foreign debt."

Garcia Valseca Jr. said former president Echeverria and Vázquez-Raña "stole" his father's company by "intimidation, pressures and conspiracies." They paid his father $12 million for a company worth at least $100 million, he said.

IT WAS BANKRUPT. Vázquez-Raña says the company was bankrupt and he paid a fair price.

Besides, one shouldn't take El Coronelito seriously, said Don Mario. He sometimes calls him "that crazy drunk." He says El Coronelito hates him because he fired him from El Sol.

"At five o'clock in the afternoon, I would hear gunshots on the floor below my office. I would ask my secretary what was going on and she would tell me, "El Coronelito is shooting."

"The guy used to come to work totally drunk and start shooting all over the place," he said. "I put up with this for a couple of months, until I got mad and fired him."

Replies Garcia Valseca Jr.: "I never, ever worked at El Sol." He said the shooting incident probably referred to a half-brother of his, Jose Alberto, who was El Sol's public relations manager and died last year of cirrhosis.

> *"The only thing they've come up with are rumors born out of envy from jealous dwarfs."*

"I understand that there was a shooting incident once, and it's possible that my brother may have shown up at work drunk more than once," he said. "Vázquez-Raña is using my brother to discredit me."

Both brothers worked at the chain and both were drunk, Vázquez-Raña says. But it was Eduardo himself who fired the shots. "There are hundreds of witnesses who saw that."

Don Mario insists he is nobody's front man.

"That rumor about me and Echeverria, I can't get rid of it," he said. "The easiest way for me to finish with this story would be to attack Echeverria in my newspapers. But I'm not going to succumb to that."

He acknowledges, however, that he made a mistake that contributed to "that rumor."

Shortly after buying the company, he named former Echeverria cabinet minister Mario Moya Palencia as director general of the El Sol chain. He is long gone.

HIGH-FLYING AMBITIONS. Vázquez-Raña says he made his fortune in his family's Hermanos Vázquez furniture store chain. He calls it one of the most profitable businesses in Mexico. He sold out to his brothers in 1982.

Now . . . his fortress-office (in Mexico City) is the takeoff runway for his high-flying wire service ambitions. . . .

Ten white telephones connect him with his future Washington headquarters and the rest of the world. A control panel gives him instant translations into English, German and French. Six translators—three in the morning shift, three at night—stand ready in an adjacent room.

He says he will open UPI bureaus in "the most remote corners" of the world. He wants to rehire dozens of first-rate reporters who have left the troubled wire service in recent years. He says he will expand UPI's financial and sports news.

He will turn around UPI's money problems—without interfering in its news operations, he says. He will appoint an American, "the best in the business," to do that.

"All I ask from U.S. publishers is eight months of trust," he says. "I'm very worried, because I'm not American. The people in the U.S. media are asking themselves what Vázquez-Raña will do with the news agency."

He answers, "I can assure you that the agency will be more American than before."

'HE'S COMMITTED'. Maxwell McCrohon, UPI's editor-in-chief, says he is confident that Vásquez-Raña will keep his promise.

"He is committed. He will maintain our independence and editorial integrity," McCrohon said. "If he doesn't, we would probably be the first to object."

Asked about journalistic ethics in Mexico, where poorly paid reporters accept paychecks from government agencies they cover, Vázquez-Raña says he prohibits that in his company. He fired "two or three" newsmen he caught, he says.

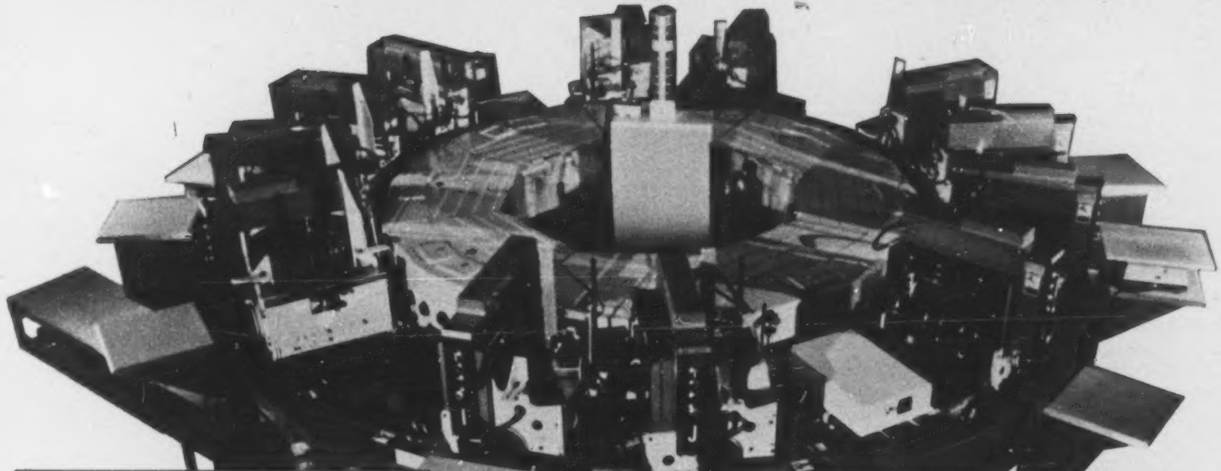
Some of his best reporters, he says, make 15 percent commissions on ads they sell. "A good reporter can double his salary this way." But they are not allowed to sell ads to the sources they cover, he says.

Don Mario says he will work out of UPI's Washington offices 180 days a year, using his Falcon 50 jet—or one of his two other planes—to fly back and forth.

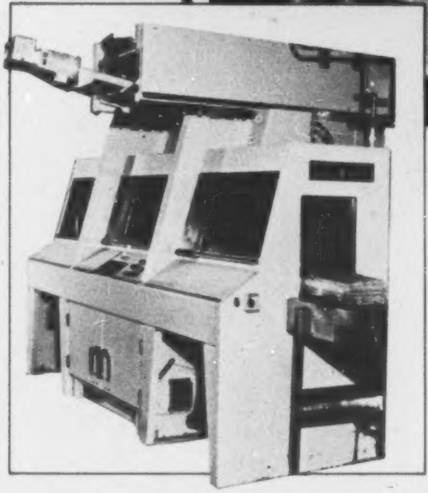
He looks forward to his U.S. travel. In Mexico, he rarely leaves his office. A 24-hour private security force protects him and his family from possible kidnapping. It's too much trouble taking a seven-guard entourage to a restaurant, he says.

His wife, Francisca, and the younger of his five children will remain in the family mansion in Mexico City. So will his two caged bears, Nacho and Olimpia. They are a gift from the Soviet Olympic organizers. □

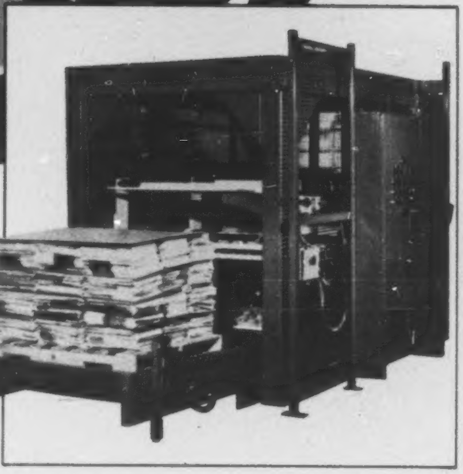
Automation is one thing. Productivity is three.



NP-1472 Newspaper Inserter



BOSS-60 Packaging System



NP-100 Programmable Palletizer

Harris Graphics' NP-1472 inserter, BOSS-60 packaging system and NP-100 programmed palletizer are designed to bring new productivity to newspaper mailrooms.

The NP-1472 has the versatility to adapt to any inserting job quickly and easily. It produces packages of up to 300 broadsheet pages in many jacket formats and automatically repairs incomplete sets.

The BOSS-60 automates packaging by doing the work of two conventional lines in half the floor space and with half the labor. The integrated functions produce high quality, strapped or unstrapped bundles at up to 50 per minute.

The NP-100 neatly palletizes stacks or bundles quickly, for better product protection and improved storage/retrieval. A programmable logic system controls all functions.

Alone, each is a dependable unit that pays off investment with lower operating costs and increased speed.

Together, the three form an integrated system that will raise mailroom efficiency higher than it's ever been. Each machine is designed to work smoothly with the others, moving product from press to pallet quickly, precisely, and with a minimum of labor.

The NP-1472, BOSS-60, and NP-100 bring more than automation to material handling. They deliver productivity.

FOIA

Landmark access law, now 20 years old, has had both success and disappointments

BY MARGARET GENOVESE
presstime staff writer

The Dallas Morning News invoked it, obtained mounds of government documents, and produced a 1986 Pulitzer Prize-winning series of stories revealing a pattern of racial discrimination and segregation in public housing in the United States.

The Pittsburgh Press used it to detail deficiencies in the operation of the federal Health Care Financing Administration for another 1986 Pulitzer Prize-winning series on organ transplants.

The San Jose (Calif.) Mercury News used it to obtain federal bank records for yet another 1986 Pulitzer Prize-winning series on the transfer of wealth out of the Philippines by former President Ferdinand E. Marcos.

"It" is the Freedom of Information Act, the federal open-records law that turns 20 years old July 4.

Use of the act is not a prerequisite to winning a Pulitzer, of course, but for reporters who are not on a tight deadline, who are persistent in following through on their requests and who are backed by a news organization willing to pick up the tab, using the FOIA can pay off.

"There's absolutely no doubt that a great deal of information has become available to the press and to other citizens that otherwise would have been kept from the American public," says Edward R. Cony, associate editor of The Wall Street Journal. "I think that is the most important point to make."

"On the negative side," Cony adds, "there has been a good deal of frustration in dealing with the mechanism of getting the information that you want."

Primarily because of the time it takes agencies to process formal FOIA requests, most reporters have become resigned to the fact that the act is not a particularly effective news-gathering tool for spot news, says Tonda F. Rush, ANPA assistant general counsel.

Those delays will get worse if agencies' FOIA compliance offices become targets for government budget cutters, observes Elaine P. English, director of the FOI Service Center in Washington, D.C., a project of the Reporters Committee for Freedom of the Press.

"I think we are entering some very troubled times for the Freedom of Information Act, particularly with Gramm-Rudman," the federal budget-balancing law, agrees Bruce W. Sanford, First Amendment counsel for the Society of Professional Journalists, Sigma Delta Chi.

Sanford notes that the FOIA has "just weathered six years of an administration that has been downright hostile to it," a trend that other observers say is destined to continue, no matter who's in power.

"All that having been said," Sanford adds, "I think it is a tribute to the act that the press continues to use it, and use it effectively, to obtain information about government and publish it."

In fact, the FOIA probably is being used by the press more today than ever before.

"There's no way to know statistically, but I think it is fairly clear there are more (press) requests," says Harold C. Relyea, a FOIA expert at the Congressional Research Service of the Library of Congress. He credits greater awareness of the act by reporters, probably because of its increased use by the wire services, and greater willingness of news organizations to give reporters time to make FOIA requests and receive materials.

FOIA PAST. Experts agree that the FOIA's greatest value may be symbolic. Its mere existence encourages agencies to divulge information voluntarily. "It becomes sort of the lodestar for agencies to use in deciding what kinds of things are considered public matters and what are not," says ANPA's Rush.

Incredible as it might seem today, for the first 190 years of its existence, the U.S. government had no legal requirement to provide public documents to the people.

Impetus for the FOIA came from the experience of a first-term congressman who had trouble getting information from the Justice Department and Civil Service Commission. "That was back in 1953," says former Rep. John E. Moss (D-Calif.), known as the "father" of the FOIA. "I was serving at that time (as a minority member) on the Post Office and Civil Service Committee."

In 1955, Moss' party gained a majority in the House, he secured a position on the Committee on Government Operations and suggested to the committee chairman that "we ought to take a critical look at the availability of information to the Congress and to the public." The chairman agreed and a select committee on government information was created with Moss as its chairman.

"We had a great deal of sup-

Dallas Morning News' Pulitzer Prize winners Rodrigue (left) and Craig Flournoy show boxes containing one-third of the materials obtained under FOIA.

THE PACIFIC RIM

TAKE YOUR READERS TO THE NEW CENTER OF THE ECONOMIC WORLD.

By the year 2000, 60% of the world will live and do business on the Pacific Rim. That's why Alexander Besher's "The Pacific Rim" is a *must* for your business readers.

Born in China and educated in Japan, Besher is the *San Francisco Chronicle's* economics writer covering Asia and the Pacific. His is the first syndicated column to focus solely on new trends, products and technologies in that region. (He was the first Western journalist to report on blood-type analysis as a Japanese management tool and on the development of China's personal computer industry.)

Available once a week on AP DataFeature, UPI DataNews, Canadian Press Dataspecials and by mail.

Represented internationally by United Press International/IFD

port from the press," recalls Moss, whose committee spent the next 11 years studying government information policies and drafting the FOIA. "It was an educational process for the Congress. It was an educational process, I think, for the media," he says. "They were frustrated, but they didn't have all of the answers, by any means."

Ultimately, the FOIA was passed by a 307-0 roll-call vote in the House and a voice vote in the Senate. He recognized that the law was only a "timid first step," Moss says. "I had to make a lot of compromises to get the bill through. No President with whom we dealt was overly enthused about seeing it become law."

Enthusiastic or not, President Lyndon B. Johnson signed the bill into law July 4, 1966. It took effect a year later.

Basically, the act provides the public with access to government records unless the records fall within nine exemptions. It applies to the executive branch of the federal government but not to Congress or the federal judiciary. It has served as a model for many states' subsequent adoption of open-records laws.

The "timid" law got some teeth in 1974, when amendments were enacted, over the veto of President Gerald R. Ford, that among other things gave agencies a time limit for responding to FOIA requests and allowed requestors who prevailed in FOIA lawsuits to be awarded attorneys' fees and court costs.

On the other hand, the bill has been subject to numerous "back door" amendments that tend to weaken the act. These are separate laws that authorize withholding of government information under FOIA's exemption 3, which excuses from disclosure records kept secret under other federal statutes.

FOIA PRESENT. Although the freedom of information legislation was viewed upon enactment as a means for the press to monitor the government, members of the press have turned out to be relatively minor users of the act in terms of volume.

Of late, U.S. government agencies have been receiving more than a quarter of a million FOIA requests a year. "I would be amazed if more than 5 percent of all requests government-wide were submitted by reporters and historians," says Richard L. Huff, co-director of the Justice Department's Office of Information and Privacy, which gives federal agencies guidance in implementing the act. The press uses the FOIA a "fair amount," he says.

Requestors vary from agency to agency. Nearly three-fourths of the requestors at the Drug Enforcement Administration last year were prisoners, and another 8.8 percent were former prisoners. Only 4.7 were media representatives. At the Food and Drug Administration, about 80 percent of the 1985 requests came from companies regulated by the agency; just 6 percent were from the media.

What happens to all these requests?

A 1985 report by the House Subcommittee on Information found that 91.9 percent of those processed by eight cabinet departments the previous year were granted in full. But compliance records varied from agency to agency—the Department of Health and Human Services complied with 98.9 percent; the State Department honored only 29.1 percent.

Members of the press have turned out to be relatively minor users of the act in terms of volume.

The information subcommittee's study did not indicate how many requests were filled within the 10-day statutory time limit. Sometimes a request takes so long to be answered that a reporter goes on to another story—or another job. That's what happened last year in the case of a San Jose Mercury News story revealing that in the late 1940s President Reagan had been a confidential informant who supplied the FBI with the names of Hollywood actors he believed to be following the communist line.

The FOIA request was made in early 1985 by reporter Jack Sirica. By the time all of the documents—some of them heavily censored—were supplied in mid-1985, Sirica had moved to Newsday, and another San Jose reporter stepped in.

In addition to excessive delays, members of the press complain about excessive charges, which can discourage use of the act. Press groups have been particularly critical of the way the Reagan administration has interpreted the FOIA's fee-waiver provision, which states that search and duplication fees "shall" be waived or reduced where an agency determines that providing the information could be considered as "primarily benefiting the general public."

The Dallas Morning News, for example, had to pay "thousands" of dollars to the Department of Housing and Urban Development for information it requested while preparing its Pulitzer Prize-winning series, says series coauthor George Rodrigue.

Fees were never meant to cover all the costs of administering the FOIA. When it was enacted, the Senate Judiciary Committee estimated it would cost federal agencies approximately $47,000 a year to comply with it. Latest estimates put the total at more than $48 million a year, not counting the government's cost to litigate the approximately 500 FOIA cases that go to court every year. However, press organizations like to point out that this is less than the amount the government spends on military bands.

FOIA FUTURE. Although the law has been on the books for two decades, skirmishes over FOIA show no signs of disappearing.

In 1981, the Reagan administration put forth a proposal to amend FOIA. Although the administration labeled the plan "limited," press groups contended the changes would "gut" the act. The Senate Constitution Subcommittee last year approved a bill incorporating some of the administration's proposals. Press groups opposed that bill, too.

Later in the year, the Society of Professional Journalists, Sigma Delta Chi, drafted and got introduced in the House a bill to make "improvements" in FOIA from the standpoint of requestors.

But other press organizations, including ANPA, expressed concern that consideration of that bill could open up the act to critics who might seize the opportunity to weaken the law.

Recently, Rep. Glenn English (D-Okla.), a successor to John Moss as chairman of the House Information Subcommittee and a cosponsor of the SPJ,SDX bill, announced that attempts to achieve a compromise bill acceptable to the Reagan administration and to FOIA requestors had failed. He said his panel would consider a bill dealing only with processing FOIA requests for business information.

"Each side has a completely different view of the problems with the FOIA and a completely different agenda," complains English.

That has been the history of the act and probably will be its future, says Richard M. Schmidt, legal counsel for the American Society of Newspaper Editors. "If the past is prologue, which I think it is, we must remember that no administration has ever testified in favor of broadening the Freedom of Information Act or strengthening it." Schmidt predicts a "continual battle" between the press and the executive branch—regardless of who is in power. ☐

A 'MONSTROUS' JOB

MAILROOM MORASS

Technological advancements are making headway in post-press operations, newspapers' most labor-intensive area. Meanwhile, the flood of preprints continues.

BY ROSALIND C. TRUITT
presstime technical writer

Stack upon stack, skid upon skid, brightly colored preprints crowd the mailrooms and warehouses of newspapers across the country, causing a profitable but logistically challenging headache for publications of all sizes.

In a perfect newspaper world, the preprinted advertising inserts and news sections would be stuffed into the paper automatically while the press runs at full speed. They would always end up in the right zoned editions. Bundles would be counted accurately. Publishers, advertisers and readers would live happily ever after.

In the real world, things are not quite so rosy, but efforts are being stepped up to improve the situation.

One approach that seems to have clicked at several locations involves splitting the stream of newspapers as they come off the press and feeding them into two different inserting machines. This enables the newspaper to insert while the press operates at normal speed. However, whenever there is an unusually large number of inserts, the paper may have to switch from a "straight" run (producing the maximum number of papers per hour) to a "collect" run (producing one-half that number).

Elsewhere, newspapers may be achieving "on-line" inserting—automated stuffing of preprints as the papers come off the press—but only by slowing down the press.

Arnold Le Fevre, Capital Newspapers

Joe Maniscalco (left) and Joe Parent are part of a growing mailroom work force at Capital Newspapers in Albany, N.Y.

Despite technological advancements, off-line inserting and a certain amount of hand stuffing remain the norm at most newspapers, says James A. Cooper, assistant vice president/operations at The Washington Post and chairman of the ANPA Technical Committee's Post-Press Packaging and Distribution Task Force [**presstime**, June 1986, p. 42].

"Post-press areas are the last great bastions of labor intensity on newspapers," observes George Cashau, ANPA director/technical research. "There are more people per product in the mailroom than in any other department."

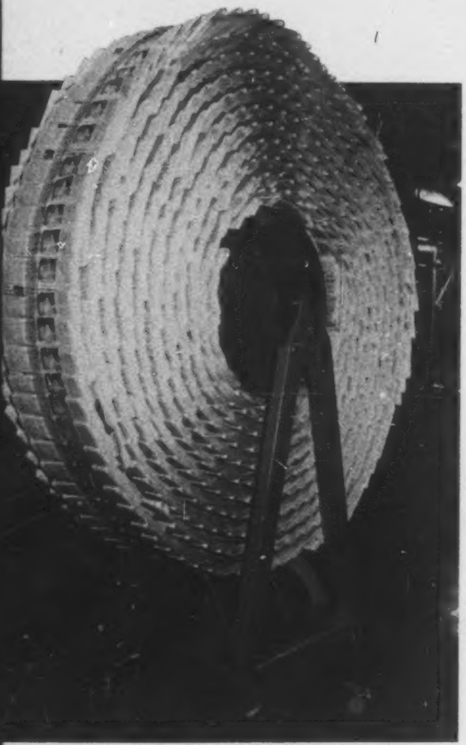
Little more than an afterthought as recently as a decade ago, the so-called "post-press" area has received a great deal more attention in recent years as newspapers search for equipment to make mailrooms efficient, productive—and profitable [**presstime**, July 1985, p. 43].

Newspaper executives say efficient mailrooms not only make good business sense but also give publications more flexibility and the ability to extend deadlines to include late sports scores and other breaking news.

As the flood of inserts continues unabated, manufacturers continue to introduce new machinery and to refine existing technology for the mailroom. Among the latest equipment—much of which was exhibited at June's ANPA Operations Management Conference & Exposition in Atlanta—are:

- Muller Martini's 308 BiLiner, an on-line or off-line inserting machine with two inserting tracks, which the company says can double the number of newspapers inserted per hour. It can be loaded manually or automatically.
- IDAB's new counter-stacker, which uses a non-contact sensor and is, according to the firm, more accurate and more durable. Driven by a microprocessor, it is the seventh edition in a line of IDAB counter-stackers.
- Stepper's packaging and collating machine, which inserts preprinted sections, then seals each copy of the newspaper in plastic
- Harris Graphics' 1472 inserter, which will be dubbed the 1472A later this year after design changes in the "pockets" where preprints are collated. The company says the machine will facilitate the zoning of preprints to specific areas.
- Ferag's Rotadisc II, which allows newspapers to insert preprints into large storable "cassettes," or wheels, until they are needed.
- Hall Systems' new design for the Tru Trac stream conveyor, which the company says uses automatic spring tensioners to apply constant, precise tension to the belts, regardless of product thickness.

MID-SIZE PAPERS. The Washington Post's Cooper observes that "mid-size and



Philadelphia Newspapers' Ferag Rotadiscs provide efficient storage.

smaller newspapers with a press run of fewer newspapers and a smaller load of inserts are finding more success" in dealing with the mailroom morass. "Many of the larger newspapers, because of the volume and their need to run presses at higher speeds to get the newspaper out, simply can't insert a large number of products," he adds.

An example of a mid-size daily that has prevailed in processing preprints is the South Bend (Ind.) Tribune (evening, circulation 95,496). Richard Paskiet, vice president for research and development, says "we've been very pleased" with the mailroom system in use since August 1984. "It's done everything we've wanted and more. We wanted to do on-line inserting at press speed, and that's what we're doing."

Using a split stream of newspapers between two Ferag inserting drums—one a 6 into 1 inserter, the other a 4 into 1 unit—the Tribune is inserting at a speed of 52,500 newspapers per hour on "straight" runs.

In 1985, the newspaper inserted 112 million pieces of material, from comics and advertising material to television listings. Emery L. Hirschler, vice president of sales, says the Tribune at one time delivered inserts to carriers on top of the bundles. Inserting by machine has been more reassuring for advertisers, he adds.

In Albany, N.Y., Mailroom Superintendent John Cipollo says that by slowing the presses from 60,000 copies per hour to between 40,000 and 48,000, the Times-Union (morning, 86,707) and Knickerbocker News (evening, 31,523) are able to insert efficiently. They use a Harris Graphics NP-1272, an older model, for daily inserting and the Harris NP-1472, a newer version, for Sunday editions.

Occasionally, the Albany dailies insert by hand when the ingredients are too large for the machinery, Cipollo reports.

And despite the automation there, he says the number of employees in the Albany mailroom has actually increased in recent years because of the soaring volume of inserts. For example, whereas it once took 15 workers to feed the hoppers that carry preprints to the inserting machines, now 18 are needed.

A big problem, Cipollo says, has been finding space for preprints prior to insertion. "We put them all over the building, in the corridors, in any spare space we can find. The only time we really run out of space is around big holiday times, like Christmas and Mother's Day."

But he says the newspaper is happy to have the "problem" of processing so many advertising circulars.

LARGER PAPERS. In general, metropolitan newspapers have been contending with the mailroom problem longer than their counterparts in smaller cities, because the metros first felt the effects of the boom in preprints.

The Houston Chronicle, for instance, began addressing problems in mailroom operations in the late 1960s, when its classified section swelled to voluminous proportions and advertising preprints began their phenomenal growth.

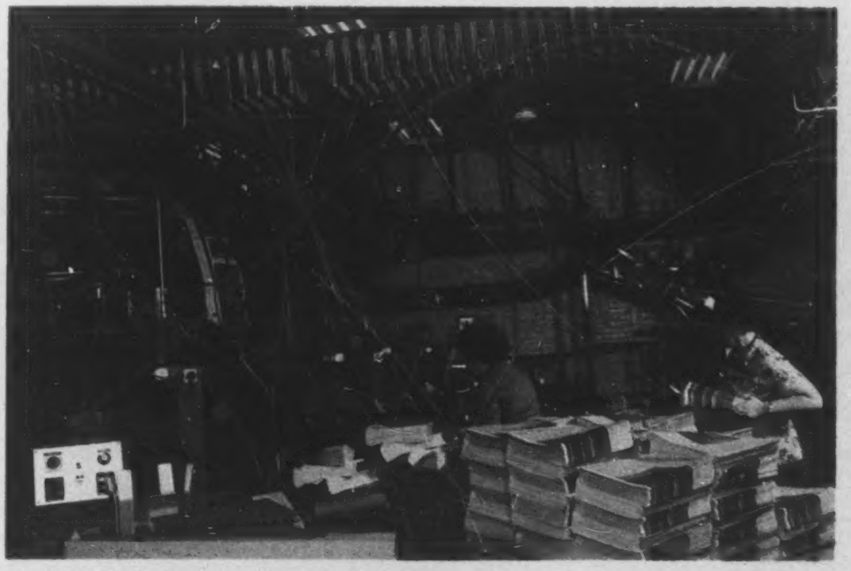
According to Gene McDavid, vice president and general manager, the Chronicle has developed a post-press system that involves off-line inserting with Harris machinery. He says the system enables the paper to handle a Sunday edition with more than 20 advertising inserts on average—and as many as 35.

But many newspapers fail to view the mailroom in broad terms as a means of addressing distribution problems, says McDavid, who is chairman of the ANPA Technical Committee.

"Most mailrooms are not designed with the flow of product in mind," he observes. "And most newspapers have never computed the total cost of handling the product from the press to the door. They need to compute how a total system would work and find the most efficient way of getting the newspaper from the press and into the hands of the subscriber."

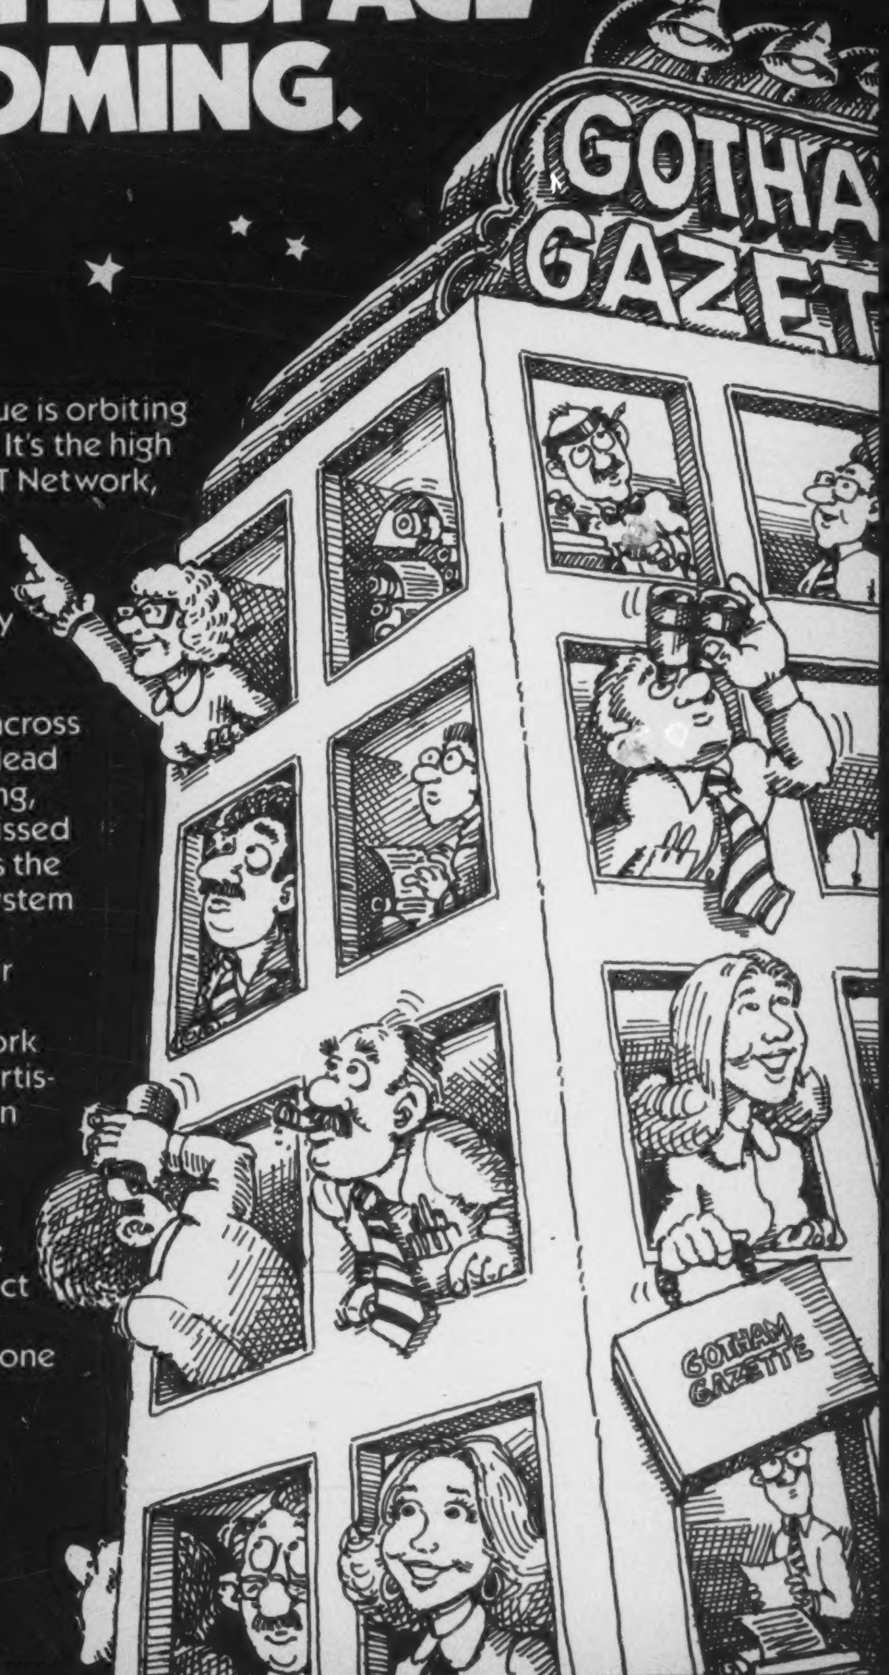
One newspaper organization that has been thinking in those terms in recent months is Philadelphia Newspapers Inc., which is spending $38 million to modernize its mailroom—$33 million of which is going for the purchase of new equipment for the Philadelphia Inquirer and the Philadelphia Daily News.

And while that seems like a great deal of money at first glance, Sam S. McKeel,



South Bend Tribune system allows insertion at press speed.

THE ADS FROM OUTER SPACE ARE COMING.



Look up. A dream come true is orbiting 22,300 miles above your head. It's the high tech cornerstone of the AD/SAT Network, a satellite that delivers ads directly to your newspaper. At the speed of light.

It all starts with one solitary piece of repro material from an advertising agency, and ends moments later at newspapers across America as a facsimile that's a dead ringer for the original. No missing, mangled or delayed ads. No missed insertions. No lost revenue. Plus the bonus of an on-line message system that, for the first time, links ad agencies, newspapers and their representatives.

This fall the AD/SAT Network goes operational, serving advertising agencies and demonstration newspapers.

For years it's been your dream. Now it's your reality. And it's time for you to join the Network. For full details, contact AD/SAT, 540 Madison Avenue, 36th floor, New York 10022. Phone (212) 872-1491.

AD/SAT

We deliver newspaper ads at the speed of light.

president of Philidelphia Newspapers Inc., says the new equipment can mean increased long-term profits.

"Last year we turned down nearly $2 million worth of preprints because we couldn't manage to put any more in the paper and still deliver (the Sunday newspaper) when the news was new," McKeel noted in his May column in Local Beat, the Philadelphia Newspapers' employee publication. "This year is different. We are not refusing any Sunday preprints on account of space limitations."

According to McKeel, improved efficiency in handling an increasing volume of inserts translates into greater reliability and may ultimately bring lower costs for preprint advertisers.

On the editorial side, the equipment has also proved useful in the distribution of the "Neighbors" section—zoned editions aimed at specific areas.

According to John Brown, senior vice president for operations, the two Philadelphia newspapers by September will be using six inserting drums as well as palletizing and depalletizing equipment and conveyor systems for 10 presses.

The Ferag Rotadisc II, which resembles a giant wheel, will enable the mailroom to handle preprints much more efficiently, Brown says. He explains that the preprints can be stored in each of 10 wheels and later inserted on-line. When all the inserting equipment is installed, the Inquirer and Daily News expect to be able to insert while printing 25,000 copies per hour on collect runs.

Early in the week, when preprinted sections of the newspaper are run and serve as "jackets" that hold ad inserts, the Rotadisc feeds the copy stream from the press onto mobile, storable cassettes until it's time for their insertion later in the week.

Ralph S. Roth, vice president/operations for the parent company, Knight-Ridder Inc., says the equipment was purchased because the two Philadelphia dailies process a lot of inserts and have big circulations. "The demands there are very great in terms of material handling," says Roth. "It's a monstrous job, and the larger the job, the more opportunity there is for automation."

A primary concern in Philadelphia was storage. For some Sunday editions, space had to be found for as many as 3,000 skids of inserts. Newspaper employees also had to keep track of where they were located.

Roth says other Knight-Ridder newspapers, including the San Jose Mercury News, the Akron Beacon Journal and the Lexington (Ky.) Herald-Leader, either are installing or already using Ferag equipment in their mailrooms.

> *"The larger the job (handling preprints), the more opportunity there is for automation."*

The San Diego Union and Tribune, which handle about 40 different advertising preprints weekly, also use Ferag equipment and have found success inserting on-line by employing the split-stream process.

According to Production Director Jerry Thomas, two 8 into 1 inserting drums are fed by one press and are able to keep up with press speeds on collect runs of 30,000 to 32,000 newspapers per hour.

The Ferag equipment installed there in 1981 has been updated as the newspapers' volume of inserts increased, Thomas says.

At The Record in Hackensack, N.J., where Ferag inserting equipment has been used since 1980, Production Director Bob Murphy says the newspaper has been generally pleased with the press speed it achieves while inserting goes on. The presses can produce 55,000 to 60,000 copies per hour when run straight, normally earlier in the week when the editions are smaller. As the week goes on and newspapers get larger, The Record slows to a collect speed of about 28,000 per hour while inserting.

While various manufacturers of inserting equipment continue to make enhancements to their product lines, ANPA engineers are working to develop more accurate newspaper counters and bundle verifiers, the Association's Cashau reports.

Getting the correct numbers of newspapers into bundles is very important, because when a carrier comes up short, costly individual trips must be made to irate subscribers, he notes.

With so much work being done both by suppliers and by newspaper-industry researchers, technical experts say the dream of the perfect mailroom may indeed someday come true. ☐

William E. Branen

Wisconsin publisher gives newspaper business what it needs: 'An awful lot of help'

BY C. DAVID RAMBO
presstime staff writer

When William E. Branen was growing up in center-city Chicago, he was fascinated by the Tribune Tower and the mighty newspaper produced therein. "Somehow," he says, "I got a bug for news."

The bug bit hard.

In his elementary school years, Branen was known as the child who wrote up news items from his neighborhood and put copies of those reports in residents' mailboxes.

Now he is known as the guru of community journalism. Owner and publisher of the twice-weekly Burlington (Wis.) Standard Press and half a dozen other non-daily publications, Branen is one of the most-consulted executives on running newspapers, particularly non-dailies.

He is an authority on newspapers' use of the mails. He is credited with playing a major role in the first cooperative offset printing plant for a group of independently owned newspapers. And he is a good source of information on numerous other newspaper-business matters.

The 59-year-old Branen, former president of the National Newspaper Association and of the Wisconsin Newspaper Association, freely shares his knowledge. He says he fields more than two dozen newspaper-related calls and letters each week, and he is a frequent speaker at newspaper meetings around the country. Lately, however, he has tried to scale back his travel. "I was invited to do 36 speeches and seminars last year, and that's just too much," he says.

He also dispenses his thoughts in a column called "The Profit Motive" in NNA's Publishers' Auxiliary newspaper.

Part of Branen's appeal is his broad view of the business and his ability to explain complex issues in a straightforward way —especially on the postal front.

Branen believes that one of the more serious problems for community newspapers is delivery. The U.S. Postal Service has "doubled and tripled the cost of distribution" with its series of second-class rate increases in recent years, he says.

While newspapers "can deliver (with carriers) for less than what the Post Office charges now," he says, establishing an alternate delivery force as reliable as the mails for a non-daily publication is a "very, very difficult type of process."

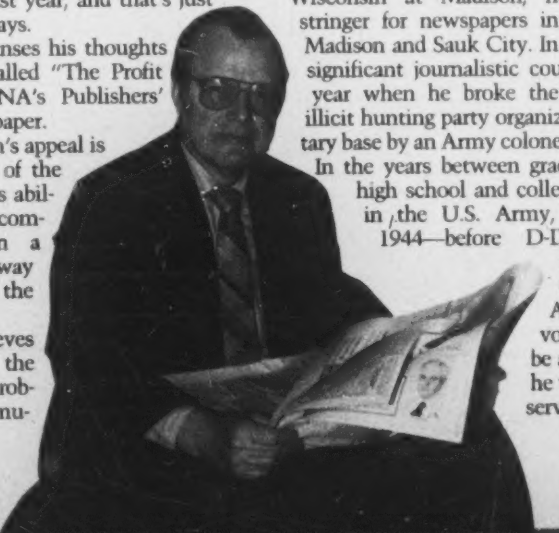
While Branen has a firm grip on this and a host of other issues, some of his friends say he may not be as well-organized in other parts of his life.

For example, Romain C. Brandt, former executive secretary/manager of the Wisconsin Newspaper Association, says Branen relies almost exclusively on his wife, Nancy, and the Standard Press staff to keep his busy travel schedule straight. Even then, things can go awry.

Bruce C. Brown of C.W. Brown Printing Co. in Oconomowoc, Wis., recalls a time he and Branen were invited by Manistique Paper Co. to a lodge in northern Michigan. When a small group gathered for the trip to be made in a small chartered plane, Branen owned up, "'You guys'd never guess what I've got here: my passport.' He thought he was going to Thunder Bay, Ontario," Brown says.

Branen's journalism career advanced from his childhood "street" editions to work on his high-school newspaper. Then, as a junior at the University of Wisconsin at Madison, he served as stringer for newspapers in Milwaukee, Madison and Sauk City. In fact, his first significant journalistic coup came that year when he broke the story of an illicit hunting party organized on a military base by an Army colonel.

In the years between graduation from high school and college, he served in the U.S. Army, enlisting in 1944—before D-Day. Branen trained for the infantry. Although he volunteered to be a paratrooper, he was tapped to serve in the "finance corps" because he was found to have a "knack for writing and math." He later also served in the chaplain service, helping to write sermons.



After graduating from college, where he earned letters in football and baseball, Branen in 1951 joined the Standard Press as news editor.

Two key members of the family that owned the paper died soon after Branen started work there, and Branen in 1953 bought a 20-percent interest, followed by other amounts in subsequent years. "This came at a time technology was developing rapidly," he explains, and offset printing was making major inroads. He and six other publishers established the central printing plant in 1962 in Delavan, Wis., for seven independent publications.

The Burlington executive in 1964 bought out his partners in the Standard Press and has continued in his leadership role at the paper. He also has worked as a consultant for Tribune Co. of Chicago and for The Milwaukee Journal.

While Branen has high professional standing, his reputation looms just as large on the local level. Foremost in his community activities is his work with Little League baseball. He has managed a team for 26 years, and he says he schedules speaking engagements so they do not conflict with his game schedule.

Branen's interest in Little League baseball dates from the time his two sons were players. They and Branen's other child, a daughter, are now grown and following in their father's footsteps. Daughter Kathy and her husband own a small newspaper in northern Wisconsin; older son Robert works in advertising at the Standard Press; other son Shad runs a Branen-owned cable television station and is a disc jockey at a Milwaukee radio station.

For family members and outsiders alike, Branen emphasizes the need for newspapers to adapt continually to changing market conditions.

Whatever the future holds, newspapers will need more and better people on their staffs, Branen says. "This industry needs an awful lot of help."

His advice to newcomers? "Work hard. I think that's the answer. Period." ☐

Admarc®... Now available for small to medium newspapers as well as large metropolitan dailies.

Announcing DEC VAX,® IBM PC,® and IBM Mainframe solutions, competitively priced with any system in the industry

We pioneered one of the first Advertising Management and Accounts Receivable Control Systems for the newspaper industry and we continue to set the standard.

That's why six of the top ten newspapers chose Neasi-Weber's Admarc System to manage their complex advertising schedules, to control revenues, and to provide sales reporting unequalled in the industry. In fact, Admarc manages more advertising revenue nationwide than any other system in existence. Our customers are our best salesforce.

Please contact Jim Chapman for the inside story.

There is a real test of mettle going on in Detroit

BY DAVID LAWRENCE JR.

David Lawrence Jr.

Back during the 1967 riot in Detroit—a week-long siege seared in the memory of all who lived through it—Neal Shine, now the senior managing editor of the Detroit Free Press, was then the very enterprising city editor. In the best traditions of big-city journalism, he decided a tank would be the perfect way for reporters and photographers to get around in the burning and sniper-terrorized portions of the city.

So City Editor Shine called Chrysler, which had a tank plant, and Chrysler agreed to lend the Free Press an armored car that looked like a tank. Because it had wheels and a push-button transmission adapted from a Plymouth, it did not take our staff long to learn how to maneuver the thing.

We were, of course, not to be trusted totally. Thus, Chrysler insisted upon removing the cannon from the turret. And the police commissioner, when told of our plans, insisted that "Detroit Free Press" be painted on the side.

Otherwise, it looked like the authentic piece of military hardware it was. Our reporters—dressed in fatigues and helmets from a military surplus store—rolled from one shooting zone to another. Along the way, they picked up reporters from other publications, except, of course, those from The Detroit News. The National Guard waved the Free Press past the barricades. (Perhaps it did help a bit that one of our reporters was wearing a general's star.)

The day before the Free Press was obligated to return the tank to Chrysler, several reporters piled in, drove it three blocks down the street, and pulled up on the sidewalk in front of the News. They sounded the siren, then turned on the loudspeaker: "This building is under siege. You have 10 minutes to surrender." Employees of the News peered out the windows but refused to come out.

That incident almost two decades ago is but one of the more colorful chapters in the competition between the Detroit Free Press and The Detroit News, two newspapers with daily circulations of just about 650,000 each. You can imagine how a guy like Neal Shine, who has been working to beat the News since his days 35 years ago as a copy boy, reacted to the big announcement April 14 that the owners of the Free Press (Knight-Ridder) and the News (Gannett) were going to file for a joint operating arrangement. It was a stunning development, even if most people at both newspapers knew intellectually that a JOA might be inevitable.

At the Free Press, there *had* been some encouraging numbers. For instance, we moved to within 5,179 papers a day of the News for the six-month period ending last March. Yet other numbers showed the Free Press significantly behind the competition in the three counties of most interest to advertisers. And in total revenue, the News had about 60 percent of the total. Together, the News and Free Press had operating losses of $63 million in the previous five years.

That led Knight-Ridder and Gannett to declare what Alvah Chapman and Al Neuharth called "a virtual tie." By combining business and production efforts, with the permission of the attorney general, they could preserve two competing news and editorial voices in Detroit. The result would be two healthy newspapers, not two hemorrhaging ones and, ultimately, one dead one.

The story of newspapering in Detroit cannot be told in mere numbers.

I will not soon forget the tears in Myron Didyk's eyes when he heard late on a Sunday afternoon that a JOA would be announced the next morning. As Free Press circulation director, he was reminded of a moment a quarter-century earlier. In the 1950s, he was a rising circulation executive at the Hearst-owned Detroit Times. Then, in the early morning hours of Nov. 7, 1960, there came a knock on the door of his home. The messenger handed him a telegram. The Times has folded, the telegram said: Don't come to work.

So Myron and nearly 200 other Times people joined the morning Free Press that very week. The major competitor was the afternoon Detroit News, which had bought the assets (principally the circulation lists) of the Times, also an afternoon paper. Seemingly overnight, the News, which had been neck-and-neck with the Free Press in circulation, was now more than 200,000 papers ahead daily and 300,000-plus on Sundays. For the next 26 years, Myron Didyk devoted his career to chipping away at that lead—down to 5,179 papers—and now he was being told that soon the Free Press and News would be competing in a different way.

In times like these, you learn a lot about yourself and about the people you work with. We have entered what could be a year or two, or more, of uncertainty. The joint operating agreement, filed with the Justice Department May 9, contains no formula for deciding which people, and how many people, from either paper will be selected to work for the new Detroit Newspaper Agency. Instead, the agreement simply calls for the agency to select the best people from both papers. Naturally enough, and rightly enough, people at both newspapers wonder: "What does this mean for me?"

This, then, is a time when good communications are essential, even though we do not yet have the answers to most questions. In the days following the announcement, executives of the Free Press met with their staffs to answer every

---

Lawrence is publisher and chairman of the Detroit Free Press. This essay is adapted from an address he made May 19 at the International Newspaper Financial Executives meeting in Scottsdale, Ariz.

> *We have entered what could be a year or two, or more, of uncertainty.*

question they could. Within two weeks, I had met with more than 2,000 employees in varying size groups. A letter from the publisher went to every employee's home. We set up a hotline, told employees to call with their questions and promised the best answer available within 48 hours. We launched a quick-turnaround bulletin board publication called "The Friendly Fast Facts" (borrowing from the 30-year-old nickname for the Free Press, "The Friendly").

We did not try to fool anybody.

The message was straightforward and three-fold:

1. We are in this together. This time of uncertainty will be hard on everybody. Let us, then, support each other, care about each other and make sure everyone has the maximum amount of information.

2. It would be stupid to be bitter; how could *that* help? It also would not make a lot of sense to replay the past, though each of us will do that to some extent. It would be easy to say, "If only we had charged more for the paper." Yet the realities of the Detroit marketplace dictated that neither paper ever felt very comfortable in raising the price, figuring the other newspaper might increase the circulation gap to such an extent that the balance of advertising (from whence we get 70 percent of our revenues) could be dramatically and negatively affected. (Interestingly enough, the Free Press, in second place in both advertising and circulation, was the circulation pricing leader in the market.)

3. We cannot afford to lose our momentum. Remember that in both the Seattle and Cincinnati JOAs, the two weaker newspapers experienced a marked deterioration while awaiting the outcome. If that were to happen in Detroit, it could surely affect how many jobs were available in the new agency.

I have marveled, to this point, at the spirit of Free Press people. Here's just one example: Within those first few days of the JOA announcement, our supervisors in customer service were sporting T-shirts with the message, "We're still fighting." Last week, building on that spirit, the Free Press kicked off a contest whereby employees in every department can win prizes for selling subscriptions.

But after all this discussion of what Free Press Executive Editor Kent Bernhard calls "the dirty J-word," am I optimistic about the future of newspapers? Absolutely.

Good newspapers have a splendid future. With the current and growing fragmentation of other media, particularly television, with more than four of 10 American homes already hooked up to cable, with more than a third of all American households having VCRs, with 11,000 different magazine titles being published in the United States this year, there is every reason for a good newspaper to serve an increasing role as a true "mass medium." ☐

A Red, White and Blue Setting Provides Appropriate Tone for Banner Event

This year it was almost impossible to get lost. When visitors went to the vast Georgia World Congress Center in Atlanta for the 58th Annual ANPA Operations Management Conference & Exposition, they were guided by yards and yards of a red, white and blue carpet.

By following the carpet and appropriate signs, they could find their way to everything—the exhibits, the general sessions, the workshops and the restaurants.

There was plenty to look at and plenty of people to do the looking, the listening and the questioning. The June 21-25 show, whose theme was "Interface '86: People—Developments—Quality," drew 11,279 persons, the largest since ANPA began charging admission to the exhibit hall in 1982.

What they saw there, in addition to five miles of carpeting, $30,000 worth of flowers and other extras, was another sweeping array of equipment covering all aspects of newspaper production and distribution. Exhibits ranged from a simple, $3,000 booth to elaborate spreads costing upwards of a quarter-million-dollars. All of it was spread over 270,000 square feet of net exhibit space—another record—in four of the center's six gigantic halls.

"I keep expecting this show to start contracting, but it just keeps growing," said Joseph M. Ungaro, OMCE Arrangements Committee chairman, and president and general manager of Westchester Rockland Newspapers in White Plains, N.Y. Indeed, about 300,000 square feet of exhibit space was sold in Atlanta for next year's Exposition in Las Vegas.

ANPA Chairman and President Alvah H. Chapman Jr. said the show reflected "a technological revolution in midstream," and both the equipment exhibited and the attendance at the Conference sessions seemed to prove his point.

On the exhibit floor, there were some "breakthrough" items—notably, a press-plating robot and video-to-print photographic equipment—and a great many other displays of enhanced equipment including color scanners, pagination systems and inserting machines. In a nice counterpoint to all the future-gazing, people at the Allied Linotype Co. booth were giving away buttons commemorating the centennial of the Linotype machine, which on July 3, 1886, ushered in the era of mass-produced newspapers.

In the Conference rooms, the high interest in this technological revolution was reflected by crowds that packed some sessions to overflowing, even though the 16 separate programs offered were the most ever presented at an OMCE.

The most heavily attended workshop was the one on flexographic printing. An estimated 1,000 persons were there, many standing in the aisles. Thomas O. Might, vice president/production of The Washington Post, submitted a six-page report that showed flexo offered a savings of $14.24 per newsprint ton compared with offset. Other panelists also debated the merits of flexo versus offset, but Knight-Ridder Vice President/Production Ralph S. Roth said flexo would figure in the press-buying decisions of his company.

Besides the flexography session, the heaviest attendance seemed to be at workshops on pagination, personal computers and post-press equipment. It wasn't surprising then that the best-selling tapes of the Conference were "Management Asks the Tough Questions About Flexo" (a runaway winner), "Print Quality," "Quality in the Mailroom" and "PCs—Panacea or Pandemonium?"

It wasn't only the workshops that had the action. Vendors reported much more floor traffic than usual and said they made substantially more appointments for private demonstrations of their wares. ☐

John Harrington

Largest-ever Exhibit Draws Heavy Traffic

BY ROSALIND C. TRUITT
presstime technical writer

Hailed by newspaper executives and vendors alike as the most exciting in recent memory, this year's equipment display saw a few bona fide breakthroughs and the continuing evolution of a variety of equipment, from pagination to pressroom to post-press.

"I was expecting a lot from this show, but it's far exceeded my hopes for it," said Joseph M. Ungaro, chairman of the OMCE Arrangements Committee.

"A lot of major steps forward were made in the areas of pagination and graphics manipulation, in post-press equipment and others. I've heard favorable comments from newspaper people about the quality of the exhibits, and the vendors did well," added Ungaro, who is president and general manager of the Westchester Rockland Newspapers Inc. in White Plains, N.Y.

This year's 11,279 registrants resulted in some of the heaviest floor traffic in several years, veteran show observers said.

Registrants were greeted by 254 vendors that filled two-thirds of the mammoth Georgia World Congress Center with a Conference record 270,000 square feet of exhibit space.

Overflow crowds for Conference sessions on pagination, personal computers and other subjects mirrored interest in equipment on the floor as Conference-goers flocked to the exhibit floor to watch companies put theory into practice.

Vendors interviewed were pleased with the turnout. A typical comment was that of Deane Parkhurst, marketing manager of Creative Data Systems, who said: "It was a fantastic show for us, lots of traffic. We had so many people that we decided to run our demonstrations almost continuously rather than every half hour as we had planned." Creative Data develops business and advertising layout software for newspapers.

Other exhibits generating intense spectator interest this year were as diverse as the various components that fit together to produce a newspaper.

Among them: Atex's Publication Production Node, the key to its pagination system; a new IDAB counter that uses a stream of air and a microphone to count newspapers; Sony's Mavigraph, a video image storage system that produces camera-ready color prints from videotape [presstime, March 1986, p. 62]; improved color scanners, shown by a variety of vendors; and a press-plating robot developed and demonstrated by Tokyo Kikai Seisakusho, the Japanese press company better known as TKS.

The robot drew large, curious crowds each time it picked up an offset plate with suction cups, moved along a track to the precise proper place on the press cylinder, then methodically locked the plate into the groove. Yet many onlookers questioned whether the cost, the potential for labor conflicts and other factors would militate against such robots' making inroads in the pressroom—at least in the near future.

TKS wows the show with a press-plating robot (above).

Michael Pugh

Dewar Information Systems Corp. shows innovation with its local-area-network front-end system, as does a visitor with an appropriate choice of functional footwear (left).

The growing attraction of newspapers to personal computers was demonstrated in one of the smaller booths, where visitors three and four deep waited to watch demonstrations of Southeastern Newspapers' Morris Publishing System. The Augusta, Ga., company developed the system for its own newspapers, but interest from other newspapers prompted the decision to offer it commercially.

This year, press exhibits seemed to take a back seat to some of the other exhibits. Only one company, Solna, exhibited a running unit.

On the other hand, most of the companies showing mailroom or post-press equipment—including Muller-Martini, Ferag, Graphic Management Associates, Stepper, Harris Graphics, Hall Systems and IDAB—had their machines up and running, demonstrating how to bundle, insert, count and otherwise handle newspapers as they leave the press.

George Cashau, ANPA director/technical research, saw the 1986 show as a year of evolution in a number of areas, though he pointed to the TKS robot, the Sony video-to-print equipment and the IDAB newspaper counter as breakthroughs.

"I would say that progress continues to be evolutionary rather than revolutionary in most areas. But the post-press area was very exciting. I've never seen so many new products introduced in one year before," Cashau said.

There was also a lot of interest on the floor in color scanners. "I believe the kinds of color developments we're seeing, with Sony for example, will allow even the smallest newspapers to use color, use it frequently and use it with consistent quality in the very near future," Cashau predicted.

Arrangements Committee Chairman Ungaro said there were more items actually ready for sale this year, as opposed to prototypes. He said he believes the equipment exhibit goes through a three-year cycle: In the first year, a product or process is discussed as a possibility; in the second year, models are demonstrated; and in the third year, an actual working piece of equipment is operated on the exhibit floor—ready for sale.

According to Ungaro's theory, there was a great deal of interest in post-press equipment this year because it is in that third stage of the cycle. In contrast, much of the pagination and graphics equipment was in the second phase, he said.

Pre-registration process and computers help speed the flow for the largest OMCE crowd since a new fee policy was instituted in 1982.

PAGINATION SYSTEMS. Twenty-two firms demonstrated pagination systems this year, and while all drew traffic some of the larger crowds gathered at the Atex, Autologic and Information International Inc. booths for demonstrations.

A number of experts interviewed found merit in the various systems, but they declined to cite any as superior to the others, pointing out that the needs of individual newspapers vary.

Atex disclosed during the show that Philadelphia Newspapers Inc. will test the Publication Production Node system in a non-production environment this summer. If all goes well at The Philadelphia Inquirer and Philadelphia Daily News, Atex plans to release the PPN for sale by the spring of 1987.

PPN is the key to Atex's so-called "Total Publishing Environment." This concept integrates graphics with editorial and advertising materials plus classified advertising and page layouts.

> *"A lot of major steps forward were made in . . . pagination and graphics manipulation, in post-press equipment and others."*

Atex officials said the integrated system works quickly enough for a large daily newspaper to use it in deadline situations. Output can be to either film or plate.

Autologic demonstrated its APPS-1 pagination system, which got its first installation recently at the Morristown (N.J.) Daily Record. The system enables newspapers to dummy pages with editorial copy, halftones, display and classified ads, and line art, and then produce those pages on lithographic film or offset plate.

At the end of its half-hour demonstration, Information International, or Triple-I, produced fully paginated pages with graphics using its 2025 Page Makeup Station, 4500 Ad Makeup Station and 2300 Image Network Processor. The system was used to edit text, dummy display ads, make page proofs and produce typeset pages.

In addition, ad text was composed and edited on Triple-I's new PC-based terminal/local area network system. Page proofs were produced on a VideoPRINT 300 Laser Recorder, and the firm's InfoSet 400 Pagesetter typeset the pages on photosensitive paper.

POST-PRESS. The mailroom or post-press area continues to be a problem as newspapers struggle to insert preprinted matter efficiently and to cope with zoned publications. (See story, p. 26.) Manufacturers offered equipment to help deal with those problems.

In addition to its air-stream counter, IDAB demonstrated several interesting new items, including the IDAB 2000 stacker, which needs no operator adjustments and can stack about 80,000 newspapers per hour. The company also

The Making Of a Trade Show

Like Producing a Movie, Huge Cast Turns Empty Hall Into Glittering Showcase

showed a vertical bundle elevator called the Whizlift, which takes up very little room, and two automated guided vehicles for handling newsprint.

Graphic Management Associates offered a new 20 into 1 inserter, the SLS-1000, which the company said can insert at speeds of up to 25,000 papers per hour off-line. It uses a gripper delivery system. A spokesman said an on-line version is planned as well.

Another product of interest was Stepper Associates' new collating and packaging system. It stacks newspaper sections in a pre-determined order—so, for example, the front section ends up on top—and individually heat seals each newspaper in plastic.

The system can handle newspapers of up to 700 pages. The firm bills it as an aid to newsstand sales for larger newspapers and to home delivery for smaller ones.

In addition, Muller-Martini's Bi-Liner, because of its inserting speeds and capacity to handle twice as many inserts on a double-tracked inserting system, attracted substantial attention.

PERSONAL COMPUTERS. The personal computer continues to be seen as a viable alternative to its big mainframe cousin, and PC-based front-end systems proved popular.

The story of how the Morris Publishing System came into being attracted a lot of interest. Initially, Southeastern Newspapers planned to buy a front-end system from one of the usual vendors but began toying with the idea of creating a system for its seven daily and one weekly newspapers. After gathering information from their editorial, advertising, programming and other departments, the system was born. It's been in the firm's newsrooms for two years.

Photos by Alan Tepper

The system, using an IBM PC with a color monitor, offers many features, including instantaneous spell checking and a split screen to view two files simultaneously. It can also handle a variety of classified advertising functions.

Bestinfo demonstrated its NewsBuilder package for newspapers that use IBM PC ATs. The software consists of GalleyBuilder, where text is composed and edited, and AdBuilder, which produced display advertisements.

Also introduced at the Exposition was Compugraphic's Intrepid II, using IBM-compatible PCs that can be used individually or in a network configuration. The terminals can process classified advertisements and editorial copy as well as perform business functions.

EQUIPMENT FOR COLOR. Quality color reproduction continued as a topic of interest, judging by the throngs that flocked to the 15 companies offering color-separation systems.

Sony generated crowds with its Mavigraph color video printer, which eliminates the need for a darkroom. It produced color prints from videotape in three minutes.

While viewing a tape, the user presses one of three "printing mode" buttons. When a picture appears on the screen and a print is desired, the "memory in" switch is activated. Mavigraph receives video signals, then digitizes them into dots which are in turn printed on paper.

Color can be changed before printing, and the Mavigraph can store up to four pictures simultaneously on the Memory Frame Buffer. Mavigraph is ready for sale.

The Mavigraph Plus, which will produce color separations from video, was shown as a prototype, with sales planned for a year from now.

Although such "next generation" devices drew oohs and aahs, the more conventional color equipment attracted a response of a different type—inquiries from newspapers ready to buy equipment now. The major attraction for that group was color scanners.

ANPA's Cashau noted that as recently as two or three years ago, scanners weren't standard equipment at most newspapers, but they are rapidly becoming so.

The crowds were large at the Crosfield Electronics booth where a number of new products were introduced. Interest may also have been heightened by Crosfield's recent acquisitions of Muirhead Data Communications Ltd., Composition Systems Inc. and Hastech Inc.

The company showed a variety of new electronic pre-press equipment including Scantel, a color scanner designed for fast input of color transparencies. Before exposure, it can process four different transparencies, complete with their own enlargements, color corrections and tone data.

C. David Rambo

Gene McDavid (right) of the Houston Chronicle succeeds Walter E. Mattson of The New York Times Co. as chairman of the ANPA Technical Committee.

Royal Zenith unveiled a new color previewer monitor, the RZ-210-CM, which the company said simplifies the cropping of photographs. Also new for the company was a laser color scanner, the RZ-210-L, which uses a low-power, blue-argon laser. It has a resolution of 4,000 lines per inch and can produce, according to the company, extremely sharp dots from 60 to 200 per inch.

Scitex America demonstrated its new high-speed Smart Scanner that utilizes artificial intelligence. The company has replaced the usual set of operating knobs with a touch-sensitive operating panel with buttons for such manipulations as cropping and color correcting. The charged-couple-device scanner can handle transparencies, positives and negatives. It enlarges images from 20 to 2,400 percent.

Alan Tepper

Kodak executive William E. Sherman (right) presents the "World's Best" award to Fred Collings, representing the Natal Mercury in Durban, South Africa, winner of Kodak's ninth annual "Run for the Money" contest for outstanding newspaper color reproduction.

Hell Graphic Systems demonstrated its new NewsPlan pagination system by recording scenes on the exhibit floor and integrating them with text to produce four-color separations and a full newspaper page in about 45 minutes. Hell also used its new Pressfax system to transmit four-color newspaper pages between its booth and that of Ricoh, whose flat-bed laser system utilizes a Hell P-100 and Hell P-210 scanners.

PRESSROOM. Although there was a lot of interest in the Conference workshops on flexography, interest regarding pressroom equipment seemed to center on platemaking and plate lockup devices, rather than press exhibits.

Hercules demonstrated a new lockup system that it said provides fast and highly accurate registration for polyester-backed printing plates. The system includes a Universal Barenscheel press lock capable of holding several press types; the Hercules PTZ automatic, punch-trim-bend unit for polyester-backed plates.

Western Lithotech offered Lith-X-Pozer V, a smaller version of its plate exposer. The company said a number of large newspapers planned to use it exclusively to expose their color plates. Western Lithotech also demonstrated its Newstek plate processor that in one operation develops, finishes and drys subtractive plates.

Another pressroom item eliciting numerous comments was a new water-oil emulsion ink that Crabtree Vickers (Canada) Ltd. has developed for use with anilox inking systems.

Besides the TKS press-plating robot (whose name, "APM—1024" is right out of "Star Wars"), there was interest in Rockwell International's new Modular Press Control System, which uses a touch-sensitive screen menu to control the Goss Headliner press.

In the annual Editor & Publisher magazine awards for outstanding exhibits, first-place winners were: for island booths larger than 1,000 square feet, Scitex; for island booths under 1,000 square feet, CIP; and for non-island booths, The Pellegren Corp.

The interest displayed by newspaper executives at those and other booths sent many exhibitors home happy.

"It was much better than last year, and we're looking forward to Las Vegas," site of the 1987 OMCE, said Karl Ziegler, advertising manager of IDAB. ☐

Conference Sidelights

Crime in the Booths

There was an "unusual amount" of thefts on the Exposition floor, according to Conference Director Peter P. Romano, ANPA director/technical services.

The Associated Press booth apparently suffered the largest loss—two video cassette recorders, a speaker and amplifier, a telephone and two special tool kits worth about $5,000 altogether, according to AP spokeswoman Kelly Smith Tunney.

AP was not alone. A VCR was taken from the ANPA booth Sunday night, and there were reports of other thefts of purses and equipment, including a security guard's motor scooter.

Relating to Technology

Nearly 30 newspaper general managers, production directors, and human resources specialists gathered at the fourth ANPA Labor Relations and Technology Seminar held in conjunction with the Conference.

Participants in the June 20-21 seminar considered not only the impact of new technology on employees but also how to bargain with unions over the number of people who will be required to maintain and operate the new equipment being developed, such as robots that put plates on presses.

College Symposia Held

Twenty student newspapers were represented at the first College Newspaper Production Symposia held in conjunction with the Conference. Thirty-one students, advisors and employees of the newspapers attended.

Air-conditioned buses provide a welcome lift between the Congress Center and hotels.

Conference Speeches Available

Single copies of the following ANPA Operations Management Conference & Exposition speeches are available without charge from the ANPA Public Affairs Department at The Newspaper Center.

Monday, June 23

General Session—Theme: People and Management

- **Address by ANPA Chairman and President Alvah H. Chapman Jr.**, chairman and chief executive officer, Knight-Ridder Inc., Miami
- **Hiring Your Next Production Managers, Melvin P. Reid**, president, Byron Harless, Reid and Associates, Jacksonville
- **Team Building—What Kind of Management Is Needed for the Total Electronic Newspaper, Gary A. Kleinhenn**, quality circles manager, Detroit Free Press

Concurrent Workshops
Managing Telecommunications (It's More Than Just Phones)

- **Helen Waicunas**, manager/telecommunications, The Hartford Courant; **Patrick A. DeFilio**, account executive/national, Southern New England Telephone Co., New Haven, Conn.

Management Asks the Tough Questions About Flexo

- **Dott. Lorenzo Jorio**, managing director, Il Gazzettino, Venice, Italy; **Thomas O. Might**, vice president/production, The Washington Post; **Ralph S. Roth**, vice president/production, Knight-Ridder Inc., Miami

PCs—Panacea or Pandemonium

- **Donald P. Ruthig**, office of systems analyst, Advance Office Systems Group, Los Angeles Times; **C. S. Wood**, vice president/manufacturing, Suburban Communications Corp., Livonia, Mich.

Drugs and AIDS in the Workplace

- **John T. Spran**, vice president/employee relations, News and Sun-Sentinel Co., Fort Lauderdale; **Stuart H. Bompey**, senior partner, Baer, Marks and Upham, New York City

Facing Building Expansion

- **Harold J. Brown Jr.**, vice president/operations, Atlanta Journal and Constitution; **Donald T. O'Neill**, production director, The Boston Globe; **W. Scott Sherman**, production manager, The Orlando Sentinel

Tuesday, June 24

General Session—Theme: The Quest for Quality

- **The new ANPA/Newspaper Advertising Bureau publication: *Guide to Quality Newspaper Reproduction*, Walter E. Mattson**, president and chief operating officer, The New York Times Co.
- **Payback on Quality, Charles M. Kinsolving Jr.**, vice president, marketing/new technology, NAB, New York City
- **Quality Control Manager, the Keystone to Quality, Gene Bell**, vice president/production director, Chicago Tribune
- **Commercial Printers Do It All The Time—and Better, James T. Sullivan**, president, magazine group, R. R. Donnelley & Sons Co., Chicago

Concurrent Workshops
Pre-Press Quality: Newsroom to Negative

- **Mark Mikolajczyk**, production/operations manager, The Cincinnati Enquirer; **Francis Przybylek**, production manager, The Times Journal Co., Springfield, Va.; **Michael Przybylek**, night production director, Florida Today, Cocoa; **Ian M. Pittendreigh**, director of operations, The London (Ontario) Free Press

Color Separation and Graphics: Perceptions and Prerogatives

- **Kenneth K. Kniceley**, production director, Charleston (W.Va.) Newspapers; **Marvin Sussman**, production quality assurance manager, Newsday, Long Island, N.Y.

Print Quality

- **Robert L. Moyer**, vice president/operations, Small Newspapers Inc., Kankakee, Ill.; **Richard Malone**, pressroom manager, Chicago Tribune; **Paul T. Lynch**, quality control manager, The Record, Hackensack, N.J.; **Thomas J. Shafer**, director of field operations, USA Today, Arlington, Va.

Quality in the Mailroom

- **Danny J. Collins**, production director, The News and Observer and The Raleigh (N.C.) Times; **Jim L. Davis**, mailroom manager, Houston Chronicle; **Robert F. Murphy**, production director, The Record, Hackensack, N.J.

Wednesday, June 25

General Session—Theme: Developments—Directions

- **Making Pagination Pay: William R. Hogan**, vice president and general manager, The Arizona Republic and The Phoenix Gazette
- **Electronic Graphics System: Louis J. Franconeri**, vice president/operations, The Baltimore Sun
- **AD/SAT On the Move: Roy Hodgson**, president and chief executive officer, British Printing and Communications Corp., U.S. Division, New York City

Concurrent Workshops
Ad Makeup Systems—A Candid Look

- **Terry E. Sturgeon**, director of production, Booth Newspapers, Grand Rapids, Mich.; **Michael L. Pearson**, production manager/pre-press, Chicago Tribune; **John Blaney**, manager/information systems, The Globe and Mail, Toronto

Getting Your Sunday Paper Out the Door and Delivered

- **Donald A. Nizen**, vice president/circulation, Knight-Ridder Inc., Miami; **Benjamin Hayes**, insert manager, Times Publishing Co., St. Petersburg; **Frank M. Manzon**, vice president/circulation, The Washington Post; **George Martin Jr.**, senior vice president/circulation, The Denver Post

Newsprint Handling—Pulling for AGVs

- **James H. Norris**, vice president/operations, Newsday, Long Island, N.Y.; **Curtis Bok**, production manager, Minneapolis Star and Tribune; **John F. Dennan**, director/quality assurance, Fort Worth Star-Telegram; **Ralph E. Imhof**, plant manager, St. Petersburg Times and Evening Independent; **Jouko Nurmela**, vice president/production, Sanoma Corp., Helsinki, Finland

A Lot of Work and Money Go Into the Exhibits

When Chesley F. Carlson first came to an ANPA trade show displaying his company's products in 1954, his display occupied an 8-by-8-foot space.

His products were representative of the hot-metal newspaper days—a "chase" and a "turtle," the metal frame for holding a page of type and the cart by which it was moved—he said. Those items pretty much were the extent of the Chesley F. Carlson Co. line, added Carlson, who has been an exhibitor at the ANPA show for 36 consecutive years, one of the longest vendor participation records.

In the years since, the firm expanded its offerings to include register-control equipment and a host of electronic gear—including a new color-proofing system that the company says is faster and cheaper than other methods. It all has resulted in corresponding growth of the Carlson booth at ANPA's annual event.

The exhibit this year took up 2,400 square feet and cost about $160,000 for the exhibit itself and various other equipment such as illustrations, large transparencies and furnishings. Machinery and props were moved from company headquarters in Minneapolis in two 48-foot moving vans. It took three and a half days to set up the exhibit, which was operated by about a dozen people.

The story of the Carlson exhibit is one of the more than 250 that can be told of vendors at the ANPA Exposition. Each display is a different combination of myriad variables: design, colors, carpeting, signs, furniture, machinery, movable walls, lights and other props, not to mention staffing requirements and costs.

The degree of complexity ranges from the Hollenback Typesetting Systems Inc.'s 100-square-foot booth with props as simple as a small sign and pamphlet stand costing between $2,000-3,000, to much larger exhibits, such as that of Digital Equipment Corp. occupying 8,800 square feet and costing nearly a quarter of a million dollars. (Among the companies' costs are fees ranging from $7.75 to $8.25 per square foot to rent the space from ANPA.)

Many of the exhibits can be and are re-used at other shows.

"Ninety-five percent of the (ANPA) show is predesigned, and untold millions of dollars are spent on design, construction and tearing down of the exhibits," said Jerry Marshall, general manager of the St. Louis division of United Exposition Service Co. United is a common denominator for most vendors at the ANPA show.

This year, exhibitors rented 500 tropical plants and purchased 1,000 flowering plants—at a cost of about $30,000.

Not only does it move most of the heavy equipment from the loading dock to the individual booth spaces, but United is hired by about 60 percent of exhibitors to help set up all or at least a part of their displays.

Working as a general contractor for ANPA, United also draws up the Exposition floor plan, lays out exhibit spaces, installs the five-miles-plus of Exposition-aisle carpeting and decorates the Conference session sites. In addition, it provides much of the carpeting in booths, Marshall said. "We have a lot of rental carpet out there—probably 10,000-15,000 (square) yards."

Another rental item used at many booths is decorative plants. This year, exhibitors rented 500 tropical plants and purchased 1,000 flowering plants—at a cost of about $30,000.

Alan Tepper

Workmen prepare Goss Headliner press for display.

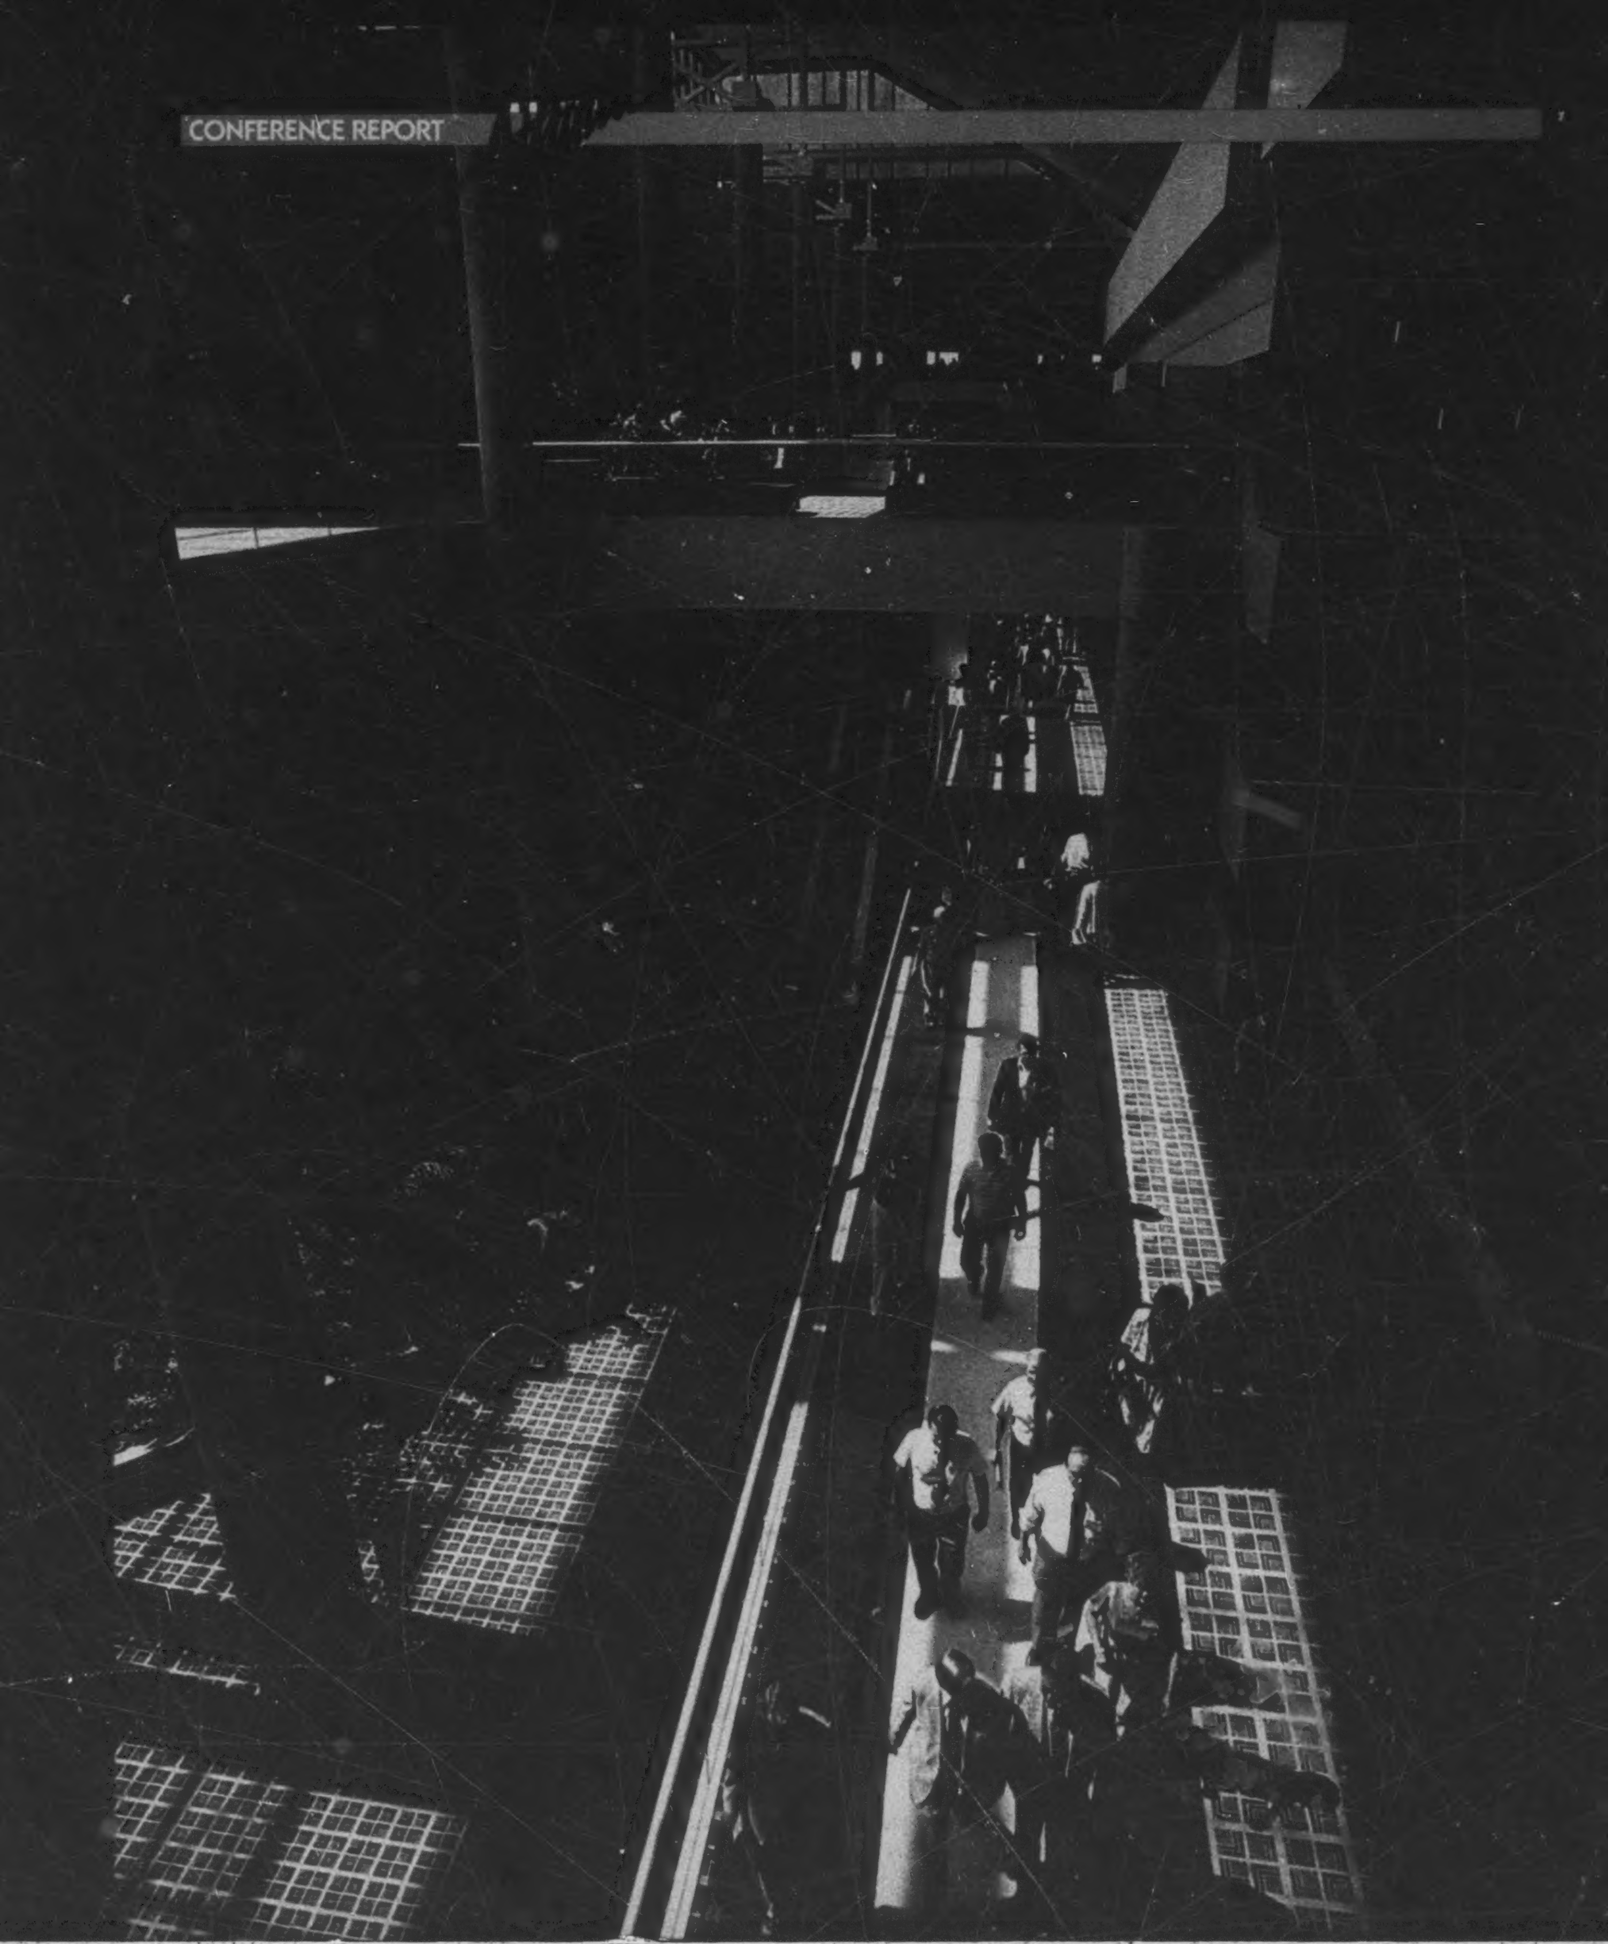
"Putting this show on is the easy part," explained United's Marshall, a 13-year veteran of the ANPA Exposition. "It's the planning and all the details that are difficult." United usually does at least two years' advance work on the ANPA Conference & Exposition. He and his work force of seven are at the show's site for three weeks each year. During that time, Marshall hires more than 100 local workers, as needed.

Among exhibitor vignettes:

- Signode Corp., which introduced machines that wrap loaded pallets with plastic, spent $12,000-13,000 on its 20-by-30-foot exhibit, said Dennis A. Miller, Signode market development manager for the graphic arts industry. Signode's machines, rented furniture, live plants and other apparatus are positioned according to a design by the firm's products advertising manager. The booth was operated by about five sales people from Signode offices around the country.
- Xenotron Inc.'s 3,200-square-foot booth employed movable walls, a raised floor for wiring and a high-tech-looking overhead gridwork—a German system called Meroform. The apparatus had been used in five other shows, including the 1985 ANPA Conference & Exposition in New Orleans. John B G Nye, publicity manager who designed the setup, said it cost about $60,000 in U.S. currency. The booth was shipped to Atlanta via air freight from its last show, DRUPA '86, in Duesseldorf, West Germany. Nye said it was to have been sent next —by boat this time—to Xenotron headquarters in Great Britain. Nearly two dozen people operated the booth, not counting five Chicago Tribune staff members who demonstrated Xenotron's Artmaster ad layout system that the Tribune uses.

Without exception, exhibitors said attending the ANPA Exposition is worthwhile, and probably mandatory.

"The (trade) show business is like a merry-go-round," said Timothy J. Hurley, manager of marketing communications of Mycro-Tek, which this year had a 3,000-square-foot booth. "You have to go with it. . . . If you're not there, your customers think you're out of business." ☐



Technology, People Keep Newspapers at the Fore

JUNE 23
SESSION DAY
1

☐ Tough flexo questions
☐ Plant expansion
☐ Drugs and AIDS
☐ PCs making inroads
☐ People and management

The 58th annual Operations Management Conference & Exposition reflected "a technological revolution in midstream" for newspapers, ANPA Chairman and President Alvah H. Chapman Jr. told the full-house opening General Session.

That revolution to computer-based technology, he said, has led to vast increases in the number of newspaper products, to better service to readers and advertisers, and to a younger, more diverse and better educated work force.

In his chairman's address to about 2,000 newspaper executives and other Conference-goers, Chapman emphasized the importance newspapers place on technology by noting another change. The revolution, he said, "has brought the production departments and those who lead them into the mainstream of American newspaper management."

When he attended his first Conference in 1948, said Chapman, chairman and chief executive officer of Knight-Ridder Inc., "our salespeople sold three products: retail ads, classified ads and national ads.

"Today, a newspaper ad salesperson may sell 300 products. A multitude of full-run, part-run and total-market-coverage products in color and black-and-white are now simple and economical to produce."

This has helped to keep newspapers the number one ad medium in America, he said, but without the technological advances and the people who foster them, "it simply would not be so." Readers also are being better served, he said. "Through the flexibility of new product offerings, our editors have the opportunity to use more graphics, more color and more coverage."

Chapman placed heavy emphasis throughout his speech on the importance of people to the technological revolution. Harking back to his first ANPA Conference 38 years ago in Pittsburgh, he noted it was the first such show to include any discussion of personnel and training matters, subjects now heavily covered.

To illustrate his point that "people" and "quality" are keys to a newspaper's success, he told the story about the St. Paul Pioneer Press and Dispatch, a Knight-Ridder paper that this year won a Pulitzer Prize for a series on the problems of a Midwest farm family.

"When the prize was received," Chapman reported, "the editors printed certificates for the pressmen whose professionalism and superior color printing talent made that series come alive for the paper's readers."

The change in technology has been remarkable in recent years, he said, but the change in people with production responsibility for newspapers has been even greater.

The median age of this year's Conference goers, he guessed, "might well be 25 years younger" than of those who attended in 1948. There are more women and minorities represented now, and many of all the attendees have advanced degrees in engineering and business management, Chapman said.

He noted that "some of the most innovative production directors that I know possess neither their youth nor an advanced degree, but do possess an uncommon sense of what is practical in our business."

Nevertheless, Chapman made it clear that his optimism for a continuation of the revolution was centered squarely on the new generation.

In the "fertile minds" of this group, he said, "the next phase of the newspaper technological revolution is unquestionably in embryonic formation." ☐

Michael Pugh

Chapman reminisces about 38 years of ANPA equipment shows.

Tapes available

Cassette tape recordings are available for the three Conference General Sessions, 13 workshops and three College Newspaper Production Symposia. Prices are $17 for each General Session and $8.50 for each workshop or symposium. A complete set of cassettes costs $178. Shipping charges are extra. To order, contact Acts Inc., 1025 E. Clayton Rd., Ballwin, Mo. 63011.

Flexo Debate Rages On

At the workshop called "Management Asks the Tough Questions About Flexo," the answers caused the biggest stir.

When Thomas O. Might, vice president/production of The Washington Post, offered some long-awaited data comparing offset and flexographic costs for everything from newsprint to personnel, there was a virtual stampede to pick up copies of his six-page report.

A standing-room-only audience of nearly 1,000 crowded into the room to hear the flexo assessments from Might; Lorenzo Jorio, managing director of Il Gazzettino, Venice, Italy; Ralph S. Roth, vice president/production, Knight-Ridder Inc.; and J.A. (Andy) Riggs Jr., senior vice president/operations, The New York Times.

Might reported that since January, The Washington Post has printed part of its press run on an eight-unit Goss flexographic press, while using offset and letterpress presses as well.

Might compared the flexographic operation with offset runs, examining costs per ton for labor, materials, newsprint waste and electricity. Figures showed, for example, that newsprint waste for flexography was half that for offset. In all, his study determined that flexo was $14.24 cheaper than offset per ton of newsprint used. (See chart.)

He said the Post will continue its flexo research and development through the end of this year and perhaps longer.

Might, who began his talk by exclaiming "Flexo works!" nonetheless ended by saying: "As in the past, the Post is not partial to flexo or any other process. We will happily invest in whichever process has demonstrated the optimum quality and cost potential when that decision day arrives."

That decision was made 14 months ago for Il Gazzettino in Venice: It is now being printed on Cerutti flexo units, five for black-and-white pages and one for color.

"We print 1.2 million copies per week, so we have now produced more than 60 million copies via flexo," Jorio reported.

He said Il Gazzettino uses color frequently, both editorial and advertising. "We are very satisfied by our choice to change from letterpress to flexo, as we now have a more productive printing facility and an improved printed newspaper." Seven other Italian newspapers that have converted to flexography are also pleased with the reproduction they are getting, Jorio said.

Washington Post costs-per-ton summary, flexo vs. offset

	Flexo	Offset	Savings
Labor	$52.18	$59.86	$ 7.68
Materials	30.73	28.36	-2.37
Newsprint Waste	8.55	17.00	8.45
Electricity	1.14	1.62	.48
Total	$92.60	$106.84	$14.24

Knight-Ridder's Roth said that group's flagship Miami Herald has been used as a printing laboratory of sorts, using letterpress, offset, heat-set offset and flexographic presses. The Herald currently is adding two flexo units and a color half-deck to three letterpress presses, giving a total of four flexo units.

Knight-Ridder remains a large offset user, Roth pointed out, and while he is enthusiastic about flexo, he said it's "self-defeating for me to say flexo will ever supplant offset. Offset and flexo will coexist for many years. Each process has its advantages and disadvantages" [presstime, April 1986, p. 70].

But flexo can no longer be considered experimental, he added. "It's a practical, though still improving, newspaper printing method." Although top-grade offset currently is better than top-grade flexo, that may not hold true in the future as flexography matures, Roth said. Even now, he noted, newspapers printed flexographically have brighter and sharper colors, less show-through and virtually no ink rub-off.

Roth said each newspaper should decide which process best suits its operation and needs, adding: "Flexographic presses will certainly weigh heavily in future press purchases at Knight-Ridder."

However, Riggs of The New York Times said he believes the offset process offers two distinct advantages over flexo.

The first is quality. "As long as we're printing against rough newsprint in a very timely situation with deadlines . . . we are going to continue to try and optimize the quality on that very rough stock. The only way we're going to do it is with a soft (offset) blanket, not printing directly" by the flexo process, he said.

Dot reproduction is the second advantage Riggs sees with offset. He doesn't believe the same reproduction is possible with flexo's relief plates as can be achieved with offset plates, and, he said, offset plates can be produced faster.

In addition, Riggs asserted that full-fledged pagination—that is, computer-to-plate technology—will lend itself more readily to offset.

At the same time, the Times executive acknowledged that offset does have its disadvantages. He cited newsprint waste, the difficulty of maintaining the delicate printing balance between ink and water, and ink rub-off.

Offset users need to find a way to eliminate or at least reduce the incidence of those problems, Riggs said. He added that anilox rollers and keyless inking systems for offset presses might be the answer. ☐

Alan Tepper

A delegation of 112 visitors from Japan constituted the largest foreign contingent. All told, 691 people from 52 countries (other than the United States and Canada) on six continents attended the Conference & Exposition. In addition, more than 25 foreign firms exhibited equipement.

- Public vs. private: Form of ownership can make a difference, but bottom line depends on caliber of management, May, p. 6
- Pulitzer Publishing Co. shareholders vote in favor of recapitalizing company, May, p. 87
- Outsider who offered to buy Pulitzer Publishing Co. sues firm, June, p. 98
- Dispute erupts in Washington newspaper family, June, p. 100
- News Corp. plans to sell shares of publicly traded Reuters stock, June, p. 100

NEWSPAPERS

Business and finance

- More newspapers use credit departments to collect bad debts, Jan., p. 17

- — Globe goes to court to retain Murdoch features, Jan., p. 62
- — Board of The Times Mirror Co., Los Angeles, approves plan to reincorporate company as a Delaware corporation, Jan., p. 62
- — N.Y. Times reaps big savings through energy program, Feb., p. 52
- — Buying co-op ends first year in good shape, Feb., p. 61
- — Newsgathering exempted from divestment law, March, p. 67
- — Insurance: Newspapers adjust budgets as premiums rise, April, p. 8

Circulation [See CIRCULATION]

Electronic technology
- — Eleven vendors agree to support Uni-File data format for its read-only optical disks, Jan., p. 52
- — Systems Integrators, California paper sign letter of intent to develop newspaper pagination system, Jan., p. 52
- — Newspaper Agency of Salt Lake City purchases $3.37-million pagination system, Jan., p. 52
- — New electronic-hardware users group organizational meeting scheduled, March, p. 63
- — Many newspapers, small and large, turn to "The Mac," April, p. 23
- — Much Mac software has newspaper applications, April, p. 26
- — Pagination may spur new innovations through "imaging couples," May, p. 83
- — Newspapers adopt some of the wire service's systems to their own use, June, p. 24
- — Additional efforts to standardize digital data from electronic imaging sytems under way, June, p. 90

Equipment/machinery/processes
- — Team of tiers tackles "football" bundles, Jan., p. 52
- — Largely hidden from view, sensors are newspaper sentries, Feb., p. 11
- — Home-made core unwinder a success, Feb., p. 53
- — ANPA Annual Capital Expenditures survey due, Feb., p. 53
- — Color film: Photographers favor Fuji when shooting slides, March, p. 10
- — A grain of advice for good color slide film reproduction, March, p. 11
- — Video-to-print technology nears newspapers' doorsteps, March, p. 62
- — Survey shows record expenditures, topping $1 billion, June, p. 86

Forecasts
- — Newspapers look forward to good—though not great—year for growth in revenue, earnings and linage, Jan., p. 6
- — Unusual range of economic factors faces newspapers in 1986, Jan., p. 42

Free circulation publications
- — Another free paper loses postal rates battle, Feb., p. 41
- — City papers: As downtowns revitalize, some daily newspapers are targeting the areas with free publications, June, p. 14

Marketing/promotion
- — Newspapers increase emphasis on customer service, April, p. 19
- — Marketing, economics will be focus of graduate program, April, p. 20
- — ANPA Industry Affairs Committee forms ad hoc task force to study distribution, marketing, April, p. 78
- — States move to restrict telemarketing, May, p. 66
- — New INPA program analyzes newspapers' promotion budgets, June, p. 74
- — Legal pitfalls outlined in INPA publication, June, p. 74
- — Creative marketing topic of fall seminar, June, p. 102

Minority employment/women
- — Minorities task force makes headway in key areas, March, p. 66
- — ANPA Foundation awards newspaper employees minority fellowships, March, p. 67
- — Institute for Journalism Education helps minorities be managers, May, p. 28
- — Minority newsroom employment up, annual ASNE survey shows, May, p. 88
- — Minority hiring efforts gain speed, June, p. 100

Personnel
- — Jay T. Harris: An advocate for minorities and newspapers, Jan., p. 32
- — Gerald P. Haslam: Mastermind of fast-growing "pesky little tabloid," Feb., p. 34
- — Tully resigns after admitting falsities, Feb., p. 61
- — Sal Micciche: A newsroom attorney with special credentials, March, p. 38
- — Alvah Chapman: Lending talents to professional and civic worlds, April, p. 44
- — New publisher named for The Arizona Republic and The Phoenix Gazette, April, p. 78
- — Dennis Bell: From pressroom janitor to Pulitzer Prize-winning reporter, May, p. 34
- — Mary Jane Haeselich: From secretary to vice president/production of Milwaukee's dailies, June, p. 52

Printing/presses
- — Newspaper technology: Reflections and projections, Jan., p. 14
- — Web breaks: Florida paper takes a swat at cutting amount of waste paper, Jan., p. 18
- — Achromatic color test shows less ink used, better control, Jan., p. 50
- — How to test extent of ink rub-off, Jan., p. 51
- — Company ends research and development of flexography for newspapers, Jan., p. 52
- — Experimental ink moves closer to production, Jan., p. 53
- — ANPA panel backs plan to substitute red pigments; problems cited with low-rub inks, Feb., p. 51
- — Introduction of offset printing at British daily breaks tradition, April, p. 52
- — Flexo's advances hailed, April, p. 70
- — New ink replaces Red Lake C, April, p. 71
- — Quality reproduction guide completed, April, p. 72
- — Getting quality-control "hands-on" training, April, p. 74
- — Other ANPA services also stress print quality, April, p. 74
- — Reproduction guide distributed by ANPA/NAB, May, p. 84
- — Mergenthaler's marvelous machine turns 100 this year, June, p. 16
- — Second printing likely for quality-reproduction guide, June, p. 89

Publishing schedules
- — Columbus, Ohio, paper's circulation jumps after shift to morning publication, March, p. 68
- — Knoxville papers to change cycles, March, p. 69
- — Three more dailies convert to a.m., March, p. 69
- — Columbus, Ohio, paper expands coverage and offers afternoon street sales, May, p. 87

Suppliers
- — Digital Equipment Corp. may re-enter newspaper business, Jan., p. 52
- — Muller-Martini Corp. doubles size of its Newport News, Va., division, Jan., p. 52
- — Flint Ink Corp. breaks ground on research facility, Feb., p. 52
- — Management of Newspaper Electronics Corp. purchases majority ownership of that company, Feb., p. 52

- — Rockwell International Corp. purchases Allen-Bradley Co., Feb., p. 52
- — Cary Co. Inc. acquired by Zerand Corp., March, p. 64
- — Itek Graphic and Composition Systems Division of Litton Industries sold in leveraged buyout, March, p. 64
- — Hell Graphic Systems Inc. relocates corporate headquarters, March, p. 64
- — Harris Graphics, AM International to merge, June, p. 88
- — Hell Graphic Systems Inc. signs agreement with Crosfield Electronics Ltd. to standardize exchange of data, June, p. 90
- — Crosfield Electronics acquires Hastech Inc., June, p. 90
- — Flint Ink Corp. purchases assets of Capital Printing Ink Co., June, p. 90

General
- — International editions: More U.S. newspapers follow the International Herald Tribune overseas, Jan., p. 28
- — Publishers from other countries enter the U.S. market, Jan., p. 31
- — California paper sued in case of child who allegedly suffocated after putting plastic newspaper wrapper over his head, Jan., p. 35
- — Technology calendar: Jan., p. 53; Feb., p. 53; March, p. 64; April, p. 71; May, p. 84; June, p. 90
- — Tabloids: Easy to handle, advertisers like them, here to stay, Feb., p. 18
- — Judge puts Tennessee executive editor on two-year pretrial diversion for taking competitor's papers off newsrack, Feb., p. 38
- — Starting pay at dailies, J-school enrollments up, placement survey shows, March, p. 48
- — Sunday magazines: Despite vast differences, they may stand together in bidding against other media for advertising, April, p. 12
- — Small newspapers' recruiting: With limited budgets and high turnover, the search for talent never ends, June, p. 6
- — Newspapers as history: American Antiquarian Society offers researchers 18th, 19th century editions, June, p. 22
- — Presstime's Special Report on the progress of newspaper technology, June, p. 38

NEWSPRINT

Consumption
- — U.S. dailies continue using more newsprint, Jan., p. 55
- — Record set in 1985 for newsprint use, Feb., p. 58
- — 1986 begins as 1985 ended: with higher usage, April, p. 68
- — Consumption climbs again in February, May, p. 75
- — Consumption increases, but production slows, June, p. 76

Labor
- — Four British Columbia mills and two unions to begin contract negotiations, Jan., p.54
- — Contracts expire at 13 newsprint mills this year in United States and Canada, March, p. 61
- — Three-year contracts are industry norm, April, p. 67
- — Contract negotiations between management of four British Columbia mills and two unions under way, April, p. 67
- — British Columbia mills, two unions reach labor agreement, June, p. 77

Machines and mills
- — Times Mirror Co. agrees to sell an 80-percent interest in its Publishers Paper Co., Jan., p. 54
- — Donohue Inc. approves plans to install new newsprint machine at its Clermont, Quebec, mill, Jan., p. 54

- — Manistique Paper Inc. to add 10,200 metric tons a year to Michigan mill's capacity, Jan., p. 54
- — Takeover try of Southwest Forest Industries unveiled, April, p. 67
- — Southwest Forest Industries restarts newsprint machines at Arizona mill, April, p. 67
- — Newfoundland mill faces possibility of shutdown because of depleted water supply, April, p. 67
- — James River Corp. takes control of Crown Zellerbach, June, p. 77
- — Two new machines planned, another shuts down, June, p. 77

Prices
- — Fluctuating exchange rates cloud outlook for newsprint prices, March, p. 60
- — Newsprint price hike seen unlikely this year, May, p. 52

Pulp substitutes
- — Kenaf research authorized, Jan., p. 54
- — USDA kenaf program advances, April, p. 67

Recycling
- — Feasibility study on proposed recycling mill in Richmond, Calif., completed, April, p. 67

General
- — Fourteen newsprint makers donate to ANPA for technical research, Jan., p. 54
- — Home-made core unwinder a success, Feb., p. 53
- — ANPA urges trade talks between U.S. and Canada, April, p. 47

NEWS RESEARCH

General
- — Newspapers' research projects must be carefully tailored for individual market needs, Jan., p. 33
- — Content changes of newspapers found widespread; journalist/public views compared; coverage of blacks studied, Jan., p. 57
- — Study shows reporters are now more careful in use of confidential sources, Feb., p. 43
- — Study suggests competition makes little difference in quality, April, p. 62
- — Researchers analyze cost of complying with FOIA, April, p. 62
- — Implications of advertising restrictions examined by university researcher, April, p. 62
- — New data for retailers advocated, May, p. 67
- — Newspapers as history: American Antiquarian Society offers researchers 18th and 19th century editons, June, p. 22

OSHA
[Occupational Safety and Health Administration]
[See SAFETY/HEALTH]

POSTAL AFFAIRS

Rates
- — A lot of people get involved in setting rates, Jan., p. 26
- — In-county rates jump 50 percent, another increase in '86 possible, Jan., p. 39
- — Appeals court upholds rate-case decision, Jan., p. 39
- — Another free paper loses rates battle, Feb., p. 41
- — In-county rate increase likely March 9, March, p. 46

- National Newspaper Association appeals latest round of postal rate increases, April, p. 50
- In-county rates go down, but other costs go up, May, p. 64

ANPA

Newspaper Executives Share Experiences In Plant-Expansion Programs

Practical advice about what to do—and what not to do—was the dominant feature of the workshop on "Facing Building Expansion."

Perhaps the most cogent comment came from Harold (Hal) J. Brown Jr. of the Atlanta Journal and Constitution, who advised: "If you can avoid building a new plant, do it," because such projects are "expensive and will tie up a lot of your key personnel with planning and construction management."

Other panelists were from The Boston Globe, which added a satellite plant; The Orlando Sentinel, which had one but closed it; and the Dallas Times Herald, which expanded on every inch of available land at its downtown plant.

The Globe's director of production, Donald T. O'Neill, advised: "If possible, contain your entire production operation in one location." He said a satellite plant should be built only if additional land is unavailable adjacent to the main plant.

It was for that reason—lack of land for such things as pressroom expansion and storage of newsprint and preprints—that the Globe decided to construct its satellite facility on a 30-acre site in Billerica, Mass., 30 miles northwest of the Boston plant. "We just had to expand," O'Neill said. "Since previous expansions had already put us wall-to-wall," the satellite plant was "the only option open to us."

One big disadvantage in having a satellite operation, O'Neill noted, is that it requires additional staffing: security guards, janitors, building service people and some more production supervisors.

But "the investment has really paid off," he said. Opened in December 1983, the 210,000-square-foot plant "is producing at far-greater-than-expected levels."

Other advantages of a satellite operation include improved access to some outlying distribution points and redundancy "should an emergency arise" at the other plant, he said.

Yet in Orlando, the Sentinel found that after a period of using a satellite plant to supplement main-plant operations, "you can go back again" to single-site production.

"We are a market-driven newspaper," said Production Manager W. Scott Sherman, and changes in the market dictated first the satellite plant and then the consolidation. Another factor was the rental arrangement for the Sentinel's downtown facility that the Tribune Co. of Chicago had with the newspaper's previous owner.

The satellite plant was opened in 1972 in an effort to keep pace with the rapidly developing suburbs of Seminole County. The energy crisis that began a year later devastated Orlando's tourist industry, and it greatly increased transportation costs for the newspaper's distribution. One result was that the Seminole plant 12 miles northwest of downtown was reduced to three-days-a-week operation.

On the other hand, rising energy prices in the Frost Belt "increased the flow of permanent residents" to the Orlando area. They settled on all sides of the central city and contributed to growing traffic congestion in many locations. That argued for a central production operation at the original downtown site, which is one block from the intersection of the two major highways feeding the metropolitan area.

In 1978, the Tribune Co. was able to acquire the land and newspaper building from the previous owner, and by the next year it bought most of the other property in the same block. An expanded, $38-million plant opened there in early 1982.

Proximity to the city's major transportation hub also was a prime factor in the Dallas Times Herald's decision to expand next to its downtown plant. Vice President/Operations Thomas E. Rice said the city's major north-south and east-west highways intersect three blocks from that location.

> *"If you can avoid building a new plant, do it," because projects are expensive and tie up key personnel.*

He warned that anyone facing a building project, whether in the city or in the suburbs, will end up as "a thorough advocate of Murphy's Law"—that whatever will go wrong will. As an example, he said that before excavation, the newspaper studiously checked with the city water department—but workers still hit a 24-inch water main located where one wasn't supposed to be. This sent a five-story-high stream of water into the air, causing "a lot of damage." Later, rainwater seeped from the excavated area into the pressroom of the original building, he reported.

Other problems included the hassle of shielding the new offset presses from the ink mist emanating from older letterpress units that were being gradually replaced; dealing with tight space situations during installation of the new presses and other equipment; and resorting to "remote inserting" at an auxiliary facility away from the main plant.

Additional insight was offered by Atlanta's Brown, as he described the process that led to construction of the Journal and Constitution's $78-million, 320,000-square-foot satellite plant, which recently opened on a 30-acre tract at Norcross, Ga., 19 miles northeast of downtown.

Among the more important questions to address, he said, are:

- Who will design the plant and will that company also build it? "You will probably be better protected if you hire an architect and engineering firm to design your plant, and then working with this architect and engineer contract with additional, unrelated contractors to build your plant. To have one firm both design and build your facility is much like having 'the fox look after the chicken house.'"
- Should a local architect be retained? "I would wholeheartedly recommend that you use a local architect if at all possible. . . . You need, virtually, day-to-day contact during the heavy design phases."
- Should the newspaper choose an architect with experience in designing other newspaper plants? "You will find that it is helpful . . . (but not) as helpful as you would like for it to be," because each newspaper's requirements are unique.
- Should the project be built by the "fast-track method" of clearing and grading—and even pouring foundations—before the design is finished? This will produce a completed building "faster than any other approach," which in a period of high inflation can yield cost savings. On the other hand, the "fast-track method" produces "a lot of engineering changes, almost by intent," and such changes can add to cost.

Brown, the newspapers' vice president/operations, also remarked: "Get yourself a hard hat and wear it at all times, because you are going to find there will be a lot of rocks thrown in your direction." ☐

Experts Advise on Dealing with Drugs in Workplace, Affirm That AIDS Is Not Transmitted on Job

The issues of "Drugs and AIDS in the Workplace" will continue to be important topics into the 1990s, said Dr. Howard R. Brown, medical director of The New York Times and moderator of a workshop of that title.

Discussing **drugs**, John T. Spran, vice president/employee relations of the Fort Lauderdale News and Sun-Sentinel, said his company began using drug screens in selecting new employees in February 1985. Other large companies in the South Florida area were screening, and the newspapers realized that if they did not, "we would soon be picking up the rejects from other companies," he said.

A urinalysis drug test is part of the pre-employment physical. Current employees who are absent for more than 10 consecutive working days because of illness, injury or surgery are given a "return to work" examination that includes a drug screen. Employees with positive test results are counseled by an employee assistance specialist about available detoxification and assistance programs. After the employee returns to work, he or she receives a letter advising of possible future testing and warning that failure to pass a test may result in discharge.

A major objective of the Fort Lauderdale program is to make employees aware of the company's positive approach to alcohol and drug abuse, Spran said. As a result, "many of our employees voluntarily turn themselves in," and no disciplinary action is taken against them.

"Our employee assistance counseling program is the key to the success of this entire (drug and alcohol abuse) program," Spran said. Employees electing to enter a rehabilitation program usually commit themselves to an approximately 30-day program. The company's medical and disability plans pay the majority of the costs and the loss of compensation.

Since the program began last year, Spran said, 100 job applicants have been rejected—about 10 percent of those tested. Those rejected were of no particular group or job category but a cross-section of all applicants. Also, 12 employees have been discharged for drug- or alcohol-related problems, 10 have volunteered for rehabilitation, and 16 have attended rehabilitation programs. "This program has helped many of our employees put their lives back in order and helped many to go from marginal to outstanding performers," he said. "There are cases where, without question, people's lives have been saved."

In addition, Spran said the company has experienced "significant" productivity improvements. Lost-time accidents per 100 employees have been reduced from 4.20 in 1984 to 0.47 in 1985. Lost-time days and medical-plan costs also dropped.

Another panelist said that if a newspaper institutes a drug-screening program, it should do so "across the board." Dr. David Sohn, who heads a drug-testing laboratory and who also is a lawyer, said "you can't pick out groups" without the risk of violating Title VII of the 1964 Civil Rights Act or a state law prohibiting discrimination against the handicapped.

Sohn, director of Chromatography Inc. in Flushing, N.Y., also noted that employees have a right to retesting if they fail an examination.

In selecting a laboratory for testing, companies should pay a visit and get to know the people running it, Sohn said. Find out how long it has been in business. Ask how many tests are done a day and how long specimens are retained. "You want people who can help you in your program," Sohn said. "They should be able to go to court for you if need be."

Examining Chemco's direct platemaking system are (from left) Lockwood Phillips, associate publisher, and Vernon Thompson, production manager, of the Carteret County News-Times of Morehead City, N.C. Chemco representative John Bukowski is at right.

Another speaker, Stuart H. Bompey, a senior partner in the New York City law firm Baer Marks & Upham, cited several "mine fields" in the drug screening area. Generally, job applicants in the private sector "don't have many rights," but it is important to give notice that a drug test will be made, he said.

The confidentiality of test results is important and should be handled on a "need to know" basis with tight control in the human resources or medical department.

On the subject of **AIDS**, the director of the federal Centers for Disease Control in Atlanta told the workshop there has been no documented case of the disease being transmitted in the workplace. "The AIDS virus is not transmitted easily," said Dr. James O. Mason. "It's a behavioral disease."

The kind of contact that occurs between workers "does not pose a risk," Mason said. Only workers who handle blood need to take precautions, he said, and even then, "the risk to health-care workers is very low."

Looking to the future, Mason noted that the majority of cases "have been and will be in the working-age population." Also, he said, "We will see more cases inland away from the cities" that so far have had the highest rates of incidence.

AIDS also involves legal matters, lawyer Bompey observed. He said he disagreed, based on the current state of the law, with a recent Justice Department opinion that it would not necessarily be illegal to dismiss a person with AIDS because of concern of spreading the disease. He said decisions to date have held that workers refusing to work with an AIDS victim have no legal right to do so.

Only three states—California, Florida and Wisconsin—prohibit screening for the virus. But Bompey does not recommend screening job applicants even where it is permitted. "There is no value to it," he said. "It can only get you into trouble" by prompting lawsuits. He advised treating AIDS "as any other disability."

The most important thing, he said, is to educate employees and unions that the disease is not a threat in the workplace. ☐

PCs a Hit At Newspapers Despite Woes

John Harrington

Ruthig advocates the "departmental" computer approach.

Have personal computers evolved as a cure-all to many of newspapers' data-processing needs? Or have they wrought havoc? According to speakers at the workshop, "PCs—Panacea or Pandemonium?" the answer is some of both.

On the plus side, said C.S. (Skip) Wood, vice president/manufacturing of Suburban Communications Corp. of Livonia, Mich., personal computers have been useful in preparing financial reports, in estimating commercial job-printing costs, in figuring out such composing room questions as the average number of hours it took to build a page, and in better understanding work flow and staffing needs.

Peggy Thompson, director/technology and services of The Hearst Corp., noted that PCs can give "a lot more output for a lot less money." A PC-based editorial system, for example, can cost 60 percent of the cost of a comparable front-end system, she said.

But on the minus side, there can be "abysmal difficulties" with personal computers, Thompson said. Those include problems when various users decide their own formats, confusion over software options, undependable maintenance and work-flow bottlenecks.

Donald P. Ruthig, office systems analyst in the Los Angeles Times' advanced office systems group, observed there can be hardware compatibility problems in PC-based systems. "The self-proclaimed standard work station, the IBM PC, is by no means standard," he said. Another hangup is "lack of good network software" that is supposed to enable independent machines to transfer data efficiently.

One solution offered for these problems is to establish an in-house PC users group. Wood of Suburban Communications said such a group could discuss problems as well as opportunities. A newspaper's data-processing department can help bring order to PC use by establishing standards on such things as file names and sizes, he said.

Another solution could, in essence, curtail use of PCs. Ruthig advocated "departmental" computer schemes—using a front-end-like system with a central processor attached to a number of terminals, some of which are personal computers and some "dumb" terminals. Such a setup can help eliminate some of the problems of personal computing, Ruthig said, yet it captures the strengths of PCs, such as their ability to produce graphics.

Hearst's Thompson said it is important to lay down PC-related ground rules. Problems are "avoidable" because "when you install a PC, you're in control until you give that control away."

But she cautioned newspapers against making "the same mistake" that many made when buying larger computer systems: "paying too much attention to the box (hardware)," and not enough to what the organization's needs are and how the system can meet them.

Whatever the degree of PC "pandemonium," the speakers agreed that personal computers have worthwhile newspaper applications. PCs account for more than half of all the computing power in use today, Thompson said. "It's a growing trend, and we need to be in control of it," she said. ☐

Fun Run Again

At 7:30 a.m. on the second day of the five-day Conference & Exposition—well before the temperature climbed into the prevailing 90s—the fourth semi-annual **presstime** Fun Run got under way.

Winner in the men's division was John R. Kastner of J. R. Kastner & Co. of Owasso, Okla., who finished the two-mile course in 11 minutes and 24 seconds. Women's division winner with a time of 13:21 was Atex Inc. Product Manager Nancy S. Felton (at right, receiving plaque from **presstime** Advertising Manager Jonathan A. Reed). She also won last year at the OMCE in New Orleans. There were 150 participants. ☐

C. David Rambo

Hiring the Right Breed of Production Manager

Melvin P. Reid

Gary A. Kleinhenn

Newspapers entering the rapidly developing world of high technology should beware of hiring only engineering-oriented production managers, warned Melvin P. Reid, an industrial psychologist and newspaper consultant.

Managers, in fact, need to have the same time-tested leadership and management qualities they relied on in pre-high-tech days, he said.

Reid, president of Byron Harless, Reid and Associates Inc. of Jacksonville, was one of three speakers who addressed the opening General Session on "People and Management."

He listed 12 categories of characteristics that are generally common to successful production directors: energy and perseverance; practical judgment and common-sense reasoning; supervisory and managerial knowledge; mental alertness, intellectual capacity and formal education; analytical and critical thinking capability; assertiveness; optimism and ability to take pressure; interpersonal skills; persuasiveness; mechanical, scientific and technical bent; high aspiration and commitment to advancement; and job stability.

In evaluations of successful production managers at 35 newspapers of from 40,000 to 500,000 circulation, his firm found that 90 percent were above average in practical judgment and common-sense reasoning capabilities, and 95 percent displayed good mechanical and technical capability. High results were reported in most other categories as well.

"Worrisome findings," he said, included the fact that less than one-fifth had college degrees and only 15 percent reached the average range of a management norm in reading rate, rapid-reading comprehension and "the usual measurements of mental alertness or intellectual efficiency."

Despite these apparent shortcomings, successful production managers appear to compensate for them, Reid said. For instance, he noted, some with only modest supervisory skills compensate with increased energy, perseverance and long working hours.

He added: "Whatever the technical, scientific and electronics bent the production director of tomorrow must possess, it is still a fact that he must be a good manager. All of the 12 qualities and predictors will still be absolutely essential."

Some newspapers and colleges are taking the wrong direction, Reid said, when training people to manage today's computer- and electronics-based production systems. He cited the Rochester Institute of Technology's four-year training program for production managers, "which appears to be primarily for engineers, as best I can understand." Reid urged such programs to expand their high-tech course offerings and requirements.

In another presentation, Gary A. Kleinhenn described how the Detroit Free Press pioneered in the use of quality circles, a technique in which small groups of people from all levels of the workforce get together to discuss and solve problems.

Kleinhenn, manager of the newspaper's quality-circles effort, said a typical program consists of a group of six to eight people from the same work area. They meet regularly, perhaps an hour a week, to identify, analyze and solve problems.

Quality circles are increasingly important, he added, because the world of high tech isolates people and saps organizational strength. □

The Confusing Choices of Telecommunications

Many newspapers do not know what their telecommunications systems are costing them. And many jump into buying new systems without proper preparation, panelists said at the workshop on "Managing Telecommunications (It's More Than Just Phones)."

Frank J. Schoff Jr., director/telecommunications for the Tribune Co. of Chicago, stressed the importance of a "needs assessment" in light of the confusing array of choices confronting newspapers today [presstime, March 1986, p. 20].

Ten years ago, Schoff said, managers had to be concerned only with basic telephone service. Now, they must deal with databases, data switching, security systems, which PBX system to buy, and whether to use AT&T or another carrier.

And that's where the needs assessment comes in.

Before establishing a new telecommunications system, a newspaper should review its current operation, conduct an inventory of its equipment and project future costs with the existing system.

Schoff suggested that before acquiring a new system, a newspaper should define reasons for needing it, identify objectives, establish a telecommunications team to oversee the project, and determine the methods to attain the objective.

Things that do not work, he added, include listing predetermined needs based on the existing system; using the "Chinese-menu approach" (a little of this, a little of that); or the "anything goes" approach of giving everyone what they want.

A needs assessment is followed by the procurement process, said Robert R. Rowell, vice president/operations, of the Press-Telegram in Long Beach, Calif.

He said newspapers should send a "request for proposal" to telecommunications vendors. An RFP has four advantages: It formalizes your needs, it forces vendors to provide price quotations, it allows competitive bids to be played against each other, and it helps the newspaper select its equipment.

Another West Coast panelist, Carleta Vineys, manager/telecommunications of the San Francisco Newspaper Agency, said that by examining the costs of telephone calls made by the agency in the San Francisco area, she was able to add a trunk line and save $14,000 a month on the agency's telephone bill.

She said managers must know what circuits they have and which trunk lines are connected to the computer mainframes and to advertising and editorial departments.

Deborah S. Walker, ANPA telecommunications systems specialist, said newspapers should have an in-house telecommunications expert. But a recent ANPA survey showed few had one.

Minneapolis Star and Tribune Delegation Goes to Atlanta with a Mission

A lot of planning by vendors and programmers goes into the Conference & Exposition. Some newspapers sending people to the show do extensive planning, too, to avoid overlooking some new equipment that could dramatically improve their printing quality, or missing a workshop that offers new ways to reduce costs significantly.

At the Minneapolis Star and Tribune, which sent one of the largest delegations to Atlanta, planning for the event began months ago. The newspaper is building a 400,000-square-foot production facility and wants to equip it with the technology that best suits the needs there, said President and Publisher Roger Parkinson.

Many of the major decisions on equipment selection, including presses and mailroom machinery, were made following the 1985 Conference & Exposition in New Orleans. "We had even more people there (New Orleans)" than the 25 from 10 departments who were dispatched to Atlanta, Parkinson said.

According to Vice President and Business Manager Bruce Gensmer, all of this year's attendees are members of the interdepartmental "Pegasus Project Team" that is overseeing the Star and Tribune's transition to the new plant.

The major mission for those attending this year's show was to evaluate color-separation systems offered by five vendors. "We wanted to put them under the microscope," Gensmer said.

Earlier this year, the Star and Tribune's Color Committee—an offshoot of the Pegasus Project—devised a list of 43 questions to pose in Atlanta to the five manufacturers. Committee Co-chairman Timothy J. Bitney, assistant managing editor/graphics, said the questionnaire was designed to help the newspaper make an objective assessment of what each color system can do and at what cost.

The questionnaire was part of a briefing book that each member of the Star and Tribune delegation took to Atlanta.

Also long before the show, the delegation arranged with certain vendors for private demonstrations of equipment. In some cases, those demonstrations were conducted in the morning during pre-Exposition hours, but the Minneapolis group devised a schedule to assure that at least one staff member attended each of the 16 Conference programs that took place over three mornings. The sessions and the ever-present corridor talk enable newspaper people to "share information on who's doing what," Publisher Parkinson noted.

When not attending demonstrations or sessions, delegation members split up and visited booths of particular interest to their areas of responsibility. Leaving nothing to chance, they devoted some time to 11th-hour scrutiny of the pressroom and mailroom equipment that has already been ordered for the Star and Tribune's new plant, including Goss Headliner offset presses and Ferag inserters. "Everybody gets one last look together," said Business Manager Gensmer. "We want to make sure there's not something we've overlooked."

Michael Pugh

Jack McPhee, Midwest regional sales manager of Scitex, demonstrates color separation equipment for the delegation.

It's important, Parkinson said, "to get the people down (to the show) so they can see and get the feel of the new equipment."

The Minnesotans also tried to bone up on emerging technologies, such as the video-to-print process shown by Sony Inc. "We're not only concerned about what we're doing now," the publisher said. "We're also thinking about the future."

In the evenings, delegation members combined business with pleasure as guests of vendors at restaurants, receptions or hospitality suites. Christine A. Freeman, manager of text processing and a first-time participant in an ANPA trade show, said these informal gatherings also proved informative.

After spending their four or five busy days in Atlanta, the delegation members now are writing "after-action reports" to be shared with each other and with top management. Parkinson said a decision on which scanner to buy probably will be made by fall.

Once the new plant is in full operation, he said, the Star and Tribune will run four-color work each day. Currently operating at capacity on one offset and four DI-LITHO™ presses, the paper generally can accommodate four-color advertising and editorial photos only in the weekly food and Variety preprinted sections.

Business office personnel in the delegation estimated that it cost about $20,000 in transportation, hotel, meal and incidental expenses to send the big group to Atlanta.

Parkinson pointed out, however, that this amount pales alongside the $110 million being spent on the new plant and equipment. Also, he said, if the Star and Tribune's improved and expanded color capability can attract just one four-color national ad for a Sunday run, it will just about cover the cost of the delegation's Atlanta visit. ☐

Readers and Advertisers Want More, Better Color

JUNE 24 SESSION DAY 2

☐ Spotlight on color
☐ Separation and graphics
☐ 'No magic' to quality
☐ Mailroom efficiency

More than ever, newspapers must look good, be "compelling" to read and, overall, do the best job possible for readers and advertisers. Those needs were addressed in the General Session titled "The Quest for Quality."

Considering the messages of the speakers, the session could have been called, "The Quest for Good Color."

"It's clear that our readers and clients want more and better color," said Charles M. Kinsolving Jr., vice president for marketing/new technology of the Newspaper Advertising Bureau, which has designated color as a high priority. Advertisers, he said, "are moving to color as fast as you will let them."

Other speakers offered tips on selecting a newspaper color quality-control manager and gave status reports on the NAB's Future of Advertising Committee.

Alan Tepper

A first-ever series of color clinics sponsored by the Associated Press attracts steady stream of Conference-goers.

Examining trends in advertisers' use of color, Kinsolving reported that in 1983-85, full-run color in newspapers rose almost 8 percent, [illegible] part-run color was up more than 65 percent. Preprints, "which many advertisers use because of their color quality or because they can't get quality ROP color," were up 51 percent during that period, he said.

At the same time, full-run, black-and-white linage was down 5 percent for the three-year period, Kinsolving said.

But there are strong hindrances to advertisers' use of newspapers for color. One is that many advertising-agency executives have a low opinion of newspaper color, Kinsolving said. Another is that many ad executives are unaware that most dailies now even offer ROP full color. Details on these and other aspects of advertiser opinions are contained in a 1983 survey of 400 ad executives. Copies are available from NAB.

The findings serve as a basis for discussion at NAB seminars on quality color reproduction. More than 700 people from more than 100 newspapers in the South and West have attended those sessions, Kinsolving said. The next seminar will be July 14 at The Newspaper Center in Reston, Va.

NAB also is producing a video presentation that can be shown to advertisers to eliminate misconceptions about newspaper color.

A key factor in quality newspaper color is a quality-control manager who oversees color. Gene Bell, vice president/production director of the Chicago Tribune, said the person who fills that role need not have a strictly technical background.

"The quality assurance manager is responsible for formulating, recommending and managing the programs, standards and plans to assure the quality of the newspaper," he said. He or she should be a "people person" with good communications skills.

"It's not important that the individual possess a working knowledge of all aspects of newspaper production," Bell added. "What is important is that the person have the ability to learn the technology quickly and enjoy working with the various technical areas of newspaper production."

Bell said the Tribune has had success with individuals "from several different backgrounds."

A new tool for color quality control is the *Guide to Quality Newspaper Reproduction*, produced by the a task force of NAB's Future of Advertising Committee and ANPA's Technical Committee. Task Force Chairman Walter E. Mattson, president and chief operating officer of The New York Times Co., reported that demand has been so high that a second printing is planned [**presstime**, June 1986, p. 89].

With the guide under its belt, the task force has at least three other tasks on its agenda, the first two of which should be ready by the end of the year:

- An ANPA quality evaluation service, which will allow publishers "to see how their newspaper's reproduction stacks up when measured against objective criteria by the ANPA technical staff."
- A checklist for publishers tentatively called, "How to Monitor Your Newspaper's Reproduction Quality," which has been drafted for the task force by the Gannett Co.'s technical staff.
- A "complete production how-to manual for newspapers," which will set "quantifiable, measurable minimum

standards for each step of the newspaper production process." Plans call for the ANPA Technical Committee to produce the manual and release it one chapter at a time over the next few years.

All the work is in keeping with the Reproduction Task Force's goal of obtaining a "strong commitment on the part of every publisher to improving color quality," Mattson said. "Newspapers are unique among the visual media in not offering high-quality, uniform color to its audience and to its advertisers. Color is important to them, and it must be important to us."

Harold W. Andersen

Harold W. Andersen, chairman and publisher of the Omaha World-Herald Co. and Future of Advertising Committee chairman, outlined work of all 10 committee task forces [presstime, May 1986, p. 50]. The other nine task forces are addressing readership, standardization, alternate distribution, classifieds, sales structure, sales personnel, promotion and advertising, pricing and position, and market data.

Andersen said fragmentation of other media helps newspapers because they can report on all of society and include many diverse elements in their pages. "The daily newspaper is the one place that brings it all together."

But Andersen also emphasized that success "will be influenced in large measure by the performance of the executives assembled in this room today." He suggested this action: "Go home and ask your publisher whether he or she is familiar with the *Guide to Quality Newspaper Reproduction*. Ask if copies have been ordered by your newspaper for your own staff, for advertisers and advertising agencies. If the answer is negative or 'I don't know,' tell your publisher to 'get with it.' You might want to use more diplomatic language, but get the point across." □

Quality = Doing It Right the First Time

After listening to newspaper executives discourse for more than an hour on the subject of quality, a commercial printer gave the General Session some simple advice: "Do it right the first time."

But doing that is anything but simple, as James T. Sullivan, president of the Magazine Group of R.R. Donnelley & Sons of Chicago, made clear in his address that leaned heavily on business management and organizational theory.

"We're learning that quality cannot be inspected into a product," Sullivan said, noting that the "traditional orientation of quality control activities has been to inspect the product intensively in order to catch defects." Now it has become clear, he said, that "the only satisfactory way" to ensure quality is "to do it right the first time."

The cost of poor quality, Sullivan said, can easily reach 20 percent of sales when all quality-related expenses—such as spoilage, waste, product redesign, engineering, inspection, testing, supplier evaluation, process control, etc.—are included. And that does not take into account the cost of losing customers, he added.

Despite his assigned topic, "Commercial Printers Do It All the Time—and Better," Sullivan made no comparisons between the quality of commercial and newspaper printing. Instead, he described new management approaches to quality in general and the specific quality programs of his company—the largest commercial printer in the country.

Echoing a theme increasingly heard throughout the Conference, Sullivan paid particular importance to the "people" aspect in the quality equation.

Quality must be the concern of everyone in the organization, he said. The role of the quality professional "is shifting from that of an outsider or a kind of enforcer to one of a facilitator; one who educates, trains, communicates and generally supports the organization's efforts to establish a culture conducive to quality improvement."

A management model, which goes under many names but often is called "participatory management," has emerged as a "major force" in business and owes much of its origins to the search for quality, he said. Although often associated with Japanese management, it originated in this country.

The commitment to quality and the productivity gains that come with it are not hazard-free, Sullivan acknowledged. Employment security is one such hazard. "How far can you go in promising your people that improved productivity . . . will not result in job loss?"

Another hazard is the role of supervisors. "They will need to be abler, better educated, more flexible," he said, "but it's also true that if all this works, you will need fewer of them. So where do the promotions come from now?"

He offered no answers to the questions but said he believes they are "solvable." □

Michael Pugh

Upwards of 2,000 people packed the General Sessions.

Team Approach Urged for Good Color

Both the editorial and the production departments were represented at the workshop titled "Color Separation and Graphics: Perceptions and Prerogatives." It was clear that people in one sometimes view those in the other suspiciously.

Marvin Sussman of Newsday, who has worked on both sides, said this is so. Photojournalist Robert C. Holt III of the St. Louis Post-Dispatch agreed. A production executive, Kenneth K. Kniceley, acknowledged that the two sides "march to the beat of different drummers," but he said that at the Charleston, W.Va., newspapers, "we have excellent cooperation all through our plant. We don't have an adversary relationship with our editorial people at all."

Sussman said he spent 31 years as a photographer and chief photo editor, and during that time he firmly believed the production staff "was intent on destroying every photograph I took."

When promoted to quality assurance manager of the Long Island, N.Y., newspaper, Sussman officially crossed over to production. He said it was "more like standing with my left foot in a bucket of ice water while my right foot was in a bucket of boiling water—and expecting my belly button to be lukewarm."

The "'us' and 'them'" attitude that prevailed in the editorial department also existed in production, he learned. But as he went from person to person to learn the production end of the business, Sussman found that attitudes "changed quite a bit. Perceptions are not as hard. Prerogatives are more judicious. I like to think we are moving more toward . . . communication and teamwork."

Holt of the Post-Dispatch said that he usually introduces himself as "the enemy" when addressing production people. "There is a real schism in the newspaper field," said Holt, director of photographic technology.

Slowly, employees in the two departments are realizing that "we're all newspaper people," that all "want to put out a quality product" and that to do so, cooperation is essential.

For example, he said, photographers must be schooled in the production process—to learn about dot gain (see story, p. 76), to understand a color scanner's capabilities and limitations, and to realize that "we print on toilet paper." Once realizing the difficulties of achieving high quality reproduction on newsprint, they will be more careful about film selection, focus, lighting, exposure and other fundamentals of photography, he said.

In Charleston, a cross-training program that sends editorial and advertising personnel to the production department for a week's orientation has contributed to the cooperative spirit there, said Production Director Kniceley. There are also regular meetings of representatives from affected departments to discuss what went right, or wrong, in color-printing endeavors.

Color printing at The Charleston Gazette and Charleston Daily Mail began to take off in 1983 when they acquired a Royal Zenith scanner for what Kniceley said was less than $100,000. Currently, each is running an average of 25 color separations a week, plus another 10 for the combined Sunday edition.

Printing quality color can return a nice dividend. At the Charleston dailies, Kniceley said, income from color advertising has grown from $388,949 in 1982 to $649,482 last year.

In addition, the scanner has enabled the papers to pick up commercial work. Sending out letters of notification to about a dozen commercial printers but without advertising per se, they attracted $22,408 in outside color-separation work in 1984 and $31,231 last year, Kniceley said.

The fourth panelist represented a commercial printer that has extensive experience in the color field. William DeMarco, manager/pre-press and business development of Case-Hoyt Corp. in Rochester, asked rhetorically: "Why color?" The answer, he said, is simple: "Color sells." ☐

Pre-press Personnel Set Goals

Four production experts with 110 years of combined experience were featured at the workshop on "Pre-press Quality: Newsroom to Negative."

A newspaper production department is a service department that must work with other departments to establish "standard operating procedures," said Mark Mikolajczyk, production/operations manager for The Cincinnati Enquirer. This ensures that all steps of the pre-press process are understood and followed by all people involved in that stage of production, he said, adding: "It is the successful use of SOPs that has enabled USA Today to print consistently across the country, in Europe and in Asia."

In Cincinnati, Mikolajczyk noted, the art director and camera/plate manager meet on a weekly basis and discuss the quality of reproduction as it relates to the different photos and other artwork that have appeared in the paper. "Through these meetings, we are able to break down the brick walls that often are built when communicating only by telephone," he said.

On the same theme, another speaker noted that errors "are caused by bad communications." Francis Przybylek, production manager for The Times Journal Co. in Springfield, Va., said employees there have developed "an attitude toward quality," which has as much bearing on the product as craftsmanship. With "everyone" now responsible for quality, a quality control department that had been established there was disbanded.

Przybylek also noted that Times Journal production people attend editorial planning sessions, and that customer complaints are reviewed not only by management but by all members of the organization. "Employees know how much revenue is lost by mistakes," he said.

Michael Przybylek (brother of Francis Przybylek) addressed the topics of artwork variation and exposure systems used to control the quality of the film negatives used in the printing process. He noted that the "ideal goal" of controlling the specifications of incoming art from advertising agencies, photographers, artists and engravers is a difficult one to reach. "Each element of art is an individual component with certain reproduction characteristics, and each must be evaluated based on those characteristics to obtain the best possible reproduction," said Przybylek, night production director/ quality control for Florida Today in Cocoa, Fla.

Quality does not just happen—it is planned, noted Ian M. Pittendreigh, director of operations for The London (Ontario) Free Press. "I don't think it can be defined explicitly. I know it when I see it, and I know it when I don't see it."

To Get Quality, Break Puzzle Into Small Parts

The importance of setting standards, maintaining equipment, inspecting materials closely and having the right work atmosphere was emphasized in the "Print Quality" workshop.

Thomas J. Shafer, director of field operations of USA Today, said there is "no magic" in the high-quality reproduction of Gannett Co.'s national daily. It is, in fact, an "elementary" concept, he said: "Break the complexities down to the lowest level and build from there."

In their drive for quality printing, newspapers can establish such things as measurable quality levels and standards, quality control and quality review, Shafer said. After determining "what looks good," they can assign numbers that "establish ranges you can measure and print against," he added. The data should be compiled in a standard-operating-procedures manual, with sections on composing, camera, platemaking, press, postpress and computer-operations.

Shafer also emphasized the need for feedback and regular product evaluation.

Richard Malone, pressroom manager of the Chicago Tribune, encouraged the audience to pay close attention to the upkeep of equipment. "There is a definite relationship between maintenance and good quality," he said. The maintenance program can increase efficiency, help to determine when new equipment purchases are cost-justifiable and assist in scheduling the work force.

A good place to begin is with paperwork, Malone said. Records should be kept concerning when a machine was purchased and from whom, the cost, options, replacement cost and serial number.

Added to that can be documentation of man-hours spent on the equipment, including such things as "emergency hours versus planned hours," and time between failures. The information can be put on a computer database, he noted.

Because materials play such a large role in the quality of the final product, it is imperative that they be closely monitored, said Paul T. Lynch, quality control manager of The Record in Hackensack, N.J.

"Quality is the key to customer acceptance, and an important factor is that quality requires raw material specifications and inspection—specifically for ink, paper and in offset application, chemicals as well," he observed. In addition, "compatibility of product material to mode of operation can reduce the pains so frequently experienced by many of us in a demanding, quick-pace production environment."

Robert L. Moyer, vice president/operations of Small Newspapers in Kankakee, Ill., agreed that high quality depends on standards, maintenance and good materials. But another important factor in the quality equation is "atmosphere—an attitude, a way of thinking and acting which demands quality." Its ingredients are top-management commitment, good production personnel, sound company policy, and good volume and productivity, he said.

"How do you know when you have it?" Moyer asked. "Well, here are some tests:

"1. When a rating report is posted and the entire crew wants to know how we scored.

"2. When we have a serious press problem, one that is going to cause us a schedule problem, the entire crew shows concern. . . . Everyone goes on double time without being asked.

"3. Crew members will use off-time to visit other operations or come in to see how a new piece of equipment or a repair job is coming along." □

Straightening 'the Kink in the Hose'

Any examination of mailroom efficiency begins with the quality of inserts newspapers receive from commercial printers, but diligence is required at each step of the way until newspapers are bundled up and out the door, the "Quality in the Mailroom" workshop was told.

Production Director Robert F. Murphy said his newspaper, The Record of Hackensack, N.J., instituted a mailroom quality-control program in March 1984. It addressed three key issues: the condition of the inserts received, the performance of the inserting crew and the performance of the equipment.

Murphy stressed the need to maintain equipment so that it functions at optimum efficiency. He also said it is important to conduct regular meetings with the staff to iron out any problems that arise.

The Record also has gotten good results, Murphy reported, from its program of recording—in writing and in photographs—the condition of the inserts when they are received.

The mailroom manager of the Houston Chronicle, Jim L. Davis, also addressed insert quality. Although newspapers have placed great emphasis on getting inserting machines to handle a variety of materials, the real problem often lies in the preprints themselves, he said.

The quality of preprints and their packaging is no less important to the newspaper production process than newsprint runability, Davis said. He noted that few, if any, newspapers would tolerate bad newsprint or plates, but that since the 1960s many have accepted badly packaged or poorly printed preprints because they wanted the advertising business.

Another problem is verifying the number of preprints received. Commercial printers should provide standard bundle sizes and accurate counts, he said.

Although Davis indicated overnight solutions are not likely, he expressed the belief that the problem of poorly packaged preprints can be solved eventually if there is more communication between commercial printers and newspapers. As it now stands, he said, the post-press area is "the kink in the hose" of daily newspaper production. (See story, p. 26.)

Another speaker, Jay G. Swardenski of The New York Times, said looking down the road and anticipating problems is important because it simplifies the execution of difficult tasks.

The distribution director said that between 9 a.m. Wednesday and 4:30 a.m. Saturday, the Times stuffs 1.8 million packages it calls the "Sunday combo," which includes several preprinted sections. "You, as the mailroom manager, have to be managing next week, the following week and the week after," he noted.

Swardenski said the Times has produced a booklet for advertisers describing size limitations, packaging restrictions, delivery procedures and other criteria for inserts.

Before the Times agrees to receive an insert, he said, someone on his staff contacts the advertiser to learn the printer's identity and then discusses with the printer such things as packaging and the delivery date. He acknowledged that this process takes time but said the effort is worth it to head off potential problems.

The Times also randomly samples its newspapers on newsstands to ensure that copies are complete. □

Total Pagination Not Here Yet, But It's on the Horizon

JUNE 25
SESSION DAY
3

☐ Pagination matures
☐ Delivering the Sunday edition
☐ Impact of laser printers
☐ Ad makeup systems

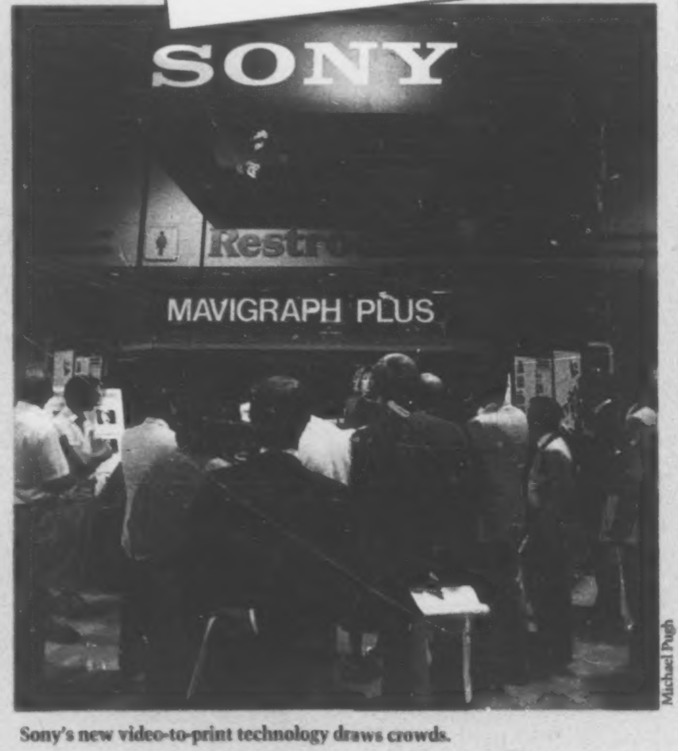
A total newspaper electronic pagination system, "completely integrated with all the pieces in place," will be available within the next three to seven years, a four-member panel estimated during the General Session on "Pagination: Where Do We Stand?"

The estimates ranged from three to five years by Larry Allison, senior vice president/editor of the Press-Telegram in Long Beach, Calif., to five to seven years by Eric Wolferman, executive editor of The Reporter in Lansdale, Pa. Both the Long Beach and Lansdale papers have pagination systems.

Robert R. Gilbert, assistant managing editor/systems and technology at The Miami Herald, said Knight-Ridder Inc. has a five-year plan to implement pagination "wherever feasible." There is still a question of how much money to commit, he said.

Asked whether newsrooms will have to change their operations to accommodate pagination, panelist James N. Longson, vice president/corporate development for Chicago Tribune Co., said the changes will be those that the newsroom itself chooses to make.

There are "still a lot of questions" whether the management of the system is a newsroom function or a production function, said Gilbert. Other panel members said that while editors will be responsible for the appearance of the product, they also will have production responsibilities. "Much of the responsibility must fall on the newsroom," Wolferman said. "The newspapers that will be the most successful will not think of it as a production function," he said, adding that a systems editor position may be necessary.



Michael Pugh

Sony's new video-to-print technology draws crowds.

Speaking on "Making Pagination Pay" in another part of the session, William R. Hogan, vice president and general manager of The Arizona Republic and The Phoenix Gazette, outlined the economic advantages. "When we reach complete pagination," he said, "we believe we can operate with 75 printers and about 48 platemakers. From today's levels, that represents a savings of $1.2 million per year." The Phoenix papers, which last year installed an Information International Inc. system, have found an editor can produce an average of four pages an hour by pagination.

Jonathan Seybold, president of Seybold Publications in Malibu, Calif., warned that whole-page makeup with full integration of text and graphics "is more difficult than most people anticipated." But the benefits of control, quality, timeliness, flexibility and elimination of the need for "dying craft skills" make it worth doing.

In discussing "Pagination Through Ad Makeup Systems," Seybold said that a newspaper has to develop its own system and cannot rely on others. "There is a lot of stuff coming you've got to plan for," he said. "The systems are not a one-time investment, it's an ongoing capital expense."

Seybold said that it is hard to cost-justify digitizing photographs unless they are for display advertisements. The prognosis for pagination, he said, is "slow progress," but many newspapers will have an immediate payoff with new display ad systems. "The fundamental problem is that we have no standards for a complete system," he said.

Capping the pagination discussion was Louis J. Franconeri, who, as chairman of the ANPA Electronic Photography/Graphics Task Force, said those systems could become "the next major future evolution" in newspaper technology [presstime, June 1986, p. 38].

Franconeri, vice president/operations of The Baltimore Sun, posed the question: "Assuming the ability to electronically download pages to almost any destination, why not explore the use of some sort of super electronic pulsing technology for transferring the image to the paper rather than the printing processes popular today?" ☐

Sunday Papers Cope with Pleasant Problems

There were two points that all the panelists agreed on in the workshop on "Getting Your Sunday Paper Out the Door and Delivered"—there is "no one answer to the problem" and "it's a wonderful problem to have."

After all, the problem is caused by the recent growth in popularity of the Sunday edition. Its elements, as enumerated by Frank M. Manzon, vice president/circulation of The Washington Post, are "increased advertising, more preprints, more zoning, growth in circulation and increased reader interest in the Sunday product." Not exactly the kinds of things newspapers want to discourage.

But with success comes problems. Benjamin Hayes, insert manager of the Times Publishing Co. in St. Petersburg, said that while the Sunday edition accounts for only 55 percent of the production hours for his insert department, "it accounts for about 80 percent of total planning and 95 percent of our headaches."

All the speakers described the printing schedules, mailroom equipment, inserting procedures and delivery schedules at their newspapers. Although most agreed that solutions have to be tailored to individual situations, one approach that seemed to attract support was to "decentralize" the operation as much as possible.

Its chief proponent was Donald A. Nizen, vice president/circulation of Knight-Ridder Inc., who said decentralization and the use of warehouses are "the most efficient and effective way" to handle the big Sunday paper with multiple inserts. "We just can't build mailrooms that can take (that load) and get them out," he said.

His position was endorsed after the session by ANPA Technical Committee Chairman Gene McDavid. "Nizen has the answer," said McDavid, vice president and general manager of the Houston Chronicle. "You've got to decentralize. . . . Just get the stuff out."

Nizen, who noted that the Sunday problem is almost exclusively limited to metro papers, cited The Miami Herald as an example of decentralization. "The inserts are inserted by mailers in a non-union environment and trucked on Thursday to 30 modern, air-conditioned warehouses where all the personnel are employees, either part-time or full-time, of the Herald."

After inserting, about 11,000 copies are distributed from each warehouse to home-delivery customers in the neighboring eight-to-10-mile area, Nizen said. "The employee adult carriers insert and deliver their own routes in their own vehicles and are paid $6 per hour and guaranteed 20 hours per week employment."

Advantages of a warehouse system, according to Nizen, include:

- Reductions in distance traveled, travel time, fleet size and staffing
- Greater flexibility to set priorities for the critical routes needing earlier papers
- Less congestion at the loading dock and mailroom
- A controlled atmosphere that lends itself to better supervision and also provides field offices
- Increased number of zoned products that can be distributed
- Easing of the problem of obtaining and keeping new drop stations.

Disadvantages, Nizen said, are start-up costs, the possibility some carriers may have to travel farther to the warehouses because of the reduction in drop points, and the fact that warehouses must be placed where availability permits.

At The Washington Post, Manzon said, the capacity problem came to a head in 1983 during a period of growth that caused the Sunday paper to balloon from primarily three main sections to a mostly four-section edition and finally to a five-section package.

Following a couple of "disastrous" Sunday delivery experiences, the Post took some short-term solutions that enabled it to get through the heavy fall 1985 season "without compromising our delivery standards." These included a 5½-pound "cap" on the size of the Sunday edition, later raised to 6¾ pounds; a compensation program, including increased inserting and carrier fees and an "oversized edition" premium to agents; and permission for carriers to deliver Sunday inserts on Saturday afternoons.

ANPA
O.E. EASTER

Michael Pugh

OMCE Arrangements Committee Chairman Joseph M. Ungaro (left) takes a break with ANPA Conference Director Peter P. Romano.

Currently, the Post is seeking longer-term solutions to its problems by examining plant expansion. Additionally, he said, the paper is starting to invest more resources in mailroom equipment.

"The future test for our circulation and production departments will be working together to replace bands, bags and twine with high-tech packaging methods used in other industries," he said.

In addition to studying plastic-wrapped packaging for all preprints, the Post has:

- Added 12 "hopper loaders" in the mailroom to feed preprints into inserter machines more efficiently
- Recommended automatic stacking machines or palletizers for the mailroom
- Begun consideration of other alternatives such as improved coordination of its three-plant operation for insert dispatch, redesign of agents' delivery vehicles to accommodate skid loading, and improved carrier delivery equipment such as carts, bags, tubes and racks.

But relying on equipment to solve the Sunday problem right away is not an approach Hayes of St. Petersburg thinks holds much promise. The lack of machine capacity "is the most frustrating obstacle to getting the Sunday paper out," he said, and it is the primary reason the paper is sent out in parts.

"The current technology of mailroom equipment is still somewhere in the Dark Ages," Hayes said. "Since we have a direct control over our staff, and little control over what machine is on the market, we decided to put our efforts toward managing the human resources."

The other panelist, George Martin Jr., senior vice president/circulation of The Denver Post, described how his paper handled the simultaneous addition of [illegible],000 Sunday subscribers. This came when the Post, through an agreement with a local cable TV company, began distributing the Sunday edition and a new TV/cable program guide to cable subscribers who had not previously subscribed to the paper [presstime, Sept. 1985, p. 46]. ☐

Automated Guided Vehicles for Newsprint Add to the Newspaper Lexicon

Another abbreviation has joined VDT, ROP and JOA in the nomenclature of newspapering: AGV. It stands for "automated guided vehicles."

As moderator James H. Norris explained at the workshop on "Newsprint Handling—Pulling for AGVs," these computerized vehicles are used to transport newsprint inside the newspaper plant. They have "captured the interest of production managers everywhere," said Norris, vice president of operations at Newsday, Long Island, N.Y.

The program featured representatives of four newspapers that are using or planning to use AGVs: the Fort Worth Star-Telegram, Minneapolis Star and Tribune, St. Petersburg Times and Evening Independent, and Helsingin Sanomat of Helsinki, Finland.

John F. Dennan said the Star-Telegram, whose new printing and distribution facility opened in May, is "the first newspaper in the United States with an operational, automated-guided-vehicle system for newsprint roll handling in a reelroom."

The technology operates on a computer-controlled guidance signal communicated either by a wire embedded in the floor or by FM-radio signals, said Dennan, director/quality assurance for the Fort Worth daily. The system there, manufactured by FMC Corp. of Colmar, Pa., employs the wire-embedded method.

> *Computerized AGVs have "captured the interest of production managers everywhere."*

According to Dennan, AGVs are more reliable and flexible than conventional conveyor systems, and they hold the promise of "significant savings in newsprint waste as a result of less damage and more effective handling" of the rolls. Capital costs for AGVs are comparable to those for older devices, he said, but the automated system requires substantial maintenance support from technicians.

The Star-Telegram's 10 battery-operated AGVs move newsprint from the warehouse to the stripping station (where wrappers are removed) and then directly to the reel stand or to a "laydown" area to await a signal to move to the press. They also remove newsprint waste and roll cores.

"We have every confidence," Dennan said, "that AGV systems have a place in our production operation and over time in newspapers across the country."

In Minneapolis, the Star and Tribune will use four fork-lift AGVs and 10 delivery AGVs in its new plant. (See story, p. 49.) Production Manager Curtis Bok said the system, manufactured by IDAB Inc. of Hialeah, Fla., will be operational next spring.

Bok advised newspapers considering AGVs for a new pressroom to spend a lot of time on design efficiency, because an "AGV unit costs more than all but the most expensive automobiles."

Workshop attendees also were briefed on older systems in use in Florida and in Finland.

Plant Manager Ralph E. Imhof said the St. Petersburg dailies have used four wire-guided AGVs made by S.I. Handling/Barrett since 1982, but the vehicles are manually operated for part of the journey. "We operate in the automatic mode in the warehouse loop but often find it easier to manually drive the trains through the rest of the facility," he said.

Some initial design flaws had to be corrected, Imhof added, mentioning that originally, "every time the train went around a turn, some rolls would roll off the carts."

To newspapers considering an AGV system, he recommended that they ascertain whether a manual system "would do an equivalent job at one-third the expense"; ask "what if" questions related to the cost of system modifications; involve their engineers and maintenance staff from the start; and insist on use of "common" parts that can be obtained from secondary sources.

The Finnish newspaper's 17-vehicle system, manufactured by Tellus-Carrago of Sweden, has been operational since late 1984. Jouko Nurmela, vice president/production of the newspaper's parent company, Sanoma Corp. of Helsinki, said there have been problems with malfunctioning radios and guiding wires in some vehicles, as well as computer-program errors.

Even so, he said, the paper has realized significant savings in maintenance and in less damage to reels by switching from a mechanical chain conveyor to AGVs.

Nurmela also listed these advantages AGVs have over older transport systems:

- They are safer.
- They allow more space in the reel room.
- They consume less energy. ☐

AD/SAT Delays Are Over, New Owner Says

The new owner of AD/SAT, the satellite delivery system for national advertising that had been delayed by lack of funding, offered assurances at the General Session that the project will succeed.

"We have invested some millions of dollars and will invest substantially more, to bring AD/SAT to the nation's newspapers and advertising agencies," said Roy Hodgson, president and chief executive officer of the U.S. Division of British Printing and Communications Corp.

BPCC is controlled by Pergamon Press Ltd., the private company of Robert Maxwell, a former member of British Parliament whose holdings include Mirror Group Newspapers, the largest newspaper group in Britain with combined press runs of 35 million copies weekly.

"The company has sales exceeding $1 billion and employs more than 26,000 people in 20 countries," Hodgson said. "Obviously, we do have the resources to support the AD/SAT business plan and bring satellite delivery of ads from agencies to newspapers quickly on stream."

BPCC purchased AD/SAT from The Robert Wold Co. of Los Angeles and Mitsui & Co. of Japan last spring [presstime, April 1986, p. 58].

Testing of the system is set for this fall. AD/SAT's aim is to be operating at newspapers in the top 100 markets within a year.

Output Vendors Welcome New Laser Printers

Low-resolution laser printers combined with personal computers aren't viewed as too much of a threat, representatives of several large typesetting firms said during a workshop on "Output Devices."

Nevertheless, there is a place for low-resolution laser printers in the newspaper business, primarily for proofing purposes, they agreed.

"Anyone buying a low quality or low resolution imaging device, I think, will soon realize its limitations," said Lou P. Tortora, director of marketing and product management for Allied Linotype Co. Such printers are "not going to do enough for you," he said. "You'll want to do more with it. You want something that addresses both needs, demand and higher quality."

Paul H. McGarrell, vice president of Volt Information Sciences/Autologic Inc., said his company "embraced" the 300-dot-per-inch, or low-resolution, laser printers. "We're never going to build one," he said, "but we're going to integrate them into our system and we're going to sell them. We think they have a definite place in the market. They produce, along with appropriate composition and fonts, a very high quality output. Most people in the newspaper industry will call it a proof, and there are people in the publishing industry who will call it a demand printer. But the 300-dot-per-inch printer is not going away. It has a definite place. I welcome it."

In the first part of the program, Tortora, McGarrell and two other vendors discussed the typesetting or imagesetting industry. In the second part, four newspaper executives questioned the suppliers.

The vendors made several suggestions for those in the market for imagesetting equipment.

"One of the most demanding business decisions you'll make is in the selection of an imaging device which helps you cost effectively integrate text and graphics matter onto plate, film and paper media," Tortora said.

"Your critical concerns in composition include design, element placement, type style and size, white space allocation . . . and graphic reproduction," Tortora said.

The choice between raster image processors and non-raster processsers should hinge on whether the publication is primarily interested in producing columns of text or whether there is a need for the integration of text and graphics, Tortora said.

RIPS with high resolution are "the only game in town" for the latter, he said. The next decision is of resolution. He said high resolution typesetters should be used for the integration of text and graphics; low resolution ones are fine for text proofs.

Brian Lacey, managing director of Monotype International, said when selecting an imagesetter a newspaper should consider speed, ease of operation, ability to interface with the paper's front-end system and size characteristics.

Stephen J. Dupree, marketing manager/newspaper systems division, Compugraphic, said there is something of a mismatch between many older front-end systems and some of the new typesetters. "A lot of you are wrestling with older generation front-end systems," he told the workshop. "Your current output devices may not be holding up well, and you need to replace them. Unfortunately, there are some very powerful output devices out there that your current front-end system can't take advantage of or utilize to the fullest." ☐

Ad Makeup Systems Give Newspapers A Boost

Several different approaches to installation of electronic advertising systems were discussed at the workshop on "Ad Makeup Systems—A Candid Look."

Terry E. Sturgeon, director of production of Booth Newspapers, said The Grand Rapids (Mich.) Press is producing its retail and classified display advertising on a Camex Breeze system.

But reaching that goal involved crossing some high hurdles, Sturgeon said.

First off, although the system "worked like a charm" at a previous ANPA Exposition and during another Camex demonstration, it was loaded with problems in the newspaper plant, he said. "I have concluded that most of our problems can be attributed to one thing: Our system was never integrated and tested as a system before it was shipped to us. We received individual components that had been individually tested and pronounced operational but never tested as a system."

Sturgeon said Camex now tests all systems as such before shipping, but he cautioned, "Be sure that it happens to your system before you allow your vendor to ship it to you."

In Toronto, The Globe and Mail decided to go with a "modular" approach that would allow it to purchase different components at different times from different vendors, said John Blaney, manager/information services. "As we evaluated systems on the market," he explained, "we discovered that all vendors had not only areas of strong expertise but areas where their knowledge was, to be polite, more apparent than real. We decided that the optimum solution would be to purchase each major subsystem directly from the vendor with the most realistic, cost-effective approach to the required technology."

After "several years of searching and several months of negotiation," The Globe and Mail bought a Harris 8300 pagination system, an Imagitex image processor and Monotype typesetter. Harris was given the responsibility of integrating the subsystems, Blaney said.

The approach has "worked very well. All vendors were conservative in their approach to the project," he reported. "Hardware and software development efforts were, for the most part, on time. There was and continues to be good cooperation between all three vendors—and no finger pointing when something goes wrong."

Michael L. Pearson, production manager/pre-press of the Chicago Tribune, said his company chose Xenotron Admaster work stations linked to a classified system manufactured by System Integrators. In a matter of weeks, he said, the system will have developed to the point that the Tribune will be doing all its display advertising composition electronically.

The Tribune also is about to hook up Xerox laser printers to its Monotype Lasercomp typesetters so that film will be used as the output product only when an ad is finally released and ready for printing. "All other output will be to plain paper proof. This will result in substantial film savings," he said.

"Solving the problem of display ad production is a big step toward complete pagination," Pearson noted. "Many of the lessons learned on this system will apply directly to any pagination system we choose to implement." ☐

Late News

Defeat for commercial speech

In a major defeat for commercial speech interests, the U.S. Supreme Court July 1 ruled that a Puerto Rican law prohibiting advertising of casino gambling aimed at the residents of Puerto Rico does not violate the First Amendment. In a 5-4 ruling in *Posadas de Puerto Rico Associates v. Tourism Co. of Puerto Rico,* the court said the law met a four-part test for determining the constitutionality of government restrictions on advertising [**presstime**, Jan. 1986, p. 35].

Some observers said the decision, which permits restrictions on the advertising of a legal activity, appeared to mean that advertising for such things as cigarettes legally could be banned. Legislation has been introduced in Congress that would prohibit advertising of all tobacco products.

"We were shocked at the apparent view of the Supreme Court's majority that the Constitution allows the government of Puerto Rico to prevent its citizens from receiving commercial information in their media about a lawful activity within that commonwealth," said ANPA Executive Vice President and General Manager Jerry W. Friedheim. ANPA had filed a friend-of-the court brief in the case, arguing that the Puerto Rican law was unconstitutional.

Friedheim said the Association agrees with dissenting justices that "it is wrong for the government 'to suppress commercial speech in order to deprive consumers of accurate information concerning lawful activity.' Because of the importance we attach to First Amendment freedoms for all our citizens, we will work actively to prevent enactment of any other restraints on the right of our people to exercise fully their First Amendment liberties."

As to whether the decision means that tobacco advertising can be banned, Friedheim said: "Not if First Amendment guarantees are properly recognized; but this 5-4 decision should give all Americans concern."

High standard for libel upheld

In a major victory for the press, the U.S. Supreme Court June 25 said a public figure libel plaintiff must provide "clear and convincing" evidence of actual malice in order to prevail over a libel defendant's motion for summary judgment, the same high standard as exists at trial. The 6-3 decision in *Anderson v. Liberty Lobby Inc.* overturns a ruling by the U.S. Court of Appeals, District of Columbia Circuit. (See story on Scalia appointment, p. 62.)

Pretrial hearings must be open

The press scored another victory before the U.S. Supreme Court June 30 when the court ruled 7-2 that pretrial criminal hearings must be open to the press and public unless it is found that a defendant's right to a fair trial will be "prejudiced by publicity" and there are no "reasonable alternatives" to closure. The case was *Press-Enterprise Co. v. The Superior Court of Riverside County, Calif.* [**presstime**, Jan. 1986, p. 35].

NNA opposes Preservation Act changes

The National Newspaper Association opposed a bill pending before the Senate Judiciary Committee to amend the Newspaper Preservation Act. (See story, p. 64.)

Printers settle in Sacramento

Printers involved in an eight-year-old labor dispute with The Sacramento Bee voted 31-28 June 22 to accept a $3.5 million settlement offered by the newspaper. The printers were not reinstated in the settlement [**presstime**, July 1985, p. 61].

Times Mirror sells Dallas daily

The purchaser of the Dallas Times Herald, William Dean Singleton, said he will keep the management team of the newspaper intact and will move his corporate headquarters to Dallas. The Times Mirror Co. of Los Angeles announced June 26 it had agreed to sell the Times Herald for $110 million. The buyers are Singleton, 34, who owns or controls 21 daily newspapers and 15 weeklies in six states; Richard B. Scudder, 73, a newspaper publisher from New Jersey; and John Buzzetta, 35, publisher of The Star Beacon in Ashtabula, Ohio.

Chicago Sun-Times changes hands

Two top executives of the newspaper are among a group of investors involved in the purchase of the Chicago Sun-Times from Rupert Murdoch. The price was $145 million, newspaper executives announced. The purchasers included Robert E. Page, Sun-Times president and publisher, and Executive Vice President Donald F. Piazza.

The Sun-Times, with daily circulation of 631,808, trails the Chicago Tribune in that category and in advertising. Murdoch, who acquired Chicago's WFLD-TV in 1985, had to sell either the newspaper or the TV station to comply with the Federal Communications Commission's cross-ownership regulations.

Newsprint price hike announced

Two Canadian newsprint companies said in late June they will raise the price of newsprint for their U.S. customers by $35 a metric ton as of Oct. 1. Consolidated-Bathurst Inc. made the first announcement June 23, followed three days later by MacMillan Bloedel Ltd. If it sticks, the increase will be the first since July 1984, when the list price went to $535 per ton.

Advo closer to being sold

The sale of Advo-System Inc. progressed in late June when John Blair & Co. signed a "definitive agreement" to sell a controlling portion of its direct-mail subsidiary to Warburg, Pincus Capital Partners.

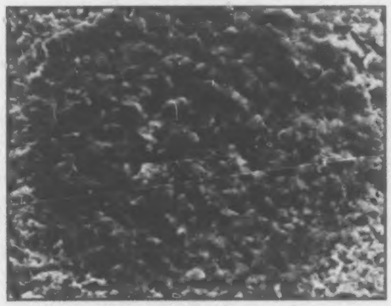
Warburg, Pincus will buy 16 2/3-percent equity interest in Advo for $10 million, with rights to buy up to 28.5 percent of the firm. The remainder of Advo will be distributed to existing shareholders in the form of common stock.

The deal is subject either to purchase of Advo's parent firm, John Blair & Co., by Reliance Capital Group, or to termination of a purchase offer for Blair by Macfadden Holdings Inc. Reliance and Macfadden have been engaging in a bidding war for Blair. In late June, Reliance—which the Blair board of directors favored—had offered $31 a share for 7 million Blair shares, plus debentures for the rest. Macfadden had offered $32 per share for 7 million shares and junior preferred shares. (See earlier story, p. 71.)

This used to be a great way to go. . .

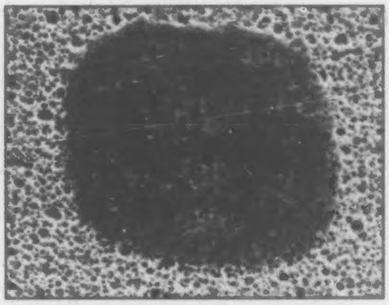
A861

So was this. . .



MAGNIFIED 400 TIMES
Typical wipe-on plate dot edges begin to grow.

But today. . .



MAGNIFIED 400 TIMES
Hoechst Newsplate S produces sharp well defined dot edges.

Why do you pay so little for something that costs you so much?
Ask about the Hoechst Newsplate S today.

Newsplate S presensitized offset plates give you dots with sharp, well defined edges, produced as a result of the plate's electrochemical grain.

Newsplate also gives you fast rollup, better ink/water balance and runs up to 250M impressions.

It's a plate that gives you beautiful dots—and beautiful time and cost savings.

THE BETTMANN ARCHIVE

“We must all hang together, or assuredly we shall all hang separately.”

Benjamin Franklin, July 4, 1776

America’s railroads and farmers always have had a special relationship, sometimes stormy, always interdependent. Railroads helped make the establishment of agricultural communities in the western states possible, but farmers came to fear the economic power of the railroads and became the driving force behind initial government rail regulation.

That early regulation was intended only as a means of curbing rate abuses. Over time, it became a controlling web that grew more and more pervasive, intruding in virtually every facet of railroad operation and, ultimately, restricting the railroads’ ability to provide the services upon which farmers and other shippers depended.

Unable to adjust rates rapidly to meet changing business or competitive conditions and hampered even in decisions as to the use of equipment, rail service deteriorated and farmers suffered. Grain shipments rotted on the ground as rail car shortages became an annual occurrence.

By 1980, it was apparent that something had to be done. Congress recognized the need and passed the Staggers Rail Act, partially deregulating the rail system. This legislation allowed railroads to conduct business in an orderly, logical manner and to negotiate contracts with farmers and other shippers.

Now, after five years of partial deregulation, it’s obvious that Staggers has provided real benefits both for railroads and farmers. During this five-year period, nationwide grain shipping rates declined by 26 percent. A study conducted jointly by the Department of Agriculture and Kansas State University found “...a significant decrease in rail rates in Kansas...” and called deregulation “...an important contributing factor in a market which made these decreases possible.”

Deregulation is working for farmers as well as railroads and the timing couldn’t be better because farmers currently need all the help they can get. Yet a few special interest shippers operating under the misnomer, Consumers United for Rail Equity (C.U.R.E.), have asked Congress to modify the Staggers Act: in effect, legislating a subsidy for their own industries to the disadvantage of farmers and other satisfied shippers.

The Association of American Railroads is prepared to provide journalists with more information on this subject, including rebuttals of the charges C.U.R.E. has made. These include charges that rail-dependent shippers are subsidizing those less dependent (the reverse is more accurate); that deregulation has allowed coal rates to rise too fast (they have risen much less since Staggers than before); and that the Interstate Commerce Commission is unwilling to protect “captive” shippers from unreasonably high rates (actually, the Commission just has adopted new rate guidelines that have been overwhelmingly endorsed by the nation’s leading economists).

There’s a story here, but you need facts, not assertions, to tell it properly. To get them, write: Media Information, Dept. 627,

Press cool to Scalia nomination

The nomination of 50-year-old Judge Antonin Scalia to the U.S. Supreme Court drew discouraging, though temperate, words from media-law experts.

The reason is that virtually without exception, Scalia's major First Amendment rulings have fallen against the media.

"Everybody involved in press law knows him to be exceedingly harsh on press-law issues," said libel expert Barbara Dill.

W. Terry Maguire, ANPA vice president/general counsel, said that after a review of more than 250 media-related cases in which Scalia played a part, "we can find very few in which Scalia ruled in our favor."

President Reagan announced Scalia's nomination June 17, coincident with his announcement that he is naming Justice William H. Rehnquist to succeed the retiring Warren E. Burger as chief justice. The appointments await Senate confirmation.

Grumbles also were heard within the media about Rehnquist's elevation, because he, too, consistently has come down against the press in First Amendment conflicts. But several experts said the 61-year-old Rehnquist's serving as chief justice is liable to have little if any impact on the court's status quo.

"It's not likely that it will make any significant difference to our concerns," Maguire said. Aside from Rehnquist's assuming power to make assignments for writing decisions, "He's already there and is more predictable than any other Supreme Court justice."

Most attention instead was centered on the record of Scalia, who serves on the U.S. Court of Appeals, District of Columbia Circuit. That record includes:

AP

Antonin Scalia

- Writing the decision in *Liberty Lobby v. Anderson*—a libel case now before the Supreme Court that, if allowed to stand, "could result in a lot more libel cases being filed," according to media lawyer Andrew A. Merdek of Washington—Scalia held, in part, that a public-figure libel defendant need not prove actual malice with "convincing clarity" when the court is considering a defendant's motion for summary judgment [**presstime**, Oct. 1985, p. 42].
- Playing a major role in the decision in *Tavoulareas v. The Washington Post*, in which the appeals court reinstated a jury's libel verdict against the newspaper. Media attorneys said the ruling cast a dark shadow over investigative reporting [**presstime**, May 1985, p. 40]. The Post appealed before the full appeals court, where the case is pending.
- Refusing access to documents in the court record related to the Tavoulareas case until the handing down of a judgment. The Reporters Committee for Freedom of the Press filed a motion to obtain access to discovery documents.
- Writing a sharply dissenting opinion in *Ollman v. Evans*, a libel case in which summary judgment was granted for columnists Rowland Evans and Robert Novak in a libel suit over an opinion article [**presstime**, Jan. 1985, p. 45].

Despite these and other instances, media law experts generally praise Scalia.

"He is a very bright man and a very lucid writer. He is an absolute tiger in oral argument," said Merdek. "He prepares very thoroughly, asks pointed questions and isn't afraid of speaking his mind."

Even those who have done battle against him tend to agree.

"Certainly, I wouldn't have chosen him because of his record," said Jane E. Kirtley, executive director of the Reporters Committee. But "he's a very bright, very intellectual, very capable judge, and I would hope that like others before him elevated to high positions, that he would be open to persuasion" from good arguments.

Others expressed hope that Scalia will be open-minded and flexible. But all acknowledged only time will tell. "My crystal ball is not in working order at this moment," Kirtley said.

—C. David Rambo

Ex-circulation manager guilty in Cookeville

A Tennessee Chancery Court on June 17 found the former circulation manager of the Herald-Citizen of Cookeville guilty of converting newsrack receipts to his own use. Chancellor Vernon Neal ordered Lee R. Hardin to reimburse Cookeville Newspaper Inc. $35,000 plus interest [**presstime**, July 1985, p. 54].

Neal also found Hardin had interfered with the newspaper's contractual relationship with 11 of its independent contract carriers—persuading them not to deliver newspapers on the day he was fired—and awarded Cookeville Newspapers $3,000 in actual damages and $2,500 in punitive damages. ☐

COURT BRIEFS

- A U.S. District Court jury June 4 found that Oregonian Publishing Co. of Portland **did not violate federal antitrust law** with its total-market-coverage program.

In a lawsuit filed in 1981, shopper publisher RFD Publications Inc. claimed that The Oregonian had engaged in predatory pricing [**presstime**, Jan. 1985, p. 8]. RFD said it will appeal.

- U.S. District Judge Lee R. West May 30 **struck down Oklahoma's ban on alcoholic beverage advertising**, saying the state applied the prohibition in an "arbitrary, capricious and irrational manner" in violation of the equal protection clause of the 14th Amendment.

Previously, West had ruled the ban did not violate the First Amendment [**presstime**, Nov. 1985, p. 42].

- In a unanimous decision, the U.S. Supreme Court June 2 upheld a lower court's ruling that a lawsuit could be brought against the city of Los Angeles by a cable-TV company that failed to receive a cable franchise for the city.

In so doing, the court said **activities of a cable-TV business "plainly implicate First Amendment interests."** However, it declined to decide whether the city violated the First Amendment rights of the cable company [**presstime**, Dec. 1985, p. 39].

FTC charges tobacco ad misleading

The Federal Trade Commission has charged R.J. Reynolds Tobacco Co. with misrepresenting in an advertisement the purpose and results of a major government study.

The 4-1 decision to issue an administrative complaint was in response to a petition filed in April 1985 by the Coalition on Smoking OR Health and its member organizations—the American Heart Association, the American Lung Association and the American Cancer Society.

Media attorney Floyd Abrams, who is representing Reynolds, said the ad, which was in the form of an "advertorial," is entitled to full protection under the First Amendment.

This case "raises the question of whether corporations that choose to speak out on public issues that affect them directly are to be relegated to second-class First Amendment protection when they do so," he said.

"The commission appears to be of the view that Reynolds' public-issue messages constitute commercial speech and are thus subject to regulation by the government. My view is that what Reynolds did was not to publish a cigarette ad but editorial commentary about cigarettes and science by a cigarette company, and so it is my view that it is wholly protected by the First Amendment."

Hearings are to begin before an administrative law judge July 28.

The ad, which ran in major newspapers and magazines in March and June 1985, took issue with a 10-year study funded by the National Institutes of Health.

The FTC said the ad, called "Of Cigarettes and Science," made three "false or misleading" assertions "directly or by implication" about the study.

The ad also "failed to disclose" that "men in the study who quit smoking had a significantly lower rate of coronary heart disease than men who continued to smoke" or that such a finding is "consistent with previous studies," said the complaint issued June 16.

The tobacco company called the ad "a fair and accurate commentary providing R.J. Reynolds Company's opinion on one aspect of a significant public controversy, the smoking and health issue." ☐

Hazpak smooths the way for hazard warning compliance

Hazpak, the manual prepared by ANPA to help newspapers comply with the federal "hazard communication" standard, generated a highly positive response, Richard W. Neergaard, manager/environmental services, said.

Newspapers and other businesses were required to be in compliance with the new standard by May 25. Developed by the Occupational Safety and Health Administration, it requires, among other things, that hazard warning labels must be carried on chemical product containers and that employees be trained to use hazardous chemicals safely in the workplace [presstime, May 1986, p. 60].

The Detroit News is among the newspapers that used ANPA's Hazpak to smooth the way to compliance, said Jack Delphy, assistant production manager and safety manager.

The manual was so complete, Delphy said, that when the state of Michigan enacted its own standards, he needed only to display a safety poster to meet them.

About 1,200 Detroit News employees, primarily in the engraving, press and janitorial departments, took the training. Managers received the training first and in turn trained people in their departments.

Delphy said he was pleased with the way Hazpak clearly explained various procedures required by the standard, from container labeling to keeping written records of chemical products used in the plant. The manual also outlined, step by step, how to develop a compliance plan.

"In addition to having to do it in order to comply with federal regulations, we feel it (Hazpak training) was a good way of keeping our employees well-informed. We got good positive feedback from them about the program," Delphy said. "We make safety a priority around here, and our people know we care about their safety and well-being."

In one recent example, the newspaper worked with a manufacturer to develop a less toxic fountain solution; in another case, an employee suggested the newspaper switch to a water soluble blanket wash for the presses.

Because of past attention to environmental matters, Delphy said the News had little to correct in its use and storage of chemicals.

He plans to hold refresher courses on the subject, using an ANPA videotape.

ANPA's Neergaard said he believes OSHA has been pleased with the serious and expeditious manner in which newspapers approached compliance in particular and environmental issues in general.

"I've been with the Association seven years, and I've never gotten this kind of response before to one of our programs," Neergaard said.

One copy of Hazpak was sent to all member newspapers. Members purchased about 375 additional packages, and another 75 were sold to non-members. Orders still may be placed—$25 per copy for members, $100 for non-members—by contacting ANPA's environmental services staff at The Newspaper Center in Reston, Va. ☐

OMB approves VDT study

The Office of Management and Budget has approved a scaled-down government plan to study possible adverse effects on pregnancy from the use of video display terminals.

OMB had disapproved, under the Paperwork Reduction Act, an earlier study proposal from the National Institute for Occupational Safety and Health [presstime, Feb. 1986, p. 38].

NIOSH was given the go-ahead for the study on the condition that it eliminate questions related to stress and fertility, and that it obtain medical records to validate any reported pregnancy complications. A September 1987 deadline was set for data collection.

The study will focus on employees of BellSouth, the regional telephone operating company. "We will continue to cooperate fully in the study," said a spokeswoman for the Atlanta company.

An epidemiologist in the Cincinnati office of NIOSH said employee interviewing would begin this fall. Release of the study is about two years away, she said.

OMB's conditional approval came within a week after a hearing on the study by the Health and Safety Subcommittee of the House Committee on Education and Labor.

In another matter regarding video display terminals, an omnibus VDT bill in the Massachusetts Senate has been referred to that body's Ways and Means Committee. ☐

ANPA opposes restrictions on photos from space

The federal government should not put any greater restrictions on news media use of pictures obtained by a "remote-sensing" device from outer space than if a news photographer were operating a camera on the ground.

ANPA made that argument May 30 in a letter to the federal National Oceanic and Atmospheric Administration, which is establishing licensing procedures for "remote-sensing" space systems. A remote-sensing space system uses electromagnetic waves to create an image of the Earth's surface.

Newspapers have purchased and published images produced by the remote-sensing process, ANPA noted in its comments. ☐

Calls mount for JOA hearing

Two members of Congress from Michigan have added their voices to those calling for a public hearing by the Justice Department on the proposed joint operating arrangement between Detroit's two daily newspapers.

However, in their June 4 letter to Attorney General Edwin Meese III, Democratic Reps. John D. Dingell and William D. Ford took no position on the merits of the proposed JOA between The Detroit News and the Detroit Free Press. (See essay, p. 32.)

Among those also on record at the Justice Department in favor of a hearing are a group that includes Detroit Mayor Coleman A. Young, former Michigan Gov. William G. Milliken, former Free Press Executive Editor Kurt Luedtke, Suburban Communications Inc. Chairman Philip Power and Michigan AFL-CIO President Sam Fishman.

Meese will not make a decision on whether to order a hearing until August at the earliest.

Initial public comments on the plan were due at the Justice Department by June 30 [presstime, June 1986, p. 57]. The public will have until July 29 to reply to those comments. ☐

LEGISLATION

Congress urged to remove 'ambiguities' from Newspaper Preservation Act

Fear of costly lawsuits is keeping newspapers that are parties to joint operating arrangements from engaging in such things as total-market-coverage programs and electronic publishing, a Senate committee was told.

At a June 10 hearing, a group of JOA publishers urged the Senate Judiciary Committee to approve a bill removing "ambiguities" from the Newspaper Preservation Act, the 1970 law that provides a limited antitrust exemption to newspapers that combine business functions to preserve two independent news and editorial voices [presstime, Aug. 1985, p. 16].

"We JOA publishers believe that the original Newspaper Preservation Act provides us the same legal rights as single owners to meet any competition, but there are those out there who do not agree and sometimes they sue," said John W. Gallivan, publisher of The Salt Lake Tribune. The Tribune is in a Salt Lake City JOA with The Deseret News.

However, a spokesman for Suburban Newspapers of America opposed the legislation, S 2314. "The end result of this bill would be to silence the editorial voice of the suburban newspaper industry," said Richard Aginian, president of Suburban Communication Corp. of Livonia, Mich.

Gallivan argued that the amendment is necessary because competitive factors in the newspaper business have changed in the 15 years since the act became law. Daily newspaper circulation penetration has dropped, bringing demands from advertisers for special ways to deliver advertising to up to 100 percent of the market, he said. Single owners of two newspapers have responded with TMC programs, but "the right of JOA newspapers to do the same is not clear."

Gallivan also said it is unclear whether JOA newspapers can become involved in electronic publishing, because the act defines a newspaper as a publication on newsprint. ☐

Concern raised over possible FOIA delays

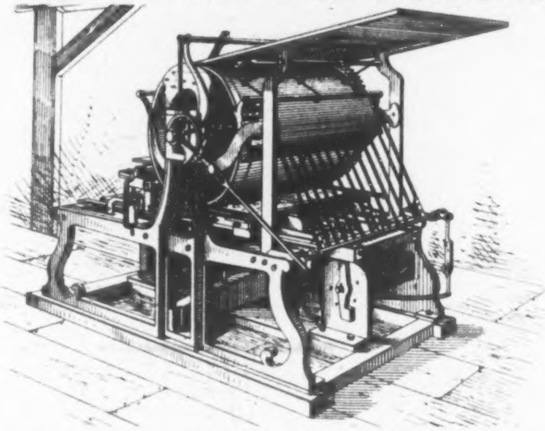
Two press organizations expressed concern that proposed new procedures on processing requests for business information under the Freedom of Information Act could result in long delays in release of information.

The remarks came at a June 5 congressional hearing by spokesmen for the Reporters Committee for Freedom of the Press and the Society of Professional Journalists, Sigma Delta Chi.

HR 4862 would allow businesses to mark information as confidential, oppose its disclosure and sue to block release under the same rules that apply to FOIA requestors.

In written comments to the House Information Subcommittee, ANPA said legislation is not necessary because agencies can accomplish by regulation much of what the bill would do. (See story, p. 22.) ☐

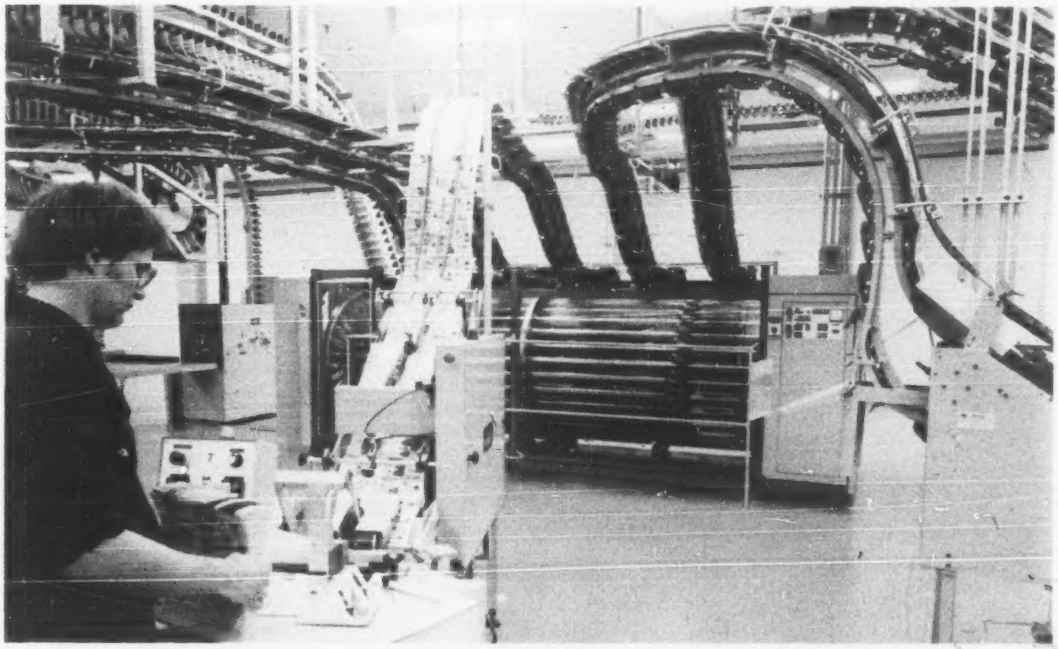
Comes the Revolution!



Single impression cylinder press, circa 1845, with a flat form bed was a revolutionary innovation a century + ago.

Over 100 years ago, "cylinder" presses were indeed revolutionary. Today's revolution is downstream from the press, where publishers are installing automated processing systems to improve profits, and be ready for the competition, wherever it appears. And, automated processing is where FERAG excels. FERAG automated inserting, conveying and processing systems are utilized by publishers all over the globe.

When you're ready to revolutionize your facilities, we're ready to help...FERAG, Inc., Keystone Industrial Park, Bristol, PA 19007...(215) 788-0892



FERAG ROTOSERT™ Automatic Inserting Systems assemble multiple inserts into main jackets on-line at press speeds, or off-line from skids or pre-palletized cassettes. (St. Paul Pioneer Press and Dispatch.)

First-, third-class service similarities again demonstrated by ANPA study

Once again, an ANPA-sponsored test of local mail speed has borne out the Association's claims regarding postal rates: that there is little difference in delivery time between first and third-class mail, although first-class is up to nine times more expensive.

"The significant difference in postage between these classes brought only one day faster delivery," the study concluded.

The test, carried out in April in four U.S. cities, showed that most first-class pieces arrived the day after being dropped off at the post office, and that most third-class pieces arrived the second day.

In two of the cities, there was almost no difference in service. There, at least 92 percent of *all* the mail took only one day to reach the destinations. Class and weight did not appear to affect delivery service "in any way," test officials said.

A previous ANPA mail speed survey also showed that most first- and third-class pieces arrived within two days [**presstime**, Aug. 1985, p. 38].

The test was conducted by the public relations firm Ruder Finn & Rotman in conjunction with local newspapers in the four cities: Oakland with The Tribune; Sherman, Texas, with the Sherman Democrat; Lawrence, Kan., with The Lawrence Daily Journal-World; and Madison, Wis., with the Wisconsin State Journal.

In each city, 12,000 pieces of mail were sent to 2,000 homes on U.S. Postal Service carrier routes selected generally by the newspapers from their subscriber lists. Each home was sent six pieces of mail: a regular first-class piece weighing 3.2 ounces; a regular first-class piece weighing less than one ounce; a first-class, carrier-route-presorted, or "CRP," piece weighing 3.2 ounces; a first-class, CRP piece weighing less than one ounce; a third-class, CRP piece weighing 3.2 ounces; and a third-class, CRP piece weighing less than one ounce.

Each mail piece contained a postage-paid return postcard on which recipients were asked to indicate the date of receipt. All told, 9,093, or 75.8 percent, of the reply cards were returned.

Cumulative responses indicated that:

- For first-class, 3.2-ounce pieces—93.2 percent were delivered the day after they were mailed; 97.4 percent were delivered by the second day and 98.2 percent by the third.
- For first-class, less than 1-ounce pieces—93.95 percent were received the first day, 97.2 by the second and 98.1 by the third.
- For first-class, CRP pieces weighing 3.2 ounces—94.3 percent were received the first day, 97.8 by the second and 98.26 by the third.
- For first-class, CRP pieces weighing less than 1 ounce—90.4 percent were received the first day, 97.4 percent the second and 98 percent the third.
- For third-class CRP pieces weighing 3.2 ounces—65.6 percent were received the first day, 96.4 percent by the second day and 99.2 by the third.
- For third-class CRP pieces weighing less than 1 ounce—61.8 percent arrived the first day, 90.3 percent the second and 91.8 percent the third. □

Rates test rebuffed

The U.S. Postal Rate Commission has rejected a Postal Service request to experiment with fourth-class, parcel-post rates. ANPA had said the plan might have negative implications for its fight for higher third-class rates.

Under the experiment, USPS would have tried changing its zone pricing structure for fourth-class packages to one based more on flat rates. It also would have had discretion to vary those fixed rates within certain ranges.

The commission supported the concept but said the proposed rate structure would not have covered costs.

In comments filed with postal authorities, ANPA said the proposal would encourage USPS to "abandon fair pricing to the detriment of competitors and the public."

The flexible nature of the proposed rates, the Association said, "suggests not only an invitation to abandon cost-based (or cost-avoided) pricing, but raises the specter of predatory pricing to reach desired ends." □

FOIA request to governors rejected

The secretary of the U.S. Postal Service Board of Governors has turned down a Freedom of Information Act request by ANPA for closed-meeting documents.

ANPA Assistant General Counsel Tonda F. Rush had asked for transcripts, minutes, notes and other documents relating to the governors' consideration of the last postal rate case.

Rush said the FOIA request was made not in an attempt to have the last rate case decision changed, but in an attempt to see previously undisclosed materials that led to the public decision by the governors.

David F. Harris, secretary to the governors, said materials in question are exempt from FOIA disclosure. □

POSTAL NOTES

- House and Senate conferees in June were debating whether to **restore a portion of a postal subsidy,** eliminated earlier this year, for mailing fewer than 5,000 copies of a second-class publication to counties adjoining the county where it is published. The rate was known as "limited circulation."

In acting on supplemental appropriations for fiscal 1986, the Senate June 6 approved a proposal by Sen. Ted Stevens (R-Alaska) to restore about two-thirds of the subsidy for newspapers mailed to subscribers in counties contiguous to the county of publication. The effect would be to lower postal bills for those newspaper deliveries.

The subsidy would not apply to mailings beyond adjoining counties [**presstime**, May 1986, p. 64].

- The U.S. Postal Service is continuing an investigation into its procurement process, spurred by the admission of a former postal governor, Peter E. Voss, that he committed **embezzlement and other crimes** against USPS.

Voss pleaded guilty to illegal gratuity and theft in schemes that included receiving money for influencing the selection of a company that makes mail sorting equipment and receiving payment for first-class airfare when he actually flew coach. Sentencing is scheduled July 24 in U.S. District Court, Washington, D.C.

Help sought for international journalism

At an unprecedented meeting of representatives of 35 groups devoted to the improvement of international journalism, there was agreement that more mutual cooperation is needed. But as James D. Ewing, vice president and treasurer of the Center for Foreign Journalists, put it, there was also "frustration" about the form such cooperation should take. Ewing is publisher of The Keene (N.H.) Sentinel.

Acknowledging it is "too soon" to expect concrete results from the June 5 meeting called by CFJ at the American Press Institute in Reston, Va., the executive director of one program observed it was "a very constructive thing to get all those people together. . . . That in itself was worthwhile," said David Nalle of the Alfred Friendly Press Fellowships, which has placed 10-12 foreign journalists in five-month internships with U.S. media for the past three years.

The meeting was "a very valuable first step," said Paul V. Sherburne, executive director of the World Press Institute, which for 25 years has brought 10-15 foreign journalists to study and travel in the United States.

High on the list of common problems identified by most of the 44 participants was the lack of generally accepted methods of program evaluation, as more and more of them vie for similar sources of funds.

"A systematic evaluation does not exist," said Hewson A. Ryan, director of the Edward R. Murrow Center, an arm of the Fletcher School of Law and Diplomacy at Tufts University. Ryan also directs the three-year-old Journalism Exchange Program of the American Society of Newspaper Editors, which brings 12 foreign journalists to the United States for six weeks, including a month of work at U.S. newspapers.

Others noted additional areas for improvement.

Without good matching of journalists and host newspapers, programs are "frequently unsatisfactory or only marginally satisfactory," said K. Prescott Low, president and publisher of The Patriot Ledger in Quincy, Mass., who represented both ANPA and the International Federation of Newspaper Publishers at the meeting.

Nalle (foreground) discusses Friendly fellowships program. Listening are (from left) Earl W. Foell of The Christian Science Monitor, Gary Sick of The Ford Foundation, Orin D. Parker of America-Mideast Educational & Training Services (partially seen behind Nalle) and Frank E. Ferrari, of The African-American Institute.

Several of those attending observed that small papers often provide more meaningful experiences for foreign journalists than do the large metropolitan dailies that are more likely to serve as hosts.

A recent CFJ survey shows that while applications by foreign journalists are running about 10 for every space available, more than half of the papers interested in such programs—"particularly in America's hinterlands"—said they have never been asked to participate.

Several people at the meeting noted that although experienced U.S. journalists have considerable expertise to offer their overseas counterparts, they are often unable to take time from their jobs to go abroad.

"The main thing we need is better-trained trainers," said J. Edward Murray, a past president of the American Society of Newspaper Editors, who has spent the past few years as an international training consultant, particularly for the World Press Freedom Committee.

Murray also stressed the need to include non-English speaking foreign journalists in training efforts abroad.

Others observed that to improve international news coverage, programs need to cut both ways.

"I am firmly convinced Americans need more education about Asia than vice versa," said Robert Hewitt, curator of the Jefferson Fellowships at the East-West Center in Honolulu, which are aimed primarily at "gatekeepers" or editors rather than reporters.

Another recent CFJ survey shows that in 1985 more than four times as many foreign journalists visited the United States than vice versa—4,483, compared with 1,003 U.S. journalists sent abroad.

In addition, some participants said that most existing training programs do not address the equipment needs of Third World media, nor do they place enough emphasis on broadcasting, particularly radio.

One thing that was not perceived as a problem was duplication of efforts by different entities. "This is a field where duplication is a virtue, not a sin," said Dana Bullen, executive director of the World Press Freedom Committee.

Just recently, the center published a 187-page directory of education, training, fellowship and intern programs for journalists, listing more than 350 programs in 70 countries.

The only comprehensive directory of such programs worldwide, it is essentially an update of the List of Talloires compiled in 1983 by CFJ Executive Director George Krimsky while he was editor of world services for the Associated Press [presstime, Aug. 1985, p. 32].

For copies, contact CFJ, 11690 Sunrise Valley Drive, Reston, Va. 22091; (703) 620-5984. Single copies are free except for $2 for postage and handling. There will be a nominal charge for bulk orders. □

Study shows more states adopting laws requiring access

BY GUIDO H. STEMPEL III

Freedom of information usually is viewed as a national problem, but it is a local problem too. The specific issue is how much access state laws mandate for media and the public to meetings of local public bodies.

Sharon Hartin Iorio, instructor in journalism at Oklahoma State University, reports that laws provide more openness in local government now than they did in 1974. The most striking finding is that while only 14 states in that year declared that actions taken in secret meetings were void, 37 states now have laws to that effect.

She also reports that the number of states that require open meetings of legislative committees has risen from 22 to 33. And all 50 states now have laws providing that meetings of county and local agencies and elected public bodies must be open.

Guido H. Stempel III

Looking at 11 aspects of openness, she found that Tennessee was the only state that provided all 11 by law. If you want to know how your state's laws stack up, you can find out by looking at her article, "How State Open Meeting Laws Now Compare with Those of 1974" in the Winter 1985 Journalism Quarterly.

• • •

What's the least readable part of most news stories? According to Harry Stapler, assistant professor of journalism at the University of Florida, it's the lead.

Stapler looked at sentence length in staff-written stories in 12 major metropolitan newspapers. He determined the sentence length in the first four paragraphs in 30 stories in each newspaper.

He found that for all the newspapers studied, the lead paragraphs were longer than the next three paragraphs. The average was 26.1 words per sentence for leads, which was 4.4 words more than the average for sentences in the other paragraphs. Readability experts say that leads averaging that many words per sentence are too difficult for the great majority of readers. It might help you understand the issue to know that the average sentence length for this column is 18.5 words.

Why are the sentences in leads so long? Stapler's answer comes as no surprise. It's because most leads have only one sentence. Nearly 84 percent of the leads he analyzed were only one sentence. In contrast, only 45.9 percent of the second, third and fourth paragraphs had only one sentence. Lead writers obviously are striving to keep the lead one sentence and are putting too much into that sentence.

It would thus seem that the part of the story we count on to attract readers is in fact the most difficult part. Our leads may be driving readers away.

Stapler's study is reported in the Winter 1985 issue of the Newspaper Research Journal.

• • •

If you're as old as I am, you may recall that in World War II we didn't find out the details of what happened at Pearl Harbor for more than a year. We didn't call it news management then because the term hadn't been invented. Besides, it was done so skillfully that we didn't always notice.

How President Franklin D. Roosevelt managed the news of World War II is explained in "News of the 'Good War': World War II News Management" in the Winter 1985 Journalism Quarterly. The author is Richard W. Steele, a history faculty member at San Diego State University.

Steele tells how military strategy was adjusted in the interest of producing favorable public opinion and how military censorship kept certain things from the public. He describes the operation of the Office of Censorship, which used coercion more than outright censorship.

Those of you who don't remember World War II may wonder why we should worry about this piece of history now. Grenada suggests why. The efforts of the Roosevelt administration provide all too convenient a model that could be applied in a current conflict. ☐

Stempel is distinguished professor of journalism at the E. W. Scripps School of Journalism at Ohio University, Athens, and editor of Journalism Quarterly. He is a regular contributor to presstime.

Dole bill would transfer purview from Greene

ANPA opposes a bill introduced in the Senate to transfer jurisdiction over the AT&T consent decree from U.S. District Judge Harold H. Greene to the Federal Communications Commission.

The Association said the bill, as written, could result in a deterioration of the "diversity principle"—the basis for the consent decree's prohibiting AT&T (at least until 1989) and local phone companies (indefinitely) from providing electronic information services.

"We will oppose the legislation unless it is amended to embody the diversity principle," said ANPA Executive Vice President Jerry W. Friedheim.

The diversity principle maintains that a telephone company providing monopoly telephone service also should not control information flowing over those facilities.

The administration-backed bill, S 2565, was introduced June 18 by Senate Majority Leader Robert J. Dole (R-Kan.).

Judge Greene, who presided over the AT&T breakup, rules on waiver requests of the Bell operating companies that want to expand into new business areas.

ANPA Vice President/General Counsel W. Terry Maguire said the Association believes that "if the FCC were given authority to lift the information services prohibition (affecting the BOCs) that now exists in the decree, it would do so."

In a statement, Dole acknowledged ANPA's concerns but stopped short of endorsing the Association's position. "To get the bill passed, I believe we may have to specifically address the limitations on electronic publishing as they apply to the BOCs," Dole said.

He also said he would favor a narrower definition of "electronic publishing" than is in the decree, something Maguire labeled as "totally unacceptable." ☐

Video kiosks closed

Cowles Media Co. dropped its public-access videotex service June 20 because advertising did not generate sufficient operating revenue. The service consisted of 20 kiosks in downtown Minneapolis [presstime, Nov. 1985, p. 46].

ACEJMC restructuring plan studied; Allied to conduct independent J-school review

A plan to restructure radically the organization that accredits U.S. journalism schools is being circulated among organizations of journalism professionals, educators and accredited schools.

The proposal addresses criticism, most recently from broadcast interests, that the newspaper business is over-represented on the Accrediting Council on Education in Journalism and Mass Communications. As currently constituted, 10 of the 20 professional organizations that belong to ACEJMC are newspaper-oriented.

Meanwhile, Allied Daily Newspapers has decided to do its own evaluating of journalism schools. Ted M. Natt, president of the regional organization for newspapers in the Pacific Northwest, said it is not Allied's intention to compete with ACEJMC as an accrediting agency. "But we can sure take a look at the faculty and program and say 'We think this is a good one,' or 'This one's not worth a hoot,' from our perspective as newspaper people," said Natt, editor and publisher of The Daily News of Longview, Wash.

The proposal to reorganize ACEJMC would reduce the size of the council from 35 members to 13—five professionals, five educators, two public members and a president elected at large. One educator and one professional would be chosen to serve on the council by each of five "Professional Accrediting Committees."

These new committees would represent segments of the communications industry: newspapers, broadcasting, advertising, public relations, and magazines/photojournalism.

The committees would be responsible for evaluating how well schools seeking accreditation are preparing students for their fields by examining the appropriate sequences of study. The council would look at the school or "unit" as a whole and make the final decision on whether it should be accredited.

The council intends to act on the plan at a meeting Oct. 19. If approved, it would take effect in September 1987.

The plan also would set up a fee structure for membership in the accrediting committees. National professional organizations with annual budgets of at least $500,000 would pay a yearly fee of $5,000. Smaller national professional groups and regional ones would pay $2,500.

The two national educator groups that are ACEJMC members—the Association for Education in Journalism and Mass Communication, and the Association of Schools of Journalism and Mass Communication—each would pay $4,000. The two specialty educator groups that belong to ACEJMC—the Broadcast Education Association and the American Academy of Advertising—each would pay $2,000.

Membership would entitle a professional organization to one seat on an accrediting committee. Once it was known how many professional members each committee would have, the educator groups would provide an equal number of educators. Currently, each professional member organization has a single seat on the council, there is no fee structure and membership contributions are voluntary.

Under the plan, yearly dues paid by accredited schools would rise to $300 from $200.

The proposal was drafted at a meeting June 8-9 in Minneapolis by a committee chaired by ACEJMC President-elect John M. Lavine, editor/publisher of the Lavine Newspaper Group of Chippewa Falls, Wis. Lavine, who represents Inland Daily Press Association on the council, said he believes that professional organizations, once they understand the plan, will be "very supportive."

A restructuring plan advanced last year by a predecessor committee, which called for reduction of voting membership of newspaper organizations, was withdrawn after newspaper industry protests.

ANPA Executive Vice President Jerry W. Friedheim put the support of the Association behind the new plan. "I think this will be an effective restructuring of ACEJMC," he said. "We'd like to see it implemented as soon as possible. ANPA looks forward to working with a streamlined, vigorous council."

Outgoing ACEJMC President Joseph W. Shoquist also praised the plan. "I think it's the kind of solution we've been looking for," said Shoquist, dean of the College of Journalism at the University of South Carolina and until recently managing editor-special projects of The Milwaukee Journal.

"It does not deprive present or any other would-be interested organization from active, lively participation in the council's affairs," he said. He added that restructuring would make the council more numerically representative of the various media segments.

At ACEJMC's semiannual meeting in April, Shoquist appointed the Lavine committee and directed it to come up with a plan for "proportionate" representation [**presstime**, June 1986, p. 72].

The committee's proposal will be discussed at the Aug. 3-6 convention of the journalism educators' organization, AEJMC, by a panel moderated by Judith D. Hines, vice president and director of ANPA Foundation.

The related action by Allied Daily Newspapers came at its annual meeting in May in Portland, Ore. Allied established a committee to write criteria for rating journalism schools, and that report will be presented at a meeting of the organization Sept. 26 in Missoula, Mont. The committee is headed by James E. Shelledy, editor/publisher of the Idahonian of Moscow, Idaho, and of the Daily News of Pullman, Wash.

"One of the concerns is that increasingly, schools and departments of communications are becoming dominated by pure academic researchers who have more background in the theory and research side than they do in the practicing, professional side of things," said Allied President Natt. —*Margaret Genovese*

NIE Week participation sets a record

A record number of U.S. daily newspapers participated in Newspaper in Education Week this year, according to a survey conducted by ANPA Foundation. The total of 503 was about 100 above that for the 1985 observance.

The survey also found that during NIE Week last March, these newspapers distributed more than 3 million copies to more than 30,000 schools [**presstime**, March 1986, p. 49].

The survey showed 60 percent of the participating newspapers held workshops for teachers to explain how to use the newspaper as a teaching tool, and 38 governors issued proclamations commemorating the event in their states.

Preparations have begun for the fifth annual NIE Week, which will be observed March 2-6, 1987.

Correct use of the phone can ring up more sales

The phone rings in a real estate office:

"Hello. Brown and Sons Realty, Chris Rogers speaking."

"Hello, I'm calling about a four-bedroom house you advertised for sale in yesterday's paper. The one with the swimming pool."

"Sorry, that house has been sold."

"Oh. OK, thank you. G'bye." (CLICK!)

BY CRAIG C. STANDEN

Phone calls like that take place by the thousands every day. They represent a problem that costs real estate agencies millions of dollars in lost sales every week.

They also are a problem for newspapers, because calls like these make newspaper advertising look far less effective than it really is.

The Newspaper Advertising Bureau's classified department has come up with a solution. It helps you help your real estate advertisers turn more of their phone inquiries into appointments to show houses, and thus increase their sales. It improves your relationships with real estate advertisers because you're doing them an important service.

The solution is called "House Calls."

The program began last October when Syracuse Newspapers Inc. asked our classified department if we could help it help a local real estate broker with a telemarketing problem: The broker was getting plenty of responses from his classified ads but was losing hot prospects because his people didn't seem to be able to convert enough of the calls into appointments.

Tony Marsella, NAB vice president for real estate classified, and Kitty Vance, vice president for telemarketing, worked out a 45-minute program to teach the basic skills of converting inquiry calls generated by newspaper ads into appointments to show houses. They placed the emphasis on making the appointment, with no attempt to sell the prospect during the initial call.

The program worked so well that Tony and Kitty felt the same idea could be successful on a much wider scale with a "train the trainer" approach—in which they could train newspaper staff members to conduct the training sessions for real estate agents.

They developed the idea into a two-hour workshop and then tested it with a group of classified staff members from eight newspapers in the New York/New Jersey area. And after a few further refinements, the first two "House Calls" regional workshops were held May 7 in Chicago and May 14 in Atlanta. Attendance was good, the response was enthusiastic, and first reports indicate that the idea is working.

To cite just one example, Roanoke (Va.) Times & World-News staffers held two workshops for real estate personnel within two weeks of attending "House Calls." After the second, the local Board of Realtors asked the Times & World-News to set up a program under the board's sponsorship!

After a newspaper's classified staffers have attended the NAB workshop, they are fully prepared to teach real estate sales associates how to develop a pleasant, positive telephone manner, how to stay in control of the conversation, how to set up an appointment and confirm it with a call-back—and they'll be able to motivate the real estate people.

They'll also be able to train other classified staff members as trainers. And I can't help feeling that all this emphasis on good telemarketing techniques will also improve the sales effectiveness of the classified sales staff, too.

Each newspaper person who attends a "House Calls" workshop receives an instructor's workbook to use while conducting his or her own training sessions plus 50 text/workbooks for real estate associates, which can be used by them on the job after they've been trained.

I believe "House Calls" is an idea that can produce positive results for almost any paper with significant volume in real estate classified. We've scheduled 10 additional regional workshops this year, starting July 15, in Los Angeles, San Francisco, Boston, New York, Dallas/Fort Worth, Houston, Pittsburgh, Fort Lauderdale, Denver and Phoenix.

For more information about "House Calls," contact either Kitty Vance at (212) 704-4513 or Tony Marsella at (212) 704-4516. ☐

Blair bidding continues

The bidding "war" for John Blair & Co. escalated in June, with Macfadden Holdings Inc. raising its offer from $25 to $30 per share for 88 percent of Blair. Macfadden already owns the remaining 12 percent.

Blair's board of directors previously accepted another purchase offer of $27 per share for 70 percent of the firm. That bid came from Reliance Capital Group, a New York limited partnership that owns Spanish-language television station KVEA in Los Angeles. However, there was speculation that Reliance would increase its offer in light of the Macfadden development.

Under the Reliance deal, Blair first would sell a controlling interest in its Advo-System Inc. subsidiary to Warburg, Pincus Capital Partners, another New York limited partnership. Remaining equity in the direct-mail subsidiary would be distributed to Blair shareholders [presstime, June 1986, p. 60.].

Under the Macfadden deal, Blair would not sell Advo. In fact, Macfadden has tried to stop the Advo sale to Warburg, Pincus in a lawsuit filed in Delaware Chancery Court. Macfadden said it would receive Advo as part of the Blair acquisition and then sell the direct-mail operation to a third party.

Blair has vowed to fight the Macfadden lawsuit.

Jack W. Fritz, Blair's president and chief executive officer, said Blair is "very pleased" with the Reliance offer because it "provides our shareholders with an attractive transaction, and also enables shareholders to benefit from the prospective Advo distribution. These two transactions will provide our shareholders superior value to the highly conditional offer" of Macfadden Holdings. ☐

Future of Advertising issues new booklet

The Newspaper Advertising Bureau's Future of Advertising Committee has issued a guide for newspaper executives titled "Readers: How to Gain and Retain Them."

One free copy is being sent to each ANPA and NAB member. Extra copies are available from the NAB Creative Department, 1180 Avenue of the Americas, New York, N.Y. 10036; (212) 921-5080, ext. 397. Cost is $5 each plus postage. ☐

OSHA to focus on back injuries

The Occupational Safety and Health Administration has begun a pilot program to help employers reduce back injuries, which account for an estimated one-fifth of all workplace injuries and illnesses.

Newspaper safety specialists report that back injuries, especially in the circulation department, are the most common type of newspaper injury and account for the greatest percentage of lost-time days [presstime, March 1984, p. 15].

According to the U.S. Department of Labor's Bureau of Labor Statistics, about one million workers suffered back injuries in 1980, the latest year for which figures are available.

Under OSHA's pilot program, specially trained inspectors will check for reports of back injuries whenever they consult accident records of employers in two of 10 OSHA regions—III Pennsylvania, Delaware, Washington, D.C., and West Virginia; and VIII Colorado, Montana, North Dakota and South Dakota.

If they find excessive back injuries, the inspectors will review the employer's training program for lifting and will offer to work with the employer to reduce hazards, OSHA said.

After the inspection, OSHA said, it will consider whether the hazards contributing to back injuries constitute a violation of the "general duty" clause of the Occupational Safety and Health Act of 1970.

The agency said it will rely on a document titled *Work Practices Guide for Manual Lifting*, which was developed by the National Institute for Occupational Safety and Health, in advising employers how to reduce back injury hazards.

A directive to OSHA's field staff noted that a "minimum" course for lifting training should cover:

- Risks of lifting
- Lifting biomechanics
- Musculo-skeletal considerations
- Individual self-risk assessment
- Handling skills—posture, movement, timing
- Handling aids
- Avoiding the unexpected.

The pilot program will continue through September, at which time it will be evaluated, OSHA said.

At least one newspaper—the New York Daily News—already has a new training program in place.

It was developed with Industrial Training Systems Corp. of Marlton, N.J., and includes a 10-minute audiovisual presentation of pictures taken in the newspaper's plant and at delivery points. A leader's guide for "The Back Story: A Spine Tingler" is used to encourage group discussion.

A quiz for employees is included in the guide. ITS notes that quiz results may be retained in employees' personnel files as a means of demonstrating to federal, state and local regulatory agencies, or insurance companies, that the employees were aware of the potential hazards of improper lifting.

Charles R. Lay, ITS manager of national accounts, said the normal price for the program is $395, but it is available to ANPA members for $325.

For additional information, contact Lay at ITS Corp., 11260 Roger Bacon Drive, Suite 201, Reston, Va. 22090; (703) 435-7300. —*Clark Newsom*

New York Daily News employee lifts newspaper bundle the correct way.

Professionalism trial ends in Concord; verdict to come

The trial in a case that could have far-reaching effects on U.S. newsrooms ended June 13 in a federal District Court in Concord, N.H., but a ruling by Judge Shane Devine is not expected before late summer.

At issue is whether newspaper reporters should be considered professional employees exempt from coverage under the Fair Labor Standards Act.

The case stems from a routine audit by the U.S. Labor Department's Wage and Hour Division at the Concord Monitor covering the period February 1978 through January 1980. The division claims the newspaper owes additional overtime pay to 33 editors, reporters and photographers. The newspaper, however, contends that the individuals are professional employees exempt under the act.

The trial, which had been postponed several times in the past, began Jan. 20, 1986. It was recessed Feb. 4 and resumed June 9 [presstime, March 1986, p. 56].

At the conclusion of the trial, Devine waived oral summations by the attorneys. Post-hearing briefs will be submitted after the transcript is received.

"The briefs will be the critical documents in this case, in my opinion," said Monitor Publisher George W. Wilson.

In a related matter, the Wage and Hour Division is considering whether to designate newspaper reporters and others specifically as professionals. ANPA, The Newspaper Guild and others have submitted comments to the division, which has not indicated when it will respond to the comments [presstime, April 1986, p. 64]. ☐

NLRB judge finds newspaper violated act in bargaining

An administrative law judge has found The Idaho Statesman violated the Taft-Hartley Act by bargaining to an impasse with a union over a non-mandatory subject.

The case arose during negotiations with Typographical Union No. 271 over new contract terms for mailroom employees. The company proposed, among other things, that trainees covered by the previous agreement be absorbed into a new "helper" classification that would not be covered in the new agreement. Helpers' wages and working conditions would be set unilaterally by the company.

The company put its proposal into effect in October 1985 after the union rejected it.

Judge Michael D. Stevenson said the company violated the act by insisting to an impasse on a change in the bargaining unit's "scope"—that is, a change that takes union representation away from employees who previously had it.

Stevenson noted that "wages, hours, and other terms and conditions of employment" are mandatory bargaining subjects, while bargaining over the scope of a unit is a permissible subject. It is a violation of the act to bargain to an impasse over a permissive subject.

The judge recommended that the board order the company to resume bargaining and to restore the previous working conditions.

The company is appealing Stevenson's decision to the National Labor Relations Board.

(The Idaho Statesman and Boise Typographical Union, JD(SF)-41-86) ☐

Board orders daily to bargain over changes

The Cincinnati Enquirer has been ordered by the NLRB to bargain with The Newspaper Guild over changes in the working conditions of editorial department employees.

The case arose after the union was certified to represent the employees, who previously had been represented by an independent union. The board agreed with an administrative law judge that the company had violated the Taft-Hartley Act by unilaterally assigning bargaining unit work to a supervisor when it created a new position of deputy features editor [**presstime**, Oct. 1985, p. 53].

The board also found that the company had violated the act by changing the wire editor's duties and by denying the union access to office mailboxes for the distribution of union material. It disagreed, however, with the judge's recommendation that the company be ordered to reimburse the Guild for postal expenses incurred in the mailing of its literature to members. A "sufficient nexus" did not exist between the company's action and the postal expenses, the board said.

The company did not appeal the order.

(The Cincinnati Enquirer Inc., 279 NLRB No. 149) ☐

NLRB upholds daily in discharge case

The NLRB has affirmed an administrative law judge's decision that the Salinas Californian lawfully discharged its credit manager for engaging in union activities during an unsuccessful organizing campaign by The Newspaper Guild.

The judge found that the individual was a managerial employee unprotected by the Taft-Hartley Act [**presstime**, April 1986, p. 66].

Charges in the case were filed by the San Jose Newspaper Guild.

(Salinas Newspapers Inc., 279 NLRB No. 142) ☐

Recent contract settlements

Indianapolis Star and News, ITU: Nine-year agreement covering composing room employees; retroactive to Oct. 1, 1985.

Minneapolis Star and Tribune, GCIU: Five-year agreement covering pressroom employees; retroactive to Dec. 1, 1984.

Philadelphia Inquirer and Daily News, ITU: Four-year agreement covering composing room employees; retroactive to Sept. 1, 1985.

(Details in July 1986 ANPA Labor & Personnel Relations Letter.)

New York court rules motor route carrier was independent contractor

New York State's second highest court has upheld The Daily Freeman of Kingston in its contention that a former motor route carrier was an independent contractor rather than an employee.

The case developed when the carrier's contract was terminated and she applied for unemployment insurance benefits. The newspaper objected to the determination by the local unemployment insurance office that she had been an employee and was eligible to receive benefits.

After a hearing, an administrative law judge overruled that finding on grounds that the claimant and all others "similarly situated" were independent contractors. The Unemployment Insurance Appeal Board upheld the judge's ruling.

The commissioner of labor appealed to the Supreme Court, Appellate Division, which affirmed the board's decision. The court found that the claimant was not bound by any time restrictions in delivering her papers, that her remuneration was negotiable and that customer complaints were referred directly to her. Additionally, the court noted, the claimant could add or delete customers without the publisher's prior approval, and she was not subject to territorial limitations.

"These factors were considered decisive by the board and have been found in other settings to indicate a lack of employer control, thereby supporting a finding of independent contractor status," the court said.

(Mid-Hudson Publications Inc. v. Roberts, No. 51586) ☐

Union's membership to vote on affiliation

The board of directors of an independent union representing about 2,000 employees of The Wall Street Journal has approved an affiliation agreement with the Graphic Communications International Union.

The board of the Independent Association of Publishers' Employees approved the agreement June 14 by a 13-5 vote, with one abstention.

IAPE President Eric Frankland said the agreement will be submitted to his union's members "before the end of the year," the exact date to be set after Labor Day. An affiliation must be approved by two-thirds of the membership [**presstime**, June 1986, p. 97]. ☐

NLRB excludes district managers from bargaining unit

The NLRB regional director in Boston has ruled that about 30 circulation district managers of The Patriot Ledger in Quincy, Mass., are supervisors and excluded from a bargaining unit represented by an independent union.

The decision had the effect of dissolving the Patriot Ledger Circulation District Managers Association.

Regional Director Robert S. Fuchs, acting on a "unit clarification" petition filed by the company, found that the newspaper's juvenile carriers are employees supervised by the district managers.

Fuchs noted that the company, through the district managers, exercises "substantial control" over the carriers by:

- Checking on their performance
- Assigning them to new routes
- Transferring them
- Splitting or decreasing route size
- Resolving customer complaints
- Approving substitutes and helpers
- Discharging them when their work is unsatisfactory.

Further, he found that the carriers have no "proprietary interest" in their routes.

The regional director said it was "clear" that the district managers "responsibly direct" the carriers and that they are not independent contractors.

The union did not appeal the regional director's ruling.

Subsequently, all of the district managers were reclassified as salaried supervisors with management status.

(George W. Prescott Publishing Co. Inc. and Patriot Ledger Circulation District Managers Assn., Case No. 1-UC-455) □

Court remands discharge case

The Washington State Supreme Court has sent back to trial a case involving the discharge of a pressman at The Daily World of Aberdeen.

Ralph O. Brady, who had worked for the daily for more than 30 years, was fired in 1981 for being "under the influence" of alcohol on the job, and for earlier incidents of drinking and warnings based on prior reports.

Brady was advised that he should seek professional help, and if he did, his job would be held open for six weeks. However, he denied he was an alcoholic and sued for damages in Grays Harbor County Superior Court. The court granted the newspaper's motion for summary judgment, and Brady appealed.

The Supreme Court noted that Brady had been given a favorable job evaluation shortly before he was fired, and that he was allowed to finish his shift even though he was allegedly "under the influence."

The newspaper's employee handbook stated that an employee may be discharged for "intoxication," but the court found there was a question of whether he actually had been intoxicated and remanded the case to the trial court.

(Brady v. The Daily World, Wash. Supreme Court No. 52183-2) □

Arbitration proceedings begin in Albuquerque

A surprise midnight search for drugs and alcohol at the Albuquerque Publishing Co. plant has led to arbitration cases for two discharged mailroom employees, with the possibility of several more arbitrations to come.

In all, 22 mailers, pressmen, maintenance workers and drivers were fired for either drug or alcohol use or refusal to submit to tests following the January search.

The company handles non-editorial functions for The Albuquerque Tribune and Albuquerque Journal.

The two mailers whose grievances are being processed are represented by the International Typographical Union's Mailers Union No. 156.

Grievances have also been filed by Local 53 of the Graphic Communications International Union, which represents the publishing company's pressmen.

The Albuquerque situation also has led to activity in other forums. Two unfair labor practice charges filed with the National Labor Relations Board have been dismissed, as has one of five charges filed with the Equal Employment Opportunity Commission by four Hispanics and one black employee. In addition, several appeals are pending before the state's unemployment compensation board. □

EEOC nomination

President Reagan has nominated Clarence Thomas for a second five-year term as chairman of the Equal Employment Opportunity Commission. The appointment is subject to Senate confirmation. □

Arbitrator rules newspaper can require blood tests

An arbitrator has upheld the right of a newspaper to require blood tests as part of periodic physical examinations of mailroom employees.

The labor agreement between The Star-Ledger of Newark and Mailers' Union No. 11 states that the newspaper has the right to have all employees undergo physical examinations when they are employed and periodically thereafter. But it does not mention blood tests.

The dispute arose in September 1985 when the company added blood screening as part of the examinations. The union opposed the addition of the tests for current employees, claiming that it was a unilateral change in working conditions in violation of the agreement.

The company contended, on the other hand, that there was nothing in the agreement that precluded requiring blood tests. A physician testified in the arbitration proceedings that it was necessary to perform blood tests in order to render an informed opinion about an individual.

Arbitrator Robert E. Light dismissed the union's grievance. He said he was "keenly aware of the current furor" respecting the rights of a citizen to privacy and "the desire of some individuals not to have their body invaded by a needle for fear of AIDS" or some other illness or injury, even though prepackaged, disposable needles are used to obtain the blood specimens.

But he said medical evidence showed that blood testing is a necessary component of a physical examination. He pointed out parenthetically that the union did not oppose blood tests for new applicants but only for current employees.

Light said he was not unmindful of the concerns of employees "given the notoriety and publicity attendant to the instances of AIDS, phobias of needles and the like." At the same time, he noted the precautions taken to ensure the sterility of the syringes used for tests and methods used to minimize or eliminate anxiety for individuals who are fearful of needles.

Wire Service Guild ratifies UPI contract

Members of the Wire Service Guild have ratified a new one-year labor agreement with United Press International, which has just emerged from bankruptcy. (See story, p. 19.) The new pact extends most provisions of the previous agreement through April 30, 1987.

Wage levels are frozen at 105 percent of what they were before pay cuts were instituted by UPI in September 1984. A reporter's top minimum pay is $585 after five years' experience, compared with a range of $655 to $675 at Associated Press.

The contract also provides for a profit-sharing plan for non-management employees.

Complaint dismissed in representation case

An unfair-labor-practice complaint against The Tribune Chronicle of Warren, Ohio, has been dismissed by the NLRB in a case dating back to 1981.

The complaint was based on charges filed by Local 721 of the International Union of Electrical, Radio and Machine Workers after it lost a representation election five years ago. The union alleged that before the election the company had unlawfully threatened employees with loss of benefits if they voted for the union.

In its recent decision, the board affirmed a 1984 recommendation by Administrative Law Judge James J. O'Meara Jr. that all allegations of wrongdoing by the company be dismissed. In 1983, O'Meara had made a similar recommendation, but the board remanded the case to him for further findings [**presstime**, Dec. 1984, p. 51].

(The Tribune Co., 279 NLRB No. 138)

Attorneys' fees awarded Los Angeles daily

Two lawyers have paid attorneys' fees of $20,157 to the Los Angeles Herald Examiner and $11,645 to an insurance administrator after losing a case in which they charged that the newspaper had denied medical benefits to a former employee. U.S. District Judge Mariana R. Pfaelzer ordered the payments after finding that the charge had no basis in fact.

Same-day coupon promotion will be tested

"A $40 value for the price of your paper!" "Twenty dollars worth of coupons in today's newspaper!" By Oct. 1 you may see ads or posters like that promoting the Sunday newspaper, said M. David Keil, president and managing director of the Audit Bureau of Circulations.

It's called same-day promotion of coupon value—an advertising and promotional idea long banned by the ABC's rule C 1.14. But at its June meeting, the ABC board voted to support a resolution advocated by ANPA and the Newspaper Advertising Bureau to lift the restriction and give same-day promotion a year's trial beginning Oct. 1 [**presstime**, May 1986, p. 71].

Under the rule now in effect, newspapers may not promote the value of coupons inserted in that edition if the value is more than half the sale price of the paper. ANPA and NAB have long been pressing for a change in the rule through their joint liaison committee for ABC matters.

Some advertisers have been reluctant to suspend the rule because they felt enticing readers to buy a paper because of the coupons inside would distort normal circulation. Some supporters of the ban also felt the promotion might increase coupon fraud, presumably by drawing attention to the total dollar value of the coupons inside a particular edition.

A study by the ANPA-NAB committee, however, apparently helped convince the ABC board that there would be no significant difference in circulation or other factors whether the papers did or did not promote same-day coupon values. The study found that people who bought newspapers already knew that coupons would be present on certain days when grocery ads ran.

Also at its June meeting, the board discussed liaison committee proposals that ABC adopt:

- An additional appeals method in cases where the bureau's managing director has ruled against an ABC member in a dispute.
- A legal waiver that members would sign as a condition of membership, in which they would agree not to claim any damages against ABC as a result of an adverse ruling against the member until all remedies provided in the bylaws had been exhausted.

'Dot gain' can be minimized

It's a great color photograph: sharp details, good texture, a full range of tones. But something is lost in the translation from the halftone to printed page. Instead of a vibrant reproduction, the picture is "muddy" and lacks definition.

Technical experts say the problem usually can be traced to "dot gain," defined as the increase in size of a halftone dot from the time it is created until it is printed on paper. Larger dots make pictures print darker than the original.

Although it's virtually impossible to eliminate, dot gain can be recognized and compensated for during the printing process. The new ANPA-Newspaper Advertising Bureau *Guide to Quality Newspaper Reproduction* offers dot standards for the reproduction of color as well as black-and-white halftones on offset and letterpress presses [presstime, June, 1986, p. 89].

John C. Harrington, ANPA photographer/color specialist, noted that generally recognized standards for black-and-white halftones have been in use for some time. Recommendations regarding color printing are of rising interest to newspapers, he said, because they are now using color more frequently.

According to Harrington, the color dot standards in the guide have been in use for several months at a number of newspapers, and they are reporting good results.

The standards recommend, for example, that when laying down cyan ink in process-color work on offset units, dots be in the 3-percent range for highlight, in the 40-percent range for mid-tones and the 75-percent range for shadow areas. (See chart.)

Halftone dots are produced when continuous-tone artwork is photographed through the grid pattern of a halftone screen that breaks up the image into lines of dots of various sizes and shapes. The number of lines per inch is the screen ruling. Most offset newspapers print an 85-line screen, while most letterpress newspapers use a 65-line screen.

> *The problem can be recognized and compensated for, according to experts.*

Dots begin growing from the time they are created on film. They are larger where the original artwork is darker and smaller where it is lighter. Large dots cover more paper, and the more paper covered, the darker the image.

Small, round dots spaced far apart make up the highlight or lighter areas of the image. The dots get darker, larger and closer together in the mid-tone area.

For the shadow, or darkest part of the image, they get larger and are spaced even closer.

Before the halftone is made, a photoelectric instrument called a densitometer is used to measure the density of the image. It indicates density ranges from the very darkest to the very lightest areas of the photograph.

Harrington said dot gain occurs when the dots print larger than they should, a defect which can result in significant changes in color.

He and other photographic specialists said there are actually two kinds of dot gain: physical and optical. Physical dot gain is the actual growth of the dot from film to plate to press.

Optical dot gain is what the name implies, an illusion. Light scatters as it penetrates the paper surface, some of it surrounding the perimeter of the dot and some getting trapped under the dot, which makes the dot appear larger.

According to experts, dot gain is caused by a variety of factors, including absorbency of the paper, the amount and viscosity of the ink, how the blankets are packed on the press, how well rollers and other press components are maintained, and other variables.

Because newsprint is very absorbent, it encourages dots of ink to mass together, creating darker-than-intended shadows when halftones are reproduced. For that reason, using the least amount of ink possible is recommended.

One way to add sharpness of detail is to use drop-out dots; that is, eliminate the dots in selected areas on the plate so that no ink is deposited there during printing. This provides a sharper contrast for the

Recommended ranges for color halftone dots

Ink laydown sequence: cyan, magenta, yellow, black

Color halftone dot on negative	OFFSET			LETTERPRESS			COMBINATION		
	Highlight	Midtone	Shadow	Highlight	Midtone	Shadow	Highlight	Midtone	Shadow
Cyan	3%	40%	75%	*9%	45%	75%	*9%	45%	75%
Magenta	1%	30%	60%	9%	31%	75%	9%	31%	75%
Yellow	1%	30%	60%	9%	31%	75%	9%	31%	75%
Black	0	1%	60%	—	—	—	—	—	—

*For prints, highlight should be 15%

Source: ANPA-NAB *Guide to Quality Newspaper Reproduction*

Alberto Pacheco

other areas around the drop-out dot area.

Harrington said this method may be used for certain highlight areas, such as the sleeve of a man's white shirt. But caution should be exercised. If too many dots are removed, so is much of the definition; then the highlight areas can reproduce as large, white blobs on the printed page.

Scott Cornish, manager of the scanner department at USA Today, said a number of steps can be taken to minimize the variables.

One, adopted by his newspaper, is to standardize as many elements of the printing process as possible. Production personnel have ensured that the USA Today printing plants across the country use ANPA AD-LITHO™ inks, that plates are of consistently good quality and that a constant ink density is maintained.

While acknowledging dot gain is inevitable, Harrington said making allowances when producing halftones and maintaining consistency during the press run can control the problem and ensure that the printed image is as close to the original as possible. —*Rosalind C. Truitt*

TECHNOLOGY CALENDAR

- A seminar on **Color Image Assembly and the Impact of New Prepress Equipment** will be July 29 at the Sheraton Midway in Minneapolis. It is sponsored by Printing Industries of Minnesota Inc.

- The **Atex Newspaper Users Group** will meet Aug. 17-20 at the Westin Hotel Utah in Salt Lake City

- Seybold Seminars will hold its first **Desktop Publishing Conference and Equipment Exposition** Sept. 3-6 at the Hyatt Regency San Francicso.

- The Flexographic Technical Association will sponsor a **Prepress Seminar** Sept. 10-11 at the Rochester Institute of Technology.

- **The Creative Data Systems Users' Conference** will be Sept. 18-20 at the Marriott Tan-Tar-A Resort, Lake of the Ozarks, in Osage, Mo.

- The annual **Lasers in Graphics/Electronics Publishing in the '80s Conference** will be Sept. 21-29 at the Anaheim Hilton in Anaheim, Calif.

- The annual **New England Newspaper Operations Conference** will be Sept. 25-28 at the Sheraton Islander Hotel and Conference Center in Newport, R.I.

- **Graphic Arts Marketing Information Services'** meeting will be Oct. 1-3 at the St. Paul Hotel in St. Paul. GAMIS is a printing group.

- The **Sixth Annual ANPA Health and Safety Symposium** will be Oct. 2-3 at the Marriott Hotel City Center in Denver.

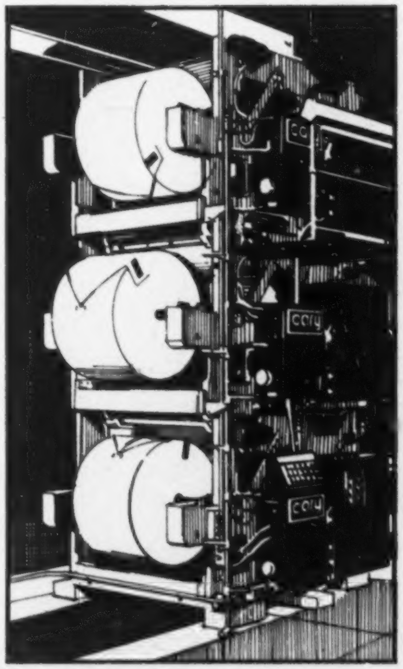
- The Society of Photographic Scientists and Engineers will hold its fall symposium and annual **International Conference & Exposition on Electronic Imaging** Oct. 13-16 at the Hyatt Regency Crystal City in Arlington, Va.

- The **International Newspaper Conversions Group** will meet Oct. 15-17 at the Capital Hilton in Washington, D.C.

- **Graph Expo '86 East** will be Oct. 19-22 at the Philadelphia Civic Center.

CARY FLYING PASTERS

BUILT-IN INFEED AND TENSION CONTROL INCREASES PRODUCTION UP TO 40%



Cary reliability means you can have up to 16 pasters on a single-width press. Cary Pasters are easily retrofitted or are available with new presses.

Cary Pasters compliment newspaper presses in construction and simplicity and are easily maintained by press mechanics.

Our world-wide field service team provides experienced start-up training and back-up. Quotations, including turnkey installations, to suit your requirements.

Over 500 Units In Operation! There is an installation near you, and we can arrange a visit. Call or write for complete details.

Specializing in Converting Newspaper Presses to Commercial Heat-Set Presses.

TECHNOLOGY NOTES

- Crosfield Electronics Ltd. has **acquired Muirhead Data Communications Ltd**. A Crosfield spokesman said the move is designed to enhance its range of newspaper and other publishing products.

Muirhead, which has headquarters in Rexdale, Ontario, makes an electronic picture desk and a flatbed scanner, among other products. Earlier this year, Crosfield acquired Hastech Inc., which makes text and pagination systems [**presstime**, June 1986, p. 90].

Crosfield, a British firm, manufactures color scanners, raster image processors and other prepress equipment.

- Under a new **joint marketing agreement**, Digital Equipment Corp. of Maynard, Mass., and Century Computing Inc. of Laurel, Md., will jointly market Digital's VAX computers and Century's Comm100 Link software.

The software will allow linkage of non-Digital terminals to a central VAX for collecting and processing data. The computer connections can be made in a variety of ways, including telecommunications, fiber optics and microwave relay.

- The Marietta (Ga.) Daily Journal and Neighbor Newspapers of Marietta are the first to use Creative Data System's Layout System. After three months, they report cutting the time to **dummy advertising layouts** from two hours per paper per day to 20 to 30 minutes.

The software system can be programmed to ensure that coupons aren't placed back to back and that competitive customers don't run side by side.

- Greater Buffalo Press, the country's largest printer of color Sunday comics, is converting two more of its letterpress presses to **flexography**.

A company spokesman said the move is being made in the belief it will reduce ink rub-off and allow the use of lighter-weight newsprint.

Publisher's Equipment Corp. of Carrollton, Texas, which converted one Greater Buffalo letterpress press last February, also will handle the next conversions.

Reliable technology.

☐ The X-Rite B318 battery powered color reflection densitometer is unmatched in accuracy, stability, and reliability ☐ Powered by **rechargeable ni-cad batteries**, this small, but mighty quality control tool provides thousands of printers precise density measurements day in, day out. ☐ The B318 incorporates X-Rite's exclusive **electronic filter selection** capability which enables you to move from one color channel to another with the push of a button. ☐ For added convenience the B318 is equipped with a **"low battery" indicator** along with an **AC power source adaptor.** And you can order the B318 with either standard graphic arts or narrow-band response. ☐ To learn more about how X-Rite's technology can benefit your printing operation call us toll free at **1-800-248-9748**. Or, contact your X-Rite dealer today.

Arbitration panel adopts labor pact spurned by workers

A tentative labor agreement reached last year between most of the nation's railroads and the Brotherhood of Locomotive Engineers, which was later rejected by the union, was adopted by an arbitration panel.

The union and rail management had decided to accept binding federal arbitration by the National Mediation Board.

Over the length of the contract, extending through June 30, 1988, employees will receive a 10.5-percent wage hike [**presstime**, May 1986, p. 84].

Meanwhile, a 60-day cooling-off period between the Brotherhood of Maintenance of Way Employees and three railroads—the Maine Central, the Delaware and Hudson, and the Boston & Maine—will end the middle of this month. Any federal intervention after a cooling-off period is usually up to Congress [**presstime**, June 1986, p. 90]. ☐

Greyhound reorganizes into four units

Greyhound Corp. has split into four regional carriers with independent agents managing all terminals as part of a strategy to compete more effectively against airlines and local bus operators [**presstime**, May 1986, p. 84].

Eastern Greyhound Lines is based in New York, Central Greyhound Lines in Chicago, Southern Greyhound in Atlanta and Western Greyhound in San Francisco. Each company is separately incorporated and, for internal purposes, will produce separate financial reports.

Greyhound's main national competitor, Trailways Corp. and affiliated lines, has long been decentralized. Trailways is a group of separate companies operating under the Trailways name. ☐

Union Pacific renews rail line offer

Union Pacific Corp. announced that its proposed acquisition of the Missouri-Kansas-Texas Railroad has been reinstated after not succeeding last year.

UP said terms of the agreement were similar to an original pact made a year ago between UP and Katy Industries, parent company of the Missouri-Texas-Kansas rail [**presstime**, July 1985, p. 72]. ☐

Newspapers in Changing Media Markets
Eberhard Witte, professor, Department of Economics, Munich University, West Germany

'85 consumption rose 2.3 percent at U.S. dailies

Daily newspapers in the United States consumed a record 8,724,521 metric tons of newsprint in 1985, an increase of 2.3 percent from the previous record of 8,531,857 tons set a year earlier, according to ANPA's annual survey of newsprint consumption.

The state-by-state report shows that Minnesota had the largest percentage increase between 1984 (110,967 tons) and 1985 (125,976), 13.5 percent. Next highest were New Jersey (13.4 percent), North Carolina (12.4 percent), Arkansas (11.5) and New Hampshire (11.4).

New Jersey, which used 338,334 tons, had the biggest increase in actual tonnage consumed—39,906 tons. California remained the number-one consumer of newsprint, using 1,196,556 tons—13.7 percent of the national total.

Net increases were recorded in 36 states as well as the District of Columbia.

Alaska had the largest percentage decrease, 9.6, or 2,478 tons. Texas had the biggest decrease in actual tonnage consumed—21,293 tons (748,795 vs. 770,088).

In ANPA's annual breakdown of regional consumption, the Northeast showed the largest percentage increase between 1984 (2,065,556 tons) and 1985 (2,139,702), 3.6 percent, followed by the South at 2.2 percent, the North Central states at 1.7 percent and the West at 1.3 percent.

The annual survey [presstime, Aug. 1985, p. 56] covered 1,752 daily newspapers as well as some foreign-language, college and special-service dailies such as trade newspapers. Altogether, they accounted for 75.3 percent of 1985's estimated newsprint consumption by all U.S. users of 11,587,000 tons, an increase of 1.4 percent and also a record. All users include weekly newspapers, commercial printers, free-distribution publications, comic sections and the government.

The 2.3-percent figure for the increase in consumption by U.S. dailies supersedes a preliminary estimate that had indicated an increase of 2.7 percent [presstime, Feb. 1986, p. 58]. The preliminary estimate was based on stratified data from newspapers in ANPA's statistical sample. The new consumption report was based on a poll of every daily newspaper in the United States. ☐

Shipment data can be retrieved electronically

After a three-month test at The Daytona Beach (Fla.) News-Journal, Emlink, a new project that allows electronic transmission of manifest information from newsprint manufacturers to newsprint users, has been announced by a joint industry task force.

Vendors can provide newsprint tracking information in the EMBARC format directly into the computers of newspapers. EMBARC—the acronym stands for "electronic manifesting and bar coding of paper stock shipments"—tracks newspaper sales and shipping dates and contains newsprint basis weights and grade identification as well as contract data and other information [presstime, April 1985, p. 56].

Newsprint manufacturers can provide newspapers with details about signing up with Emlink. The cooperative efforts of a variety of newspaper, graphics, paper and other associations led to the establishment of EMBARC in 1985. The need for such a system had been recognized for several years.

The task force involved in setting up Emlink consisted of representatives from ANPA, the Graphic Communications Association, the American Paper Institute, the Canadian Pulp and Paper Association, the Envelope Manufacturers of America, and the National Paper Trade Association. ☐

May's statistics delayed

Newsprint statistics for May were not available at press time. They will be published in the August issue.

Craig Flournoy and George Rodrigue, Reporters, The Dallas Morning News

■ When word about the Pulitzers came across the wire Thursday afternoon, April 17, 1986, cheers swept through the newsroom of The Dallas Morning News. It was announced that the Pulitzer Prize for National Reporting had been awarded to Craig Flournoy and George Rodrigue for their 8-part series, "Separate and Unequal: Subsidized Housing in America." This series documented systematic discrimination in subsidized housing across America that has gone unchecked despite legislation, federal regulation and court decisions. Supervised and edited by Howard Swindle, the series was published by The Morning News in February 1985, the culmination of a 14-month investigation that included interviews in 43 East Texas counties and 47 cities nationwide. ■ As a result of this series, a U.S. House Committee and the Commission on Civil Rights have both ordered investigations into the subsidized housing system. ■ As the most prestigious award in our industry, this Pulitzer reflects the long-standing commitment of The Dallas Morning News to give our readers journalism of the highest standards every day. ■ For a copy of this series, call Ralph Langer, Vice President and Executive Editor, at (214) 977-8363.

Baltimore joins acquisition hot spots with sale of the Sunpapers

BUSINESS ROUND-UP

Stockholders of family-owned A.S. Abell Co. on June 13 ratified the sale of the Baltimore company to The Times Mirror Co. of Los Angeles. There was no discussion and no dissent, a spokesman for the Abell family said.

The ratification came two weeks after Times Mirror announced the $600-million purchase of the Baltimore Sunpapers and two television stations. The unexpected development came only a day after The Hearst Corp., failing to find a suitable buyer, closed the Sun's rival, the 213-year-old Baltimore News-American [presstime, Jan. 1986, p. 62].

Robert F. Erburu, chairman and chief executive officer of Times Mirror, said the purchase will diminish the company's earnings by about 20 cents a share in 1987 but will prove to be a great buy over the long term. Newspaper analyst John Morton of Lynch, Jones & Ryan in Washington, D.C., agreed, pointing out that the Sunpapers with a combined circulation of 375,000 are quality products that now are without major newspaper competition in a growing market.

Even so, the purchase caused Standard & Poor's to place Times Mirror on its CreditWatch list. Observers said the purchase may cause Sun executives to postpone plans to expand suburban coverage. As many of the more than 100,000 readers of the News-American move to the Sun, expenses will rise faster in the short run than the paper can adjust its advertising rates, analysts said.

To comply with Federal Communications Commission cross-ownership regulations, Times Mirror—as a buyer of a newspaper/broadcast combination in the same market—will sell WMAR-TV.

In other newspaper-business developments:

- The new owner and president of Standard Gravure Corp. of Louisville said the firm will continue to print Sunday magazines for newspapers that include The Courier-Journal, the St. Louis Post-Dispatch and the Akron Beacon Journal. Michael D. Shea, an Atlanta businessman, paid the Bingham family of Louisville more than $20 million for the printing plant in late May.

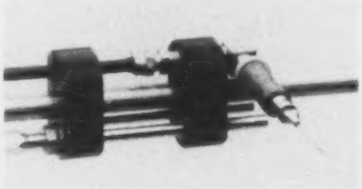
The Binghams, who sold The Courier-Journal and The Louisville Times to Gannett Co. for about $300 million in mid-May [presstime, June 1986, p. 98], are divesting themselves of all communications properties, a family spokesman said. On May 30, the family sold WHAS-TV of Louisville to the Providence Journal Co. for $85.7 million, and the $20.1-million sale of two Louisville radio stations, WHAS-AM and WAMZ-FM, is in process to Clear Channel Communications Inc. of San Antonio.

- In yet another move to prevent unfriendly takeover bids, Dow Jones & Co. plans to issue a new class of stock early this month. Under the plan, each Class B share of common stock will carry 10 votes, and one share of Class B common will be distributed for every two shares of common stock held as of June 9. The Class B shares will not be transferable except to a stockholder's family members.

A Dow Jones spokesman said the new class of stock will facilitate retention of control by the Bancroft family, who control 57 percent of Dow Jones common [presstime, April 1986, p. 75]. ☐

SUPPORT PRODUCTS INC.

REMOTE PASTING & SOFTENING SYSTEM
SAVES MAKEREADY TIME AND MONEY



The Support Products Inc. remote pasting and softening system is easily installed on any folder. It allows production of booklets from 8 to 96 pages. Remote control keeps pressman away from moving web — eliminating possibility of tools being dropped in folder. High pressure employed permits finer orifices on the glue heads, so the glue job is neater with less material used. Call today for additional information and pricing.

AP

London firefighters hose a blaze that destroyed a newsprint warehouse owned by a subsidiary of Rupert Murdoch's News International company, which publishes The Times and three other newspapers in a high-technology plant across the Thames River from the warehouse. Most of the 10,000 rolls of newsprint destroyed in the fire were destined for non-Murdoch papers in Britain. Police said the fire was ignited June 2 by arsonists.

There's no glut of advertising in Oil Belt newspapers

It's so bad in West Texas, one story goes, that a bank advertised this deal: A customer opening a $100 savings account would be offered either an oil rig or a toaster. And the bank ran out of toasters.

The depressed oil market in oil-dependent states like Texas, Louisiana and Oklahoma has had widespread effects on employment, the economy in general—and on newspapers.

In the Oil Belt's biggest city, Houston, executives of the two daily newspapers have seen advertising revenues drop significantly during the first five months of this year compared with the same period of 1985. Total ads were down 15-16 percent at the Houston Chronicle, according to the company president, Richard J.V. Johnson, and 7-10 percent at The Houston Post, according to Publisher Donald F. Hunt.

"At the Chronicle, we have 101 accounts not advertising that were advertising last year," Johnson said. "In classified, we were the leading newspaper for help-wanted in the nation; now help-wanted is wiped out."

Hunt said the total advertising for both Houston dailies for 1984 was $300 million; it is estimated that figure will fall to $250 million for 1986, he said.

A wage freeze is in effect at both papers. Since Hunt and J. Douglas Creighton bought the Post in 1983, they have reduced the staff from 1,750 to 1,300 employees, but Hunt said the reduction took place before the oil crunch because staffing was "artificially high."

The Chronicle has had a hiring freeze since October. In addition, the paper is offering an early-retirement plan to employees over 55 years of age who have at least 10 years of service.

Harte-Hanks Communications Inc. of San Antonio, whose properties include 11 daily and 14 non-daily newspapers in Texas, imposed a 5-percent payroll cut in every division of the company. Robert G. Marbut, president and chief executive officer, said in February the low gas and oil prices and the resulting stagnant economy were major causes of the payroll cuts.

In Louisiana, The Daily Review of Morgan City has seen its classified advertising volume drop 40 to 60 percent from the 1980-82 peak. Unemployment in St. Mary's Parish was 21.3 percent in June and, said Associate Publisher Steve Shirley, "No one is looking for people to work right now."

The Oklahoma Press Association, which held its annual convention in Lake Kingston in June, loaded the agenda with workshop themes such as "Managing Against Troubled Times," and "Oil and the Southwest Economy: Where's the Bottom line?"

Ben Blackstock, executive vice president of the OPA, said newspapers throughout the state are reporting a 15- to 35-percent decline in gross income compared with two years ago.

The number of active drilling oil rigs has fallen to about one-fifth the number in use two years ago, he said.

—Gene Goltz

GREAT NEWS!
THE FIRST BUSINESS SYSTEM THAT WILL FIT ANY SIZE NEWSPAPER!

PRO MACS runs on small and large computers . . . and anything in between!

SO WHAT'S THE SECRET?
PRO MACS is written in PROGRESS, a fourth generation programming language that provides incredible flexibility and ease of use. And PRO MACS runs under the UNIX® operating system for hardware independence!

YOU CHOOSE THE HARDWARE!
LAN Systems' complete accounting and business management system NOW will run on computers such as the IBM PC/AT, Sperry's super micros and Burrough's minis. This is not a small system with limited capabilities. It's the same full functionality LAN has provided for years!

You can start small and PRO MACS will grow with you–no need to discard software as you add to your system. Or if you want to start larger, you have a choice of a single, more powerful system or multiple small systems with automatic hardware backup.

YOU SAVE TWICE!
First, you save on your initial investment, because you keep your software as you move to new hardware. Second, you avoid retraining and typical upgrade headaches.

SAME GREAT SERVICE, SUPPORT!
Some things are too good to change. You still get LAN's unmatched service and support–our on-line diagnostic telephone hotline and 80% of our people assigned to client services.

IT'S NEVER TOO SOON TO SAVE TIME, MONEY!
Call or write today to learn how PRO MACS can save your newspaper time and money!

Quality and service
leaders since 1972

South Africa investment list deletes news organizations

The Investor Responsibility Research Center of Washington, D.C., has deleted a controversial news media list from its new directory of companies with investments in South Africa.

The list of U.S. news organizations with correspondents in South Africa, which appeared as an appendix to the IRRC's previous directory, caused at least one state to include newspaper companies on its "hit list" of companies whose stock was to be sold from its state pension portfolio as a way of protesting South Africa's apartheid policy.

The news media list was not included in the latest IRRC directory, issued in May, because "some people weren't reading the explanation of the appendix and were divesting from those organizations, even though they may not have had anything in South Africa but a reporter," according to Meg Voorhes, assistant director of IRRC's South Africa Review Service.

ANPA had urged IRRC to delete the appendix, arguing that it was misleading and counterproductive.

New Jersey's Division of Investment used the directory to compile a divestment list that included The New York Times Co. and The Times Mirror Co.

Subsequently, New Jersey's attorney general ruled that the state's South Africa divestment law does not apply to news organizations whose principal activity in South Africa is gathering news for dissemination abroad. The attorney general also said the state's Division of Investment could not use an outside source, such as the directory, to compile a divestment list [presstime, March 1986, p. 67]. ☐

Business reporting book offered by Foundation

ANPA Foundation has available at no charge (except shipping) copies of *Reporting on Business and the Economy*, written and edited by 13 business journalists.

The book, published in 1981 under a grant from the Foundation, offers advice on covering such topics as inflation, energy, consumerism, and wages and employment.

Single copies are mailed at a cost to the recipient of $1. Bulk orders are billed for United Parcel Service charges. To order, contact Ruth Finn of the Foundation at The Newspaper Center, Reston, Va. ☐

WINNER OR LOSER?

Whichever you are, the Inland Cost & Revenue Study can help improve your newspaper.

Cost & Revenue Study

With the Inland Cost & Revenue Study, you can get a handle on your spending by comparing your operation with other newspapers your size throughout the United States and Canada. It will help you address issues like:

- **Staffing**—Are you over or under staffed for an average newspaper your size?
- **Advertising & Circulation**—Compare your rates with group averages of other, similar newspapers.
- **Revenue**—Are your PROFITS where they ought to be? If not, where's the waste?

The cost is $500 for the circulation and revenue book of your choice, plus all circulation and revenue group averages and the famous Inland Chart of Accounts. Order now and get FREE entry to an Inland Cost Clinic, which explains the Study in detail.

Order yours today. Call the

University of Miami gets huge gift from James L. Knight

The University of Miami has received the largest gift in its 60-year history, a $56,250,000 charitable trust fund established by James L. Knight, former chairman of the company now known as Knight-Ridder Inc.

Knight and his brother, John, in 1937 purchased The Miami Herald, which under their leadership became the flagship of Miami-based Knight-Ridder, one of the nation's largest newspaper groups.

Although he did not attend the University, Knight has supported the school for many years. "I adopted the university because I admired the drive and persistence of its leaders to assure the university's place in the galaxy of great centers of learning," Knight said.

The gift, which does not involve any direct funding for UM's School of Communication, was announced May 29 and is believed to be one of the largest ever presented to a university from an individual. ☐

Changes in command

The **Organization of News Ombudsmen,** at its annual convention May 18-21 in Washington, D.C., elected the following officers:

- *President*—Claire Balfour, The Gazette, Montreal
- *Vice President*—Robert Kierstead, The Boston Globe
- *Secretary-Treasurer*—Arthur C. Nauman, The Sacramento Bee

The **International Newspaper Promotion Association,** at its 56th international conference May 18-21 in Fort Lauderdale, elected the following new officers:

- *President*—Caroline John, The Atlanta Journal and The Atlanta Constitution
- *President-elect*—David C. Teague, T. Bailey Forman Ltd., Nottingham, England
- *Vice President*—E. Russell Donnelly, Worcester (Mass.) Telegram and The Evening Gazette. ☐

Press doesn't buy town's gimmick to get attention!

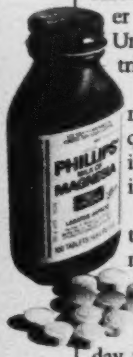
Adding an exclamation point to its name may have brought Hamilton!, Ohio, the attention it desired, but the Associated Press and The Journal-News of Hamilton have yet to adopt the newly punctuated form.

The exclamation point is part of a publicly financed public relations campaign that the city council hopes will attract attention, industry and jobs.

Even though it supports the PR campaign, The Journal-News will not use the punctuation mark in its nameplate or stories. "Substance, not packaging, determines whether a town is successful," notes Managing Editor Bob Walker.

AP will continue to refer to the southwestern Ohio community as plain old "Hamilton," unless postal authorities add the exclamation point in the *United States Postal Guide*. Jack Cappon, general news editor of AP Features, says, "If they make the *Postal Guide* with it, I guess we will use it . . . and (then) hope that nothing happens there!"

Eases heartburn, too



If you want to preserve a treasured newspaper clipping, whether a recipe or an item about Uncle Hugo's embezzlement trial, there's hope.

Newsprint, because of elements ranging from fiber quality to the effects of light, is prone to deterioration, but it can be stabilized.

Paper chemists offer this tip: Dissolve a Milk of Magnesia tablet in a quart of club soda and refrigerate overnight. Place the clipping in a flat pan the next day, pour the mixture over it and let it sit for an hour. Then lay the clipping flat to dry.

Moammar makes it official: spell it G-a-d-h-a-f-i

It may have taken 17 years, but Libya's leader has finally provided the West with a preferred English spelling of his name: Moammar El-Gadhafi.

The answer to what has been a longstanding journalistic dilemma came in a letter that he sent to second-graders at a St. Paul school. The students had sent letters, part of a weekly class project, to him and to President Reagan following the fighting in the Gulf of Sidra. The students urged the heads of state to settle their differences by talking instead of killing.

In his response, Gadhafi denounced the President and U.S. policy, and he explained the Libyan position. At the foot of the letter, "Moammar El-Gadhafi" was typed beneath the colonel's Arabic script signature.

News of the reply was reported initially by the St. Paul Pioneer Press and Dispatch, followed by the Associated Press and United Press International. A week later, the wire services announced a change in their stylebooks from "Khadafy," which they had used since he came to power in 1969, to "Gadhafi." The Washington Post, Chicago Tribune, The Dallas Morning News and USA Today have also decided to adopt "Gadhafi."

The New York Times and Time magazine, however, have decided not to change. The former will continue to use Qaddafi; the latter, Gaddafi.

Getting lost in the translation

Using stories, unchecked, that have appeared elsewhere is a risky business.

Consider an experience attributed to Ben D. Martin, former manager of the California Newspaper Publishers Association. Martin wrote an item for his association's news bulletin. The piece was picked up and run in other state press association bulletins around the country. Eventually, Martin read the story in one of those publications. Not recognizing the well-traveled tale as his own, he published it and credited the bulletin from which he had taken it.

That tale was told in a recent issue of the South Carolina Press Association Information Bulletin.

However, when **presstime** attempted to check the story's authenticity, it found that Martin's memory for his own stories remains less than perfect, eight years after his retirement from CNPA. "I don't remember it," he says, "but it probably happened," citing the penchant of state press associations for picking up interesting items from each others' newsletters.

Newspaper numbers

7.8—average number of newspaper strikes per year in Canada and the United States during the 1980s.

4—number of U.S. dailies selling for 50 cents per copy at the end of 1985.

77—percent of U.S. daily circulation accounted for by group-owned papers.

186—number of foreign correspondents for U.S. newspapers.

50,098,000—total circulation of the 7,711 weeklies in the United States at the end of 1985.

62,723,438—number of daily copies circulated in the United States on weekdays as of Sept. 30, 1985.

Symbol of Printing Excellence for Over 60 Years

Letterpress . . . Offset . . . Rotogravure . . . Flexography . . . including Motter flexo presses for newspapers. For 60 years, the Motter nameplate has been an enduring symbol of printing excellence. Our engineering and manufacturing people have developed great expertise in building high-speed publication presses to print on wide webs of paper under many different conditions.

Over the past six years (with newspaper flexo presses on the job and others on order) our commitment to flexography for newspapers has strengthened continuously. We now believe that the future is more exciting than ever.

Motter has built a solid reputation for working with our customers and standing behind our equipment so that it meets the stringent requirements of continuous daily production. We are making that same pledge of support for our Motter flexo newspaper system.

We know that flexo, compared to the offset alternative, will save you time and money . . . today and in the long run. And we are convinced that Motter is in the best position to help newspapers attain the benefits of flexo technology quickly and economically.

Quality and commitment: The best in writing.

"I'm sort of the back roads person for the AP," says Special Correspondent Jules Loh. "I have been to every state, not as a tourist but as a reporter, talking to the people. And I'm forever discovering something about this country that I didn't know before."

The Associated Press is a news organization that doesn't have a star system, but Jules Loh stands out. His stories, focused on the everyday lives of Americans, often show the extraordinary side of ordinary people. His well-crafted pieces have been spotlighted in almost every newspaper in the country and have made his name one of AP's most familiar bylines.

Loh is a product of AP. He came up through the bureau system, starting 28 years ago in Louisville, filing the wire. He's spent his career taking on all kinds of news and features assignments, routine and special, to serve the needs of the thousands of member newspapers and broadcasters who own AP.

Like him, the 2,850 people who staff AP's 219 offices around the world are dedicated to giving these members the highest quality service in the news industry — a goal that is a continuing commitment by everyone in AP.

"Quality is not something I specifically think about every time I go to work in the morning," says Loh. "But when you're working with people who have a commitment to excellence and to quality, the quality comes out."

Why is Kim Breese in newspaper pagination?

"Consistently better quality and more flexibility are the main reasons why The Wall Street Journal is now using pagination," says Frank C. "Kim" Breese III, president of the Operating Services Group of Dow Jones & Company, Inc.

The Wall Street Journal has the world's most advanced computer-to-plate pagination system, jointly developed by Dow Jones and Information International, in daily operation in its Orlando, Florida, production plant.

"The system we have in place today already has given us an improved publication," says Breese, "and in the years ahead, pagination is going to enable us to grow, to be more efficient and to provide more benefits for our readers and advertisers."

Find out why Information International systems have some of the most technologically advanced features on the market.

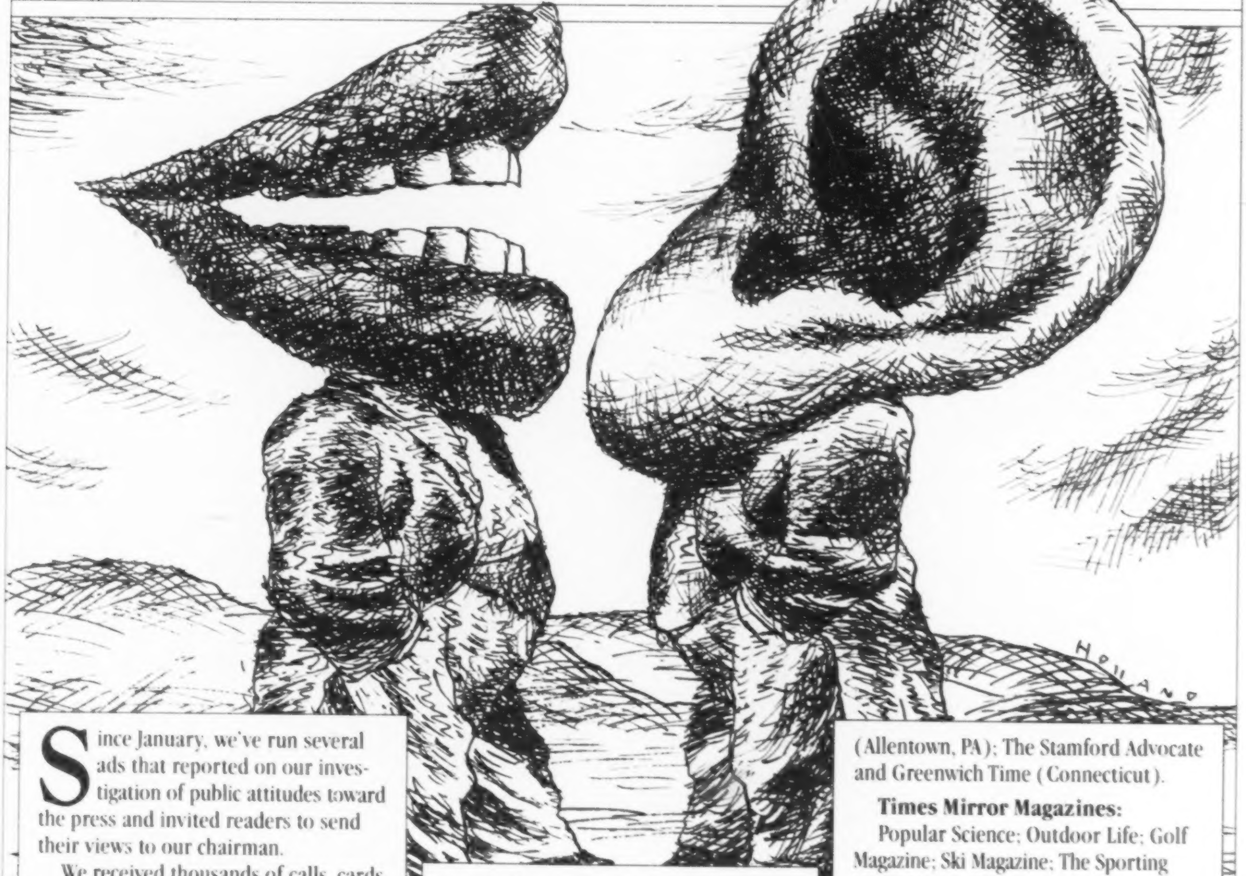
"The People & The Press," Ad #8 in a series

Have you told us what you think yet?



Since January, we've run several ads that reported on our investigation of public attitudes toward the press and invited readers to send their views to our chairman.

We received thousands of calls, cards, letters, even drawings. Nearly all were thoughtful and constructively critical. Our correspondents took our invitation seriously.

Now it's our turn to take them seriously, to use their comments to improve our products. But we don't want to end it at that. We commissioned the study and ran the ads because we wanted to know more about how people like you see our business, and because we wanted to engage you in a dialogue about that business.

And we still do.

So we plan more ads, more Times Mirror Forums on press issues around the country and more surveying.

Meanwhile, if you haven't told us what you think yet, we hope you will soon. Write our chairman, Robert Erburu, Times Mirror, Times Mirror Square, Suite 100, Los Angeles, CA 90053.

He's also the person to write for a summary of our "People & The Press" investigation or our new annual report. Or you can call our public affairs people at (213) 972-3946.

Who we are

We own the media properties below. In terms of sales, we rank 135th among Fortune magazine's current "500." In terms of net income, we're 70th.

Times Mirror Newspapers:

Los Angeles Times; Newsday; Dallas Times Herald; The Denver Post; The Hartford Courant; The Morning Call (Allentown, PA); The Stamford Advocate and Greenwich Time (Connecticut).

Times Mirror Magazines:

Popular Science; Outdoor Life; Golf Magazine; Ski Magazine; The Sporting News; National Journal.

Times Mirror TV Stations:

KDFW, Dallas; KTBC, Austin; KTVI, St. Louis; WVTM, Birmingham (AL).

Times Mirror Cable:

Fifty cable TV systems serve 300 communities in 15 northeastern, western and southwestern states.

Times Mirror Publishing:

Matthew Bender & Company, law books; The C.V. Mosby Company, medical and college publishers; Year Book Medical Publishers, medical publications; Harry N. Abrams, art books; Mirror Systems, computer software; Learning International, training programs; Jeppesen Sanderson, flight information and training.

INDEX

VOLUME 8, NUMBER 8
AUGUST 1986

Special Report *Internationally, acts of terrorism are on the rise. So is discussion over the relationship between terrorists and the news media. Questions about the role of the press intensified after last year's hijacking of TWA Flight 847. But there are no easy answers. For several reasons, U.S. newspapers generally have not adopted specific written guidelines on covering terrorism. Despite calls from some in government for members of the media to agree on coverage restraints, there has been no movement there, either.* **26**

Wrong number *Newspapers were among the first to apply for licenses to operate a new type of radiotelephone system. Now, many have left the field.* **6**

Snip shops *More state newspaper associations are operating clipping services to raise revenue, but few view them as major moneymakers.* **9**

Promotion commotion *Promotional activities are on the rise at newspapers. One even sponsored a blimp race to heighten visibility.* **12**

Tough trucks *When it comes to delivery vehicles, newspapers look for economy and durability. They now have more assembly lines supplying their needs.* **16**

Performance appraisals *Newspaper personnel experts say periodic job reviews can benefit both employees and management.* **18**

After the falls *The press in Haiti and the Philippines enjoy freedom following the end of the Duvalier and Marcos dictatorships.* **20**

The minority press *A status report on U.S. newspapers that target a minority audience: Hispanics, blacks, Asians and American Indians.* **22**

Essay: A blow to commercial speech *P. Cameron DeVore says a Supreme Court ruling undermines advertising's First Amendment protections.* **34**

Profile: Tim A. Giago Jr. *The publisher of the largest independent, Indian-owned U.S. newspaper yearns to amplify the voice of the American Indian.* **35**

Detroit JOA snag *The Justice Department's Antitrust Division recommends a hearing on the Detroit dailies' bid for a joint operating arrangement.* **36**

TV ad recall *A new study by the Newspaper Advertising Bureau shows viewers' memory of advertising on television is poor and may get worse.* **45**

CHAIRMAN'S CORNER

Future of Advertising project focuses on revenue opportunities

(Note: I've asked Newspaper Advertising Bureau Chairman Frank Daniels Jr. of The News and Observer and The Raleigh (N.C.) Times to write this month on the important, industry-wide Future of Advertising project. ANPA supports this much-needed, high-priority effort. Every newspaper executive needs to follow its work, to help when asked, and to implement its new ideas and tools.

—Alvah H. Chapman Jr.)

FRANK DANIELS JR.

More than 125 leading newspaper executives are working together in a specially targeted and intensive way to identify future advertising opportunities for newspapers and to develop specific programs and tools to help each individual newspaper provide better and more effective services in coming years.

These executives are committing their time and talent to the Future of Advertising project under the chairmanship of Harold W. Andersen of the Omaha World-Herald. They are doing it because times have changed—and continue to change. They are doing it because the revenue opportunities before us are positively mind boggling.

You know about the changing times. Total advertising has been growing faster than newspaper advertising. Our share of the advertising dollar has slipped. We carry more ads, in dollar terms, than any other medium, but television and direct mail have grown dramatically. We have responded with creative marketing that has shown our effectiveness in the face of fragmented television and cable audiences and demonstrated our flexibility to provide shared mail projects of our own that give advertisers what they want and need.

Thirty years ago, TV sales people were saying "Take your radio ad budget and a part of your newspaper budget and put it into TV." We can now say "Take part of your TV ad budget and use it in newspapers because we can reach a more targeted audience more dependably and can generate quick sales."

The opportunity is large, and the 10 working subcommittees of the FOA project already are finding ways to help us improve our printing quality, offer more standardized ad sizes, zone more effectively, initiate more standard invoicing, generate classified volume, make individual decisions about more understandable rate systems, train sales people for the new environment and give them specific tools to carry on the job, and produce ever-better editorial materials quickly and accurately. You have seen some of the print-quality and readership publications and recommendations from these working groups already; you will be seeing more.

The hours of hard work are paying off. Newspaper people are good about working together for the common good. We like to help each other. NAB and ANPA are the clearinghouses for our work. Each of you now needs to help when called upon and to consider thoughtfully the suggestions and recommendations from the Future of Advertising project. Your views are wanted and needed, too, because the project is for our common good.

How FMC systems keep business in motion

FMC systems integration. The power to offer you a complete line of roll handling equipment, software, and technical service. Designed to work in harmony. Keeping complex systems in motion, reliably and efficiently, day after day.

That's why the nation's leading dailies have turned to FMC for over twenty-five years for their roll handling needs. Because FMC knows the newspaper business can never stop.

If you're looking for a total roll handling system—start with a good role model. Contact FMC Corporation, Material Handling Systems Division, 3400 Walnut Street, Colmar, PA 18915. NOT THEIR CALLING

CELLULAR RADIO

Portable phones are a hit, as predicted, but newspapers back off from system ownership

BY GENE GOLTZ
presstime staff writer

To visionaries and skeptics alike, cellular radiotelephone has been an electronic pipe dream of the '80s—or the '90s. Just about everybody would have a cellular phone in the vest pocket, another on the wrist and two in the car.

One could call home from the old fishing hole and tell the spouse to put on the frying pan. You could close a million-dollar deal in New York City while stuck in rush-hour traffic in Cincinnati. Portable telephone transmitting-receiving towers would dot the countryside.

"The cellular system," says Stuart Crump Jr., author and cellular pioneer, "means you can telephone anybody anywhere without being tied down to a telephone line."

To the surprise of some people, this is one dream (a predicted $10-billion industry by 1990) that is coming closer to reality. Cellular telephone customers are multiplying like rabbits.

It is becoming obvious, however, that newspapers—many of which had pioneered in cellular development—will not play a big part in the brave new world of cellular phones. In fact, newspapers play hardly any role at all in cellular any more.

Recently, some of the few remaining newspaper companies active in cellular enterprises—Cox Enterprises Inc., The Washington Post Co. and McClatchy Newspapers—have announced plans to get rid of some or all of their cellular holdings.

There are many reasons for this, but a principal one was the decision of the Federal Communications Commission to begin awarding franchises by lottery.

Besides The Washington Post Co., the only newspaper publisher left with any major-league cellular holdings, according to data gathered from the FCC and other sources, is Affiliated Publications, publisher of The Boston Globe.

Affiliated owns 45 percent of McCaw Communications Inc. of Bellevue, Wash., which in July doubled the number of systems it owns to 14. The company purchased from MCI Communications Corp. a majority interest in cellular systems in Minneapolis, Sacramento, Salt Lake City, Pittsburgh, Denver, San Antonio and Fresno, Calif. McCaw previously operated cellular in Seattle, Tacoma, Kansas City, Wichita, Oklahoma City, Austin and Portland, Ore.

Cox announced in April it was going to sell its only venture into the cellular industry, Cybertel Corp., a mobile communications company in St. Louis that includes cellular operations.

William L. Killen Jr., manager of financial analysis and planning at Cox Enterprises, says Cybertel began selling cellular phone subscriptions in 1984, and subscriber growth exceeded expectations. Nevertheless, expectations had been modestly set, Killen said, and at the end of the year the operation was in the red because of heavy start-up costs.

With at least 131 cities already served by cellular phone systems (and more being added all the time), these four newspaper-related firms—Affiliated, Cox, McClatchy and The Washington Post Co.—have holdings in just 17 of them.

> *"The FCC has created a monster they can't control" with the lottery system for awarding franchises.*

Another newspaper company, Knight-Ridder Inc., sold all its cellular interests—they were in eight cities—in December 1984 when the FCC made its decision to award future franchises by lottery.

RETRENCHMENT REASONS. The FCC's approach in the beginning had been to screen each applicant and hold a public hearing before awarding a so-called "non-wireline" cellular franchise.

Two cellular systems are allowed in each city. One is operated by a "wireline" company, which is usually the local telephone company that owns the telephone lines. The other is awarded to an outsider, or "non-wireline" company.

As applications became more numerous, and as the hearings became too time-consuming, the commission decided to allow virtually anyone to apply for a cellular license and to resort to the lottery method of awarding them.

The FCC has targeted 305 urban areas in the country as being feasible for cellular operations. Expansion to rural areas will take place later.

But one result of the lottery system was that the commission had a staggering 90,000 applications on file when it closed out applications May 23 for the last of those 305 areas.

"The FCC has created a monster they can't control," says John Bain, vice president for research at Shearson Lehman Brothers Inc. in New York City.

"Knight-Ridder really wasn't interested in getting into it in that way," says company spokeswoman Mary Crowson, referring to the lottery procedure. "We had a feeling that not all the applicants are that reputable. You can be some 'Joe Schmo' and apply without any financial backing and become the owner of a cellular company. We had a reputation of being a fine, upstanding company, so we pulled out of cellular at that point."

McClatchy Newspapers also effectively pulled out when the lottery came in. Companies interested in various geographic areas began to bargain with each other as to who would get a piece of the action in a certain area no matter whose name came up as the winner. McClatchy agreed to withdraw from several areas where it had submitted applications in return for a controlling interest in the Oxnard, Calif., franchise.

"Before the lottery, we had spent a lot of money, as much as $50,000 a pop, on engineering studies and applications for each location," says Erwin Potts, Mc-

Clatchy executive vice president. "We faced the prospect of getting maybe 15 good operations because we had a good reputation in those communities. Suddenly, with the lottery, we saw a chance of no more than one or two and being in partnership with somebody we didn't know."

Now, says Potts, the company controls only the Oxnard franchise. Oxnard is adjacent to Los Angeles, where the franchise is already reportedly overloaded as a result of its attracting 60,000 customers. Potts says his company has no specific plans for development in Oxnard.

Observers, analysts and investors give several other reasons for the newspaper industry's prevailing hands-off approach to cellular systems:

- **Money.** It costs millions to build a central cellular transmitting station plus the auxiliary stations located in each "cell," or zone. This capital can be tied up for as long as 12 years before the investment is recouped, although a company can achieve a positive cash flow—that is, its revenues can exceed expenses—in three years or less.
- **Uncertainty.** Is cellular only for traveling salespeople and executives? With costs of actually having one in a car still hovering around $150 a month, will the ordinary American want a telephone under the dashboard?
- **Belonging.** Some observers believe newspapers do not belong in cellular radio, which depends, after all, on tapping into the existing telephone system. These observers say the phone companies have a major advantage because of their familiarity with the equipment and because of their likely tendency to favor their own "wireline" cellular operations over the rival "non-wireline" ones.

It was for an entirely different reason that The Washington Post Co. announced June 30 it will sell its 20-percent interest in the Washington-Baltimore cellular systems to Southwestern Bell Corp.

The Post's proposed sale was taken in response to Metromedia's announcement that it was selling its entire mobile telephone and paging system to Southwestern Bell, a "wireline" company, for $1.65 billion. Metromedia, previously the nation's largest investor in those businesses, had held 54.6 percent each of the Washington and Baltimore franchises; the Post had 20 percent, and several other companies split up the remainder.

Guyon (Chip) Knight, the Post company's vice president/corporate communications, says the Washington-Baltimore operation "was making money. We want to reinforce that this was an excellent business." The Post decided to offer its cellular share for sale because it was deemed to be in the best interests of the company to follow the lead of the majority holder, Metromedia, when it sold out, he says.

The optimistic predictions of profitability ran about 10 years ahead of their time.

According to Knight, the Post Co. expects an after-tax gain of between $20 and $25 million.

He says the Post will retain its 60-percent cellular interest in Miami and its 18-percent interest in Detroit.

Southwestern Bell, with its six existing cellular operations and the purchase of Metromedia's holdings in eight cities, becomes the nation's largest cellular operator with 14 systems in markets containing an estimated 45 million people, according to Advertising Age.

A FAST START. When the FCC announced on April 9, 1981, it would begin accepting applications for cellular radio systems in the country's 30 largest urban areas, enthusiasm was almost unrestrained. Many financial analysts advised newspapers to invest in the new industry.

Twelve of the 142 applications for the first 30 markets were submitted by newspapers [presstime, Nov. 1982, p. 18].

Cellular is a big jump forward from conventional mobile phones, which have been around since the 1940s. Mobile phones are restricted to only a few radio channels per city. And only one person can talk on the frequency at a time.

Cellular, by contrast, can handle thousands of calls in a city on only a few channels. This is because it uses extremely weak signals that are renewed from one sector, or "cell," to another. Numerous callers around the city could be using frequency no. 2, for instance, because the weak signals do not travel far enough to interfere with each other.

In Chicago and environs, the nation's third largest metropolitan area with a population of about 8 million, only eight callers at a time were able to use mobile phones. Users were waiting for a miracle to happen.

The miracle was cellular. The catch was that someone had to build a whole lot of towers, one for each cell.

Kris Betker, public relations coordinator for McCaw Communications, estimates that it costs $500,000 per cell site and $1 million to $2 million for a switching system that enables a phone to switch automatically to the nearest cell as the user travels. The average cost to install a 12-cell system in a city the size of Seattle or Kansas City, Mo., is $10 million, Betker says.

Industry records show that demand for cellular services tripled in 1985 from the previous year, and that by the end of 1985 there were 340,000 cellular customers nationwide, served by 105 systems. At least 26 additional systems have gone into operation since then.

As the ranks of customers have grown, user fees have decreased. Four years ago a cellular telephone purchased and installed in a car cost about $3,000; now they are being advertised for $1,000 or less.

Rentals are available for prices ranging from $19 a month upward; $29.95 a month is rapidly becoming a standard rental fee in the industry. There is also a monthly access fee or service charge of $15 a month or more, plus charges by the minute when the phone is in use.

A year ago, the trade magazine Cellular Business found that average monthly costs ranged from a low of $89.83 in Milwaukee to $180.80 in Miami. This is based on 250 minutes' usage during peak hours (usually 7 a.m. to 7 p.m.) and off-peak usage of 75 minutes.

It's generally agreed that the ordinary citizen will not pay that kind of money to have a cellular phone in the car.

DO NEWSPAPERS BELONG? In retrospect, William L. Dunn, vice president and general manager of Dow Jones & Co., seems something of a prophet with his observation in the fall of 1982 that the entry of newspapers into cellular seemed "faddish."

Dow Jones, Dunn says, never got into the business. "Cellular," he says today, "is all sort of alien to what newspapers have done. One of the things we were concerned about," he says, "was that you were going against a common carrier with unlimited resources"—the local telephone company.

Dunn, a former member of the ANPA Telecommunications Committee, believes that when the cellular system finally matures and shakes out, there will probably be "only one survivor in a city." And the phone companies with their experience in electronics likely will be the survivor.

Bain of Shearson Lehman Brothers is one of a few who cautioned newspapers to be wary of investing in cellular, because the profits would be a long time coming.

"Cellular was a pretty hot deal in the early '80s," says Bain, "but it pretty much takes 10 years to make a profit." Nevertheless, he says the growth of cellular operations is on track with his early predictions. "I'm very pleased with cellular's progress. I'm tickled pink with it."

When it comes to newspapers' involvement in cellular, however, Bain says cellular has about as much relevance to print as "two dentists and a golf pro" investing in the radiotelephone business.

Herschel Shosteck, an economist and management consultant who has specialized in cellular markets since their inception in 1981, puts it more strongly. "There was a general euphoria when this new technology came out, and it was hyped by Wall Street and by an irresponsible and lazy press," he says. "So many people were enamored of the fantasy of cellular technology, they refused to examine any realistic or thoughtful analysis of the industry."

Shosteck insists he is not pessimistic about the future of cellular, but he says the optimistic predictions of its profitability ran about 10 years ahead of their time.

And he agrees with Bain that cellular operations and newspapers are not exactly a natural alliance. "From the point of view of the newspaper industry," Shosteck says, "you have to distinguish between mass communications, which newspapers know, and telecommunications, which is more a one-to-one communication. They are very different kinds of businesses."

Newspapers, like any other cellular investor, should not expect quick profits, he says. "A lot of them are in for disillusionment. Unless you have very deep pockets, you can't afford to be a part of it." □

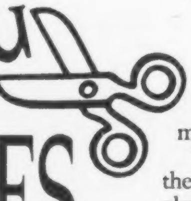
CLIPPING SERVICES



More state press groups are using them to supplement annual revenues

BY MARCIA RUTH
presstime staff writer

To clip or not to clip: That is a question many state press associations answer in the affirmative. Over the past decade or so, several associations have started clipping stories from member newspapers, categorizing them and selling the packages to everyone from large corporations to politicians to everyday citizens with a cause or a special interest.

Why a clipping service? Mostly for the money.

In Illinois, where dues comprise only 15 percent of the press association's income, the clipping service brings in 35 percent, says Executive Director David L. Bennett. "It is the most profitable part of my association," says Bennett, who notes that "when we have these extra sources of revenue, it takes the pressure off dues."

Many press associations also view clipping services as a way to raise the profile of newspapers, possibly increasing both readership and advertising. "It shows the impact of the printed word," says William A. Bray, executive director of the Missouri Press Association. "I think clipping bureaus really extend the influence of the newspaper."

Others, however, consider it inappropriate or inefficient for press associations to get involved in activities not of direct help to newspapers. The Michigan Press Association dropped its clipping service—selling it at a "handsome profit"—because "the board felt the manager's time could be better spent in services that directly benefit our members," says Executive Director Warren M. Hoyt.

Similarly, the executive director of the Pennsylvania Newspaper Publishers Association, Raymond C. Jones, comments: "It's a gross distortion of what we are here for. We're here to help members put out newspapers, and to run a business on the side is pretty silly."

Instead, advertising sales provide a prime supplement to dues income for MPA and the annual America★East Newspaper Operations Conference serves the same purpose for PNPA.

And some association heads note that although clipping services are particularly useful for cash flow, there are more significant sources of income.

At the Washington Newspaper Publishers Association, advertising contributes 75 percent of operating revenues, says Executive Director Jerry Zubrod. The clipping service brings in two-thirds of the amount generated by dues, which provide only a small portion of the association's income. It is a "good auxiliary item for cash flow, but I would never look at a clipping service . . . as a major source of income," he says.

But for those associations in the clipping business, the system works basically like this: Newspapers, as part of their membership agreement, send copies of each issue to the association. There, employees mark, clip, sort and then mail clippings to clients who want to know how certain topics are treated in the press.

In most states, the steadiest clients are governmental agencies, political candidates, private corporations and public interest groups. Entrepreneurs also use the services for "prospecting." For instance, in the search for potential clients, wedding photographers can obtain published engagement announcements, or construction companies can get governmental stories about roadbuilding.

Typically, press associations operate these services in-house with full-time employees. In addition to its regular staff, IPA has six "readers" and three "clippers," who work in separate rooms under the supervision of Mary Alice Staats, manager of the Illinois Press Clipping Service.

But at the Virginia Press Association, a full-time manager oversees what Executive Director Raymond C. Carlson calls a "cottage" industry of four people who read and clip at home.

The few associations that have dropped clipping services recently complain about personnel problems in what tends to be, at least at the beginning, a minimum-wage job. But others laud the people drawn to this work.

"Attrition with 'readers' is low. They get this job and seem to love it," says Donald G. Campbell, assistant director of the Tennessee Press Association. "It takes a certain kind of person . . . someone who has a real quick memory, someone who is mentally alert," he says. The job has obvious benefits "if you like to read, if you like to know what's going on."

Some say the margin of profit in this labor-intensive business is too low to make it worthwhile, while others say clipping-service revenues far exceed expenses.

Most clients pay by the month and by the clip. For example, in Tennessee the association charges $23 a month and 23 cents per clip; in Illinois, where there are more than 700 papers, the fee is nearly twice as high—$40 a month and 40 cents a clip.

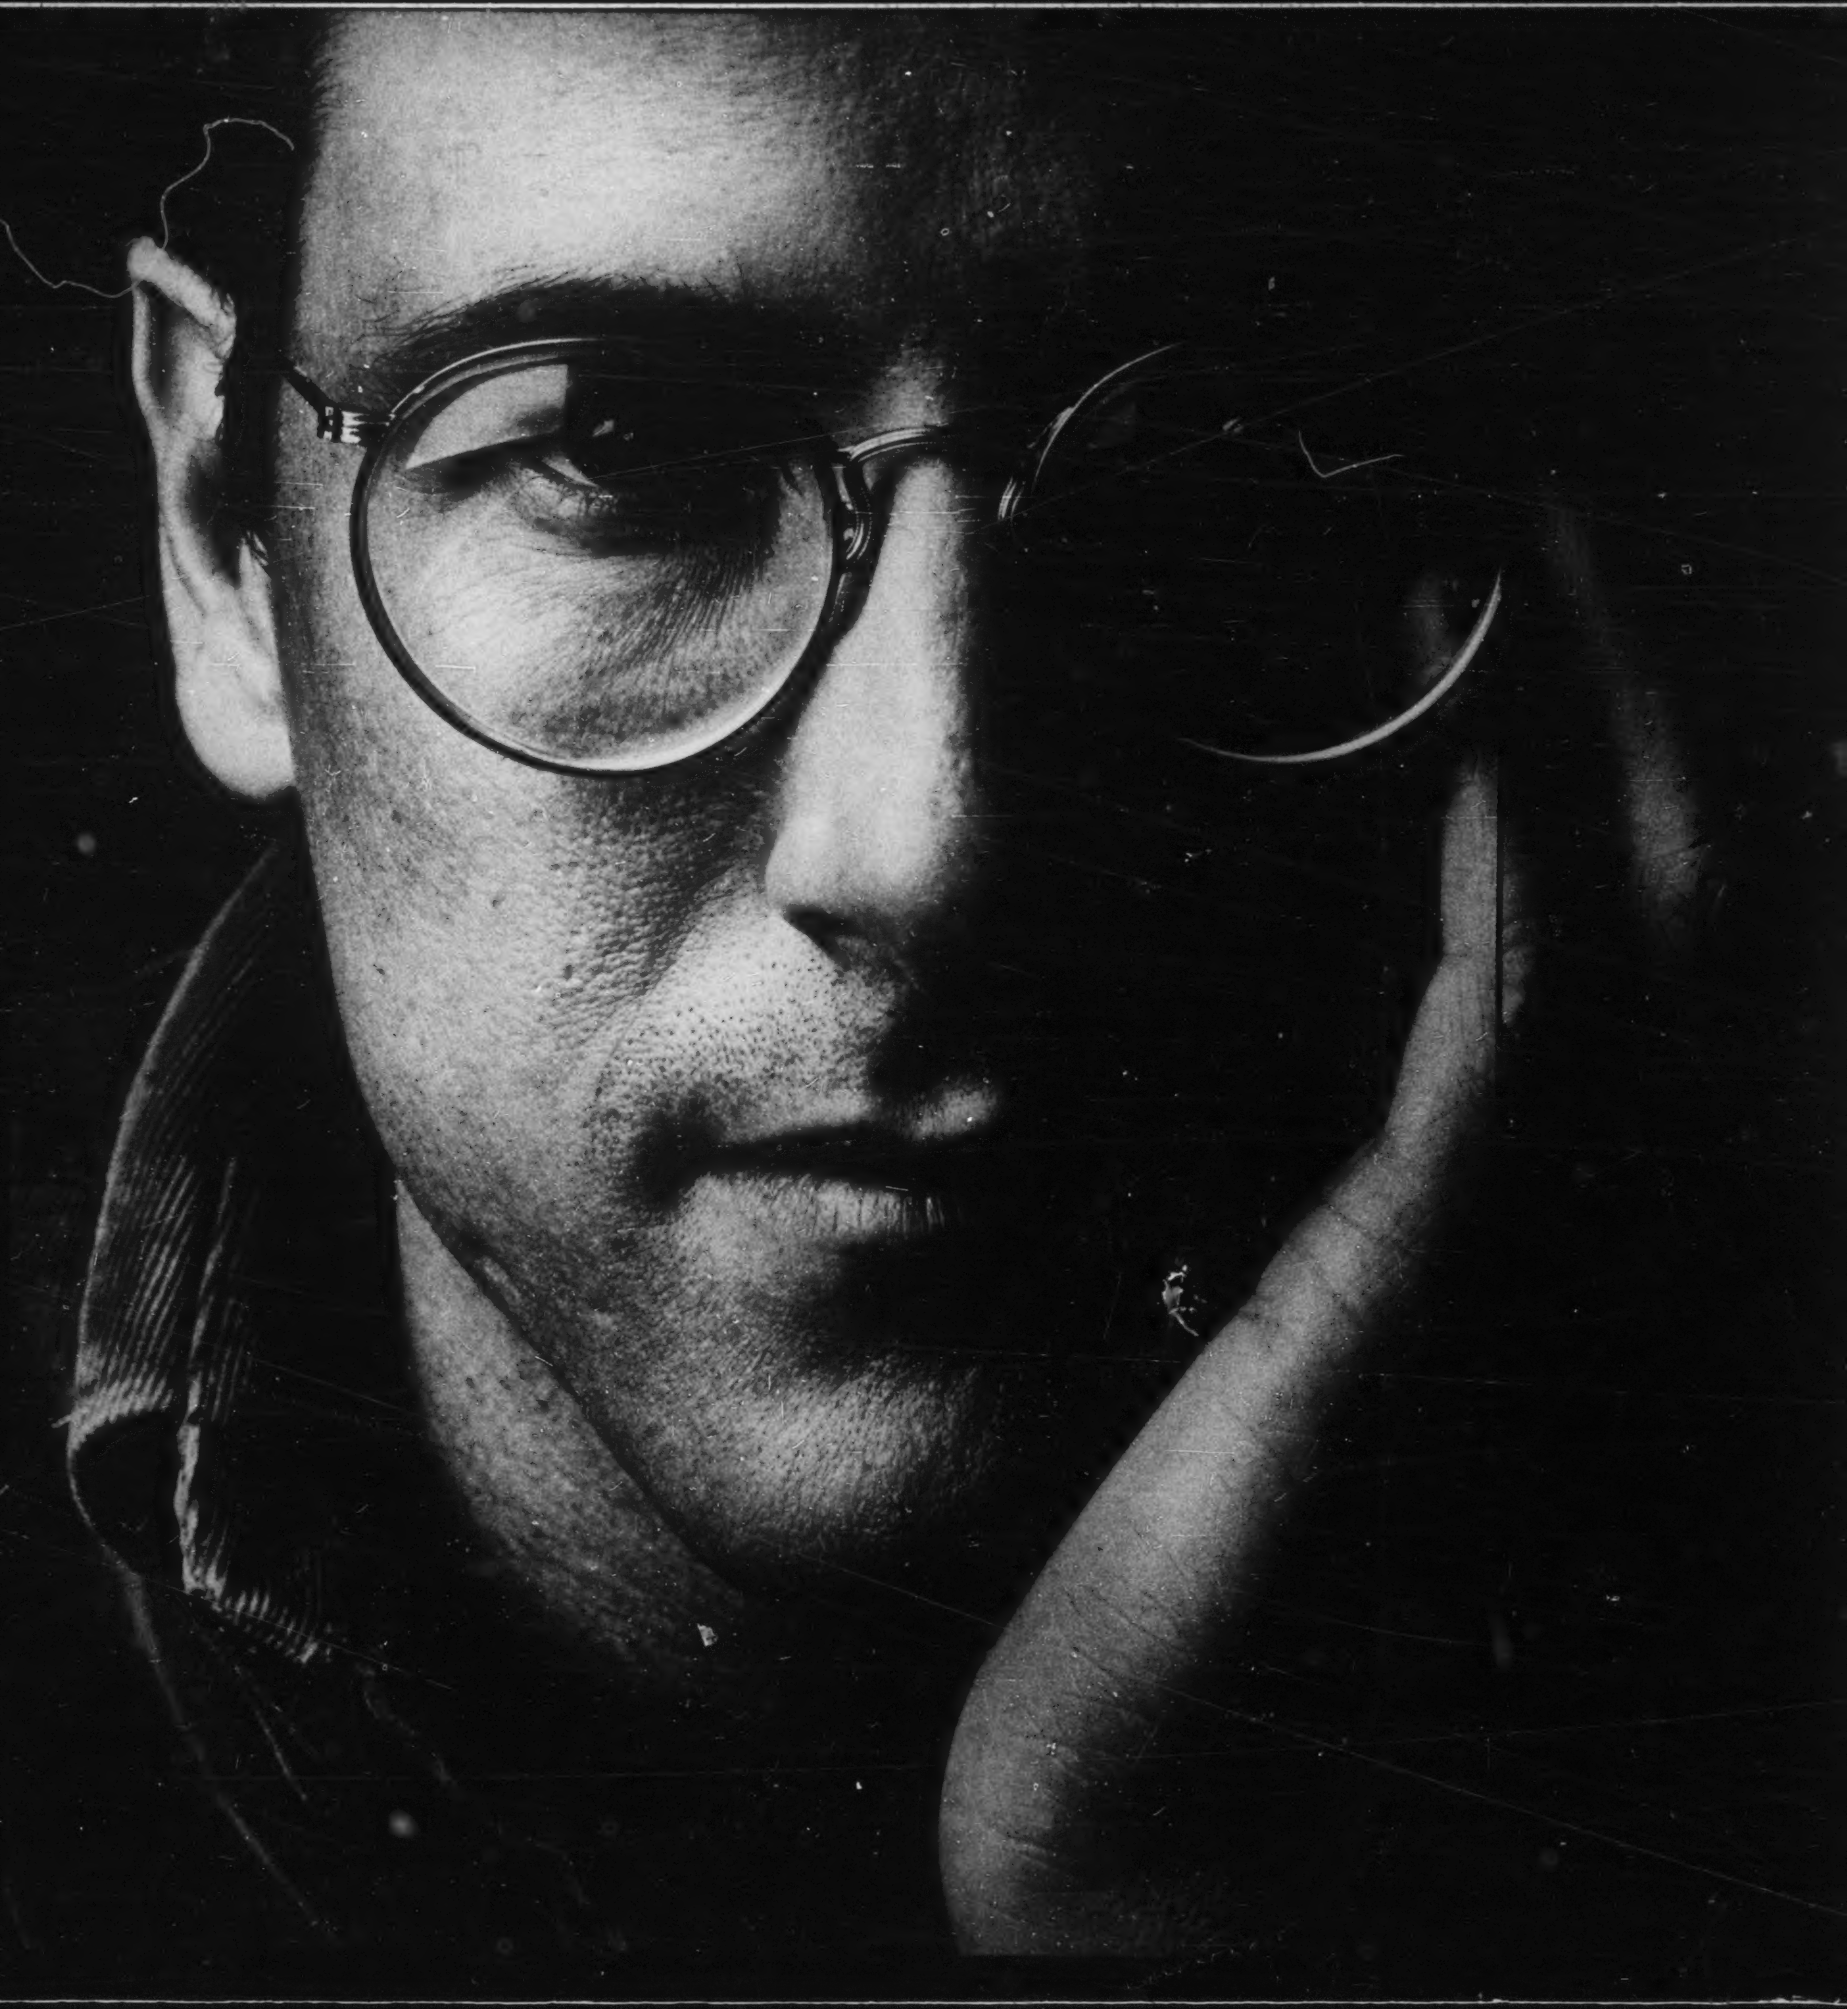
Some associations charge a premium rate for faster than usual service, such as daily or emergency deliveries.

The trend toward clipping services appears to be continuing as some associations not now involved acknowledge they are examining the practice. For example, the Georgia Press Association, which sells copies of its members' papers to a private clipping service, is "looking at the possibility" of starting an in-house service, according to Executive Director Kathy T. Chaffin.

But ruminating over what she believes could be a "management nightmare," she observes "there are other things that are easier to do to benefit the association." ☐

Rich Saal

Ed Kienzler of the Illinois Press Association works at a board holding 760 tabs that are pasted to clips showing the paper in which a story appeared.



David Leeson, Photographer, The Dallas Morning News

■ There's a volcano of violence erupting in South Africa. At the very core is apartheid, the system of racial separation mandated by South African law and enforced by a powerful combination of bureaucratic regulation and force. Through the lens of his camera, photographer David Leeson of The Dallas Morning News documented the strife and suffering generated by apartheid, when he and staff reporter Michael Precker traveled through South Africa for two months in 1985. What emerged was an award-winning report published by The Morning News last November entitled "South Africa: Its Troubled People." Leeson's photographs revealed two disparate worlds on a collision course, with both blacks and whites feeling the frustrations of inequality, alienation and an ever present sense of burning rage. ■ Giving Dallas area residents insight into other countries and cultures with photojournalism of the highest standards is yet another reason why Dallas reads The Dallas Morning News.

INCREASED COMPETITION CITED

PROMOTION

A new attitude at the top leads to increases in ads and events funded by newspapers

BY LOUIS MINTZ

Facing stiff competition on all fronts, newspapers are relying more on their promotion departments to sustain and bolster readership, attract advertising, and maintain high visibility in their communities.

This is in stark contrast to the attitude held by many publishers as recently as a decade ago—a time when promotion personnel routinely complained that management ignored their needs and shortchanged their efforts.

These charges were well-founded in many cases. Publishers were known to be skeptical about advertising in other media; they perceived such efforts to be both a boon to the competition and a drain on revenue.

Sponsorship of special events and community projects often was viewed with disdain because it failed to generate income.

Today, however, a new, market-oriented attitude is pervading the offices of many top newspaper executives. Publishers are spending more money on sales/advertising campaigns, committing more resources to event marketing and restructuring departments to facilitate promotion efforts.

"Publishers are taking a new, fresher look at what promotion can do for them," says Kathy Clay, director of promotion and public service of the Pensacola (Fla.) Journal. "More and more emphasis is being put on promotion because publishers are finding that with increased competition for the advertising dollar and an overall decline in circulation, promotion departments are coming in and helping to bring results."

Clay, however, also sees room for improvement. "Change takes a long time," she says. "There are still many traditional, conservative publishers who don't see promotion's marketing-support aspects." A recent study by the International Newspaper Promotion Association confirms her suspicions, uncovering gaps in promotion efforts that many newspapers have only begun to fill.

The concept of the "total newspaper"—a coordinated overview of a newspaper's missions, market and organization—appears to be the key component in any successful promotion/marketing strategy. But while a number of newspapers adopted that concept in the 1970s, organizational and structural changes at most papers are a fairly recent phenomenon.

Three years ago, in an attempt to relate promotion and marketing efforts to its strategic objectives, the Chicago Tribune established a Promotion Steering Committee. Richard Honack, manager of promotion and special events, calls it "a super way to work," as the committee involves top executives in promotion.

On the committee are Honack and five others: the president and chief executive officer, executive vice president and editor, vice president of circulation, vice president of marketing and manager of advertising.

Innovations of this sort are appearing not only at big-city papers. For example, at the Macon (Ga.) Telegraph and News (circulation 71,921), management formed a Marketing Task Force three years ago to facilitate its "total newspaper" efforts.

"The nice thing about it is that you can cross division lines, something that doesn't usually happen at newspapers," says Dave Wallace, director of promotion and public service. "Conflicts can be resolved right there on the spot, and pretty soon you have a very coordinated effort." Wallace is joined on the six-member task force by the general manager, editor, advertising director, circulation director and personnel director.

> A *new, market-oriented attitude is pervading the offices of many top newspaper executives.*

MEDIA ADVERTISING. Strengthened by these coordinated efforts, newspapers are relying increasingly on radio, television and, in some cases, cable TV and videotex, as promotional outlets.

According to an analysis of Broadcast Advertisers Reports data by the Television Bureau of Advertising, newspapers have more than doubled their use of television commercials in the nation's top 75 TV markets since 1980. Last year alone, newspapers spent a record $31.7 million on television spots.

A similar increase has occurred in radio advertising. The Radio Advertising Bureau reports that total newspaper advertising expenditures in spot radio grew to nearly $8 million in 1985, more than seven times the amount spent by newspapers in 1980. Most of this rapid growth took place last year, when total expenditures were double 1984 levels.

INPA staff assistant Michael Kane explains the increases by saying that in contrast to views that prevailed until recent years, many top newspaper executives now view placing advertisements in other

Mintz, a Duke University senior, is interning at presstime *this summer.*

The Daily News added to New York's Liberty Weekend excitement July 5 by sponsoring the Great Blimp Race.

Bill Eppridge, Sports Illustrated

media as an asset, not as a liability.

A **presstime** random sampling of 15 U.S. dailies found that newspapers throughout the country, regardless of circulation size, have increased their use of advertising in other media.

Examples include:

- Worcester (Mass.) Telegram and The Evening Gazette. Ten years ago, the promotion department of these two papers served primarily a public relations/community events function. By 1980, management had made a strong commitment to promotion, marketing and communications, including a "fully thrashed out multi-media advertising campaign," according to Russell Donnelly, promotions manager. The campaign included a television spot on cable's Music Television Network and heavy use of direct mail.

Donnelly also notes his department's heavy reliance on in-house advertising, as the Telegram and Evening Gazette are the second- or third-largest advertisers in the papers. He adds, "I'm still amazed at the number of papers in the industry that still allot under 1 percent of revenue to advertise themselves."

- San Francisco Chronicle. In addition to extensive use of radio and television, the Chronicle is currently experimenting with Teleguide, a local videotex service. "It is very attractive to us," says Phelps Dewey, assistant to the publisher. "You can make your pitch and then get a response right away."

- The Dallas Morning News. Prior to 1979, it had a nine-person department in charge of promotion, research and public relations. Today, Vice President of Marketing Harold Garr supervises three separate departments with a combined staff of more than 30 people. With a "market-driven attitude toward promotion," the paper has made extensive use of radio and TV—including spots on ESPN and Cable News Network.

SPECIAL EVENTS. A similar trend appears to have swept over community affairs/special events promotion. While some papers have been dedicated to community participation for a century or more, others are just beginning to establish a high-visibility profile in their community [**presstime**, Nov. 1985, p. 32].

> *"It adds to the integrity and believability people have in your product."*

Kane of INPA again cites a change in publishers' attitudes for the greater emphasis on community events.

He and other industry observers say that a new breed of publishers has abandoned the conservative, profit-oriented view that if a project does not make money, it is not worth conducting. Today, practically all publishers and promotion/marketing personnel believe a good relationship with the community is essential for the long-term profitability of the paper, especially in light of several recent reports attacking media credibility.

"The more sophisticated papers have realized the ongoing need for promotion and event marketing," says John Campi, vice president of promotion and public relations at the Daily News in New York City. "It adds to the integrity and believability people have in your product."

The Daily News is currently involved in a number of community projects and special events, including sponsorship of spelling bees, art expositions, New York Pops concerts and two annual street fairs, making the Daily News, in Campi's view, "part of the fiber of this city."

Campi and the Daily News also took the excitement of the recent July 4th/Statue of Liberty celebration beyond the confines of New York Harbor with the first-ever Daily News Great Blimp Race. Four blimps sponsored by different companies traveled around the New York tri-state area before racing 12 miles down the Hudson River. Fuji, sponsor of the victorious airship, donated the $25,000 first prize to the Boys Clubs of America.

Other papers are committing similar resources to event marketing. One such paper is the San Francisco Chronicle, which Dewey says is making a big push toward increased community involvement. "We found the public is very responsive," he says. "When you can draw 50,000 to 100,000 people to an event, you know you are hitting the right note." The Chronicle currently sponsors a number of events, including a personal finance fair, comedy day and cable car festival.

Equipped with a new Public Affairs Department, The Hartford Courant published a "Connecticut Celebrity Register" in its May 18 issue of Northeast, the paper's Sunday magazine. The edition celebrated Connecticut's 350th birthday with highlights about 350 celebrities who reside in the state. "We thought a salute to the state would fit in with the anniversary spirit," says Communications Manager Dennis Schain.

The paper also signed up 13 of the celebrities to help raise money for Camp Courant, the newspaper's free summer day camp for Hartford children. The 92-year-old camp attracts close to 500 children a day and provides each with lunch and transportation at no charge. "I think we are the only paper in the country that actually administers a camp; we don't just make a donation," says Schain. "Of everything we do, it really reaches the inner-city community the best."

Increased emphasis on community affairs, however, is not just a trend sweeping up the nation's Atlantic and Pacific coasts. In the Midwest, the Kansas City Star Co. embarked on a major PR and promotion campaign three years ago in hopes of building a stronger bond between its newspapers—the Kansas City Star and Kansas City Times—and the community. The campaign has produced a positive response from the public, as well as other "intangible benefits," according to Jeff Hall, vice president of marketing. "The returns are difficult to quantify," says Hall, "but if nothing else, it has increased the community's awareness that we are a good corporate citizen."

The Star Co.'s campaign includes two major community programs. Project Literacy, aimed at teaching illiterate adults how to read using the newspaper as a tool, has been called one of the more innovative programs of its type in the country [**presstime**, Sept. 1985, p. 28]; the other, Project Warmth, has raised over $400,000 and 100 tons of goods for the needy in Kansas City over the last three winters.

Other creative attempts by newspapers to improve community ties include:

- The Wichita Eagle-Beacon's "Great American Newspaper Airplane Championship." The paper began sponsoring the event three years ago. Contestants try to toss paper airplanes through the open sunroof of a new car, with the eventual winner taking home the prized auto. Response to the contest and other Eagle-Beacon events has been overwhelming, according to Promotion Director Bill Beck. "We are owned by a group (Knight-Ridder) outside of Wichita, which makes it doubly important to maintain our exposure," he says.
- The Fort Lauderdale News and Sun-Sentinel's free reprints on the drug-related death of basketball star Len Bias. The reprints contained news stories, columns, and editorials chronicling his tragic death from cocaine intoxication. "We looked at our work and thought it was good," says R. E. Plaisted, director of marketing, "but more importantly, we thought it contained a message. . . ."

Plaisted notes that the newspaper was primarily looking to reach kids and young adults with the reprints. "We thought it was a good vehicle to command attention from an audience not reached by routine drug information hotlines." Within 24 hours of making the supplement available, the paper received more than 6,000 requests for copies.

- The Binghamton (N.Y.) Press and Sun-Bulletin's "Hands Across Broome." This local version of Hands Across America focused attention on the hungry and homeless of Broome County, N.Y. The event, held the same day as the trans-national program, allowed citizens who donated money and food to join hands at local high schools.

> *Despite advances, promotion efforts at many newspapers are still not getting the attention they require.*

While many newspapers have no doubt placed a greater emphasis on establishing a presence in their communities, a slightly different promotional challenge faces The Boston Globe. At the age of 114, the Globe has been dedicated to community service for many decades; the problem is that few people have been connecting the Globe to the many successful events it sponsors, according to Dick Collins, director of public affairs.

In response, the paper has taken a "more organized approach to handling external communications," says Collins. This has been accomplished in part by a departmental reorganization last year that split the Globe's Promotion Department into two distinct divisions: Sales Promotion and Public Affairs. Collins says the new structure is indicative of the subtle difference between promotion and public affairs—the former representing the "art of persuasion," the latter characterizing "the art of confrontation," albeit confrontation in a modest sense.

"It has become a little more evident," Collins notes, "that perhaps the Globe should do a better job telling our readers what the Globe does and means to the community," especially in light of recent attacks on industry credibility. "We've realized we should call more attention to ourselves." He adds that "this realization extends to the whole industry. We think we are on the right track."

NEEDS STILL EXIST. Despite these recent advances, promotion efforts at many newspapers are still not getting all of the attention they require, according to a recent survey conducted for INPA.

The study is the first part of an INPA program designed to identify the role of newspaper promotion in an overall marketing effort and to measure "the impact and effects of promotion campaigns."

In the study, 30 newspaper marketing, promotion and research executives were queried about how their papers evaluate their promotion efforts. It found, among other things, "a lack of management support for promotion evaluations," stating that "research dollars are much more readily available for other functions such as advertising or news/editorial."

Only two of the executives said their papers conducted "pre-campaign" tests of promotions on a regular basis. Although 12 said their papers "frequently" conducted "post-campaign" tests, the study found "something of a malaise among respondents because of inadequate budgets and management commitment to regular post-testing."

Given these shortcomings, the INPA report cited some future directions for newspaper promotion. More than half of the executives mentioned the need for better target marketing, while a number of other comments focused on the need for better research, more orientation to goals, and the development of new, more creative promotion ideas.

Still, few in the industry deny that promotion has caught the attention of most publishers. "Finally the industry realizes the importance of telling readers why they should buy us," says Paula Redmann, promotions/human resources coordinator of The Bismark (N.D.) Tribune.

Her efforts have not brought the Tribune any substantial circulation gains in that depressed farm and energy area. But while she admits that circulation has been "flat" over three years, she exclaims: "I'd hate to think of what would have happened had we not been here." □

Photo by Jim Osborn, The Kentucky Post

WHO CARES?

When The Kentucky Post responded to a tragic hostage story, it also discovered a sad waste of young lives on the streets of Covington and Newport, Ky.

Children as young as 11 were on the streets drinking, taking drugs, selling sex, and stealing.

The young man who terrorized and threatened two boys for hours was killed by police sharpshooters—but not before he revealed sexual involvement with other boys and told police where to find the bodies of two boys he had murdered.

The Kentucky Post didn't just report the tragedy. The newspaper issued a call to action and organized a "Summit for Our Kids." By soliciting the endorsement and participation of Northern Kentucky social and community service organizations, businesses, schools, churches and parents, the paper brought the community together to create a plan for action.

The paper also researched a series that further emphasized the vulnerability of street kids and the frustrations of those who try to help. Somebody does care.

DELIVERY VEHICLES

Newspapers use an increasing variety of trucks to meet their special needs

BY ROSALIND C. TRUITT
presstime technical writer

Whether they have a fleet of more than 200 vehicles, as does the Los Angeles Times, or just two trucks, like the Alexandria (Va.) Gazette, transportation and circulation executives at newspapers around the country expect a lot from their delivery trucks—in particular, fuel efficiency and durability.

As they look at trucks that can maneuver on narrow city streets and withstand loading dock scrapes, they are finding their range of choices expanding as more manufacturers design vehicles for the newspaper industry.

Domestic trucks manufactured by such companies as Grumman Olson, Ford, General Motors and Chrysler are chosen most frequently, according to newspaper circulation executives. However, foreign manufacturers including Iveco of Italy, Hino of Japan and Mercedes Benz of West Germany are gaining converts.

There are thousands of newspaper delivery vehicles dropping off bundles and stocking newsracks every day. An exact accounting of all those trucks is hard to determine, because the nearly 1,800 daily newspapers in the United States and Canada are constantly adding to and subtracting from their fleets.

But the annual Safe Driving Campaign sponsored by ANPA and the International Circulation Managers Association offers some clues. In 1985, the 619 newspapers participating operated 12,429 vehicles.

The vehicles being used nowadays to get newspapers from the printing plant to the deliverers and to single-copy sales outlets come in many sizes and shapes. They range from large tractor-trailers for bulk deliveries to central distribution centers to small vans that may stop at 80 or more stores and newsracks each day. However, most are panel trucks within those extremes.

Dick Nava, fleet manager of The Record, in one of the Hackensack paper's Grumman Olson delivery trucks

They range from large tractor-trailers to small vans that may stop at 80 or more locations daily.

When it comes time to select a truck, the choices go far beyond size. Should the fuel be gasoline, diesel, propane or natural gas? Is a body of fiberglass-reinforced plywood or of aluminum more durable for the long haul?

Fuel efficiency is first on most fleet operators' lists of desirable features, because the vehicles travel tens of thousands of miles annually and in some cities are on the road day and night. The 12,429 vehicles tracked in the 1985 Safe Driving Campaign logged a whopping 279.5 million miles.

To gain fuel economy, many newspapers have turned away from gasoline and toward diesel fuel. Others have switched to propane or natural gas.

For durability, newspapers are turning to trucks with aluminum bodies as well as those constructed from a combination of fiberglass and plywood. Many circulation executives say that trucks with those types of bodies hold up over longer periods of time than do bodies of reinforced steel, which is important because the vehicles can be viewed as mobile billboards for the publications they deliver. One concern is whether the trucks can withstand the minor dents and scrapes of loading-dock squeezes.

Another side of durability is maintenance, and many papers with diesel trucks say those engines cost less to maintain over long periods of time.

DIESEL BENEFITS. Although diesel engines have been the norm for heavy-duty trucks for decades, only in the last few years have smaller commercial trucks with diesel engines become popular among businesses like newspapers.

Diesel engines are seen as a cost-effective alternative to gasoline for several reasons.

They run on a cheaper, less-refined grade of fuel. They are considered by many experts to be more thermally efficient—that is, more energy is used than is rejected during combustion. Therefore, they also produce greater horsepower than comparable gasoline engines.

The maintenance savings result from the fact that diesel vehicles do not have an ignition system and therefore do not need tune-ups. They do, however, require more frequent oil changes.

For the most part, diesel-powered vehicles also depreciate less rapidly and can be resold more readily than those with gasoline engines, their champions claim.

Richard Decarlo, post-press manager of the New Haven (Conn.) Journal-Courier and New Haven Register, says he will convert the newspapers' 50 gasoline-powered trucks, two at a time, to diesel over the next couple of years.

"We feel we'll save a lot—maybe $4,000 per truck—by converting rather than buying new vehicles," Decarlo says.

The company has 49 Grumman Olson trucks and one Iveco. They log more than a million miles per year.

In "Motor City," the Detroit Free Press has been conducting tests to determine whether it should switch from gasoline to diesel, says Myron Didyk, vice president of circulation. Currently, the newspaper deploys about 107 Ford and General Motors trucks ranging in size from step vans to tractor-trailers.

At the Alexandria Gazette, Circulation Director Lawrence A. Del Gado says he has been pleased with his company's diesel Iveco truck, which together with a Ford Econoline van makes up the newspaper's motor pool. "It's pretty easy to take care of," Del Gado says of the Iveco. "From the standpoint of fuel economy and ease of service on the engine, it works real well. The biggest thing we have to do is change the oil."

OTHER FUEL ALTERNATIVES. While diesel fuel is the most popular alternative to gasoline, natural gas and liquid propane gas also have proven effective [presstime, Oct. 1982, p. 40].

Kenneth M. Schmid, transportation manager for The Pittsburgh Press Co., says trucks there have been using propane since 1979, when the company became concerned about the availability of gasoline. Vehicles in the Press fleet, mostly Chevrolets and one Iveco, have dual gas tanks. The trucks use propane as a primary source and gasoline as a backup.

Propane is less efficient to burn than gasoline, Schmid admits, but it generally costs less and results in less expensive overall operation. Schmid recently purchased propane for 60 cents per gallon; at the time, gasoline was 86 cents. "And, we know it's readily available," says Schmid, who purchases tanker truckloads of the fuel every week for his 195-truck fleet.

The Los Angeles Times started using propane about 12 years ago because it is cheaper and less of an air polluter, says Terry Spencer, assistant transportation supervisor. About 90 percent of the Times' vehicles burn propane and the rest use diesel, Spencer says.

The Fort Lauderdale News and Sun-Sentinel use natural gas and have been highly satisfied with the results. "We've found the natural gas very cost-effective," says Mac McDowell, circulation operations manager. "Not only does the natural gas burn cleaner, but we get prolonged engine life."

Although it has purchased trucks, mostly Fords, in the past, the company is close to signing a contract to lease all its vehicles from Hino, McDowell says.

He cited the trucks' handling ability, their ease in carrying heavy loads and fuel economy as reasons for choosing Hino. He also says the News and Sun-Sentinel do not have maintenance facilities for their 21 trucks, and a leasing contract including repairs would be expected to save money.

To gain fuel economy, many newspapers have turned away from gasoline and toward diesel fuel.

A PUNISHING ROUTINE. Regardless of the make, model or type of fuel, newspaper delivery trucks have one thing in common: hard use.

"Newspapers have requirements for their trucks which are not faced by most users of these trucks," says James R. Bostic president of Iveco. His company manufactures and sells truck chassis for a variety of commercial uses, and executives there see the newspaper industry as a growing market for them.

"In most major cities, newspaper trucks are operated around the clock and under great extremes, from the congestion of urban routes to suburban roads and rolling freeways," Bostic says. "The trucks are banged around, scraped in and out of narrow parking areas, and often overloaded. They have to be sturdy to take that kind of abuse."

The part of the truck that shows wear the most is the body, which many newspapers have installed over a basic chassis. Although tempered steel is still used for many truck bodies, the aluminum and a fiberglass-plywood combination are increasingly favored. Those materials are lighter—resulting in better fuel economy—and they keep their good looks longer.

It is for reasons of durability that Richard X. Nava, fleet manager of The Record in Hackensack, N.J., likes Grumman aluminum truck bodies. He has some of them mounted on General Motors chassis with diesel engines. In addition, he also has Fords and Mercedes Benz trucks with aluminum bodies.

The Record's trucks covered 770,000 miles last year, and aside from some minor dents, Nava says they look fine.

"When the trucks are out on the street, we feel they are a reflection of the newspaper, so we try to keep them clean and as free from bashes as we can," Nava says of his 60 vehicles, which range from step vans to larger vehicles.

Not everyone is completely sold on aluminum or fiberglass and plywood, however. Schmid at The Pittsburgh Press says he is perfectly happy with the gas mileage and durability of his tempered-steel vehicles.

Overall, the general view in the newspaper industry is that improvements in design and materials are prolonging the life of delivery vehicles. The typical newspaper truck has longevity of five to seven years, and this average life span is increasing. ☐

THE ASSOCIATED PRESS SELECTS FDI PORT EXPANDERS

The Associated Press is using the P6C Data Director on its new WARN Weather Service for newspapers. The P6C allows the connection of up to four (4) wire service feeds to a single computer port or printer. Connecting to any wire service conforming to the American Newspaper Publishers Association (ANPA) format, the P6C gives the user complete flexibility in selecting and routing stories with nearly endless selection criteria. Present internal memory capabilities allow up to 1 million characters to be buffered for output to the selected port. The device also allows the wire service vendor to easily and remotely change the category of stories the customer receives as requirements change or special events take place.

Performance Reviews

BY MARK INGHAM

True or false:

- People do not like to receive negative feedback related to their job performance.
- It is not possible to appraise objectively the performance of creative personnel such as reporters.
- Appraising employee performance is too time-consuming, and it does not result in improved performance.

If you answered true to all of the above, your organization probably is one where performance appraisals, if done at all, exist in name alone.

The antithesis of these statements, and what experts say is more characteristic of employee needs concerning performance reviews, is that employees welcome the process if it is fair and understandable. In fact, employees are motivated to achieve and to be recognized for their work. They want to know exactly what is expected of them on the job.

"It seems like employees today are much more interested in giving and receiving feedback about their jobs," says Phyllis J. Fleming, assistant managing editor for news of The Gazette in Cedar Rapids, Iowa. An appraisal system is a good way of addressing that desire."

In the case of creative personnel, not only is it possible to evaluate performance objectively, it is likely that the best reviews will be conducted in the editorial departments. Beverly A. Jurgenson, personnel director of Wilmington (N.C.) Star-News Newspapers and manager of employee relations for The New York Times Regional Newspaper Group, reports that some of the most thorough and in-depth performance appraisals come from the newsroom.

Managers appear to be generally pleased with results of the formal-review process. "They groaned a bit when we started," says Jurgenson, "but it is working for them."

While there are no recent data on the number of newspapers that perform employee performance appraisals, a 1981 ANPA survey showed 36.8 percent of responding newspapers used them in some fashion. Experts say the number probably has grown since then.

Employees want an objective evaluation, even if it means hearing that their work is unsatisfactory

Personnel Services Manager Beverly K. Lundberg conducts appraisal of a Houston Chronicle employee.

MANY BENEFITS. Michael H. Seraphine, personnel manager of the Minneapolis Star and Tribune, says among the numerous reasons for instituting a performance appraisal system are a desire to obtain:

- Feedback between employees and supervisors/managers
- An understanding of job duties and standards
- A basis for recognition of superior performance
- A structure for salary administration
- Better overall management and supervision of human resources.

In addition, an effective appraisal system can be used to set performance objectives, to identify training needs, to increase productivity and to identify performance areas where improvements are needed.

To accomplish all these objectives, however, executives report that the evaluation process itself should come under scrutiny and be revised when necessary. "We change our (appraisal) forms every few years," says Becky Gonzalez, personnel director of the Corpus Christi Caller-Times. "Right now, we would like to make some changes to increase the interaction between supervisor and employee."

Sometimes the change itself will help managers commit themselves to the system. At The Columbian in Vancouver, Wash., Personnel Director Ann Michael reports that involving managers in a task force to overhaul the appraisal program was a turning point in its utilization.

Also important for success is support of top management. "Our managers and supervisors know that the publisher is supportive of performance appraisals, and they know that they will receive an appraisal as well," says Seraphine of Minneapolis.

Although it is necessary that the appraisal be performed regularly, there is no standard interval. Most personnel executives report that their reviews are done less frequently as an employee's tenure increases. Many start out with an appraisal every 90 days, but by the time a person has been employed for three years, the formal appraisal usually occurs only once a year.

More important is basing the system on standards related to the job being done and not on personal characteristics. One reason for success of the editorial performance-appraisal system at the Rochester, N.Y., dailies is the common perspective the system provides. Even though reporters do different jobs, the system—developed in part by teams of editors—involves certain common standards of performance. Under the heading of "accuracy,"

Ingham is ANPA personnel relations associate.

for example, are such categories as "spelling, stylebook, typos"; "attributing information to sources"; "factually accurate information"; "verifying identities, addresses"; and "calling errors to editor's attention."

Each category is described by a standard of performance. For example, "verifying identities, addresses" is described as: "Verifies names and addresses using such references as phone books and directories. Checks the spelling of names and places. When questions arise, goes directly to the source, if possible, to verify information. Discusses with editor when problems arise in verification."

A reporter's rating is based on the degree to which the individual falls below, meets or exceeds performance standards.

"Many performance-appraisal systems work well to identify poor performance but have a tendency to fall down at the top," says Christine D. Landauer, director of personnel at the Rochester newspapers. "Ours is a tool to recognize both good and bad performance."

A common criticism of performance appraisals is that supervisors may have a tendency to inflate the ratings—especially when the appraisal is tied to an employee's salary review. At The Columbian, managers must submit to a salary-administration committee examples of performances they determine are above or below the standard. When there is sufficient documentation to support a raise, it will be granted. Otherwise, it is denied.

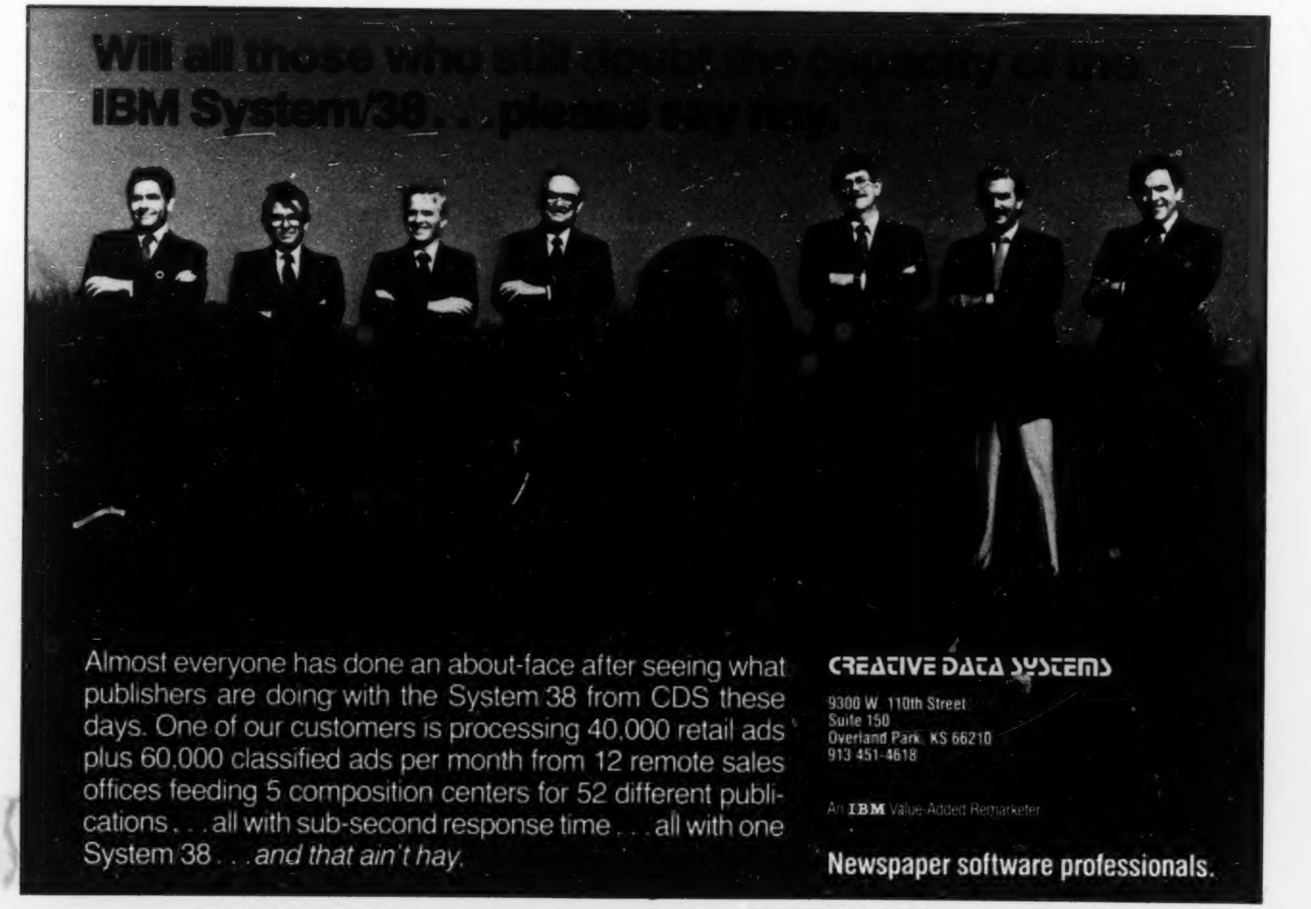
> *More important is basing the system on job-related standards and not on personal characteristics.*

Another benefit is the supervisory coaching that follows appraisals.

LEGAL SIDE. Aside from the management benefits, there are possible legal reasons for formally evaluating worker performance. For instance, a federal court in 1982 ruled in *Chamberlain v. Bissell Inc.* that an employer negligently failed to evaluate an employee and to warn him—prior to being discharged—about his deteriorating performance. The employer was ordered to pay $61,354 to the former employee. Two years earlier, in *Brown v. Delta Airlines Inc.*, a federal court identified the components of a legal evaluation system. The system was upheld because:

1. Categories on the evaluation form were specific and called for objective determination of performance.
2. The evaluating supervisor was given detailed instructions on how to complete the evaluation form and conduct a proper interview.
3. The evaluation process contained several safeguards designed to avoid discriminatory practices.
4. The company demonstrated that the factors considered in the evaluation were job-related.

Human resources specialists at ANPA and the Newspaper Personnel Relations Association are available to assist newspapers that wish to implement or refine an appraisal system. ☐



Will all those who still doubt the capacity of the IBM System/38 . . . please say hay.

Almost everyone has done an about-face after seeing what publishers are doing with the System 38 from CDS these days. One of our customers is processing 40,000 retail ads plus 60,000 classified ads per month from 12 remote sales offices feeding 5 composition centers for 52 different publications . . . all with sub-second response time . . . all with one System 38 . . . *and that ain't hay.*

Free Press Can Flower

Haiti's Press Now 'Has No Reins'

BY JOSEPH B. TREASTER

The Chauvet family has been publishing a daily newspaper in Haiti for 88 years. But until the collapse of the dictatorship of President Jean Claude Duvalier earlier this year, their newspaper had carried very little news.

It was the same with the other two dailies in the capital, the 14 radio stations and the two television stations.

"During the Duvalier regime, everything was secret," says Lucien Montas, the 64-year-old editor of the Chauvet newspaper, Le Nouvelliste. It was the continuation of a long tradition in Haitian history.

Le Nouvelliste
LE PLUS ANCIEN QUOTIDIEN D'HAITI

Ray Fisk, The New York Times

Chauvet says Le Nouvelliste used caution reporting on the Duvaliers.

Even if journalists stumbled onto some news, they were unlikely to publish it, says Max Chauvet, general manager of the newspaper his great-grandfather helped start.

"Let's say 10 Tontons Macoutes (the most notorious of the Duvaliers' secret police organizations) went and killed some people," he says. "We would not print it. You wouldn't talk about Jean Claude stealing money or killing people. That would be the end. We never used the word 'dictator,' and when we said 'president,' we had to say 'president-for-life.' "

The newspapers published government announcements, notices of social events, essays on the arts and reviews of non-controversial books. They carried some news-agency reports of world news so long as they were not critical of Haiti or dictators in general or were not likely to otherwise offend the ruling family. In 1980, after a period in which some criticism was permitted, Duvalier arrested a number of radio station and newspaper employees and sent others into exile. After that, most radio stations stopped reporting any news at all.

Now, under an interim government led by an army general, there is freedom to publish or broadcast virtually anything, and the country is awash in reports and commentaries, some enlightening, some confusing and some disastrous.

It is a new world for those working at Haiti's newspapers and radio and television stations. Few have had any formal training in journalism, and until now, they've had no opportunity to practice fair and accurate reporting, writing and editing.

Many of them recognized a need for coaching in the fundamentals, and in late July the World Press Freedom Committee responded by sending Loyal N. Gould, chairman of the Department of Journalism at Baylor University and a former correspondent for the Associated Press and NBC, to Haiti.

A number of courageous Haitians tried to undermine the Duvaliers through the press and radio. But they operated more like opponents of the government than as journalists. They were shadowed by Duvalier police, arrested and beaten. At least two were killed.

Several critics published weekly magazines, and now two are hoping to be elected president of Haiti. About two years ago, the Roman Catholic station, Radio Soleil, moved into the forefront of government criticism and is credited by many as being the catalyst that brought down the regime.

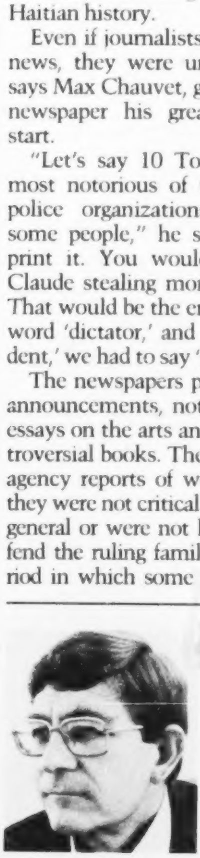
The last thing those writing in the Duvalier years would have attempted would have been to put the point of their message in the first sentence. They worked in a kind of vague, coded language, heavy on double entendre, innuendo and implication. The most popular writing form was the meandering essay, and that is the style that predominates in the newspapers today. Fact and opinion tend to run together, and there is often more advocacy than objectivity.

In the post-Duvalier days, the radio stations, which are by far the most influential media in a country in which about 80 percent of the population can neither read nor write, have often broadcast unchecked information. In one tragic incident, a radio station erroneously reported that someone had poisoned a reservoir in a north coast city, and at least one suspect was lynched.

The country has been electric with excitement since the Duvaliers fled into exile, and the passion flows raw into the newspaper and broadcast reports. In one television broadcast, reporters were shown shouting at an army officer accused of torture and murder: "You killed him," "You're lying."

Live reports of anti-government protests have led to chain reactions across the country, and the government has said it intends to introduce a law that would spell out the responsibilities of the press. Those in the news organizations say they are against any restraints and they most strongly object to a provision that would give owners of newspapers and broadcast stations the final decision on what is published.

"Right now, we have a press that has no reins," says Jacques Sampur, owner and news director of one of the most popular radio stations. "We are cautious at my station. We recognize the danger of a press that has no self control." ☐



Treaster is chief of the Caribbean Bureau of The New York Times and is based in Miami.

With Ouster of a Dictator

Newspaper Shakeout in the Philippines

BY EDUARDO LACHICA

Only a few days after Corazon Aquino's nearly miraculous ascension to the presidency of the Philippines, the same opposition dailies that had campaigned so hard for her were questioning her choice of Central Bank governor and finance minister.

The pugnacity of Philippine journalism is both a strength and a weakness. Erstwhile strongman Ferdinand Marcos never fully throttled the press except during the first five or six years of martial law which he declared in 1972 [**presstime**, July 1985, p. 22]. By the late 1970s, a number of female journalists at the Bulletin Today, then owned by Marcos' former senior military aide, were crowding the borderline of what the regime considered publishable.

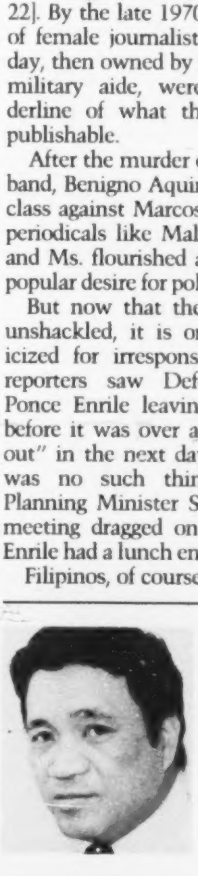
Daily Express
The Manila Times
FM ordered arrest of 10,000 – Enrile
The News Herald
Enrile snubs loyalists offer of leadership
Malaya
Cory rules out military coup

Philippine newspapers are battling for advertising revenue.

After the murder of Cory Aquino's husband, Benigno Aquino, turned the middle class against Marcos in 1983, anti-regime periodicals like Malaya, Veritas, and Mr. and Ms. flourished and gave voice to the popular desire for political reforms.

But now that the press is completely unshackled, it is once again being criticized for irresponsibility. For instance, reporters saw Defense Minister Juan Ponce Enrile leaving a cabinet meeting before it was over and called it a "walkout" in the next day's headlines. "There was no such thing," says Economic Planning Minister Solita Monsod. "That meeting dragged on for four hours, and Enrile had a lunch engagement to catch."

Filipinos, of course, would rather have a free press, no matter how undisciplined, than one that's gagged. But this return to unfettered reporting also reminds many readers of certain structural problems in the nation's media industry. For one thing, there are more than 15 dailies in Manila vying for a limited market of not more than a million copies a day. This is a major reason for the yellow-raggish tint of some of the post-revolution papers.



Lachica, a former Filipino journalist, reports for The Asian Wall Street Journal from Washington, D.C.

The new crop of periodicals is arguably more independent than that of the pre-martial law generation.

But the economics of the industry are as precarious as ever. Reporters are paid so poorly that they are forced to moonlight or, worse, accept money from news sources.

Publishers are only partly to blame. While the economy is still recovering from the shocks of the Marcos era, there aren't enough advertising pesos to share with employees.

The Philippines Daily Inquirer is the exemplar of the new journalism. The paper was launched last December to give the Aquino campaign its share of space. Circulation, riding on her popularity, leaped to 239,350 in a little more than two months. But the front page is cluttered with poorly sourced, speculative stories.

Whether its sensation-a-day style will keep the Inquirer ahead of the pack remains to be seen. The paper probably will survive the inevitable shakeout while some weaker ones fold.

It's also entirely possible that the Manila Daily Bulletin, as the Bulletin Today is now called, can recover from the effects of a reader boycott against Marcos-related media and regain its accustomed position as the advertisers' favorite newspaper.

Also worth noting is the fact that Business Day, an employee-owned newspaper, continues to hold reader and advertiser support while maintaining high reporting standards.

But at this crucial time, the Philippine press overall could benefit from more institutional support. It has to relearn the truism that freedom must be accompanied by responsibility.

The paternalism of the Marcos era was the wrong kind of support. The presidential palace replaced a publisher-financed news service with a state-run propaganda machine. The Aquino government has wisely scrapped the Ministry of Information so the press is on its own. But with few resources, it's struggling to keep on its feet.

Some media executives are thinking of reviving the Philippine Press Institute, a publisher-supported group that conducted skill-upgrading seminars for reporters. The PPI was a martial-law casualty. The Manila-based Press Foundation of Asia also could be harnessed for the same kind of in-service education.

The United States can help, both officially and privately, in speeding up such a recovery. The Reagan administration's plans to include Filipino journalists in an expanded visitors' program can be supplemented with opportunities for these journalists to experience brief stints at U.S. newspapers and magazines. During the Marcos years U.S. academic fellowships for Filipino reporters dried up because sponsors feared the education would be wasted. It's time to reopen the gates. ☐

Minority Press

Hispanics, blacks, Asians and Indians rely on specialty newspapers, but the publications' influence wanes as assimilation process goes forth

BY MARCIA RUTH
presstime staff writer

Newspapers geared to minority groups have been a part of U.S. journalism since Colonial times, and they continue to be part of community life in cities with high concentrations of minorities.

In general, the historic pattern for such newspapers is that they are strongest when groups are least assimilated into American life.

"As long as there is any vestige of segregation and discrimination, there will be a need for the black press," says John H. Sengstacke, president of Sengstacke Newspapers, the largest black newspaper group, with a combined circulation of about 100,000 from publications in Chicago, Detroit, Pittsburgh and Memphis. "When that (need) is eliminated," he says, "the black press will become a good community newspaper."

Nationally circulated black newspapers reached their zenith before World War II, before other strong institutions emerged to fight for equality and civil rights. But in the decades that followed, such papers were largely replaced by small community weeklies, now the most numerous black newspapers read by America's 26 million blacks.

Among minorities whose first language is not English, the ethnic press generally reaches a high point during waves of immigration, then fades as the second generation learns English.

The "peak year for foreign-language newspapers" was 1914, say newspaper historians Edwin and Michael Emery, with "approximately 1,000 papers, of which 140 were dailies." After the flood of immigration in the early part of the century subsided, the figures dropped. "By 1983 there were fewer than 40 dailies and perhaps 200 other papers in some two dozen languages," say the Emerys in the fifth edition of *The Press and America*.

Not surprisingly, Hispanics, the fastest-growing minority in the United States, have the nation's strongest foreign-language press. A 1985 survey by the National Association of Hispanic Publications shows that 56 percent of its readership is first-generation Hispanic, but most observers say the rate of immigration is high enough to keep the Hispanic press growing for decades.

Hispanics are expected to become the largest ethnic group in the country by the middle of the 21st century.

Because of the size of the group—14.6 million in the 1980 census—and its concentration in specific parts of the country, a major question is to what extent will the Hispanic press become a bilingual press. "Will it follow the audience (as it learns English), or will it continue to be identified as a Spanish-language press?" asks Felix Gutierrez, associate professor of journalism at the University of Southern California.

Since the Immigration Act of 1965 opened up the opportunity for more non-European immigration, Asians have become the second most numerous immigrant group in the United States, with 1980 population of 3.2 million.

In the past decade, the Asian press has grown rapidly in most U.S. cities with a high concentration of recent Asian immigrants. But unlike Hispanic communities, which rely more heavily on Spanish-language papers published in the United States, Asians read a greater mix of foreign-language papers published locally and those imported.

Also noteworthy are recent developments among newspapers read almost exclusively by the United States' indigenous minority—1.4 million American Indians. There is a move to upgrade existing publications and to establish new ones independent of tribal governments, which now own most of the Indian press.

Among minorities whose first language is not English, the ethnic press reaches a peak during immigration waves.

In the sections that follow, **presstime** presents a brief status report on these four mainstays of the minority press in the United States.

HISPANIC MOVEMENT. Among Hispanic papers, "what you're seeing right now is a 'movement,'" says Joseph Garcia, publisher of El Heraldo, a 25,000-circulation weekly in Chicago.

"About 1979-80, things started to take off, and since '80-81, things really blossomed," says Kirk Whisler, executive director of the National Association of Hispanic Publishers.

According to a 1985 study for the Los Angeles-based NAHP, there are 10 Hispanic dailies, 140 weeklies, 76 "less than weeklies," 114 magazines (20-25 published regularly), 91 journals and assorted other publications.

Nonetheless, Whisler predicts that this burgeoning circulation of more than 6 million, which has more than tripled since 1977, will coalesce into a smaller number of publications by the end of the century.

Several strong dailies have already emerged in major Hispanic centers, with the five largest based in Los Angeles, New York and Miami.

Of these, two are owned by Hispanic families:

- La Opinion, circulation about 62,000, is the oldest continuously published Hispanic daily in the United States. Founded in Los Angeles in 1926, it is now run by the second and third generation of the Lozano family.
- Diario las Americas, circulation about 67,000, was founded in 1953 by Nicaraguan exile publisher Horatio Aguirre who, with his son, still operates the newspaper in Miami.

The other three members of the "big

THE ADS FROM OUTER SPACE ARE COMING.

Look up. A dream come true is orbiting 22,300 miles above your head. It's the high tech cornerstone of the AD/SAT Network, a satellite that delivers ads directly to your newspaper. At the speed of light.

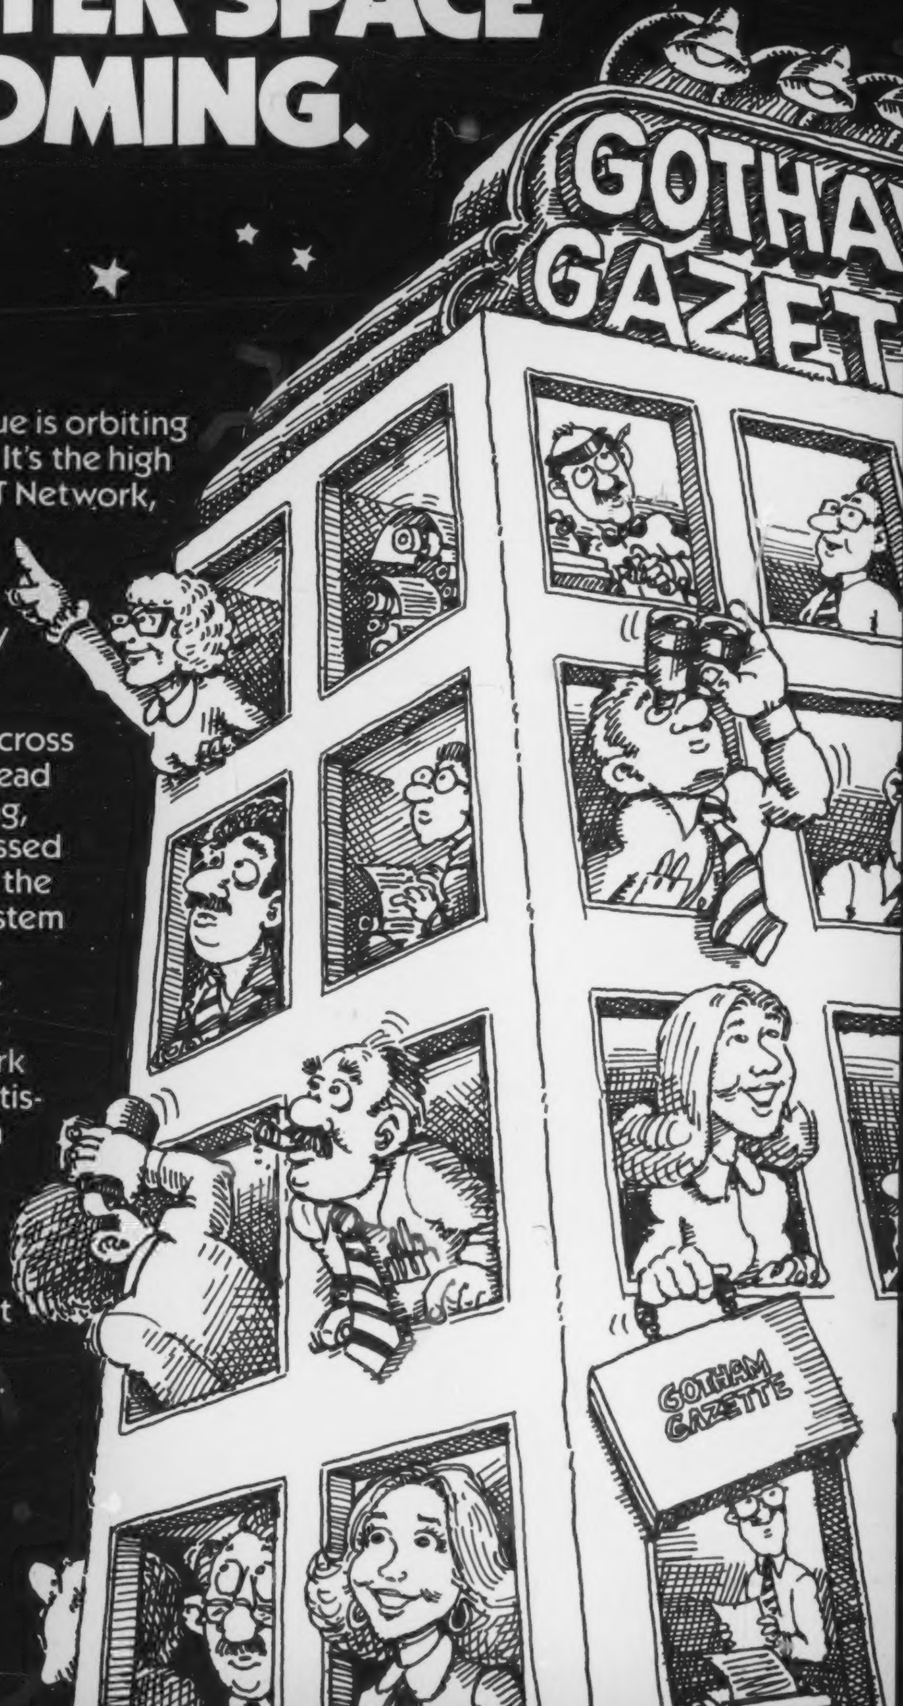
It all starts with one solitary piece of repro material from an advertising agency, and ends moments later at newspapers across America as a facsimile that's a dead ringer for the original. No missing, mangled or delayed ads. No missed insertions. No lost revenue. Plus the bonus of an on-line message system that, for the first time, links ad agencies, newspapers and their representatives.

This fall the AD/SAT Network goes operational, serving advertising agencies and demonstration newspapers.

For years it's been your dream. Now it's your reality. And it's time for you to join the Network. For full details, contact AD/SAT, 527 West 34th Street, New York City, New York 10001. Phone: 212/330-0678.

AD/SAT

We deliver newspaper ads at the speed of light.



Richard S. Heyza, The Seattle Times

NNPA President Bennett (left photo) advocates more national ad dollars and more modern equipment for black newspapers. Three generations of the Lozano family (right photo) have published La Opinion, the nation's oldest Hispanic daily founded by the late Ignacio E. Lozano, whose photograph is on the wall. His son and grandson are Ignacio E. Lozano Jr. (right), editor and publisher, and Jose I. Lozano, assistant publisher.

five" are owned by U.S. media companies:

- El Miami Herald, circulation about 85,000, founded in 1975 by Knight-Ridder Inc.'s Miami Herald
- El Diario-La Prensa, circulation about 60,000, purchased in 1981 by Gannett Co. It is published in New York City.
- Noticias del Mundo, founded in 1980 by News World Communications, which launched The Washington Times in 1982. Circulation of the original New York edition is about 50,000, and that of a Los Angeles edition is about half as many.

News World Communications is the only publisher of these dailies with public aspirations to go national with locally focused editions. Earlier this year, the parent company added small operations in San Francisco and Chicago. It plans to test market this fall in Miami.

In varying amounts, Hispanic papers mix coverage of local Hispanics with news of their countries of origin. "The focus is to serve the local community," which also means "you must let them know what is going on in their (home) countries," says Carlos Ramirez, El Diario's president and publisher.

Like general-circulation papers, Hispanic papers are in pursuit of national ad dollars, most of which go to Spanish-language television.

"Up to now, the broadcasters have done a job on Madison Avenue, which is convinced Latinos watch TV and listen to radio and don't read newspapers," says Gutierrez of USC. "Until the publishers can effectively make their case to national advertisers and make it (newspaper advertising) easier to buy, then print growth will be stifled."

Estimates vary on how much of Hispanic advertising generally is going to the print medium. Both Hispanic Business, a magazine published in Santa Barbara, Calif., and the NAHP agree that the amount for all media is about $333 million.

But Hispanic Business maintains only 10 percent, or $33.3 million, of that goes to print. NAHP contends, however, that the amount is closer to 20 percent, or $61.2 million.

Seeking an increased share of the Hispanic market, Hispanic newspapers are "finally getting their act together," says NAHP's Whisler.

Last year, NAHP formed Entrada, a New York City advertising-rep firm that now offers one-order-one-bill purchasing of 38 Hispanic publications with combined circulations of over one million.

BLACK RE-EVALUATION. Five years ago, John L. Procope, publisher of the New York Amsterdam News, proposed a "national editorial board" to spearhead stronger "advocacy" journalism on the part of the 100-plus members of the National Newspaper Publishers Association [presstime, Sept. 1981, p. 39].

That editorial unity did not occur, says long-time NNPA Executive Director Steve Davis. Instead, he says, concerted action has focused on the business side, where "black newspapers have to go out and fight like mad for advertising"—a struggle in which they have been only marginally successful thus far.

Following predictions in the early 1980s by a historian of the black press, Boston University Professor Henry G. La Brie III, that black newspapers were headed for hard times, Christopher H. Bennett, now in his second term as NNPA President, committed the organization to aggressive pursuit of national ad dollars.

Bennett, publisher of The Seattle Medium, says he was not selected as a priest or an undertaker. "I was not hired to do the last rites or the burial." He claims that since he took over as NNPA president, black publishers have obtained commitments for $100 million in advertising over the next few years.

Precise figures are hard to pin down, owing to lack of centralized data.

Circulation is also hard to determine. Audits are done by several different firms, and some papers do not have them. But in 1984, La Brie estimated circulation of black newspapers at 3.6 million, one million of which was free circulation, and only 538,000 of which was audited.

But publishers say that the black press is stronger than circulation figures would indicate because they have more readers per copy than mainstream newspapers.

On the national advertising scene, most black newspapers are represented by one of two New York City firms—Amalgamated Publishers Inc. and Black Media Inc.—but some, including Bennett's Seattle paper, market independently.

Those involved in advertising sales point to several signs of progress. In the past year, national advertising for the more than 80 papers represented by Amalgamated Publishers increased by $1.2 million over the $7 million obtained in fiscal year 1984-85, says General Sales Manager Karl D. Jackson.

This upward trend will continue, Jackson predicts, because of the general decline of "mass media" buys. "Fortune 500 advertisers are moving to a new stance, and it's called 'segmentation,'" he says. "They have now realized segmenting is the wave of the future."

Also growing is membership in NNPA. Executive Director Davis says that over the past five years, it has increased from 115 to 138. The only three black dailies in the country are members—the Chicago Defender, Atlanta Daily World and New York Daily Challenge.

Meanwhile, the black press is evolving to meet the changing needs of its readers. While acknowledging the historic function of the black press to serve as a "watchdog for the black community and principle advocate for social justice," NNPA First Vice President William H. Lee says, "We also serve as a publication for survival news, which is the type of news urban Americans need for everyday existence." With this emphasis, says Lee, publisher of The Observer Newspaper Group in Sacramento, "you begin to attract more than just blacks."

An attempt to launch a national black newspaper, the National Leader, failed in mid-1984 after almost two years of operation. The weekly failed to obtain the advertising needed to survive, but its 96,000 circulation shows there is a demand for such a product in the black community, says former editor Claude Lewis, now a columnist and editorial board member at The Philadelphia Inquirer.

Ironically, one problem being experienced by black newspapers—that does not plague minorities with a foreign-language press—is that as general-circulation papers increase their efforts to hire and promote minorities, black publications have been losing talent. "Over the years, we have been training them (journalists) and they have been stealing them," says black publisher Sengstacke.

ASIAN DIVERSE. Wide variations exist among foreign-language newspapers read in the United States by people from various Asian countries. Unlike the black and Hispanic newspapers, those with an Asian connection have no overall trade association, and information is more difficult to come by.

But, generally, the Asian press follows the same growth pattern as that of other minorities. "What you find in Asian communities is that the newer group of immigrants have the more vibrant ethnic press," says Gil Roy Gorre, editor of the Philippine American News, a biweekly paper published in Los Angeles.

Among Americans of Japanese origin, Japanese-language newspapers published in the United States are on the wane, while there is a brisk importation of newspapers published in Japan.

"Virtually none of the American-born Japanese read Japanese, and most are so Americanized they really don't care about Japanese affairs," says William K. Hosokawa, former editorial page editor of The Denver Post and now ombudsman for the Rocky Mountain News.

On the other hand, the large numbers of Japanese businessmen temporarily in the United States have created a market for the importation of newspapers printed in Japan—10,000 a day, according to Nihon Shinbun Kyokai, the Japan Newspaper Publishers and Editors Association.

However, in U.S. cities with large Chinese-speaking populations, the picture is reversed. There, as many as a dozen dailies produced in the United States may compete.

As general-circulation papers increase minority hiring, black publications have been losing talent.

In an article headlined "Newspaper Wars—the Battles Rage," the Los Angeles Times last year characterized the Chinese press in that city as a "free-for-all reminiscent of bygone days in American journalism when newspapers divided along fiercely partisan lines."

The major papers "have their political stand clearly designated," says Oscar Chiang, a reporter-researcher at Time magazine who has studied the Chinese press. This reflects the sharp political division in the U.S. Chinese community between loyalty to Taiwan or mainland China.

Fierce competition is also a function of increased professionalism, says Charles Lai, executive director of the New York Chinatown History Project. "In the last 10 years, there are more professional journalists that are entering Chinese newspapers," he says. "The stories are becoming more fine-tuned. There is more investigative work."

A few Chinese-language newspapers circulate nationally. The World Journal and the Chinese Daily News claim circulations of about 100,000, the Centre Daily News about 65,000, and the International Daily News about 58,000.

But sources consider the figures suspect: "I would not take anybody's numbers seriously because they (the papers) tend to exaggerate," says Chiang. "They always seem to inflate their numbers," agrees Lai.

In Korean-speaking communities, there is another pattern—localized editions of papers published in Korea.

"What happens is that in every major city where Korean-Americans live, people apply for a sort of franchise and operate out of a small office," says Choi Sung-il, executive director of the U.S.-based Council for Democracy in Korea. In general, when such papers are distributed on U.S. newstands, about 80 percent of their pages are printed in Korea, with the rest added locally, also in Korean.

INDIANS UNIFYING. In contrast to the free-for-all environment of the press of the most recent wave of immigrants, America's indigenous minority—American Indian—is presenting an increasingly unified front.

Since the formation of the Native American Press Association in 1984, many leaders of the Native American press have pushed for significant upgrading of the more than 350 publications read primarily by American Indians. As tangible evidence of this effort, more than 100 people, mostly publishers and editors, attended the NAPA's second annual convention in Scottsdale, Ariz., June 5-7, which included workshops on all phases of newspaper production.

But beyond technical development, many are also concerned about a problem not shared by other U.S. minorities—reservation living and government.

"There is a real difference in Indian country," says Tim A. Giago Jr., owner and publisher of The Lakota (S.D.) Times, one of the few privately owned Indian papers and the largest Indian weekly. (See profile, p. 35.) What most of these papers print is subject to approval by tribal boards, he says, and unless they become independent, "they are up against some very harsh censorship."

Of the approximately 350 Indian publications in the United States, only one is a daily, less than a quarter are weekly, and the rest are published monthly or less often, says Margaret A. Clark Price, NAPA's executive director.

Of these, "several are truly independent rather than published by a tribe," says Loren Tapahe, a founder of NAPA and former publisher of The Navajo Times in Window Rock, Ariz.—the only Indian daily. Others are owned by tribes but approach being editorially autonomous, and some are "house organs," he says.

Although such issues are prominent among American Indian publishers lately, most of the minority press weighs similar questions of independence.

And most would probably agree with the dual function of minority newspapers articulated by John H. Murphy III, publisher of the Afro-American group, whose papers in Baltimore, Richmond and Washington, D.C., have a combined circulation of about 50,000. "We serve the same general needs as any community paper," he says. "We let people know what's happening in the community."

At the same time, he observes, the minority press shares a goal with its readers: "We're doing the same things all other minority groups are doing—trying to get a piece of the action." □

TERRORISM

AP

Newspapers grapple with the extraordinary challenges of covering worldwide terrorist incidents. There are no easy answers.

REVOLUTION

AP

BY MARGARET GENOVESE
presstime staff writer

Once again, talk about the relationship between terrorism and the news media is fashionable.

The topic has become standard fare at meetings of newspaper associations and in their publications.

Dozens of academic researchers are engaged in a massive project probing the terrorism-news media connection.

A congressional subcommittee convened a hearing on the matter a year ago.

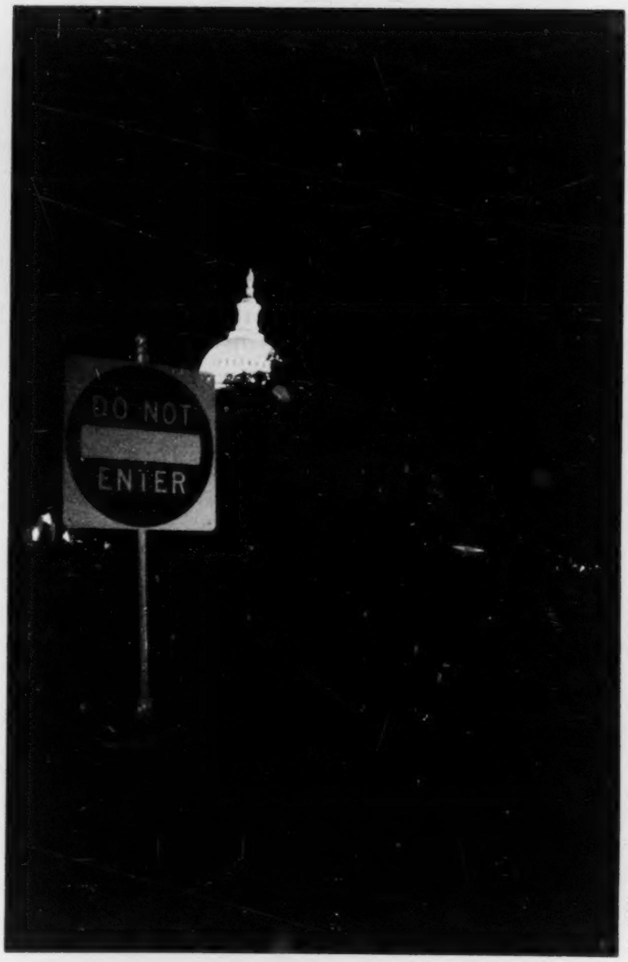
Six months ago, a cabinet-level, U.S. government task force on combating terrorism suggested that "journalistic guidelines," such as those developed for use during wartime, "in some circumstances should be considered appropriate during a terrorist situation."

Yet, among the nation's newspapers, that's just about all there's been so far. Talk. And, considering the options, that may be the best approach.

Neither the newspaper business as an entity nor individual U.S. newspapers have formalized procedures for covering terrorism, beyond those few papers that adopted standards in the late 1970s.

"I haven't seen any newspapers develop any formal guidelines or anything like that," says Michael Gartner, president of the American Society of Newspaper Editors and newly named editor of The Courier-Journal and The Louisville Times. "It's like almost everything else, you rely on reporters' judgments, on editors' judgments—the common sense and professionalism of newspaper people."

Gartner says it is up to individual newspapers to decide whether they want to adopt guidelines. However, he is among those who oppose industry-wide guidelines. Thomas Winship, president of the Center for Foreign Journalists, agrees. At the same time, Winship, former editor of



As a result of a November 1983 bombing, heavy vehicles are parked to block road entrances to the Capitol when Congress is not in session. Other preventive steps in the Nation's Capital include barricades placed strategically around the White House grounds.

Louis Mintz

The Boston Globe, brands terrorism as “possibly our number one communications problem today and probably will be for some time to come” because of the impact coverage can have on world politics and people's lives. “I don't think any of us feel comfortable about how we cover this story,” he says.

Even those newspaper executives who believe individual newspaper guidelines are unworkable and industry-wide guidelines unwise say shop talk about terrorism is helpful, because it raises consciousness about the issue and its ramifications. “We do become more sensitive, and we are able to make better and more informed judgments about what we do,” says Kent Bernhart, executive editor of the Detroit Free Press.

In contrast to newspapers, all three major broadcast TV networks have longstanding, written policies on covering terrorism incidents. For example, ABC, CBS and NBC prohibit live coverage except under special circumstances and only with the approval of top news officials.

Newspaper executives contend that television, because of its immediacy, has a distinctly different role and coverage needs and, consequently, must approach the subject from a different perspective.

The printed press and local television stations have “only a limited part to play in the drama of terrorism,” observed Katharine Graham, chairman of The Washington Post Co., in a speech to the ANPA Government Affairs Committee last March. “Network television is the star.”

“The problems of coverage are different,” says Seymour Topping, managing editor of The New York Times. “Television feels a need to cover an event visually, while a newspaper, obviously, has more time for reflection in the way it handles a story and is able to deal with a problem in all of its complexities.”

Says Nancy C. Monaghan, managing editor/news of USA Today: “We don't sit and think up hypotheticals and then talk about what we would do if that incident happened. It's just like any other big story, we do talk about it a lot when it happens. We are in a very different position, I think, than television. We are not the instant camera on the scene. I'm sure the television networks have a different set of criteria to consider.”

Some observers consider terrorism a kind of warfare. Another reason newspapers have not adopted wartime-type coverage restraints is that the front lines in this war, at the present time, are overseas, and only about two dozen U.S. newspapers have their own foreign correspondents. “There are many, many local stories here that we are concerned about, other than terrorism,” says Robert H. Giles, executive editor of The Detroit News. He places it “fairly far down the list of stories we are interested in, in Detroit, Michigan.”

Typical of terrorist acts posing special media challenges are a bomb blast last March in a shopping mall on the Champs Elysees in Paris (at left, top photo) and a press conference by hooded Shiite Moslems identified as hijackers of the TWA jet seized on an Athens-Rome flight in June 1985 (at left, bottom photo).

While the number of terrorist incidents around the world climbed 36 percent last year to 812 (177 of them involving U.S. targets), terrorism has been on the wane in the United States. Last year, the FBI counted only seven incidents of domestic terrorism, and it has recorded only one so far this year—a dramatic decrease from 112 in 1977. An FBI spokesman credits “effective law enforcement” for the decline, pointing out that many of the people responsible for prior incidents have been apprehended and that the FBI thwarted 23 incidents last year. Signs of U.S. efforts to counter terrorism are visible all around, from the sophisticated metal-detecting devices at airports to the crude garbage truck barricades at the entrances to the U.S. Capitol grounds.

Editors also say that because each terrorism incident is different, it is difficult to develop coverage guidelines in advance. The skyjacking of TWA Flight 847, the hijacking of the cruise ship Achille Lauro, and the assaults at airports in Rome and Vienna are just three of the major terrorism incidents that took place in 1985. “I would be hard-pressed to sit down and write a policy on this,” says Tony Pederson, managing editor of the Houston Chronicle. “That is the nature of terrorism. It is unpredictable.”

The experts find it difficult even to define terrorism. Attempting to do so is a “futile effort,” says Robert H. Kupperman, a senior adviser at the Georgetown University Center for Strategic and International Studies in Washington, D.C.

However, like the late Supreme Court Justice Potter Stewart who, despairing of defining “obscenity,” said “I know it when I see it,” Kupperman knows terrorism when he sees it and lists these common characteristics:

- Normally, terrorism is the act of small groups, acting either independently or as a proxy for a large nation.
- Terrorists often attack innocent people with the intent to

target a nation for political or ideological reasons.

- The act of terrorism is designed for high shock value. "It is intended to stimulate the media."

"I know some things it's not," Kupperman adds. "It's not the Tylenol killers." Although the cyanide contamination of the over-the-counter medicine can be said to have inflicted terror on the public, it apparently has no political or ideological motive, he notes.

Nor does the term encompass such things as the bungled burglary of a Beverly Hills boutique that turned into a hostage situation or, according to the FBI, abortion-clinic bombings. The FBI defines terrorism as: "The unlawful use of force or violence against persons or property to intimidate or coerce a government, the civilian population, or any segment thereof, in furtherance of political or social objectives." According to the State Department, terrorism is "premeditated, politically motivated violence perpetrated against noncombatant targets by subnational groups or clandestine state agents, usually intended to influence an audience."

Because the words "terrorism" and "terrorist" can be so politically loaded, some journalists avoid using them as much as possible.

Kupperman says that aside from occasional errors, such as the occasional labeling of would-be presidential assassin John W. Hinckley Jr. as a terrorist, the press has begun to understand terrorism "reasonably well."

ABC, covering the Munich Olympic Games via satellite, found itself providing instead what Newsweek called the "first, live, international coverage of a deadly terrorist raid."

AP

Radical Shiites chant anti-American and anti-Israeli slogans while burning a U.S. flag during a demonstration in support of hijackers of the TWA jet last year.

NOT A NEW ISSUE. Although the news media are still grappling with ways to deal with it, terrorism is nothing new.

"Terrorism goes back thousands of years," says Kupperman, "but you didn't have satellite television thousands of years ago, and you didn't have jet transportation." Without these, he says, terrorism would not have such a large, fundamental effect on society, simply because not as many people would know about an incident and, by the time they did, it would be of only "historical value."

Some date the beginning of modern-day terrorism from 1968, when an Israeli commercial airliner, en route from Rome to Tel Aviv, was hijacked by members of the Popular Front for the Liberation of Palestine. Another milestone was in 1972, when Arab terrorists stormed the quarters of Israeli athletes competing in the Munich Olympic Games. The ABC television network, on hand to televise the games via satellite, found itself providing instead what Newsweek magazine at the time called the "first, live, international coverage of a deadly terrorist raid."

The incident that prompts the current debate over the media's role in terrorism was last year's skyjacking of TWA Flight 847. Even some in the news media concede the coverage was marred by excesses and errors in judgment, particularly by television.

The incident provoked a long list of questions, among them: Should the hostages, obviously under duress, have been interviewed? Should the deployment of the U.S. Army's counterterrorism unit Delta Force have been reported? Should so much time and space have been devoted to a single story? Should victims' families have been subjected to such heavy media attention? Should the media purchase pictures from terrorists? Should reporters act as surrogate negotiators?

(The American public has been somewhat less critical. Immediately after the conclusion of the Flight 847 crisis, an ABC News/Washington Post poll found that 67 percent of Americans approved of the way the television networks covered the hostage situation. Similarly, The Times Mirror Co.'s study on "the People and the Press" found that "despite the criticism of the media, public support for the press was actually higher during the crisis.")

The Canadian media, too, currently are engaged in soul searching, stemming from recent hostage-taking incidents in the capital of Ottawa. The Ottawa Citizen has directed its news staff not to make phone calls to hostage-takers or people involved in terrorist activities or any other violent criminal activities; the Canadian Press has asked the Ontario Press Council to look into possible guidelines.

The last time the issue was probed in a major way in the United States was in the late 1970s, sparked by a series of domestic incidents, including one in 1977 in Washington, D.C., in which Hanafi Muslims seized three buildings, killed a radio journalist and took more than 100 people hostage. There were several media blunders, including the broadcast by one TV station that persons who had eluded the terrorists were holed up in a room in one of the buildings, and repeated telephone calls to the terrorists

AP

from journalists, including one in which the terrorists were asked what their deadline was and what they proposed to do if their demands were not met.

Speaking at a recent American Bar Association symposium on terrorism, Benjamin C. Bradlee, executive editor of The Washington Post, says he learned a lesson on covering terrorism during that incident. After a Post reporter reached one of the terrorists by telephone, the District's police chief contacted Bradlee to say: "'Get off the blank phone.'" Bradlee says he agreed with the chief. "We had no business on that phone."

Following that incident, the National News Council (since disbanded) asked the media to "consider certain self-restraint"; specifically, to consider the dangers of providing live coverage and telephoning terrorists or hostages during the event.

WHY NOT GUIDELINES? Believing their cities could be the location of incidents similar to the Hanafi Muslim siege, several newspapers subsequently developed written guidelines.

Among them were The Courier-Journal and The Louisville Times. According to the guidelines adopted in 1977, those newspapers will cover terrorist hostage takings "fully and accurately" but will exercise "care and restraint." To that end, the guidelines advise reporters and editors to: avoid sensationalism in writing and displaying the story; make every effort not to become participants; agree to publish terrorists' demands only if not to do so would endanger lives of hostages and only after consultation with the most senior editors and with proper law enforcement officials; be mindful of the danger of telephoning hostages or terrorists for interviews during the incident and avoid taking action that would interfere with duties of police or other officials.

The Louisville newspapers' guidelines never have been invoked but remain in effect. Newly named Editor Gartner has made no decision on whether to retain them. Paul C. Janensch, who until recently was the executive editor there, favors guidelines. "I think they should be available to help decision makers in a news organization do the right thing when they are faced with a crisis."

ANPA Executive Vice President Jerry W. Friedheim agrees. "Every editor and every publisher should know what their coverage and publication guidelines are for kidnapping, hostage or pure terrorist incidents and should think in advance about how they will relate to and work with law enforcement authorities," he says. "Almost certainly, basic policies and an emergency-action checklist should be written down, kept where they can be found, and periodically reviewed with both news staffs and government authorities."

Terrorism coverage guidelines "should be available to help decision makers in a news organization do the right thing when they are faced with a crisis."

The Chicago Sun-Times adopted a set of guidelines in 1977 [presstime, March 1982, p. 29]. Although Don Kopriva, assistant to the editor, cannot say whether they have ever come into play, the guidelines remain valid. "All we are talking about here is good news judgment combined with good taste and good sense."

The Sun-Times is the only one of the 20 largest U.S. daily newspapers with written guidelines on terrorism, according to a presstime survey. The Plain Dealer in Cleveland is considering adopting some procedures on covering crises of all kinds, which would include everything from train derailments to nuclear accidents to terrorist incidents.

In addition to fundamental opposition to written guidelines, some editors doubt that any meaningful standard could be formulated. "I think any attempt at a guideline on local terrorism would either be so vague and general so as to be Pablum, or so restrictive that you would violate it more than you would honor it," says Tim McGuire, managing editor of the Minneapolis Star and Tribune.

Instead, these editors say they consider each incident on an individual basis and exercise their own news judgment—"being cognizant," as Thomas F. Mulvoy Jr., managing editor of The Boston Globe, puts it, "that it is not a baseball game."

"I think we all are sensitized to the need for discretion," says Heath J Meriwether, executive editor of The Miami Herald. If there is one rule that his newspaper follows, it is that "we've got to have top editor involvement in what our decision-making process is."

Similarly, Topping of The New York Times says "we have experienced editors who are capable of making sensible judgments, who can protect security interests of the United States and the safety of hostages or others who become victims of terrorism."

Topping recalls one incident during the 1979-81 Iranian hostage crisis in which he was called upon to make such a judgment. The Times was in

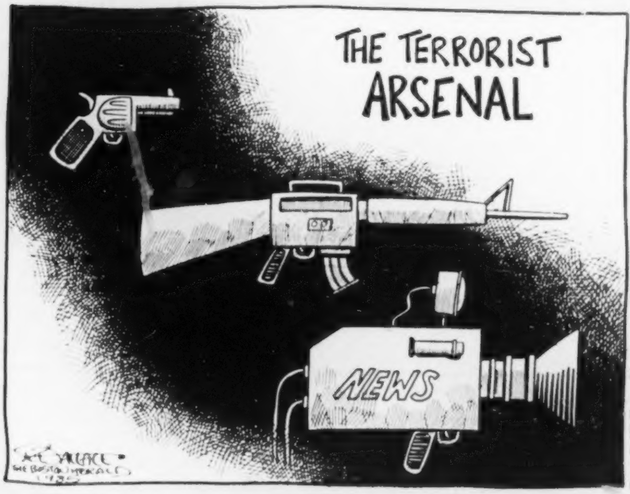
Some government officials have suggested that newspapers and other media suspend normal news judgment when it comes to terrorism incidents.

touch with a person who had managed to escape from Iran but, before doing so, had taken refuge in the Canadian Embassy in Tehran. "Cyrus Vance, who was then the secretary of state, became aware that this information was in our possession. He telephoned me to ask us to withhold the information because it would endanger other Americans who had also taken refuge in the Canadian Embassy. I agreed to that, and when the hostages had left the Canadian Embassy and there was no more danger involved for them, Secretary Vance telephoned me and we published the story."

With correspondents all over the world, the wire services have more first-hand experience covering terrorism than most U.S. newspapers.

Neither the Associated Press nor United Press International has written guidelines, although UPI has had them in the past. "You have to deal with it (terrorism) on a case-by-case basis," says UPI Editor in Chief Maxwell McCrohon. Walter R. Mears, AP executive news editor, agrees. "The problem with this, as with so much else that we do, is that it almost defies simple rules," he says. "You can't say 'Always do this in this set of circumstances' any more than you can say 'Always write the story with this lead on it.'"

For instance, Mears says, AP would not seek to be a mediator in a terrorist incident. However, during a 1982 incident in Washington, D.C., in which a suspected terrorist threatened to blow up the Washington Monument, an AP reporter became a go-between between the man and police officials. "Given any options, I'd prefer not to have a reporter in that role, but there weren't any at that point," says Mears, who was Washington bureau chief at the time.



Peter B. Wallace, The Boston Herald

According to Mears, part of the way AP conducts itself, "I hope instinctively," is to avoid doing or writing things that could endanger people. The news cooperative is "particularly sensitive" to this, he says, because Middle East correspondent Terry Anderson is one of four Americans currently held hostage by terrorists in Lebanon. (See story, p. 33.) "At the same time," Mears adds, "you don't stop doing what you do for a living, or the terrorists have won."

COVER OR COVER UP? When it comes to deciding how to play a story about a terrorist incident, each is "judged on its own merit," says George J. Cotliar, managing editor of the Los Angeles Times.

Two of the seven domestic terrorist incidents that took place last year occurred in suburbs of Los Angeles. Both were bombings, both have been attributed by the FBI to extremist Jewish elements, and both appeared on the front page of the Los Angeles Times. "What it is really is a news judgment, which we exercise with everything we do," says Cotliar.

But some government officials have suggested that newspapers and other media suspend normal news judgment when it comes to terrorism in the belief that withholding coverage will discourage such acts.

In a speech to the American Bar Association shortly after the TWA hijacking last year, British Prime Minister Margaret Thatcher said: "We must try to find ways to starve the terrorist and the hijacker of the oxygen of publicity on which they depend."

Some journalists subscribe to that view, including David S. Broder, national political correspondent and columnist for The Washington Post. "(T)he essential ingredient of any effective anti-terrorist policy must be the denial to the terrorists of access to mass media outlets," he told a symposium on terrorism and the news media last fall. "The way by which this denial is achieved—whether by voluntary means of those of us in the press and television, self-restraint, or by government control—is a crucial question for journalists and for all other citizens who share our belief in civil liberties."

"If terrorists can gain leverage, influence and control in the battle for public opinion in free societies by their acts of terrorism, there is an enormous incentive for them to continue such acts," he reasoned.

But many other journalists are unconvinced, worrying that if the media ignore terrorist incidents, terrorists will escalate the volume of terror until the acts can no longer be ignored.

Others think it would be more terrifying not to publish information about terrorist incidents. "A news blackout might generate rumors, and perhaps wild rumors, that could create an even larger crisis," says William B. Ketter, chairman of ASNE's Press, Bar and Public Affairs Committee. Ketter, editor of The Patriot Ledger in Quincy, Mass., also says the press would face a potential loss of credibility if it did not report on terrorism, leading readers and viewers to ask: "What else is the press keeping from us?"

"The basic cause of terrorism is not news coverage," declares Ralph Langer, executive editor of The Dallas Morning News. "Terrorism comes from real or perceived disputes and problems that aren't resolved."

"We've certainly never been convinced that a lack of information about terrorism is going to be helpful," says Michael Blackman, foreign editor of The Philadelphia Inquirer. "Frankly, I think the more you expose these people to readers (and) to viewers, the more that the audience sees what they really are."

The accusation that the news media encourage terrorism by giving terrorists so much publicity is "really difficult to assess," says Brian M. Jenkins, a terrorism expert at the Rand Corp., a California think tank. "It is certainly true that publicity is one of the major objectives of terrorists. It is also true that where press coverage of terrorism has been prohibited, terrorism has tended to decline. But that decline is likely to be the result of other measures taken at the same time."

For example, Jenkins says, a decline in terrorism has been noted in some South American countries where press censorship of terrorist incidents has been accompanied by such things as arbitrary arrests and the use of torture and interrogation.

The question about terrorists' reliance upon publicity, and others, are being studied by academic researchers working under the auspices of the Association for Education in Journalism and Mass Communication. "This is going to be the biggest piece of research that has ever been done on the subject of the news media's relationship to terrorism," says Robert G. Picard, one of the project directors. Findings will be discussed at a conference, tentatively scheduled for winter 1987-88, says Picard, assistant professor at the Manship School of Journalism at Louisiana State University.

Coverage of the TWA hijacking last year spurred new debate over the role the media play in terrorist incidents.

Whatever the evidence shows, newspaper editors clearly are concerned about being "used" as a platform for terrorist propaganda.

In September 1976, a group of Croatian nationalists hijacked a TWA jet bound from New York to Chicago and threatened to kill passengers unless a lengthy communique was published on the front page of several U.S. newspapers, including the Chicago Tribune. "From that point on, we have been struggling with policies regarding terrorism," says Tribune Editor James D. Squires.

Because of the variety of terrorist acts, the newspaper was unable to come up with specific guidelines. "Basically what we do is have a policy which balances our obligation to the reader against national security concerns and the loss of human life."

Adds Squires: "We don't want to be used and manipulated by anyone. So we try to be as skeptical and as cautious about being compromised in the interest of some special cause or group of people as we are on a day-to-day basis when we deal with government."

The Washington Post is another of the newspapers that printed the terrorists' treatise. "I don't believe that we would do that now," says Executive Editor Bradlee. "I think that would be considered hopelessly wimpish, chicken. We pride ourselves that the president of the United States can't tell us what to put on Page One. Even some judges have difficulty telling us what to put on Page One."

"We must discourage any idea that Reuters or other news organizations are suitable targets for terrorist activities or suitable channels for genuine or hoax threats or claims."

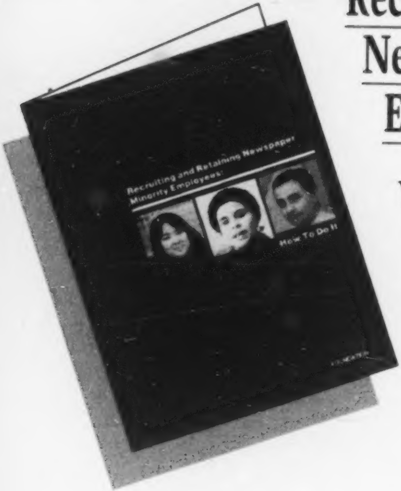
Reuters, the London-based international news and information service, also recently took steps to guard against being used by terrorists. In March, Editor-in-Chief Michael Reupke directed reporters not to write stories about threats of terrorist actions, except on rare occasions and with the approval of top editors, and not to mention Reuters or any other news organization by name as having received statements of responsibility for terrorist actions. In most cases, he said in his directive, an unspecific term like "news organization" should be used. "We must discourage any idea that Reuters or other news organizations are suitable targets for terrorist activities or suitable channels for genuine or hoax threats or claims," he explained.

SEEKING SOLUTIONS. So far, there has been no indication that U.S. government officials will seek to impose their own judgments over editors' news judgments.

After Prime Minister Thatcher's call for restraints on press coverage last summer, U.S. Attorney General Edwin Meese III said the Justice Department was considering asking the media to adopt written guidelines on covering terrorism. Subsequently, the cabinet-level task force, in which Meese was a participant, examined U.S. policy on combating terrorism, including problems caused by media coverage.

In its report, issued in February, the task force concluded that the solution to the problems "is not government-imposed restraint that conflicts with the First Amendment's protection of freedom of speech and the press." Rather, it said: "The media must serve as their own

Recruiting and Retaining Newspaper Minority Employees: How To Do It—



Your guide to improving minority opportunities in the newspaper business.

Chapters in this 28-page manual outline ways to recruit, hire, train, promote and provide staff development for minority employees in all newspaper departments. Newspaper executives can use the book to design minority advancement plans that suit their own particular needs.

Order several copies of *Recruiting and Retaining Newspaper Minority Employees: How To Do It*, so each manager on your staff will have one close at hand.

Please turn this card over for ordering instructions.

The only joint government-media action it recommended was "regular meetings" between media representatives and government officials on terrorism coverage, which, it said, "could contribute to more effective government-media relations."

That process has begun. On May 6, representatives from ANPA and ASNE met with Parker W. Borg, deputy director of the State Department's office of the ambassador-at-large for counterterrorism.

The most extreme call for government action appears to have come from a former general counsel of the Federal Communications Commission. Bruce E. Fein has said it should be against the law for the news media to disclose the citizenship, religious affiliation or nationality of any hostage, or to perform any role in transmitting demands of hostage takers. He sees little likelihood that such laws will be enacted, though. "The news media, of course, are very powerful on (Capitol) Hill and I think would oppose this with a ferocity that would perhaps make an atom bomb look mild in comparison."

To date, Congress has not made any move to legislate restrictions on press coverage of terrorist incidents. The House Foreign Affairs Committee's Subcommittee on Europe and the Middle East conducted a hearing last summer, following the TWA Flight 847 incident, on the news media and terrorism. The thrust of the hearing was not on the need for government regulation but rather on the need for media self-regulation and self-criticism. In addition, a dozen members of Congress have urged the television networks to convene a "summit" to consider coverage guidelines, a call that was renewed after NBC this year aired an interview with Abu Abbas, the terrorist wanted in connection with the Achille Lauro hijacking.

Thus far, however, there has been no movement toward formal, industry-wide, self-regulation.

Following the American Bar Association meeting last summer, two joint ABA-press committees were asked by ABA President William W. Falsgraf to discuss "the feasibility of the media developing voluntary guidelines." ANPA representatives sit on one of the committees. In a follow-up report to Falsgraf, the committees' co-chairmen reported "a consensus" that "terrorist incidents, because of their unpredictability and unique facts, are not susceptible to any kind of uniform approach, whether by the government or the news media."

In addition, some journalists say, guidelines are unenforceable and tend to wilt in the heat of a news event. "Industry guidelines are bad in almost every respect," says ASNE President Gartner. "Different segments of the industry have different missions, have different constituencies, have different philosophies. I think that almost as a rule, written guidelines of any sort are turned around and used against the press and have more of a negative effect than a positive effect."

TWA hostage Victor Amburgy hugs his niece at Andrews Air Force Base outside of Washington, D.C., after he and 29 others were freed by terrorist captors.

But if newspapers have been lukewarm to suggestions that they consider adopting their own guidelines on covering terrorism and downright cold to the notion of industry-wide action, the idea of talking about the subject—with other media people, with experts in the field of terrorism and with government officials—has hit their hot button.

Within the past year, the topic of the news media and terrorism has been discussed at the annual conventions of ANPA, the Associated Press Managing Editors, and the Society of Professional Journalists, Sigma Delta Chi; and it was brought up in a question-and-answer session with President Reagan at ASNE's convention. It also has been the subject of numerous smaller meetings and seminars. In fact, some news executives on the terrorism speaking circuit joke about the "cottage industry" that has grown up around the topic.

And while from time to time there seems to be a lull in major terrorist activity, there is no letup in the press' preoccupation with the issue. At the APME meeting last October, the organization's president, Michael J. Davies, called for a conference at which representatives of broadcast and print media would "assess the complicated issues and . . . see if there are some general areas of restraint that could be agreed upon without compromising our standards."

The proposal by Davies, editor and publisher of The Hartford Courant, will become reality Sept. 27. A conference underwritten by Times Mirror, the Courant's parent company, will be conducted in Washington, D.C., by Media and Society Seminars, a program of the Graduate School of Journalism at Columbia University. The event will be videotaped for televising in three or four parts on Public Broadcasting Service stations later in the fall.

In congressional testimony last year, Fred W. Friendly, director of Media and Society Seminars, said that, to him, the "third worst outcome" of the controversy surrounding press coverage of the TWA Flight 847 incident would be if the U.S. government were to impose restrictions on reporting during a terrorist crisis. The second worst outcome, he said, would be if government and network officials were to come up with a list of agreed-upon guidelines. But, he said, "the most tragic course of action would be for American journalism—and I include the news magazines and the newspapers—to continue their defensive posture. . . and learn nothing and do nothing."

A year later, the former television executive is satisfied that at least half of what constitutes his worst fear has not come to pass.

"There has been much introspection and meaningful dialog," he reports. "The question is, when the roof falls . . . do those lessons that we seem to learn hold up, or do they just come crashing to the floor with the debris?" ☐

How Should Media Act When One of Theirs Is Hostage?

Are the U.S. media doing all they could, or should, to help free Associated Press Middle East correspondent Terry Anderson and the other Americans kidnapped by terrorists in Lebanon?

Jerry Levin, the former Cable News Network bureau chief in Beirut who was a hostage himself for 11 months, calls these four Americans the "forgotten hostages" and charges that the media have "ignored" their story.

"If there isn't a spot development, or if there is not an anniversary where cameras or microphones are focused on the families of the hostages," he asserts, "there is no coverage."

"That is vastly different from the broad-gauged, wall-to-wall coverage of other crises in which every facet from the largest to the most minute of developments and issues were repetitively examined, debated and argued," says Levin, whose period in captivity ended last year when he escaped—not because his freedom was negotiated.

He has been speaking to press associations, pleading for more coverage—especially for thoughtful examination of U.S. government policy on negotiating for hostages' release.

Josh Friedman, a Pulitzer Prize-winning reporter for Newsday who was helped by Anderson when he was on an assignment in Beirut, says what he wants is not more coverage but the commitment of media executives to work for Anderson's release. "I want them to treat Terry Anderson as if he were their own employee and do for him what they would do for their own people."

Along with two other acquaintances of Anderson—Stephen K. Hindy, Newsday's assistant foreign editor, and Donald Mell, an AP photographer who was with Anderson when he was kidnapped—Friedman is trying to enlist executives for the cause.

In addition to Anderson, the other American hostages are diplomat William Buckley; David Jacobsen, director of the American University Hospital in Beirut; and American University Administrator Thomas Sutherland. (There have been unconfirmed reports of Buckley's death.) The Rev. Martin Jenco was released July 26.

At press time, Anderson's sister, Peggy Say, was in Syria to seek the help of President Hafez Assad in efforts to free her brother and the other American hostages. She was accompanied by AP Washington Bureau Chief Charles J. Lewis.

Terry Anderson

Since Anderson was kidnapped in March 1985, the news cooperative has engaged in "a long list of activities" to try to secure his release, says AP Executive News Editor Walter R. Mears, including "talking to this government, other governments, private citizens, anybody and everybody we could deal with."

Mears acknowledges that AP has "encountered some criticism for not making more noise and, in some quarters, for not immediately going to the Middle East." But, he says, the wire service has been acting on the "best advice" it could obtain, from experts both within and outside the government. "Their advice has been to do what we have been doing, which is to make every contact possible" and to avoid "theatrics."

At one point, AP asked the Friedman group to hold off on their activities. According to Mears, it was at a time when some AP contacts appeared to be making some headway. But this apparent movement went nowhere, and Mears then told Friedman to proceed.

Although he declines to go into detail, Friedman reports "there was an approach made to the Syrians by American press executives, conveying their interest in having the Syrians help in getting (Anderson) out. Now we are trying to develop a similar approach to the Iranian government."

He and his two associates believe that top-level news executives would be able to exert greater influence than they would as working journalists. "In terms of the way the Middle East works and their perception of how the United States works, it's important to have some very powerful people out in front on this."

With the White House not wanting to be seen as negotiating with terrorists, someone has to "break the ice and start talks going," says Friedman. "We don't view ourselves as the Scarlet Pimpernel or diplomats," he says. "We just want to increase the number of people involved."

These activities are apart from Friedman's work as chairman of the Committee to Protect Journalists. That group has written on Anderson's behalf to U.S. government officials as well as to Lebanon's President Amin Gemayel, Syria's President Assad, and at the time of the TWA Flight 847 incident, Shiite leader Nabih Berri.

Six other Western journalists also are being held hostage in Lebanon. The multiple kidnappings have led the AP and other U.S. news organizations to use Lebanese or other Arab nationals instead of U.S. citizens as correspondents in Beirut.

Mears declines to say what, if any, other precautions AP has taken to safeguard staffers from terrorist attacks—"that would be counterproductive in protecting them.

"But basically, the simple answer is you can't be a reporter and be protected. All you can do is ask people to exercise some judgment about their own safety and not to take risks where the risks are avoidable. We put people in places where they are taking a risk just being there. They know it, and we know it."

Jerry Levin escaped after 11 months' captivity in Beirut.

Gambling-Ad Decision Weakens Commercial Speech Rights

BY P. CAMERON DeVORE

On July 1 in *Posadas de Puerto Rico Associates v. Tourism Company of Puerto Rico,* the Supreme Court cavalierly undermined the First Amendment foundation of its commercial speech doctrine, until then considered one of the major innovations of the Burger Court.

The case involved what Justice Stevens, in dissent, called a "rather bizarre" and "grotesquely flawed" Puerto Rico regulation aimed at banning casino gambling advertising directed to residents of Puerto Rico. But casinos themselves—and every other type of gambling activity—are all perfectly legal in Puerto Rico. To most First Amendment commentators, the challenge to the rule looked like a slam dunk under the commercial speech precedents starting with the *Pittsburgh Press* advertising case in 1973.

The commercial speech opinions had found a clear mandate in the First Amendment to deregulate product and service advertising, reasoning that more, not less, commercial information aids economic decision making by American consumers. In 15 or so decisions, the court treated with considerable skepticism the previously sacrosanct reasons advanced for banning or sharply curtailing advertising of such things as prescription drugs, residential realty, legal services, contraceptives, utility services and abortion counseling.

However, even with its almost annual production of commercial speech decisions, the court had never quite pinned down its own rationale for the doctrine. The cases swung between a classic First Amendment analysis—subjecting ad regulations to strict First Amendment scrutiny—and an occasional willingness by the court to defer heavily to the regulators and take on faith their asserted rationales.

In the *Central Hudson* utility advertising case in 1980, the court tried to gather in the loose ends and systematize the doctrine. Justice Powell came up with a seemingly precise four-part test to help the lower courts decide the consitutional bona fides of ad regulation. However, that test itself was not always consistently applied, even by the "centrist" justices. Justices White and Powell, for example, wrote some of the most "classic" First Amendment decisions overturning ad regulations, but they also participated in decisions paying great deference to local regulators.

P. Cameron DeVore

The critical difference between the "strict scrutiny" and "deference" applications of the *Central Hudson* test is, very simply, who has the burden of proof. In some cases like *Virginia Pharmacy* (pharmaceutical ads) and *Zauderer* (lawyer ads), the court imposed a heavy burden on the state to prove the need for the regulation, how it would "directly advance" the state's goal, and why there weren't less intrusive ways to fix the problem. In the "deference" cases, like *Metromedia* (billboard regulation) and *Friedman* (optometric trade names), the court uncritically accepted the local rationale for less speech and put a heavy burden on the consumers or advertisers challenging the regulation to refute a presumption of validity.

But even given the resulting schizophrenia of the commercial speech decisions, the court had never upheld a total ban of a category of advertising until *Posadas.*

Justice Rehnquist wrote the opinion, joined by Justices Burger, O'Connor, White and Powell. Rehnquist has never liked the commercial speech doctrine, and he dissented in the early cases which first recognized its existence under the First Amendment. In *Posadas,* he finally found a 5-4 majority for watering down the *Central Hudson* test in a way that may keep advertising relegated to a narrowly protected status under the Constitution.

The opinion is a classic revisionist effort. Areas formerly of greatest doubt under *Central Hudson* are confidently resolved (e.g., found to be "clear beyond peradventure"), with little analysis of earlier cases and with extreme deference to the skimpy and slightly cockamamie Puerto Rican legislative rationale.

The opinion strongly suggests that the court had a sharp eye on the potential impact of the decision on tobacco and alcoholic beverage advertising issues. Rehnquist goes to some pains to cite a 1971 District Court decision, upholding a ban of broadcast advertising of cigarettes, as support for the broad—and brand new—constitutional proposition that a flat advertising ban can qualify as "no more extensive than necessary to achieve the government's interest." In the same breath, he cites a 5th Circuit case upholding a checkerboard ban of liquor advertising in Mississippi. Both decisions had been much criticized and were considered to be of doubtful validity under pre-*Posadas* First Amendment theory.

However, direct application of *Posadas* to proposed cigarette and alcoholic beverage advertising limits is still problematic. The facts of *Posadas* are narrow and quite special. The justices may have been more willing to defer to local legislative assumptions about a problem they know little about (i.e., gambling habits in Puerto Rico) than one which is the subject of heated national debate and controversy.

Also, in spite of its weak application in *Posadas,* the four-part *Central Hudson* test survives, and a strong majority of justices has, for example, shown repeated hostility to rationales asserted to support lawyer ad regulations—a subject with which they have professional familiarity.

In the meantime, however, there is no doubt that *Posadas* represents a substantial diminution of commercial speech—and First Amendment—doctrine. ☐

DeVore, a partner in the Seattle law firm Davis Wright & Jones, is a noted First Amendment lawyer who wrote ANPA's amicus curiae brief in Posadas de Puerto Rico Associates v. Tourism Company of Puerto Rico.

PROFILE

Tim Giago

A voice of the American Indian

BY MARCIA RUTH
presstime staff writer

Nawica Kjici.

Literally translated, the name means "He Stands Up for Them," or simply, "Defender." Appropriately, elders of South Dakota's Oglala Sioux Tribe selected this name for Tim A. Giago Jr. after he founded The Lakota Times in 1981.

By then, he was already established as the lone Indian voice in the mainstream media with his "Notes from Indian Country" column, now syndicated in 14 newspapers. Giago soon amplified that voice from his home on the Pine Ridge Reservation by turning The Lakota Times into the largest weekly in South Dakota and the largest independent, Indian-owned paper in the United States.

Then, to help other Indians develop newspapers, Giago in 1984 became the driving force behind formation of the Native American Publishers Association, which now has 56 members representing about 30 Indian newspapers.

"Clearly, he is a man with a vision," says Gerald M. Sass, vice president/education for the Gannett Foundation, which has been a major source of funds for the new organization.

Combining passion with pragmatism, Giago, 52, now says his long-range plan is to "start a chain of Indian newspapers—of independent, totally self-supporting newspapers." With regular media that "could care less" about Indian culture, and with "98 percent" of the Indian media under tribal ownership, such independent papers are the "only way we (Indians) are going to get a voice in America," he says.

Even when seeking help, Giago's goal is self-sufficiency: "We don't need a handout," he says. "We need a hand up."

That attitude and a "clear" writing style were the things that first attracted James Carrier, then news editor of the Rapid City (S.D.) Journal, to Giago. Carrier convinced Giago to start writing the "Notes from Indian Country" column in 1979, and the Journal became the first paper to carry the feature. As the column gained in popularity, Carrier was impressed by Giago's ability to communicate both with Indians and with the largely white readership of the 32,000-circulation Journal. Giago can "float between the two worlds," says Carrier, now a roving reporter for The Denver Post.

Tim Giago's ability did not come easy.

Like many Indian children of his generation, he was sent to a boarding school at the age of 6 to be raised away from his tribe until he was 15. In a slim book of poems written later, but "from the perspective of an 11- or 12-year-old," he described how Indian children were beaten for speaking their own languages at the Holy Rosary Mission School in Pine Ridge, S.D. In retrospect, he says they were punished for what he terms "the aboriginal sin" of being born Indian instead of white.

After high school, Giago took a succession of jobs, joined the Navy for six years, then emerged to "find out that while everything was equal in the service, it's not that way in civilian life."

Courses at San Jose (Calif.) City College and at the University of Nevada at Reno were followed by still more jobs, until he abandoned "trying to find myself" and returned home with the conviction that "there's a lot of things I could be doing on the reservation."

It was while trying to organize an Indian business association that he discovered the need for a "voice" to enable Indians to communicate among themselves as well as with the white establishment. "The powers that be are not influenced by anything except a very strong press," he says.

So he decided to join the Fourth Estate. He started a television talk show on Indian topics in 1976, then turned to writing his column about two years later. The column led to a brief stint as a reporter at the Rapid City Journal, then a job as assistant regional editor at the Farmington (N.M.) Daily Times, which he left to found The Lakota Times in 1981. All the while, he continued to write his column.

In 1985, Giago won The Baltimore Sun's fifth annual H.L. Mencken Writing Award for his column. "Notes from Indian Country demonstrates compelling emotion and compassion. The writer conveys some of the pain and unfairness that Indians on reservations live with, without being . . . overly sentimental."

Giago continues to write his weekly column, but most of his energy is poured into the task of getting out his newspaper. A family commitment from the beginning, The Lakota Times' managing editor is his wife, Doris, also an Oglala Sioux and a former teacher at Red Cloud Indian School.

As editor and publisher, he supervises the staff of 10, writes the editorial page and often drives the more than 300 miles round trip to have the paper, which averages 20 pages, printed. The paper's office is in Martin, S.D., which is on the Pine Ridge Reservation where the Giagos live with their two young children, Tim (Walking Thunder Man) and Marie Therese (She Stands in the Four Directions).

Despite the family's close ties to the tribe and the reservation, The Lakota Times has, on occasion, been opposed by the tribe. After the paper exposed mismanagement in tribal government, Giago's tribe attempted to set up a competing newspaper.

And when Giago opposed leaders of the American Indian Movement for what he termed their overly militant stands and unnecessarily violent actions, his office was attacked on several occasions with shotguns and explosives.

"People were afraid," he says, but after issues were aired in print, "fears started to diminish"—another example, he maintains, of the need to include many viewpoints in both the Indian and the mainstream press. "I read William Raspberry; I read Ellen Goodman; I read George Will," he says. "All of these opinions give you an idea of what America is about. The Indian view is just one (more) view that should be included." ☐

REGULATIONS

Hearing urged on Detroit JOA

If Attorney General Edwin Meese III takes the advice of his department's top antitrust attorney, it will be many months before he makes any decision on whether the Detroit Free Press and The Detroit News may join forces under a joint operating arrangement.

An assistant attorney general recommended July 23 that a public hearing be held in Detroit to gather more evidence on the newspapers' contention that the Free Press is a "failing newspaper" and in need of a JOA to preserve its independent news and editorial voice. The Free Press has been owned by Knight-Ridder Inc. since 1940; Gannett Co. acquired the News earlier this year.

Although Douglas H. Ginsburg did not recommend outright denial of the application, which he could have, he concluded that a JOA "does not appear necessary" on the basis of the record to date.

"At this time," he said, "the record shows that Knight-Ridder made significant investments in the Free Press that, while not meeting all objectives, resulted in gains in circulation relative to the News, gains in advertising revenues (measured in constant dollars), and the promise of more benefits from a newly expanded printing plant. Therefore, without further evidence that the economic choice facing Knight-Ridder was much bleaker than these objective facts indicate, approval of the application does not appear necessary to prevent the loss of the Free Press as an independent voice."

Knight-Ridder referred calls for comment to William J. Keating, chief executive officer of the Detroit Newspaper Agency, which has been formed to operate the proposed JOA.

Keating called the recommendation for a hearing "consistent" with the Antitrust Division's action in the last two JOA applications, in Cincinnati and Seattle. In both cases the applications were ultimately approved. (On two applications prior to those, in Anchorage and Chattanooga, the Antitrust Division recommended approval without a hearing.)

Of the report itself, Keating said: "We come to some different conclusions upon the facts as we see them." The parties will analyze Ginsburg's findings and prepare a reply for submission to Attorney General Meese in late August, he said.

In his 70-page report, Ginsburg devoted a great deal of attention to circulation trends of the two papers, predicting at one point that if current trends were to continue there is a "strong possibility" that the Free Press will, for the first time, take the lead in daily circulaton when Audit Bureau of Circulations figures for the six months ending Sept. 30 become available.

Another key point was that the operating losses of the Free Press—almost $40 million in losses in the last five years—were sustained in an effort to achieve "dominance."

"When a newspaper owner consciously and deliberately decides to sacrifice short-term profits in a quest for greater long-term profits, indeed potential monopoly profits, should a JOA be available as a "'second best' alternative?" Ginsburg asked.

The Newspaper Preservation Act of 1970, which authorizes JOAs and the procedure for seeking them, states that to qualify, at least one newspaper must be a "failing newspaper." "I have concluded that the applicants have not yet sustained their burden of proof of showing that the Detroit Free Press is a 'failing newspaper' within the meaning of the Act. . . .," Ginsburg said. But he continued: "One cannot conclude that this burden is incapable of being met."

To ascertain if the Free Press meets the requirements of a "failing newspaper," he said, these questions should be considered:

- "Whether in light of current circulation trends, including larger gains by the Free Press than by the News in the primary market area, the Free Press is likely to achieve further growth in the market and improve its competitive posture"
- "Whether these circulation trends, as well as the (upscale) demographic characteristics of the Free Press readers, indicate that advertising revenues are likely to increase"
- "Whether, in light of growing circulation and increasing advertising revenues, the Free Press is in the so-called 'downward spiral,' the traditional plight of a failing newspaper . . . "
- "Whether in light of Knight-Ridder's decision to fund Operation Tiger (a long-range plan to improve market position) and the $22.3 million plant expansion, the benefits of which have not been fully realized, applicants can sustain their burden of showing that the Free Press probably would be closed in the absense of the JOA"
- "Whether Detroit can support only one profitable newspaper."

Ginsburg also questioned the "almost unseemly haste" in which Knight-Ridder and Gannett considered the possibility of a JOA. He said the matter was considered even before Gannett completed its acquisition of the News in February.

Gannett Vice Chairman Douglas H. McCorkindale told **presstime** the company "did not have any understanding with Knight-Ridder" prior to the purchase about a possible JOA.

Comments on the Ginsburg report and on any other filings that have been submitted to the Justice Department on the JOA application may be filed until Aug. 22 [**presstime**, July 1986, p. 64]. After that, Meese will decide whether to approve the application, deny it or appoint an administrative law judge to conduct a hearing. —*Margaret Genovese*

REGULATORY NOTES

- The Federal Trade Commission July 3 asked for public comment on proposed regulations implementing the new law requiring **health warning statements** in print advertisements for "smokeless tobacco" products such as snuff, chewing tobacco and plug tobacco.

The law requires the warning statements to appear in a circle-and-arrow format. The proposed regulations list the minimum diameter of the circle and the size of type that must be used for various size advertisements. Comments are due Aug. 4. The law takes effect next Feb. 27 [**presstime**, March 1986, p. 42].

- The Federal Communications Commission is reviewing public comments on a petition that it adopt a rule prohibiting a single entity from **owning cable TV systems** serving more than 50 percent of subscribers in any one state or more than 25 percent of subscribers in the nation.

- Patricia Diaz Dennis was **sworn in as an FCC commissioner** June 25 for a term to expire June 30, 1989 . [**presstime**, May 1986, p. 62].

LEGISLATION

LEGISLATIVE NOTES

- The House Education and Labor Committee June 25 approved a bill that would require the federal government to **notify workers who have an increased risk** of developing diseases because of their exposure to hazardous substances.

HR 1309 would establish a nine-member risk assessment board. The Secretary of Health and Human Services would make the notifications. A similar bill, S 2050, is pending before the Senate Labor and Human Resources Committee.

- ANPA and eight other media organizations opposed a Senate-passed measure that would impose new **penalties on people convicted under espionage laws**, including forfeiture of any property used to commit the crime.

In addition to applying to "classic acts of espionage," the penalties would apply to the law under which Samuel L. Morison was convicted for providing photographs to a British defense magazine [**presstime**, May 1986, p. 59], and to the law under which CIA Director William J. Casey has threatened to prosecute the press [**presstime**, June 1986, p. 68], the groups said.

- ANPA has urged a Senate subcommittee considering a bill imposing economic sanctions on South Africa to do nothing that might make it more difficult for the press to **gather news in South Africa** and for news to be distributed there.

In a July 10 letter to the Subcommittee on International Finance and Monetary Policy, the Association noted, for example, that one provision in S 2498 would prohibit deposits in South Africa banks. "Any U.S. citizen assigned as a foreign correspondent in that country would find it most difficult to function on a permanent basis using only travelers checks," the letter stated.

- The House Subcommittee on Health and the Environment scheduled a second hearing on **tobacco advertising** for Aug. 1 to listen to opponents of advertising restrictions. Proponents of restrictions testified at a July 18 hearing.

COURTS

COURT BRIEFS

- Over three decades, through 1984, the **average damage award in a libel case** increased nearly 16 times. According to the Libel Defense Resource Center, the average award in the period 1954-64 was $128,933; from 1980-84 it was $2,043,702.

"Even adjusting for inflation, the data strongly suggest that [the Supreme Court decision in *New York Times v. Sullivan* in 1964] and subsequent cases . . . have completely failed in their mission to put a brake on runaway damages that would threaten to chill freedom of expression," said LDRC General Council Henry R. Kaufman at a libel conference sponsored by the Gannett Center for Media Studies.

- In another study, LDRC **examined the records of** Justice William H. Rehnquist, nominated as chief justice, and U.S. Court of Appeals Judge Antonin Scalia, nominated to the Supreme Court. In 25 libel and privacy cases in which either wrote or joined in a decision or statement, none favored the media or libel defendants, according to LDRC [**presstime**, July 1986, p. 62].

Confirmation hearings on the Rehnquist nomination were scheduled to begin July 29 in the Senate Judiciary Committee.

- U.S. District Judge Thomas G. Hull July 8 **dismissed a $26-million lawsuit** filed by a political candidate against a Tennessee newspaper that refused to accept his political advertisement.

Hubert D. Patty, a candidate for county executive for Blount County, claimed that the action by The Daily Times of Maryville violated the First and Fourteenth amendments to the U.S. Constitution, the state constitution, a federal antitrust law, and a federal voting rights law.

- U.S. District Judge Samuel P. King ordered Hammer DeRoburt, president of the Pacific island nation of Nauru, to **pay attorney fees** incurred by The Pacific Daily News of Guam in successfully defending itself against DeRoburt's libel suit [**presstime**, Dec. 1985, p. 38].

- On a 2-1 vote, the 2nd U.S. Circuit Court of Appeals May 27 **upheld the securities fraud conviction** of former Wall Street Journal Reporter R. Foster Winans [**presstime**, Sept. 1985, p. 36].

You'll have to wait to go up into space

The National Aeronautics and Space Administration has indefinitely postponed plans to include a journalist on a space shuttle flight. Shuttle flights are not expected to resume before 1988.

A 15-member panel was to have begun work this fall to select five finalists from 40 regional nominees [**presstime**, June 1986, p. 68].

The selection process was administered by the Association of Schools of Journalism and Mass Communication. ☐

IRE publishes index

Investigative Reporters & Editors has published an annotated index of the thousands of investigative stories in the organization's files. *The Investigative Journalist's Morgue* is a 188-page, softcover book available for $10 plus $1 postage and handling from IRE, P.O. Box 838, Columbia, Mo. 65205; (314) 882-2042. ☐

Postal Rate Commission urges Congress to scrutinize in-county subsidy

Some newspapers' mail rates ultimately could increase as a result of a new Postal Rate Commission report urging Congress to take a "closer look" at postal subsidies.

The commission said in-county mail rates that apply to some newspapers possibly are being used for purposes other than Congress intended when establishing postal subsidies.

The panel said such in-county rates historically have applied to mail in "rural" areas. But the term "rural" is "too limited for today's in-county users," it said. "The bulk of current in-county mail pieces are entered at central city post offices of large (population over a million) metropolitan areas."

Comments were contained in a "preferred rate study" the commission recently prepared at the request of Congress.

The commission noted that congressional concern over use of the in-county rate stems partly from the practice of large, national magazines designating their "known office of publication" in a county where a large number of copies were mailed—even though their main offices are elsewhere. For example, the commission cited a General Accounting Office report that six national publishers had designated Los Angeles County as their office of publication and hence lowered their costs by increasing their use of the mail subsidy.

To curb that and other practices, Congress this year denied eligibility for the in-county rate if the number of copies of an issue distributed in the county of publication is less than half the issue's total paid circulation. The limitation does not apply if the issue's total paid circulation is less than 10,000 [presstime, May 1986, p. 64].

Elsewhere in the report, the commission recommended changing the way "overhead" costs are calculated for mail that receives a subsidy. The commission suggested that as a way to put less strain on federal coffers.

The commission went so far as to suggest eliminating most of the federal "revenue forgone" appropriation—the one that funds the postal subsidy—and replace it with money generated from other classes of mail. "Virtually all costs of the Postal Service could then be recovered from mail users rather than taxpayers, and revenue forgone could be substantially eliminated as a federal government expense," the commission told Congress.

As part of the recommendation, it said Congress should change the rate-making process so that the commission would take into account the "public benefit of organizations eligible to use these (subsidized) subclasses."

The current revenue-forgone appropriation is $716 million, and Congress' goal for next fiscal year is to freeze that amount. Of the total this year, 78 percent goes to third-class, bulk, non-profit mail. Second-class, in-county mail takes up 7.7 percent, and second-class non-profit, 7.1 percent. Other categories are "free for the blind" (3.9 percent), fourth-class library rate (3 percent), second-class "classroom" rate (0.2 percent) and "science of agriculture" (0.1 percent). ☐

USPS issues more TMC rules

The U.S. Postal Service last March clamped down on the practice of mailing total-market-coverage publications via second-class mail. And it turned the screws even tighter in mid-July by issuing new rules that threatened the practice by a few papers still engaging in it.

Under the new rules, published in the Federal Register July 15 and effective July 20, eligibility for second-class TMC status hinges on whether a large number of regular issues also are mailed.

Specifically, the rules provide that a TMC publication cannot travel under a newspaper's second-class permit if the number of non-subscriber copies "is more than twice the number of copies of any other single issue of the parent publication distributed through the mails during the same week."

If the publication cannot qualify, it must secure its own second-class permit. That would be virtually impossible because of numerous other rules governing second-class, not to mention a host of separate-permit rules that took effect June 8 [presstime, June 1986, p. 64].

Tonda F. Rush, ANPA assistant general counsel, said in late July the Association was studying the impact of the new rules and likely will comment unfavorably on them by an Aug. 14 deadline.

Meanwhile, ANPA in late July was preparing to file a brief in its federal court appeal over the first set of restrictive, second-class TMC rules. The case is in the 4th U.S. Circuit Court of Appeals, Richmond, Va. ☐

POSTAL NOTES

- A proposal to restore a portion of a **newspaper-related postal subsidy** eliminated earlier this year was defeated in a House and Senate conference committee.

The money would have been used to subsidize mailing fewer than 5,000 copies of a second-class publication to counties adjoining the county of publication. The rate was known as "limited circulation" [presstime, July 1986, p. 66].

- The U.S. Postal Service said it will ask the Postal Rate Commission for a recommendation on enlarging slightly the minimum size allowed for third-class mail pieces in the carrier-route presort category. The change, advocated by ANPA, would **accommodate many newspapers' total-market-coverage publications** [presstime, May 1986, p. 64].

ANPA Assistant General Counsel Tonda F. Rush said that because the change would have no effect on rates for other mailers, the commission likely will go along with the idea. New size restrictions could be in place by the end of the year, she said.

- A **rate increase is unlikely** for at least another year and a half to two years, according to Postmaster General Albert V. Casey. The reason is that USPS reported a $115-million surplus for the quarter ending June 6, and postal authorities predict a $414-million profit this fiscal year.

USPS attributed the bright financial picture to cost-cutting measures largely in the reduction of postal worker overtime.

- Postmaster General Casey is scheduled to **end his eight-month stint** this month. There was no word on a successor by late July.

Casey was named to the top USPS post in January to replace Paul N. Carlin, who was fired by the postal Board of Governors [presstime, Feb. 1986, p. 40].

Carlin sued in federal court to get his job back, but the case was dismissed.

Legislatures chip away at newspapers' tax exemptions

Recent state tax developments around the country leave newspapers with mixed results in efforts to retain tax exemptions. Legislatures in two states voted to take away sales tax exemptions from newspapers, while in two other states a court and a tax appeals board upheld exemptions.

On July 1, newspaper circulation sales in Louisiana became subject to a temporary 1-percent tax. The state Department of Revenue estimated the tax will raise more than $800,000 in one year to help the state offset a projected budget shortfall caused by the decline in oil and gas prices.

Newspaper circulation previously had been exempted entirely from the state's 4-percent sales tax.

Technically, the state legislature suspended part of that exemption for one year. All other exemptions were similarly affected. "It was an across-the-board suspension, so we did not initiate any effort to fight it," said Jill Wilson, manager of the Louisiana Press Association.

Among the other exemptions suspended was one for certain raw materials used by printers.

In another move with consequences for newspapers, the legislature gave municipalities and parishes the power to levy an occupational license tax. Among those specifically mentioned as subject to tax are editors, publishers, printers and lithographers.

An amendment that would have deleted those four categories was narrowly defeated in the Senate, according to John D. Koch, general counsel for the Louisiana Press Association.

The tax is 0.1 percent of annual gross receipts, with a minimum tax of $50 and a maximum of $2,000. It is levied on businesses, not individuals.

Also, proposals to tax the news media are pending in two Louisiana cities.

In New Orleans, a proposal for a 2.5-percent sales tax on advertising is before the City Council. Twice deferred, the matter is on the agenda for Aug. 7. In Alexandria, the mayor's request for a 1-percent sales tax on advertising is "in limbo," according to Jim Butler, managing editor of the Alexandria Daily Town Talk. Because Mayor John Snyder has decided not to seek re-election, Butler said, "I think the mayor's proposals will just fall by the wayside."

In other recent state tax developments:

- In Florida, Gov. Bob Graham June 30 signed a bill that would repeal sales tax exemptions for newspaper advertising and circulation effective July 1, 1987, unless legislation is passed during the 1987 legislative session reinstating them.

The newspaper exemptions are among a large number of exemptions facing a legislatively mandated "sunset" [**presstime**, Feb. 1986, p. 42]. A study commission will be appointed to review the exemptions and report back to the Legislature next April.

- In Massachusetts, the Supreme Judicial Court has ruled that the state's sales and use tax exemption for machinery and materials used in publishing newspapers covers certain items involved in the prepress process. Among them are video display terminals, computers and phototypesetters.

The Lowell Sun Publishing Co. and the Massachusetts Newspaper Publishers Association had challenged 1982 regulations that limited the exemption to items used in the printing process.

- In Montana, the State Tax Appeal Board ruled 2-1 on July 1 that newspapers' inventories of newsprint and ink are exempt from personal property tax because they are used to produce a "marketable product."

The state's Department of Revenue had maintained that newsprint and ink were taxable as supplies used in the delivery of a service.

The decision resolved disputes involving two daily newspapers, The Billings Gazette and The Daily Inter Lake of Kalispell. County tax assessors challenged the newspapers' use of the exemption in 1985 after attempts to pass a tax on newsprint and ink failed in the state Legislature.

- The U.S. Supreme Court has agreed to hear a case concerning Arkansas laws that exempt newspapers and some speciality publications from the state sales tax while not exempting general-interest magazines. Arkansas Writers' Project Inc., publisher of Arkansas Times Magazine, has appealed a ruling by the Arkansas Supreme Court upholding the statutes. ☐

Newspaper deliverers declared exempt from seat belt laws in additional states

Four of the 10 states enacting mandatory seat-belt usage laws this year specifically exempted people delivering newspapers. Those states are Florida, Kansas, Ohio and Tennessee.

California and Connecticut previously enacted laws with newspaper-delivery exemptions [**presstime**, Aug. 1985, p. 39].

By late July, 26 states and the District of Columbia had seat-belt statutes, according to the National Highway Traffic Safety Administration.

Several states without specific newspaper exemptions had general delivery exclusions. Michigan Attorney General Frank J. Kelley recently ruled that an exemption in that state's law for a "commercial vehicle . . . which makes frequent stops for the purpose of pickup or delivery of goods or services" applies to rural newspaper carrier vehicles.

A provision in the law in Washington state allows its Commission on Equipment to exempt operators of vehicles required to make frequent stops.

Paul R. Conrad, executive director of Allied Daily Newspapers, said he has received verbal assurance from a commission official that exemptions will be given to drivers on rural newspaper-delivery routes. Tacoma, Wash.-based Allied is a regional association for newspapers in the Pacific Northwest. ☐

Pennsylvania adopts open meetings law

A new open meetings law will take effect in Pennsylvania in January.

The law, signed July 3, circumvents a 1977 court ruling that only formal votes of governmental boards had to be taken in open session. Under the new law, "deliberations" leading up to those votes also must be open to the public.

The Pennsylvania Newspaper Publishers Association lobbied for the new law, which passed both houses of the Legislature unanimously. ☐

ANPA urges Senate panel to retain curbs on phone companies' electronic publishing

The infant electronic information industry still needs protection from AT&T and its spun-off Bell operating companies, ANPA said in a 132-page document presented to the Senate Commerce Committee July 17.

"Domination of electronic information services by the BOCs (Bell operating companies) and AT&T, as a result of their control over critical transmission facilities, is a very real danger that threatens the diversity of information sources fostered by First Amendment policies," the Association said.

The "Modification of Final Judgment" that divested the BOCs from AT&T "contains provisions to implement the diversity principle, which provides that monopoly telephone companies should not be allowed to own or control the information which flows over their transmission facilities," ANPA noted. That diversity principle "must be retained in any legislation affecting the MFJ to ensure the development of a competitive, significant marketplace for electronic information services," the Association said.

The Commerce Committee has jurisdiction over the bill introduced in June by Senate Majority Leader Robert J. Dole (R-Kan.) to shift jurisdiction over the MFJ from U.S. District Judge Harold H. Greene to the Federal Communications Commission. As currently written, S 2526 would not embody the diversity principle [presstime, July 1986, p. 69].

Although no hearings have been scheduled on the legislation, Dole has said he will seek passage before the end of this year. Commerce Committee Chairman John C. Danforth (R-Mo.) invited "interested parties" to submit comments, which are now being reviewed by committee members and staff.

Among ANPA concerns is that FCC Chairman Mark Fowler favors lifting restrictions on the phone companies, freeing them to provide electronic information services over their own transmission lines. Under the MFJ, AT&T is barred from such activities at least until August 1989. The BOCs are barred indefinitely, or at least until they can prove that their entry into the marketplace would not adversely affect competition.

ANPA and a host of firms in the telecommunications industry have long argued that if the telephone companies are allowed to own and operate innovative electronic information services, they will squeeze out competitors.

> *"Domination of electronic information services by the BOCs" is a "danger that threatens the diversity of information sources."*

The Association told the Senate the Bell companies can do this by:

- Providing service to their own electronic information systems more quickly than to competitors
- Designing new equipment to fit the needs of their own affiliates rather than those of competitors
- Providing their own affiliates with information, such as subscriber lists and maintenance and operating statistics and plans, which would be denied to competitors
- Introducing technical standards that would favor their own companies and impede competitors.

ANPA cited evidence submitted by the Justice Department in the antitrust suit that led to the MFJ that AT&T had used its monopoly power to discriminate against competition. AT&T allegedly adopted restrictive tariffs for competitors, refused to provide necessary services to competitors and prohibited the connection of competitors' equipment to the telephone network.

When he introduced his bill, Dole claimed that the FCC has the "staff and the technical resources for effective, continuing oversight" to make sure such things do not happen. But ANPA maintained in its comments that the FCC has no experience in antitrust matters, while Judge Greene is an expert in the field.

ANPA issued a "legislative alert" on June 20 to member newspapers urging them to express their views on the pending legislation to their senators as quickly as possible. "The diversity principle is under assault," ANPA said. "It is extremely important that your senator hear your views on whether or not the diversity principle should remain law." ☐

TELECOMMUNICATIONS NOTES

- As expected, two **regional Bell companies**, Nynex Corp. and Ameritech Corp., have joined forces to **publish a magazine** for families on the move.

The first edition of the free quarterly magazine, Changing Homes, was distributed nationwide June 1 to 1.5 million families who have recently moved, said spokespersons for the companies.

Nynex and Ameritech said about 1.5 million families move each quarter. Each newly located family will receive four issues. An additional 1.5 million families will be added for each edition during the first year.

Telephone and utility companies, who have the latest information on new arrivals, will distribute the magazine. It will contain national generic articles, such as tips on home safety and decorating, and local information such as maps, commercial services available and mass transportation schedules [presstime, March 1986, p. 16].

- Dow Jones Information Services announced a new **service that discloses stocks held and traded by insiders**—a company's officers, directors or shareholders with more than 10 percent of a class of stock.

The service, called the Insider Trading Monitor, is available on Dow Jones' News/Retrieval online information system. It offers stock-trading information on 60,000 insiders at 6,500 publicly held U. S. firms.

- The **privacy** of electronic mail, computer transmissions, paging devices and cellular telephones would be protected under a bill passed by the House in June.

The measure would make it a crime for an individual to disclose, alter or gain improper access to electronic communications.

The Senate is considering a similar bill.

- Scripps Howard **acquired 100 percent of TeleScripps Cable Co.** with the purchase of the 50-percent share held by Tele-Communications Inc.

TeleScripps operates cable systems in eight states. With the purchase, Scripps Howard becomes one of the 25 largest cable operators in the United States.

Foundation workshop develops literacy project guidelines

Guidelines for starting three types of literacy projects emerged from a two-day workshop for newspaper personnel conducted by ANPA Foundation.

"The guidelines represent the combined efforts of 16 newspaper representatives" and "a good start for the handbook the Foundation will be developing over the next few weeks," said Carolyn Ebel, coordinator of the Foundation's literacy program. The handbook, giving newspapers information on designing a literacy campaign, is scheduled to be available sometime this fall.

In the meantime, the guidelines will be sent to ANPA-member newspapers this month along with other literacy materials, including camera-ready ads and cartoons, which may be used during "Literacy Month" this September. The cartoons focus attention on the importance of reading and writing as well as on solutions to the problem of illiteracy. The ads urge newspaper readers to encourage those who cannot read to seek help.

Participants in the July 9-10 workshop at The Newspaper Center in Reston, Va., identified three kinds of newspaper literacy projects: those stressing community involvement, those involving newspaper employees and those in which the newspaper serves as catalyst for fund-raising. They compiled a set of guidelines for each, consisting of purposes/rationales and suggested courses of action.

The Foundation's literacy program has been officially named "Press To Read." Foundation Chairman and President Edwin L. Heminger, editor and publisher of The Courier of Findlay, Ohio, said the slogan "signifies the spirit of newspaper efforts to help America become literate."

Heminger added: "Through the Newspaper in Education program, our industry has had a longstanding commitment to reading instruction for children and adults. The new program is a logical outgrowth of NIE and aims to help newspaper publishers expand or custom design literacy projects in their own communities.

"'Press To Read' will give support and counsel to a variety of local and national literacy programs in an all-out attempt to raise public awareness of this very serious national problem." ☐

Discussing literacy efforts during a workshop break are (from left) Betty L. Sullivan of USA Today's Classline program, Jeffrey J. Rubin of The Washington Times, Judith A. Koloski of the American Association for Adult and Continuing Education, and E. Joan Abeles of the Canadian Daily Newspaper Publishers Association.

Survey charts steady NIE growth

The number of U.S. daily newspapers with Newspaper in Education programs has grown nearly 10 percent since 1983.

According to a new survey, conducted by ANPA Foundation and the International Newspaper Promotion Association, 654 U.S. dailies reported NIE programs, a 9.4-percent increase from the 598 that reported them in the last survey [presstime, Sept. 1984, p. 41].

The latest survey was conducted by mail between August 1985 and January of this year. Follow-up telephoning took place through April.

For the first time, the survey covered some dailies in Canada and several other countries. In all, 702 dailies reported NIE programs, or 73 percent of those surveyed.

The survey also found that NIE programs have expanded in size since 1983. The number of newspapers with 100 or more participating schools rose from 21 percent to 27 percent of the total. Also on the rise were percentages of newspapers reporting 100 or more participating teachers, 6,000 or more participating students, and 5,000 or more copies distributed annually.

One of the other developments noted was that fewer NIE-sponsoring newspapers are providing newspapers or curriculum materials free of charge. That number dropped from 20 percent in 1983 to 12 percent. Seventy-six percent provide the newspapers at half the newsstand price; 7 percent provide them at less than half the newsstand price; and 5 percent have other pricing arrangements (such as half the home-delivery price). ☐

NIE instructor training seminar Oct. 20-23

ANPA Foundation will hold a Newspaper in Education Instructor Training Seminar Oct. 20-23 at Airlie House near Warrenton, Va.

The seminar, designed to help NIE personnel and educators conduct effective teacher workshops, will be conducted by Edward deRoche, dean of the School of Education at the University of San Diego, and Linda B. Skover, assistant director of ANPA Foundation.

The $450 registration fee includes room, board and instructional materials. For more information, contact Rose Stormer of the Foundation at The Newspaper Center, Reston, Va. ☐

Books

The 'Big Four' among wire services

Some critics accuse Reuters, the Associated Press, United Press International and Agence France-Press of being "monopolizers, gatekeepers and perpetrators of a predominantly negative picture of the Third World," notes Jonathan Fenby.

Are these barbs justified? Not necessarily, says Fenby, a former foreign correspondent for Reuters and currently head of the Bonn bureau of The Economist magazine. Presenting both sides of the controversy, he concludes that in most instances the allegations against the wire services don't hold up. In *The International News Services: A Twentieth Century Fund Report*, he also chronicles the emergence of "The Big Four" and their expansion into non-newspaper media.

The 276-page, hard-cover book is available for $19.95 from Schocken Books, 62 Cooper Square, New York, N.Y. 10003.

Making a case for journalism ethics

Truthtelling, justice, freedom, humaneness and stewardship—these bulwarks of Judeo-Christian civilization are vitally important to the establishment of a journalistic ethics system, according to Edmund B. Lambeth.

Lambeth, director of the University of Kentucky School of Journalism, draws upon hypothetical and actual reportorial decision making to state his case for a contemporary journalism code of ethics.

Committed Journalism: An Ethic for the Profession is available in hard cover for $25 and in soft cover for $8.95 from Indiana University Press, 10th and Morton streets, Bloomington, Ind. 47405.

Advising journalists on libel and privacy

The Journalist's Handbook on Libel and Privacy by Barbara Dill is "a reference for reporters, photographers, editors and publishers."

Dill, formerly on the legal staff of The New York Times Co., leads seminars on prevention of libel and privacy suits. In this 264-page, hard-cover book, she covers the development of libel law, discusses case histories, and devotes a chapter to questions and answers on public records, "actual malice" and libel trials.

The handbook is available for $19.95 from The Free Press, 866 Third Ave., New York, N.Y. 10022. ☐

News Research

Readers found to spend less time with paper after a.m. conversion

BY GUIDO H. STEMPEL III

Conversion from afternoon to morning publication has become common in the newspaper field, but research into reader reaction to such changes has not. This makes a well-designed study by Galen R. Rarick and James B. Lemert, professors of journalism at the University of Oregon, of particular interest.

They interviewed 256 subscribers to the Eugene Register-Guard both before and after its conversion to morning publication in September 1983. Randomly selected respondents were interviewed by telephone the week before the change and again three to four weeks later.

Rarick and Lemert found that subscribers spread their reading time more across the day but spent slightly less time reading the morning Register-Guard than they had with the afternoon Register-Guard. Average time was 39 minutes for the morning paper and 45 minutes for the afternoon paper.

They also found that television news viewing dropped both in the morning and the early evening. The decline in morning news viewing might be expected as the result of the presence of the morning paper. The reason for the decline in evening viewing is not so obvious, but Rarick and Lemert suggested that perhaps reading the afternoon paper put people in the mood to watch TV news. The absence of the afternoon paper might affect that mood.

Half the respondents said they wished the Register-Guard would go back to afternoon publication, while 35 percent said they did not want it to do so and 15 percent had no preference. Only 2 percent canceled their subscription after the change, which probably was not much different from what would have happened if the Register-Guard had not changed its publication schedule.

The study is reported in the Winter 1986 issue of the Newspaper Research Journal.

• • •

How publishers, editors and reporters view reporter participation in decision making is the subject of an article in the Winter 1985 Journalism Quarterly.

Ted Joseph, a journalism faculty member at Virginia Commonwealth University, sent a mail questionnaire to 600 randomly selected daily newspapers and received responses from 325 (54 percent).

He asked about 34 specific types of decisions and found reporters agreed with both publishers and editors on how much reporter participation there should be in 27 of them. They differed, however, on how much reporter input there should be in decisions about how to cover a story, time needed, length, overtime, bylines, evaluation of editors and determination of the individual reporter's salaries.

Joseph also asked about existing practice and found that practice was closer to reporters' preferences than to editors' and publishers' preferences on how to cover, time needed, length and bylines. ☐

Stempel is distinguished professor of journalism at the E. W. Scripps School of Journalism at Ohio University, Athens, and editor of Journalism Quarterly. He is a regular contributor to **presstime**.

Minnesota survey yields mixed results on public support for free expression

Forty percent of Minnesotans think it is better to have the government suppress free speech than to risk undesirable behavior, according to a survey conducted by the Minneapolis Star and Tribune. At the same time, 56 percent said it is better for society to risk unwanted acts than to limit expression.

The survey was commissioned by Freespeech, a statewide organization formed by the Minnesota Newspaper Foundation to heighten public awareness of the value of the First Amendment.

Many people think the First Amendment "is OK if no one gets hurt," said U.S. District Judge Edward Devitt, a Freespeech official. But he warned, "If we want the First Amendment, we have to take the good with the bad, the bitter with the sweet."

The survey found that people most likely to express themselves in public are "far more supportive of free expression than people who don't speak out in public."

It also found that free-speech supporters tend to be better educated. Seventy-two percent of the respondents, however, did not know where free expression is mentioned in the U.S. Constitution. ☐

Defining Circulation Success in the Marketplace of the Future

Tom Holbein, executive vice president, Belden Associates, Dallas

Low recall of TV ads cited

"Down the Tube" is where most television advertising goes, according to Leo Bogart of the Newspaper Advertising Bureau.

Presenting the results of new bureau research at a press briefing June 23, Bogart observed that over the past two decades, recall of TV commercials has dropped significantly. Furthermore, the shorter spots now being introduced, 15 seconds long, "will have a devastating effect on the memorability of television advertising," said the bureau's executive vice president and general manager.

In 1965, 18 percent of the adults surveyed could remember what was advertised in a commercial they had viewed less than five minutes earlier. In 1974, recall was 12 percent, and in 1981 and again this year, it was down to 7 percent.

Leo Bogart

Contrary to some studies, NAB research has indicated that shorter commercials get less recall than longer ones. And those in the middle of a block of commercials are less than a third as memorable as those at either end.

So with more short commercials packed tightly together, recall is further imperiled, the new study said. "It can be expected that if 15-second commercials should become as dominant as 30-second commercials now are, recall of the last brand advertised might be expected to drop to less than 4 percent of viewers."

The study was based on telephone surveys of 1,011 adults who were watching television in six cities: Albuquerque, Atlanta, Cleveland, Denver, Pittsburgh and Seattle. Interviewing was conducted from Jan. 27 through Feb. 5 between 6 p.m. and 9:30 p.m. Interviewing, editing and coding, weighting and tabulations were supervised by Burke Marketing Research Inc. of Cincinnati.

The question asked was: "Thinking about the very last commercial that was shown, can you tell me what product was advertised? And if you can remember the product or company, what brand was it?"

NAB "credited the answers as correct if the viewers recalled any commercial in the last 'pod' rather than just the very last one, and even if they mentioned the manufacturer or company rather than the specific brand or product," Bogart said.

> *"The people who watch television most are most immune to the advertising."*

In the press conference at which the new study was unveiled, he pointed to other findings that suggest television commercials often reach the wrong audience:

- "The people who watch television most are most immune to the advertising"; that is, the study found that recall was lowest among most frequent viewers. For example, people over 55 watch 29 percent more hours of TV than young adults (age 18-35), yet their recall of commercials is much lower—4 percent, compared with 11 percent among young adults.
- "TV overexposes your messages to a lot of people and underexposes them to a lot you ought to be reaching"; the top 20 percent of television viewers see 42 percent of the commercials, yet "the heaviest users of TV are the people most packaged-goods advertisers are least interested in—the older, less affluent, less educated members of the population."

In contrast, Bogart said, "newspapers concentrate on the best customers, the better educated and the more affluent, the very ones who are the lightest TV viewers."

The NAB executive cited previous research showing that TV sets often play to empty rooms or to people not paying attention. And he noted that the use of cable television, video cassette recorders and remote-control devices is growing [**presstime**, Oct. 1984, p. 11]. The combination of these developments plus the poor-recall factor are having a major, negative effect on TV advertising, Bogart said.

On the other hand, "77 percent of the people who read the paper will open the page that carries your ad," he said.

Meanwhile, according to a separate study, the costs of preparing television commercials are continuing to soar.

The report by the Association of National Advertisers shows that between 1984 and 1985, "the average cost of producing a single television commercial jumped 29 percent."

"For the first time," said the ANA report, "the average cost per commercial rose above the $100,000 level—to $124,930." □

Blair sale delayed by FCC

The sale of John Blair & Co. and its direct-mail subsidiary, Advo-System Inc., remained in limbo at press time, as the Federal Communications Commission was investigating whether the parent company's buyer was eligible to complete the transaction.

The buyer, Reliance Capital Group, in early July had bought 90 percent of Blair's outstanding shares of stock under terms of an offer favored by Blair's board of directors over another bid [**presstime**, July 1986, p. 58].

Under the Reliance plan, shareholders would receive $31 per share for 7 million Blair shares, plus debentures for the remaining 4.5 million shares.

But the FCC questioned whether Reliance violated FCC rules by not getting prior commission approval for a special trust. The trust would operate Blair during an FCC review of the transfer of Blair's television station licenses to Reliance.

Meanwhile, competing bidder Macfadden Holdings Inc. sought action by the Securities and Exchange Commission that would allow Blair shareholders to change their minds and back out of the Reliance deal. Macfadden said it was ready with a hostile bid to pay shareholders a higher price—$32 a share for 61 percent of Blair and a combination of $2 cash and preferred stock valued at $32 for each remaining share.

The sale of Advo was supposed to have been to yet another party, Warburg, Pincus Capital Partners. But that transaction was subject either to the Blair purchase by Reliance or to termination of the Macfadden purchase offer. □

Simmons and Scarborough decide to go separate ways again

The blending of two competing firms into Simmons-Scarborough Syndicated Research Associates was never a smooth marriage. Nonetheless, most observers were surprised by the sudden announcement of its "dissolution" July 17.

Interviews were to have started in a few months for the 1987 update of the 1985 Newspaper Ratings Study. Heralded as the largest syndicated study ever conducted of newspaper readership, it was intended to boost newspapers' share of national advertising by presenting advertisers and ad agencies with a single source of infomation on at least the top 50 markets [presstime, Aug. 1985, p. 42].

"It's a very awkward period," said Joseph E. Maschio, senior vice president/sales development and research for Million Market Newspapers Inc., a newspaper advertising-representative firm.

Meanwhile, Simmons Market Research Bureau and Scarborough Research Corp. announced they were each back in the business of conducting syndicated research for newspapers.

Newspaper executives active in establishing guidelines for the $2-million ratings study update expressed optimism that syndicated research will proceed.

"I suspect it will survive in one fashion or another because it is needed," said Gerald T. Silvers, president of the Newspaper Research Council, which worked with the International Newspaper Advertising and Marketing Executives in drawing up study guidelines. Silvers is research director of The Cincinnati Enquirer.

As things now stand, each of the independent firms says it will do syndicated research in at least the top 50 markets. Returning to the competitive situation that existed before the short-lived merger for the 1985 study, each firm will solicit its own clients. Though final reports will include data on non-subscribing newspapers, they will be available only to subscribers. Each firm will also try to sell its reports to ad agencies and ad-rep firms.

The breakup of the unified firm "matters only if the newspapers do not participate" in one of the two syndicated studies, said Larry Burkhart, chairman of INAME's Research Committee and co-chairman of the joint NRC/INAME Syndicated Research Task Force. He added: "I don't think we'll drop the ball. It's too important for our future."

Beyond the question of survival of syndicated research, "timing is a critical factor," said Jack Vernon, the other task force co-chairman. "One of the big guesses now is how quickly the companies will offer their reports," said Vernon, vice president of marketing for The New York Times Regional Newspapers Group. "They are talking about starting interviews in the fall, but no one is saying when the reports will be delivered."

Some predicted that the breakup will result in higher costs to the newspaper industry. "It can be very costly," said Burkhart, manager of general advertising for The Orange County (Calif.) Register. "Very few newspapers can afford to go with both." Before the merger, many newspapers bought both studies.

Others saw possible cost advantages in the long run. "It's going to complicate things a little bit, but in a competitive situation like that, it's good price-wise," said Philip E. Stout, who headed the Newspaper Advertising Bureau/INAME Task Force that spearheaded the original design for the syndicated study.

And some observed that the high cost of doing separate studies, which both firms cited as a prime reason for initiating the joint venture in 1984, might eventually eliminate one of the two.

Meanwhile, Scarborough has designated a director for its study, Jeffrey W. Rodgers, formerly vice president/marketing and research for the ad-rep firm of Cresmer, Woodward, O'Mara & Ormsbee. Simmons has not yet designated a project director. Interim questions should be addressed to Greg Appel, who was sales manager for the previous Simmons-Scarborough project. —*Marcia Ruth*

Planbooks available

The 1987 edition of the Newspaper Advertising Planbook is now available from the Newspaper Advertising Bureau.

For NAB-member newspapers, hardcover copies of the planbook cost $5.35 for up to 49 copies, $4.95 for 50-99, and $4.75 for 100 or more. Soft-cover planbooks are $4.25 in any quantity. There are additional costs for postage and imprinting of newspaper logos. Deadline for imprinting is Aug. 22.

Order from bureau's Creative Department, 1180 Avenue of the Americas, New York, N.Y. 10119. ☐

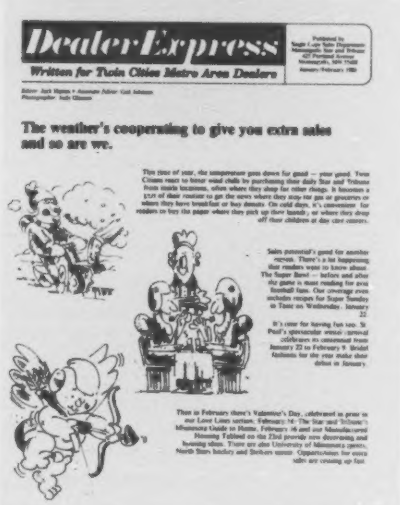
Dealers courted

Monetary rewards and gifts are fine, but to really bring out the best in your newsstand dealers, offer them fame and glory, too. That's the ticket at the Minneapolis Star and Tribune, which publishes a magazine, Dealer Express, dedicated solely to newsstand dealers such as convenience stores and hotel newsstands that sell the paper.

Dealer Express is a six-page, glossy publication that goes out every two months to some 1,350 dealers, said Associate Editor Gail Johnson. The magazine carries features about dealers. It also runs stories and photos of dealers who have won prizes and cash by displaying the Star and Tribune's latest promotional materials and by featuring the paper prominently, usually on the top rack.

There were 23 winning dealers in a recent month—those who had followed correct promotional guidelines. Each won a $25 prize, such as an umbrella or a windsock.

Perhaps the prime feature of the magazine is the back page, where dealers can—and do—write in to express their viewpoints and air complaints. The editors answer the letters, complaints and all, on the same page.



Dealer Express

Written for Twin Cities Metro Area Dealers

The weather's cooperating to give you extra sales and so are we.

Minneapolis dealers get bimonthly pitch.

No one has figured up the cost of the publication, Johnson said, but the Star and Tribune feels the expense is well worth it in terms of keeping the dealers happy and obtaining superlative displays at newsstands. Others feel Dealer Express is worthwhile too; the circulation depart-

with magazines

ment regularly mails out copies to 75 other newspapers throughout the country who have requested it.

Johnson said Dealer Express was launched in 1983.

A similar publication has been produced for a much longer period by Newsday of Long Island, N.Y. Dealer's Choice dates back at least to 1962.

But Peter J. Pacifico, assistant single-copy sales manager, says the publishing schedule in past years was erratic, with editions coming out sometimes only once every three months and occasionally only once a year.

Editor Ann Marie Ciervo said Dealer's Choice is now bimonthly and goes out to 6,000 dealers. The magazine carries news stories and features, and it promotes prizes.

Three dealers each month are chosen by lottery to be eligible for $1,000.

After their numbers have come up in the lottery, an anonymous checker visits each of the three stands to ascertain whether the monthly promotional devices and the newspaper are properly displayed. If all three stands have satisfactory displays, they split the $1,000; if only one or two are eligible they receive all or half the $1,000, accordingly. ☐

ANPA considers ABC proposal on indemnification

ANPA's Executive Committee will recommend to the ANPA Board of Directors at the September meeting that it approve a proposal by the Audit Bureau of Circulations on indemnification.

The audit bureau has been considering a bylaw under which members would waive any rights to recover from ABC any lost profits or other damages arising from publication of circulation figures.

In return for the waiver, newspapers will have the right to appeal to an impartial committee. Internal procedures must be exhausted before a member who still disagrees with the decision may file suit.

ABC considered the indemnification and appeals proposals in June [**presstime**, July, 1986, p. 75]. It is expected to consider the matter again at its Aug. 12-15 meeting in Vancouver, British Columbia.

If approved then, the audit bureau is expected to notify all members and give wide publicity to the proposals. Final passage is expected in November. ☐

Mexican journalists slain in incidents near U.S. border

Just south of the Texas border, three Mexican newspaper executives have been murdered in two separate incidents since mid-June.

In the most recent incident, the publisher and a columnist of El Popular were shot and killed July 17 in Matamoros, across the border from Brownsville, Texas.

A month earlier, the publisher of two other Mexican papers was gunned down in Reynosa, a border town near McAllen, Texas, and about 30 miles from Brownsville.

"These latest murders raise profound questions about the state of law and order in the region," the Inter American Press Association told Mexican President Miguel de la Madrid in a telegram. The message was signed by IAPA President Edward H. Harte, publisher of the Corpus Christi Caller-Times, and by Wilbur G. Landrey, chairman of the IAPA Freedom of the Press Committee and foreign editor of the St. Petersburg Times.

Following the Matamoros slayings of Publisher Ernesto Flores Torrijos and Norma Moreno Figueroa, a columnist and newly named assignments editor, The Brownsville Herald reported: "El Popular reporters and judicial police said they believed the journalists' killers were gunmen hired by some of the gangsters the newspaper has repeatedly attacked over the years."

The Monitor in McAllen did not speculate about the still-unsolved June killing of Jorge Brennes, publisher of El Rio in Rio Bravo and of Frontera in Reynosa. However, one of the Monitor's reporters, Scott Lind, was held briefly and tortured while on assignment in Mexico a year and a half ago. His assailants are still unidentified, said Monitor Editor Jack King.

According to published reports, as many as 26 Mexican journalists have been slain since 1971, including Manuel Buendia, a prominent columnist for the Mexico City daily, Excelsior [**presstime**, July 1984, p. 55]. ☐

WORLD PRESS NOTES

- ANPA has chastised the Nicaraguan government for its failure to restore the **right of La Prensa to publish**. The only major opposition newspaper in the country was closed "indefinitely" by the Sandinista regime in June.

In a statement by ANPA Chairman and President Alvah H. Chapman Jr., the Association said the paper should reopen "while there remains a staff and economic support to publish." Otherwise, said Chapman, chairman and chief executive officer of Knight-Ridder Inc., "the world will know that any belated lifting of the closure order is but a sham taken only after there no longer was a real opportunity for continuing an independent newspaper voice in Nicaragua."

- A 69-nation committee of the United Nations in July approved a controversial resolution calling for a **"new world information and communication order."** The action was opposed by the United States and other Western nations that said such a plan could lead to government control over news flow.

The resolution, adopted by the UN Information Committee, is similar to one the panel passed, also with sharp dissent, last year. It also is much like proposals hotly debated at UNESCO that have never gotten off the ground [**presstime**, June 1986, p. 54].

- The South African government has **dropped charges against Anthony Heard**, editor of the Cape Times in Cape Town.

Accused of interviewing a "banned" person, an offense punishable with a prison sentence of up to three years, Heard was arrested last November.

The editor's arrest came after The Cape Times published Heard's long interview with Oliver Tambo, a leader of the outlawed African National Congress opposition group.

Heard's trial was postponed several times, and charges were finally dropped July 16.

The International Federation of Newspaper Publishers (FIEJ) presented Heard with the 1986 Golden Pen of Freedom in May [**presstime**, March 1986, p. 45].

- The 14th **Management & Marketing Symposium** of FIEJ will take place Oct. 9-10 in Brussels, Belgium. Executives of ANPA-member newspapers who wish to attend can obtain application forms from Martin Casey, ANPA manager/government and international affairs, at The Newspaper Center in Reston, Va.

Vote on ITU-CWA merger set

By a 3-2 vote, the International Typographical Union's Executive Council sent a document for merger with the Communications Workers of America to a referendum.

This follows unsuccessful efforts in recent years to consolidate the ITU with three other unions. In addition, the ITU held merger talks with the International Association of Machinists prior to the Executive Council's July vote to send the CWA proposal to the ITU membership for a vote Nov. 19.

Morton Bahr

The question of merger with the CWA is expected to be a matter of vigorous debate among the approximately 250 delegates attending the ITU's Aug. 9-15 convention in Hershey, Pa. ITU President Robert S. McMichen, writing in the July issue of the Typographical Journal, said it is anticipated that "certain groups within the ITU" will attempt at the convention to revive a 1985 proposal for merger with the Teamsters that was rejected by the membership.

Also at the convention, nominations will be made for international officers to serve new three-year terms beginning Jan. 1, 1987. The membership will vote for officers at the same time they vote on the CWA merger. McMichen is a candidate for re-election. No other candidates had filed for the office at press time.

CWA membership approval is not required. A spokeswoman said that union's 17-member Executive Board has delegated authority to the president to consummate an "affiliation" with another union in consultation with the board.

ITU President McMichen and CWA President Morton Bahr said in a joint announcement that the agreement provides for the creation of a Printing, Publishing and Media Workers division within the CWA that would be headed by ITU officers.

"We have a substantial common interest with the CWA," McMichen said. "The increasing computerization of newspaper composing and mailrooms and the major ownership participation in cable television by the big newspaper chains have put the ITU and the CWA on a common track."

Some newspaper labor specialists had predicted several years ago that the CWA, which is among the 10 largest unions in the country, would eventually play a role in the newspaper business [presstime, Jan. 1983, p. 34]. The only newspaper where the 650,000-member CWA currently represents employees is the Appleton (Wis.) Post-Crescent, where it is the bargaining agent for editorial and advertising employees.

The entry of the CWA into the newspaper business "creates a new dimension in collective bargaining and organizational efforts," said ANPA Vice President/Human Resources Roy W. Anderson. "As an information-age union," the CWA may bring "a new philosophy and strategy to the business," Anderson said. "But with the competition in telecommunications, there has to be a question as to whether this proposed merger would solve problems or create new ones for the unions and the competing media."

At the same time, some experts said an ITU-CWA merger would be unlikely to affect current relationships between newspaper management and organized labor. Richard A. Williams, vice president/employee relations director of The Journal Co. in Milwaukee, said he did not believe a merger would bring about "any significant change in the relationship with our local unions."

Sam S. McKeel, president of The Philadelphia Inquirer and Philadelphia Daily News, noted that the mergers that have occurred in the newspaper business in the past "did not change anything in our workings with the local unions, and I would not anticipate that this one would based on that history. The CWA seems to be a responsible union. . . . We'll wait and see what happens."

"If the CWA takes the ITU in, creates a separate division and lets them manage their own affairs, then there probably wouldn't be much change in our labor relations," said Lawrence A. Wallace, vice president/industrial relations for The Washington Post. "If that happens, there should be no change at all at the local level."

On the international level, Murray Seeger, director of information for the AFL-CIO, said the policy of the federation "is to encourage merger, and we hope these two affiliates are able to make a happy marriage."

The ITU has been actively seeking a marriage partner since the beginning of this decade. In the past three years, efforts to merge with the Graphic Communications International Union, The Newspaper Guild and the Teamsters have failed. "We've been able to get into the bedroom but not into the bed," said one ITU member.

The active membership of the ITU now stands at about 43,000 members [presstime, March 1986, p. 22].

CWA President Bahr said his union eventually hopes to discuss possible mergers with the Guild and the GCIU as well.

Asked to comment on Bahr's remark, Guild President Charles A. Perlik Jr. said, "I would have to see what he's talking about and how it would improve our bargaining abilities." He noted that the proposed "printing, publishing and media workers division or sector" headed by elected ITU officers could cause a problem for other unions joining it. "We would want a shot at the leadership roles," he said.

GCIU President James J. Norton could not be reached for his reaction.

—Clark Newsom

NLRB elections

Denver Post, GCIU, ITU: Press and bindery workers in the newspaper's community press department voted 15-7 against union representation. GCIU Local 22, which represents the newspaper's pressmen, received the seven votes. No votes were cast for two other local unions on the ballot, GCIU Local 440 and Mailers' Union No. 8.

(NLRB Case No. 27-RM-585)

Mobile (Ala.) Press and Register, ITU: Composing room employees voted 33-18 against further representation by Typographical Union No. 27.

(NLRB Case No. 15-RD-594)

Youngstown (Ohio) Vindicator, ITU, Teamsters: Mailroom employees voted 32-1 in favor of representation by Cleveland Local 473 of the Teamsters, decertifying ITU Mailers Union No. 80.

(NLRB Case Nos. 8-RC-13436, 8-RD-1335)

Court upholds discharge of copy editor in Wilkes-Barre case

A former employee of The Times Leader in Wilkes-Barre, Pa., failed a second time to convince a court that she had been discharged unlawfully.

Copy editor Dorothy Kay Martin was fired in 1981 for aiding a competitor. She had placed a display ad in the Citizens' Voice, a union-sponsored paper also in Wilkes-Barre, promoting an ice cream stand she operated at a nearby resort.

After unsuccessfully petitioning the National Labor Relations Board for relief, Martin sued The Times Leader and Publisher Richard L. Connor for breach of an alleged employment contract in the form of a personnel handbook distributed to employees.

Following the dismissal of her suit by the Luzerne County Court of Common Pleas [**presstime**, June 1985, p. 90], Martin appealed to the Superior Court of Pennsylvania.

The Superior Court noted that the question of whether an employee handbook should be accorded contractual significance has "engendered tremendous controversy" in recent years. The court found, however, that the handbook involved in this case did not constitute an implied employment contract.

The court also dismissed Martin's contention that her discharge was against "public policy" because she was fired for exercising constitutional rights. There were "legitimate business reasons" to justify her discharge, the court found.

(Martin v. Capital Cities Media Inc. and Connor, No. 01064) ☐

Motor route carriers found to be employees

The California Unemployment Insurance Appeals Board has overturned an administrative law judge's ruling that a group of motor route carriers who delivered the Monterey (Calif.) Peninsula Herald were independent contractors.

The board found that the carriers claiming unemployment benefits were employees, noting, among other things, that subscriber lists remained the property of the newspaper. The judge had held that the newspaper was entitled to a refund of more than $39,000 in unemployment, disability and state income taxes that had been paid under protest [**presstime**, Jan. 1986, p. 60]. ☐

Briefs have been filed in 'professionalism' case

Post-trial briefs were filed in July on the issue of whether newspaper reporters, photographers and non-supervisory editors should be classified as professional employees exempt from the overtime requirement of the Fair Labor Standards Act.

Trial in the case involving the Concord (N.H.) Monitor ended in U.S. District Court in June, and a decision is expected by the end of this year [**presstime**, July 1986, p. 72].

The brief for the defendant newspaper said the issue is not whether newspaper writing, editing or photography equate to the practice of law or medicine, but whether journalists "of the caliber herein who work essentially unsupervised and who make many important and complex judgments daily" should join the 30 occupations already recognized as professional by the U.S. Department of Labor and the courts.

Among those with education similar to that of reporters who are recognized under the FLSA as professionals are accountants, nurses, teachers and commercial pilots. In addition, there are a number of jobs such as musician, painter, floral designer and radio or TV announcer that are accepted as artistic professionals within the meaning of the FLSA.

"In our information society," the Monitor's brief said, "journalism has evolved into a more intellectual, more specialized job requiring more knowledge, more talent and more creativity because of the competition from other media."

The issue has not been litigated in federal court since 1944. The Monitor contends that the profession of journalism has evolved dramatically since then. The Labor Department's own Bureau of Labor Statistics uniformly classifies reporters, photographers and editors as professionals, as does the department's *Occupational Outlook Handbook*.

In addition, the Immigration and Naturalization Service recognizes journalists as professionals for immigration purposes, and the secretary of education recognizes a bachelor's degree in journalism as "professional" education.

Furthermore, the Monitor argued, "It is undisputed that since 1940 the Department of Labor has expected the number of FLSA professions to expand as 'degrees are offered in new fields and educated specialists, so trained, are given new and greater responsibilities.' Despite this established principle and universal agreement that journalism has changed dramatically, the Wage-Hour Division stubbornly continues to follow rules written in the 1940s."

"Circumstances have changed," the brief noted. "The interpretations have not."

As a result of changes in duties and education levels, journalists now perform "learned professional" work the same as exempt "technical" writers, the company argued. "At the same time, the creative and interpretive aspects of the work of newspaper writers have also developed in sophistication."

The Monitor said it was only asking "that journalists be accorded the same (FLSA) status as their 'professional peers' in teaching, nursing, biology, chemistry, medical technology and actuarial science."

Its brief noted that the Labor Department, "in apparent recognition of the infirmity and obsolescence of its wage-hour journalism interpretations," has initiated formal rule-making proceedings on the very question presented by the court case [**presstime**, April 1986, p. 64].

In its brief, the Labor Department argued that there is no accumulated body of knowledge that a journalist is required to master prior to "practicing his trade." Therefore, the government said, a reporter cannot qualify for exemption as a "learned professional" as defined in the act.

Neither can newspaper writers and photographers qualify as "artistic professionals" exempt from coverage, the department said. To qualify for exemption under the artistic provision, work must be "original and creative in character in a recognized field of artistic endeavor," the brief noted.

In arguing that journalism is not a learned profession, the department said that the newspaper's contention to the contrary "amounts to little more than a recitation of the totally obvious fact that journalists today are better educated than their predecessors of forty years ago. So, however, are the practitioners of every trade and craft in the American economy."

The department's suit against the newspaper seeks additional overtime pay for 33 current and former employees. ☐

Guild seeks to limit size of newspaper groups

A bill that would limit the size of newspaper groups to 30 newspapers and 3 percent of the average U.S. daily circulation "is on the verge of introduction" in Congress, according to Charles A. Perlik Jr., president of The Newspaper Guild.

The bill, drafted by the union's Research and Information Department, would require divestiture over 15 years for those groups that are already oversize, Perlik said in an address to the 221 delegates attending the Guild's 53rd annual convention in Philadelphia. The only exclusions, he said, would be newspapers in competitive cities and those established, rather than purchased, by their owners.

The International Typographical Union and Graphic Communications International Union "are joined with us in the push to enact this measure into law," Perlik said.

"We don't underestimate the magnitude of the task," he said. "The publishers showed the kind of legislative clout they have 15 years ago when they persuaded Congress to endow their joint operating agreements with both prospective and retroactive immunity from the antitrust laws."

Concerning the proposed JOA between The Detroit News and the Detroit Free Press [presstime, July 1986, p. 64], the delegates were told that the Detroit Guild is challenging the proposal by requesting a Justice Department hearing. The convention adopted a resolution "wholeheartedly" supporting the local Guild unit and urging the Justice Department's Antitrust Division to conduct an investigation of the newspapers' financial situation preliminary to a hearing.

In the bargaining area, the Collective Bargaining Committee rejected by a 43-22 vote a motion to reduce the number of the 39 mandatory bargaining proposals required by the union's collective bargaining program.

In his address to the June 23-27 convention, Perlik urged the delegates to keep the program intact. "Critics of the bargaining program complain that by presenting many of its proposals year after year we dilute our bargaining effectiveness," he said. "They overlook what that persistence has accomplished for us."

Today's bargaining climate "is one of the most difficult in the history of the Guild," the committee reported. The convention called for a review of the union's bargaining processes and policies by a special committee of 13 members.

Another committee noted that the Guild's campaign to bring video display terminals under state regulation "has continued to gain momentum despite limited successes. Fierce lobbying by computer manufacturers and management groups has thus far prevented the adoption of effective legislation."

In other action, the convention declared its support for the Family and Medical Leave Act of 1986 (HR 4300) and a similar bill (S 2278) to provide a minimum of 18 weeks unpaid leave to care for a newborn, newly adopted or seriously ill child or dependent parent. The House bill has been approved by the Education and Labor Committee.

The officers' report to the convention noted that the union had 33,110 members at the end of its fiscal year March 31. That figure is 762 below the Guild's all-time membership high of 33,872, reached in September 1978. □

Strike in Montreal; another daily resumes publication

Labor disputes between two daily newspapers in Quebec and Local 145 of the International Typographical Union have been resolved.

One of the disputes involved an initial contract covering 40 advertising support service employees of The Gazette in Montreal. The advertising group called a three-day strike July 4 after the union's proposals for an agreement were rejected.

The dispute escalated July 6 when composing room employees, who are also ITU members, refused to handle pages containing advertising. The employees who refused to work were sent home, and their jobs were performed by supervisory personnel. The union lifted its ban on "struck work" the following day.

The advertising employees returned to work July 8, and the contract dispute was scheduled to be resolved through binding arbitration. The 199,431-circulation Gazette, which is the only English-language daily in Montreal, did not miss any publication days.

In the other conflict, publication of Le Nouvelliste in Trois-Rivieres resumed June 21 after shutting down May 30 in a dispute over new contract terms for production workers. The workers claimed they were locked out; the company contended that the union had engaged in a strike beginning with a work slowdown May 29.

A new three-year agreement with the 56,008-circulation French-langugage newspaper, which is the only daily in the city, provides salary increases of 5 percent the first year and 4 percent in each of the next two years.

Quebec labor law forbids a company involved in a strike or lockout from hiring outside workers. □

Most who lost jobs in Tacoma sale hired by new owner

McClatchy Newspapers of Sacramento has hired most of the 740 full- and part-time employees of Tribune Publishing Co. in Tacoma, Wash., who lost their jobs when the company was sold. They received 2-percent raises.

Tribune Publishing, publisher of The Tacoma News Tribune and the triweekly Pierce County Herald, notified the employees in June that they would lose their jobs July 31 when the company formally ceased operations—an action believed to be without precedent in the newspaper business.

McClatchy bought the assets of the company and was scheduled to begin publishing the two newspapers Aug. 1 [presstime, May 1986, p. 87]. In the ownership transfer, McClatchy accepted no labor agreements or other contracts made by the Tribune. About half of the employees are represented by unions.

In July, McClatchy began interviewing Tribune employees for jobs. Of the 650 employees at the daily, 32 took early retirement and McClatchy hired all but 20 of the rest. Of the 90 employees at the triweekly, all who applied for jobs were hired, the company said. ☐

Lockout and hiring temps is lawful, NLRB rules

The NLRB has ruled in a landmark decision that an employer can legally continue operations by hiring temporary replacements for workers it has locked out during new contract negotiations.

The case arose when Harter Equipment Inc. of Englishtown, N.J., locked out employees represented by a union to pressure the union to reach an agreement.

In its 3-1 decision, the board said an employer does not violate the Taft-Hartley Act by taking such action unless there is specific proof of anti-union motivation.

The AFL-CIO said that the precedent-setting decision "continued the sharp tilt by the Reagan-appointed board towards the employer position."

But ANPA Manager/Labor Relations Charles D. Cole said the June 24 ruling reaffirms the board's policy of "hands-off" in matters of contract negotiations, "leaving the choice of economic persuasion to the respective parties in attaining a mutually satisfactory labor agreement."

(Harter Equipment Inc. and Local 825, IUOE, 280 NLRB No. 71) ☐

NLRB orders Spokane dailies to sign contract

A divided NLRB ordered the company publishing The Spokesman-Review and Spokane Chronicle to sign a labor agreement with a union that the company contended no longer represented its janitorial employees.

By its 2-1 vote, the board adopted an administrative law judge's recommendation in the case involving Cowles Publishing Co. and Local 6 of the Service Employees International Union [presstime, June 1983, p. 29].

NLRB Chairman Donald L. Dotson dissented. He noted that the union had let more than seven months go by before it sought negotiations to break an impasse in bargaining. The chairman said he would not order the company to continue to recognize a union that had "long abandoned" the bargaining unit.

But the majority held that the lack of contact between the parties from April to November 1981 was an inadequate basis for doubting the union's viability.

(Cowles Publishing Co. and SEIU, 280 NLRB No. 105) ☐

Additional arbitration awards

Cleveland Plain Dealer, GCIU: Roger I. Abrams converted to a 13½-month disciplinary suspension the discharge of a pressman for absenteeism because of jail confinement.

Dayton (Ohio) Daily News and Journal Herald, Teamsters: John J. Murphy ruled that the company acted properly in filling a circulation district representative vacancy with an employee who had recently returned to the bargaining unit from a supervisory position rather than with another unit bidder for the job.

San Jose Mercury News, GCIU: Robert E. Burns found that the company properly calculated the benefits of a disability pay plan.

After more than three years, arbiter sustains San Francisco discharge

The March 7, 1983, discharge of a circulation district manager for the San Francisco Examiner was sustained by an arbitrator June 10, 1986.

Long delays are a common complaint in labor arbitrations [presstime, Nov. 1985, p. 14].

The arbitrator, Donald H. Wollett, a Sacramento attorney, noted that seven days of hearings were held between Nov. 19, 1983, and Oct. 23, 1984. Wollett said he took testimony the first day, and the remaining six days of hearings were conducted by a hearing officer. Briefs between the parties were exchanged in 1985.

While the hearing officer made recommendations as to appropriate findings and conclusions, Wollett said that he reviewed the record independently and that the decision in the case was his alone.

"The incidents leading to the discharge of the grievant are many and varied, no one of which in and of itself would be serious enough to warrant discharge," Wollett noted. "The question is whether or not the accummulated effect of this extensive series of derelictions and deficiencies is sufficient to give the employer just cause for the termination."

The grievant, represented by Local 921 of the International Brotherhood of Teamsters, had been hired in 1974 and received disciplinary suspensions in 1979 and 1982. The company contended that the discharge was justified because he had not responded to progressive discipline.

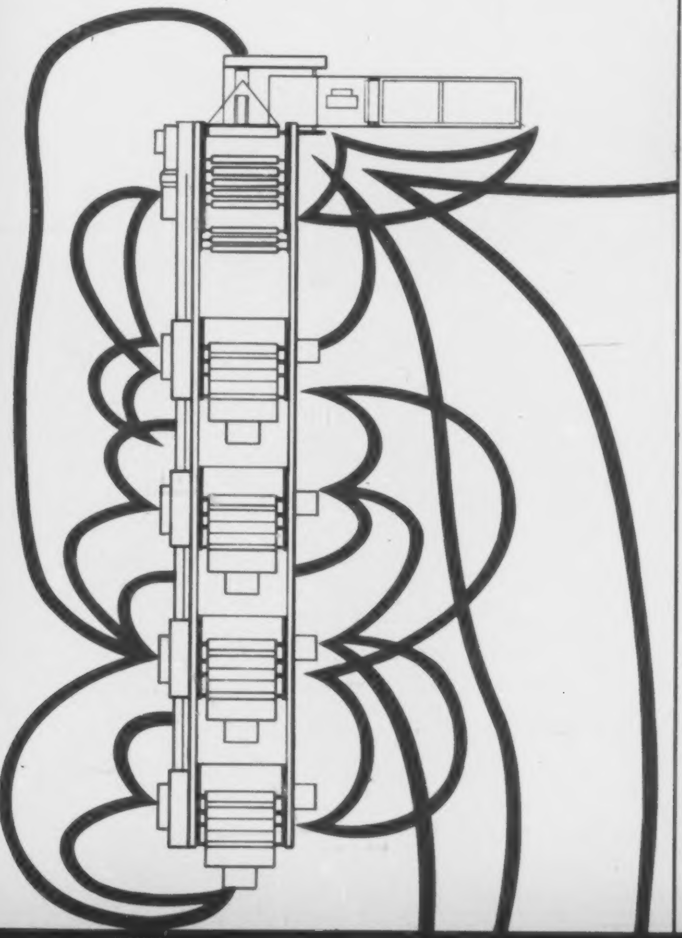
The union argued that the company was attempting to "hang" the grievant for a series of minor infractions. It said the company was "nit-picking" and called for the district manager's reinstatement with full back pay.

Wollett rejected the union's claim that the company was nit-picking. "The fact that the employer built a careful record over a period of about 12 months prior to deciding to terminate demonstrates a degree of care which is commendable," the arbitrator said.

Chicago strike is one year old

The strike against the Chicago Tribune by printers, pressmen and mailers passed the one-year mark July 18 with no sign of a settlement. Members of the three involved unions have made unconditional offers to return to work. Sixty-three of the 250 printers have returned [presstime, April 1986, p. 66].

A total of 113 meetings have taken place with the printers, 56 with the pressmen and 53 with the mailers, the company said.



ONE PRESS DOESN'T GIVE YOU THE RUN-AROUND BLUES.

Unless you have a Solna Distributor, you're getting the run-around. Unlike other newspaper web presses, The Distributor is designed for easy operation from only one side. In fact, most everything is controlled from one panel right by the folder.

Take a good look at the quality, easy operation and profitability of an orange Solna Distributor. It will cure your run-around blues. Fast.

Four-Color Network membership rests on printing quality

After barely a year, there has been more than a threefold increase in the number of newspapers participating in the Four-Color Newspaper Network, which offers combined color ad sales keyed to high quality reproduction.

Begun in June 1985 with 65 newspapers [**presstime**, March 1985, p. 42], the network now has 208 papers qualified for membership. It gives national advertisers the promise of consistent color reproduction and can offer circulation of 15.9 million on weekdays and 15.4 million on Sunday.

In its first year, the network reported gross advertising billings of $1.5 million.

The network is the brainchild of William V. Shannon, senior vice president for Gannett Media Sales. He said the newspaper business as a whole benefits when greater numbers of newspapers print good color because it lures advertisers that might not otherwise consider newspapers in making their media buys.

"We've developed good color and have shown we can print it consistently in printing plants across the country," Shannon said of the company's USA Today. "But there are no secrets in our industry, and we're willing to share what we know with other newspapers."

Fifty-one of the network members are Gannett newspapers; the rest are not.

Shannon said he got the idea after noticing that so many advertisers were turning to other media because they felt newspaper color reproduction was too much of a gamble—good here, wretched there.

That perception is reinforced when advertising agency executives themselves are polled on the quality of newspaper color.

The Four-Color Newspaper Network is working to change those kinds of perceptions, and Shannon said the network has attracted a variety of advertisers. Procter & Gamble Co. bought ads in 50 newspapers with a circulation of 7.8 million to introduce its new Tartar Control Crest toothpaste, while NBC ballyhooed its "Peter the Great" mini series in 22 newspapers totaling 1.8 million circulation.

Other advertisers have included Apple computers, Wrangler jeans, Ford Motor Co. and Johnnie Walker scotch.

"It's a good mix," Shannon said. "We have advertisers from all categories."

A major stipulation for participating in the network is that advertisers must purchase advertisements that will appear in newspapers with a combined circulation of at least 1 million.

Network members vary greatly in size. They range from the 6,913-circulation Edwardsville (Ill.) Intellingencer to the Chicago Tribune (760,031) and USA Today (1.45 million including bulk sales).

Some advertisers desire to have their ads seen in large cities across the country, while others want to focus on specific regions.

One such regional grouping is the New York Color ring, a group of newspapers around the New York metropolitan area. Members are: the Asbury Park (N.J.) Press; The Bridgewater (N.J.) Courier News; The Record in Hackensack, N.J.; the Morristown (N.J.) Daily Record; Newsday, Long Island, N.Y.; and the Westchester Rockland Newspapers, White Plains, N.Y. There is no charge to be a member.

Most of the newspapers in the national network are printed on offset presses, but Shannon said any newspaper can get into the network if it passes the color reproduction requirements. Each newspaper is given the same two advertisements, one for Merit cigarettes and another for Captain Morgan spiced rum, to reproduce.

Stanley Altyn of Westchester Rockland Newspapers operates a facsimile receiver used as part of the Four-Color Network.

When they are printed, tear sheets are sent to Gannett production staffers in Arlington, Va., for examination.

All entries are checked for registration, color density and other factors; then they're graded. A score of 20 is perfect, and the network would like all reproductions to fall in the 15 to 20 point range. A score of 12 or below disqualfifies a newspaper—and many have failed their first test.

However, Gannett's production personnel offer help in correcting whatever problems they think contributed to the not-quite-up-to-snuff reproduction, and many newspapers submitted entries a second time and were accepted.

Getting into the network doesn't mean a newspaper automatically stays there, Shannon pointed out. Each time an advertisement is printed, the newspaper sends tear sheets to Gannett for more judging. If it consistently fails to meet the standards, the paper is dropped and must reapply for membership.

"We don't wait for the advertisers to say something. We look at each result ourselves and make corrections if necessary," Shannon said. "We have to maintain our standards."

The network simplifies matters for advertisers because they can send one piece of advertising material and have it reproduced in a number of newspapaers, Shannon noted. In return, the advertiser receives one bill instead of many.

Advertising rates are uniform; that is, the rate is the same for newspapers in the same circulation range, no matter where they are published.

The partnership between the network and the advertisers seems to be benefiting both. Advertisers are producing materials of a higher quality, which in turn makes them easier to reproduce, Shannon said. He feels there is an increasing awareness of what will reproduce well in newspapers and what won't. Ads are being designed with sharper details and more vibrant color.

He expects the network to continue to attract advertisers and newspapers. And he's issuing an open invitation to other newspapers that would like to join the fold. "We'd never turn down a newspaper because it was too small or for any other reason, except that it didn't meet our standards," Shannon said.

Crosfield broadens product line

Crosfield Electronics Ltd. has made a series of acquisitions in recent months that industry observers say greatly enhance the company's ability to offer a complete product line of electronic pre-press equipment.

Crosfield, a British firm and subsidiary of the British De La Rue Company p.l.c., until recently was known primarily as a manufacturer of color scanners, raster image processors and data-transmission systems. In recent months, it has acquired:

- Hastech Inc., which manufactures front-end and pagination systems for editorial and advertising uses. The Manchester, N.H. company is now called Crosfield Hastech Inc.
- Muirhead Data Communications Ltd., which makes electronic and facsimile communications equipment. The Rexdale, Ontario, company is now called Crosfield Muirhead Ltd. [presstime, July 1986, p. 78].
- Composition Systems Inc. of Elmsford, N.Y., also a maker of newspaper front-end systems, which has conducted considerable research in the area of so-called "artificial intelligence." That work will continue under the company's new name, Crosfield Composition Systems Inc., or Crosfield CSI.

In another move, the firm announced it was establishing offices in Sweden and Norway that will have demonstration and training facilities as well as offer service and spare parts.

"At a time when a great many pre-press vendors are struggling to maintain profitability, we feel our company is in a very strong position, and that these acquisitions will strengthen us even more," according to Jim Salmon, Crosfield's managing director.

Salmon said the company seeks to offer products that will follow "an all-electronic path from original graphics through scanning and text handling to page composition and output systems, to meet the needs of several different printing and publishing sectors."

At the ANPA Operations Management Conference & Exposition in Atlanta in late June, Salmon used a color-coded chart to show reporters how neatly the various companies and their equipment dovetail.

For example, even though both Hastech

X-Rite® is a trademark of X-Rite, Incorporated.

and CSI make front-end equipment, Hastech's is geared to smaller publications (20- to 70-terminal systems), while CSI handles larger systems (70 to 200 terminals).

Salmon said that his company has always pushed for standardization in the industry and that much of the equipment to be sold by Crosfield already works well together.

As the newly acquired companies begin working together under one umbrella, the Crosfield managing director anticipates an even tighter link between the equipment. In the future, he added, cooperation between the various subsidiaries will eliminate any duplication of equipment.

A company spokesman said the recently acquired companies will be managed much as they were before. However, all marketing and sales will be handled through a central Crosfield office. Crosfield is based in Hempstead, England, and the U.S. headquarters is in Glen Rock, N.J.

A company spokesman in Glen Rock would not speculate on possible future acquisitions. ☐

TECHNOLOGY NOTES

- Compugraphic Corp. of Wilmington, Mass., and Information International Inc. of Culver City, Calif. **settled a patent infringement suit** in June just days before the case was scheduled to go to U.S. District Court in Los Angeles.

According to Triple-I officials, Compugraphic will pay the company $5 million over three years, with $2 million to be paid immediately. In return, Compugraphic receives a non-exclusive license for the patent good until 1991.

Focus of the suit was a process of generating type from outline data in typesetting machines.

- After two years of evaluation and testing at The Washington Post, the Graphics Systems Division of Rockwell International has announced it will **manufacture a new flexographic press.**

The Goss press will become available for delivery in the last quarter of 1987, a spokesman said. The double-width press, which has not been named, will be designed to produce 70,000 newspapers per hour.

- Neasi-Weber International and Digital Equipment Corp. have **entered into a marketing agreement** for Neasi-Weber to sell the entire Digital product line, including its Vax and MicroVax systems.

Neasi-Weber will sell Digital hardware to be used with N-W software.

- The Omaha World-Herald became the **first U.S. newspaper to purchase** the new Ro-TRX Cross Strapper bundle-tying machine. The strapper's design enables it to apply two cross straps simultaneously.

Manufactured by Mosca, a West German company, the equipment is imported by EAM Industries. It works in a limited amount of space and can cross-strap 30 bundles a minute.

TECHNOLOGY CALENDAR

- The **Atex Newspaper Users Group** will meet Aug. 17-20 at the Westin Hotel Utah in Salt Lake City.

- Seybold Seminars will hold its first **Desktop Publishing Conference and Equipment Exposition** Sept. 3-6 at the Hyatt Regency San Francicso.

- The Flexographic Technical Association will sponsor a **Prepress Seminar** Sept. 10-11 at the Rochester Institute of Technology.

- **The Creative Data Systems Users Conference** will be Sept. 18-20 at the Marriott Tan-Tar-A Resort, Lake of the Ozarks, in Osage, Mo.

- The annual **Lasers in Graphics/Electronics Publishing in the '80s Conference** will be Sept. 21-29 at the Anaheim Hilton in Anaheim, Calif.

- The annual **New England Newspaper Operations Conference** will be Sept. 25-28 at the Sheraton Islander Hotel and Conference Center in Newport, R.I.

- **A Digital Equipment Computer Users Society Symposium** will be Oct. 5-10 at the Moscone Center, San Francisco.

- The Society of Photographic Scientists and Engineers will hold its fall symposium and annual **International Conference & Exposition on Electronic Imaging** Oct. 13-16 at the Hyatt Regency Crystal City in Arlington, Va.

- The **International Newspaper Conversions Group** will meet Oct. 15-17 at the Capital Hilton in Washington, D.C.

- **Graph Expo '86 East**, a graphic arts trade show and a series of seminars, will be Oct. 19-22 at the Philadelphia Civic Center.

Rail strike averted, but New England still faces trouble

A possible nationwide rail strike was averted July 16 when President Reagan established an emergency board to investigate labor disputes between the nation's major railroads and six rail unions. The unions could have struck July 25.

Separately, however, the rail labor situation remained unsettled in the New England area as talks continued between the Brotherhood of Maintenance of Way Employees and three railroads owned by Guilford Transportation Industries.

The emergency board established by Reagan has until mid-August to make recommendations to settle labor disputes that are national in scope. Both sides will then have 30 days to consider those recommendations. The process effectively delays the possibility of a strike until mid-September.

Seven out of 13 rail unions have already settled.

In New England, Guilford—owner of the Maine Central, the Delaware and Hudson, and the Boston & Maine—said it was not optimistic on chances for a labor settlement. It said secondary picketing could affect other railroads.

A 60-day cooling-off period expired in mid-July. Thereafter, congressional action was needed to prevent a walkout [**presstime**, July, 1986, p. 78]. ☐

Truckers' handbook

The Private Truck Council of America has released the 1986 edition of the Professional Truck Drivers Handbook. It covers federal safety regulations, hazardous material transportation information, highlights on operating tractors and semitrailers, and other topics.

Cost is $3.50 per copy. For information, contact the Private Truck Council of America Inc., 2022 P St. N.W., Washington, D.C. 20036. ☐

Car costs compiled

The average, per-mile cost of owning and operating a compact car increased 4.2 percent to 47.64 cents in 1985, according to the Hertz Corp. annual survey of car costs. The increase—the 12th in the past 13 years—was recorded despite lower gasoline prices and lower interest rates on car loans. ☐

Observers express doubt price increase will stick

Most North American newsprint producers followed the lead of two Canadian mills and announced a price increase from $535 to $570 per metric ton, effective Oct. 1. However, financial analysts and newsprint buyers have expressed doubt that the new price will stick.

If the increase does hold, it would be the first to do so since July 1984, when the list price for newsprint went to $535 per metric ton. Seven unsuccessful attempts to raise prices were made last year.

The plentiful supply of newsprint is being cited as the primary reason newspapers likely will rebel once again at paying higher prices. Stocks of U.S. daily newspapers were estimated at 48 days' supply at the end of June. (See statistics, next page.)

One newspaper executive who oversees newsprint purchases in excess of 800,000 metric tons annually for a large group of newspapers said he does not foresee an increase this year, and he is skeptical about 1987 as well.

"I think it may be posturing on their (newsprint companies') part to make it look good when they go into (labor) contract negotiations," said the executive, who agreed to be interviewed on condition that his name not be used. "An increase simply isn't realistic with the kinds of supplies we're seeing. Prices are dictated by supply and demand, and there is more than an ample supply on hand."

He likened the mills' price increase efforts to those of OPEC, the Organization of Petroleum Exporting Countries. Both groups, he said, attempt a united front but ultimately sell their products for less when buyers appear with money in hand.

Another newsprint buyer, one who purchases 240,000 tons a year for a smaller group and who also asked not to be identified by name, described the current newsprint supply as a "glut."

"For that reason, I don't see prices going up this year, and I'm very doubtful about 1987 as well," he said.

He offered a different theory as to why the mills have failed to raise prices. "More and more power is concentrated in fewer and fewer hands," he said, referring to the growth of newspaper groups. "If you have a number of newspapers, you have a lot more power when it comes to prices. We're seeing a lot more buyer resistance because they (groups) realize they don't have to pay the price if they don't want to."

Brian F. Topp, senior financial analyst for the securities firm of Midland Doherty Ltd. in Toronto, agreed that a price increase this year is "very unlikely."

"Things can change pretty quickly, but right now I don't foresee an increase this year," Topp said. "I'll stick to my forecast from earlier in the year" [presstime, May 1986, p. 52]. However, he said a 1987 boost is a possibility.

Topp said if Canadian mills successfully raise prices, it might be attributed to the fact that the Canadian dollar has gained strength since earlier this year. A weak Canadian dollar means Canadian newsprint manufacturers make more money on sales to U.S. newspapers, because payments are made in U.S. dollars.

The announced price increase originated in late June at Consolidated Bathurst Inc. [presstime, July 1986, p. 58]. Most producers followed suit, but an exception was Kimberly-Clark Corp., which reportedly notified customers it does not plan to raise prices this year. ☐

Two mills negotiate for new contracts; two others ratify

Contract negotiations between management of two U.S. mills and the United Paperworkers International Union were under way in late July.

Contracts expired April 30 at Garden State Paper Co.'s Pomona, Calif., mill and June 30 at Champion International Corp. in Lufkin, Texas [presstime, June 1986, p. 77].

Meanwhile, a new three-year contract has been ratified between the UPIU and Bowater Carolina Corp. at Catawba, S.C. Workers will receive a lump sum of $1,050 in the first year and 3-percent pay increases in each of the second and third years.

Also, a new contract between the UPIU and Manistique Papers, Manistique, Mich., was ratified in July.

Four other labor contracts between UPIU and paper mills are scheduled to expire by the end of the year. They include a pact at Augusta Newsprint Co., Augusta, Ga., which expired July 27. ☐

Canadian capacity to grow modestly, new report says

Canadian newsprint production capacity is expected to grow modestly, just under 3 percent, from the beginning of 1986 through 1988, according to a report

NEWSPRINT NOTES

- Mead Corp. and Brunswick Pulp & Paper Co. **sold their 41.5-percent stake in British Columbia Forest Products** Ltd. to Gordon Investment Corp. and Merrill Lynch Canada Inc.

Mead, a Dayton, Ohio, paper and forest products concern, held a 15.2-stake in BCFP. Brunswick Pulp, 50 percent-owned by Mead and Scott Paper Co., owned 26.3 percent of the firm.

Observers estimate that the investment consortium paid about $250 million (Canadian) for the shares. This closely follows Alberta Energy Co.'s sale of its 18-percent stake in BCFP to Gordon Investment and Merrill Lynch.

- Jefferson Smurfit Corp. is naming all of its recently acquired Publishers Paper Co. operations **Smurfit Newsprint Corp.** The acquisition included two newsprint mills at Newberg and Oregon City, Ore. [presstime, Jan. 1986, p. 54].

- Rothesay Newsprint Sales Inc. was **merged** into Irving Forest Products Ltd., which now is responsible for all of Rothesay's U.S. sales

Statistics booklet published

"Newsprint Statistics 1985" has been published and is available from ANPA's Newsprint and Transportation Department at The Newspaper Center, Reston, Va. The booklet contains data on U.S. daily newspapers' newsprint consumption, newsprint supply and sources, and mill capacity.

6-month consumption up

Newsprint consumption by all U.S. users was up 2.6 percent in June compared with June 1985. In the first half of 1986, U.S. newsprint users consumed 2.9 percent more than they did a year earlier.

Consumption by U.S. daily newspapers increased 3 percent in June and 3.1 percent for the first six months.

Newsprint inventories of newspapers in ANPA's statistical sample were estimated at 48 days' supply at the end of June, down from 52 days a year earlier. Stocks of North American mills were 8.5-percent below the previous year's level.

The June operating rate for both U.S. and Canadian mills was 94 percent of capacity.

Shipments from Canadian mills for the first six months were 1.2-percent higher than in the same period last year. Domestic shipments from U.S. mills increased 0.4 percent.

Farm Belt newspapers prove resourceful in hard times

Quite a bit of ingenuity is being displayed by newspapers in the nation's breadbasket as they try to survive the ravages of depressed agricultural prices, farm failures, bank closures and widespread unemployment.

Newspaper owners in the Farm Belt have tried a variety of ways of diversifying to ride out the depressed economy. One small-town publisher bought a frozen yogurt franchise in another community and is "making a bundle," according to one newspaper association staff head. With the profits, he is helping keep his newspaper alive.

Others are somewhat embarrassed to note that ads for auctions of farms and farm equipment are taking up the slack in advertising linage.

In Iowa, at least eight non-dailies have reduced publication schedules from three to two days a week or from two to one. Faced with higher postal rates and decreased advertising, just as newspapers in the Oil Belt [presstime, July 1986, p. 85], some have raised subscription prices.

Although some owners of small papers are having a rough time surviving in such states as Iowa, Nebraska, Kansas and Minnesota, most are holding their own. And the newspapers in larger communities are sustaining themselves if not exactly thriving.

"We don't know of any papers that have had to go out of business," said William P. Monroe, executive director of the Iowa Newspaper Association.

Jim Raglin, manager of the Nebraska Press Association, said "newspaper people are like the farmers here: They complain occasionally, but they're not 'hangdog' about it."

The prevailing theme is that newspapers have not been hurt as much as the economy has been hurt. Circulation has stayed constant, according to reports from state press associations. "When times are tough, it seems people read the newspapers," said David L. Furnas, executive director of the Kansas Press Association.

The economic statistics, however, are gloomy. From the Rockies to east of the Mississippi, from Canada to the Gulf Coast, some 20 states in the heartland are suffering. Unemployment throughout the area lingers at about 9 percent. Iowa farmers, with a debt of $16 billion, owe more than the government of Peru. Kansas led the nation last year in bank failures.

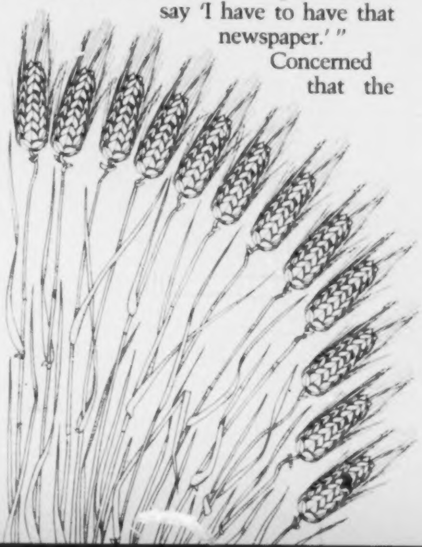
> *"Newspaper people are like the farmers here: They complain occasionally, but they're not 'hangdog' about it."*

The economic bubble began to burst in the late 1970s. Worldwide demand for farm products dropped at a time when farmers were buying more land and large equipment at high interest rates. They soon found they could not repay the loans, and the downward spiral had begun.

The first ads to disappear from newspaper pages were for farm implements. Farmers stopped buying the equipment, and many stores went belly up, according to Raglin of the Nebraska Press Association. Eventually, he said, entire towns stagnated, and ads for hardware stores, clothing, automobiles, and other goods and services dried up.

"This state has had more bank failures than it had in the Great Depression," he said. "The marketplace is very, very tough in this part of the country, and frankly there's no relief."

Yet, like in Kansas, Nebraska newspapers have not experienced a decline in circulation, said Raglin. "People seem to say 'I have to have that newspaper.' "



Concerned that the outside media's portrayal of the farm problem left an unrealistically negative impression, Joe Hladky, president and publisher of The Gazette Co. in Cedar Rapids, Iowa, enlisted the support of Gov. Terry Branstad and the Iowa Development Commission in a campaign to disseminate accurate information.

In mid-May, a group of newspaper publishers including Hladky, other Iowa businessmen and the governor held a press conference in New York City in which they emphasized the economic strength and diversity of the state's economy.

Most larger papers in the Farm Belt, including his, really aren't being directly hurt, Hladky told presstime. Most of the people in Iowa, one of the hardest-hit states, are relatively prosperous. Only 14 percent of Iowa's population is involved in farming, and even most of them are surviving quite well.

What's distressing, Hladky said, is that people—including advertisers—may have the perception that disaster is imminent.

"If they keep on reading all this negative stuff, businessmen will not invest in a new plant, or the national advertisers won't bother to advertise in the papers because they think people haven't any money to spend. Or somebody like Sears will say it's no use to renovate or open that new store," he noted.

In Kansas City, Publisher James H. Hale of the Kansas City Star and Times echoes the words of Hladky. "Obviously, we have had severe problems," he said. "We've lost some major accounts," and "we have had to be more resourceful and innovative."

But by examining the entire operation, making the sales staff more productive and in general making the newspapers more efficient, Hale said, the Kansas City Star and Times have more advertising accounts now than at any time in their history.

In Wichita, where the prolonged slump in the farm economy has been accompanied by a downturn in the aviation industry, business nevertheless continues to be fairly good, said Norman J. Christiansen, president and publisher of The Wichita Eagle-Beacon.

Thus, in a pea pod, Farm Belt newspapers seem to be saying it's been bad for so long that it's no big deal, and survival is almost taken for granted. *—Gene Goltz*

Ranks of independents continue decline with sale of Newport News dailies

BUSINESS ROUND-UP

After weeks of rumors, the sale of Daily Press Inc. of Newport News, Va., to the Tribune Co. of Chicago was announced in mid-July.

The transaction, for $200 million, includes the two Newport News daily newspapers and cable television systems in Newport News and Danville, Va.

Analyst Kevin Gruneich of First Boston Corp., estimated the value of the cable operations at $85 million. This would mean the Tribune Co. paid $115 million for the newspapers, in which case, Gruneich said, it was one of the best bargains of the year. The papers are a monopoly in a growth area, part of the Hampton Roads complex of cities in Tidewater Virginia [presstime, Dec. 1985, p. 51].

Another analyst, Bruce Thorp of Lynch, Jones & Ryan, said a conservative estimate for the cable franchises' worth would be $70 million, but he said the company valued them at around $80 million, which would set the price of the newspapers at $120 million. This, said Thorp, is "pretty much a premium price but not out of line."

The Daily Press, a morning and Sunday paper, has a circulation of 62,138 weekdays and 108,364 Sunday. The Times-Herald has p.m. circulation of 36,468.

The Tribune Co., which has been divesting itself of other cable holdings, said it will likely put the cable businesses on the market shortly. They have about 60,000 subscribers.

The Newport News papers were owned by the Bottom and Van Buren families, who shared equally in the management and board representation. The families reportedly decided to sell because they had been feuding.

Raymond B. Bottom Jr., board chairman and vice president, said other bidders made offers, but he declined to name them. Bottom and William R. Van Buren Jr., president and treasurer, will become vice chairmen.

In other recent business developments:

- Gannett Co. agreed in July to sell The Knoxville Journal to two Gannett executives for what the Journal reported was between $22 and $30 million.

The buyers are Ronald D. McMahan and William C. McKinney. McMahan has been the senior executive officer of the Journal since 1981, and McKinney is publisher of The Reporter, a Gannett paper in Lansdale, Pa.

The Journal was forced to switch from morning to afternoon publication recently after it renewed a joint operating agreement on Jan. 1 with Scripps Howard's Knoxville News-Sentinel.

- Knight-Ridder Inc. in July joined the ranks of companies that have acted to prevent hostile takeovers. The board of directors approved the distribution of one "right" for each share of common stock held. The right gives each shareholder the opportunity of purchasing for $200 a share Knight-Ridder common stock worth twice that amount. That right is triggered if any group acquires 20 percent or more of Knight-Ridder stock, or if any entity commences a tender offer that would result in its holding 30 percent or more of the company.

Further, the shareholder would be entitled to purchase the common stock held by the acquiring company, and that stock would double in value with the exercise of the right.

- Under a settlement announced July 3, Phoebe Cowles will sell all her shares in Cowles Publishing Co. back to the company. She had filed suit, asking for a "fair return" on her ownership of 12.2 percent of the stock in the Spokane company, or that she be allowed to sell it at a fair price [presstime, June 1986, p. 100].

The company did not disclose the price it paid for the stock. Its main holdings are The Spokesman-Review and the Spokane Chronicle.

- The New York Times Co. moved to assure that the firm remains under family control. Subject to stockholder approval, the Sulzberger family agreed in late June to sell Class B shares only to other family members or to the Times Co. The Sulzbergers hold 80 percent of the Class B stock, which has unlimited voting rights and elects 70 percent of the board of directors. If the company were to fail to exercise its option to buy the stock at the prevailing price, the stock prior to sale would be converted into Class A, which has only limited voting rights.

- Phoenix Newspapers Inc. has folded two unprofitable business ventures—its public-access videotex service, Teleguide, in late June and its free-distribution weekly entertainment newspaper, CityLife, in July.

Neither of the businesses had reached the earnings potential required to be profitable, according to William R. Hogan, vice president and general manager of Phoenix Newspapers. CityLife, begun in 1983, had a circulation of 115,000 [presstime, June 1986, p. 14]. Teleguide, started in 1984, had terminals located in 100 locations throughout the Phoenix area [presstime, Aug. 1984, p. 10]. ☐

Recent acquisitions

Arlin Albrecht of Red Wing, Minn., is acquiring Red Wing Publishing Co. which includes the Red Wing Republican Eagle, daily circulation 8,722, and The Daily Journal of International Falls, Minn., circulation 5,134.

Donrey Media Group of Fort Smith, Ark., acquired The Athens (Texas) Review, circulation 7,269.

Gloucester (N.J.) Suburban Newspapers Inc. acquired The Morning News, Blackfoot, Idaho, daily circulation 7,203.

Worcester (Mass.) Telegram and Gazette Inc. is acquiring the Daily Item, Clinton, Mass., circulation 4,183. ☐

Ad shortage forces Texas Weekly demise

The shifting fortunes of Sunday magazines have claimed another victim—Texas Weekly. It suspended publication July 27 after less than one year of life.

Launched by Harte-Hanks Communications Inc. in September 1985, Texas Weekly was an attempt to stake out new territory—statewide readership, rather than the national reach of Parade and USA Weekend or the localized audience for magazines produced by individual newspapers.

At its height, Texas Weekly was distributed by 27 newspapers, about half owned by Harte-Hanks, and had a circulation of 573,291, larger than any other Sunday magazine in the state [presstime, April 1986, p. 13].

Harte-Hanks spokesmen said the magazine's failure to get sufficient advertising was attributable in part to the current economic crisis in oil-dependent states like Texas [presstime, July 1986, p. 85]. ☐

Evening-to-morning conversions number 105 since 1976

The number of U.S. daily newspapers that have converted from p.m. to a.m. over the past 10 years has passed the century mark, according to ANPA files.

The latest to make the switch is the Port Arthur (Texas) News. It ceased publishing afternoons Monday through Friday and became a seven-days-a-week morning paper on July 7.

That makes 105 that have joined the trend since The Modesto (Calif.) Bee converted to a.m. in October 1976.

One week before the Port Arthur switch, The Daily Report in Ontario, Calif., went from p.m. to a.m., as did two Knight-Ridder papers in Florida on June 16: the Boca Raton News and the News of Delray Beach.

Another daily, facing a rare problem, plans to join in the swing to a.m. publication on Sept. 2.

The Ketchikan (Alaska) Daily News currently comes out after the last air taxi departs town at 1:30 p.m.. This means readers in outlying areas do not receive the Ketchikan paper until the next morning—about the same time the morning Seattle Post-Intelligencer arrives, also by air.

With morning publication, the Daily News will be able to deliver the paper the same day, meeting the challenge of both the Post-Intelligencer and the Anchorage Daily News, which arrives in the afternoon, said Ketchikan's president and publisher, Lew M. Williams.

In a related development, The Forum of Fargo, N.D., went from all-day to mornings-only publication on June 2. The Forum had published three morning and two afternoon editions Monday through Friday, and morning editions on Saturday and Sunday.

Earlier this year, two other newspapers suspended their p.m. editions, but another paper added one [presstime, March 1986, p. 69]. □

Journal Co. issues comprehensive ethics code

The Journal Co. of Milwaukee says it may be the first diversified communications company to publish a comprehensive code of ethics for its employees.

The code supplements policies that already exist in various divisions of the company, including The Milwaukee Journal and Milwaukee Sentinel. What is new, company spokesmen say, is that the 18-page booklet presents the company's basic principles in clear, "layman's" language.

The booklet includes sections on loyalty to the employee-owned company, conflicts of interest, political involvement, handling of confidential information and use of corporate assets. It also addresses relationships with customers, suppliers, competitors, news sources and colleagues. □

More minority job fairs scheduled

Three major total-newspaper job fairs for minorities are scheduled during the next six months.

Sponsored by the Task Force on Minorities in the Newspaper Business, they will be held in conjunction with previously scheduled job fairs.

The task force, made up of representatives from 31 newspaper-related organizations, is working to increase the number of minorities in non-editorial departments. Its job fairs are intended to complement the efforts of other organizations, most of which have been concerned with increasing minority employment on the editorial side.

The schedule is:

- Oct. 16-18, Boston, with the American Society of Newspaper Editors
- Jan. 15-17, Louisville, with ASNE
- Feb. 6-7, Los Angeles, with the California Chicano News Media Association.

Another total-newspaper job fair sponsored by the task force is tentatively scheduled for March 1987 in Washington, D.C.

Although these are the first job fairs to be sponsored directly by the task force, several participating organizations sponsored a "total newspaper" fair in Atlanta in 1985. Also last year, ASNE sponsored a minority job fair in Hartford that was not limited to editorial employment.

For additional information, contact ANPA Minority Projects Coordinator Terri Dickerson-Jones at The Newspaper Center in Reston, Va. □

WHAT'S BLACK AND WHITE AND GRAY ALL OVER?

THE CHRONICLE

A story that needs the libel coverage of Mutual Insurance.

Because the truth is often neither black nor white, but a lot of gray, libel suits have become an unpleasant fact in the newspaper business. And because a single unfavorable ruling can mean financial disaster, more and more newspapers are turning to The Mutual Insurance Company of Hamilton, Bermuda, for the protection that libel insurance provides.

During the twenty-five years that Mutual has served the unique insurance needs of the newspaper industry, Mutual has handled more than 4,500 suits in the libel field. Only Mutual has the experience and the policies to provide complete protection against loss due to libel suits.

Mutual offers ANPA-member publications libel insurance that provides punitive damage coverage across the United States. A policy from Mutual pays up to 10 million dollars per occurrence, rather than an annual aggregate. With low deductibles to minimize your loss, a libel insurance policy from Mutual is your best protection when the black and white of a news story turns to gray.

Press associations: changes in command

The **Newspaper Purchasing Management Association**, at its annual conference May 11-14 in Omaha, elected the following new officers:

- *President*—Robert M. Comer, Dayton (Ohio) Newspapers Inc.
- *First Vice President*—Stephan S. Grant Jr., Fort Lauderdale News and Sun-Sentinel Co.
- *Second Vice President*—Raymond F. Burnett, USA Today, Arlington, Va.
- *Secretary*—James O. Dunning, San Francisco Newspaper Agency
- *Treasurer*—W. Kent McCall, Kansas City Star Co.

The **National Newspaper Publishers Association**, at its annual convention June 18-21 in Winston-Salem, N.C., elected the following new officers:

- *Second Vice President*—Patricia O. Thomas, The Milwaukee Community Journal
- *Secretary*—Jane E. Woods, St. Louis Sentinel

Suburban Newspapers of America, at its summer management conference June 3-6 in New Orleans, elected the following new officers:

- *President*—William Canino, Sentinel Publishing Co., East Brunswick, N.J.
- *First Vice President*—Stephen Rose, Sun Publications, Overland Park, Kan.
- *Second Vice President*—Lewis S. Fisher, Fisher Publications, San Antonio
- *Secretary*—Christopher Larsen, Imprint Inc., West Hartford, Conn.
- *Treasurer*—William G. Starks, Centralia (Ill.) Sentinel

The **Association of Newspaper Classified Advertising Managers**, at its annual sales conference June 22-26 in Chicago, elected the following new officers:

- *President*—Lee C. Bollinger, The Press Democrat, Santa Rosa, Calif.
- *President-elect*—James T. Conner, Morning Advocate and State-Times, Baton Rouge
- *Second Vice President*—Bill D. Horton, Fort Worth Star Telegram
- *Third Vice President*—Ronald G. Beach, San Jose Mercury News
- *Secretary/Treasurer*—Nancy O'Connell, The Providence Journal

Investigative Reporters & Editors, at its annual national conference June 26-29 in Portland, Ore., elected the following new officers:

- *Executive Committee Chairman*—Tom Renner, Newsday, Long Island, N.Y.
- *President*—Joe Rigert, Minneapolis Star and Tribune
- *Vice President*—Mary Hargrove, The Tulsa Tribune
- *Secretary*—Edward DeLaney, Barnes & Thornburg, Indianapolis
- *Treasurer*—Mike Grim, Richmond Times-Dispatch

The **Newspaper Personnel Relations Association**, at its annual conference June 22-25 in Vail, Colo., elected the following new officers:

- *President*—Alvin Miller, The Record, Hackensack, N.J.
- *Vice President and President-elect*—A. N. (Nelder) Dawson Jr., Alexandria (La.) Daily Town Talk
- *Secretary/Treasurer*—Terry T. Travelstead, USA Today, Arlington, Va.

The **International Circulation Managers Association**, at its annual sales conference June 29-July 2 in Seattle, elected the following new officers:

- *President*—Richard J. Lakus, Worcester (Mass.) Telegram and The Evening Gazette
- *Executive Vice President*—David Thomas, The Courier-Journal and The Louisville Times
- *First Vice President*—Carlton Rosenberg, Gannett Co. Inc., Arlington, Va.
- *Second Vice President*—Ron Myatt, Rocky Mountain News, Denver

Future ANPA Meetings

Convention		Conference & Exposition
New York City, May 4-6	1987	Las Vegas, June 6-10
Honolulu, April 25-27	1988	Atlanta, June 11-15
Chicago, April 24-26	1989	New Orleans, June 10-14
Los Angeles, April 23-25	1990	Miami Beach or Dallas, June 9-13
New York City, April 22-24	1991	Miami Beach or Las Vegas, June 8-12
Vancouver, April 20-22	1992	Atlanta, June 6-10

Nixon speech most popular event at Convention

Former President Richard M. Nixon's address at the Associated Press annual lunch received the highest rating of any segment of the 1986 ANPA Convention, according to a post-Convention survey of attendees.

In the mailed questionnaire, Convention-goers were asked to indicate which sessions were most valuable to them, using a scale of 1 to 6. Also highly rated were author Jonathan Kozol's speech about illiteracy, the mock libel trial, author Thomas J. Peters' talk about U.S. business and the panel discussion on the space shuttle tragedy [**presstime**, May 1986, p. 36].

Of the 260 respondents, 250 favored the Convention's returning to San Francisco in the future. ☐

Former staff member Paul Kruglinski dies

Paul V. Kruglinski, 38, **presstime** technical writer from March 1983 until earlier this year when he was placed on long-term disability because of illness, died Sunday, July 13, in Toms River, N.J.

He was a pressman by trade who later graduated from San Francisco State University with a bachelor's degree in journalism. He was a reporter for the Ocean County (N.J.) Reporter prior to joining **presstime**.

Surviving are his wife, Roberta, and a son, Matthew. The family has said memorial contributions may be made to the American Cancer Society, 346 Maple Ave. East, Vienna, Va. 22180. ☐

over-set

As smoke clears, a Baltimore bargain becomes apparent

When The Times Mirror Co. of Los Angeles purchased The Baltimore Sun newspapers and two television stations in May, some observers and analysts tsk-tsked that the $600-million price tag was a mite stiff. It was generally agreed that the price could be broken down to $450 million for the newspapers—The Sun and The Evening Sun—and $150 million for WMAR-TV in Baltimore and WLRH-TV in Richmond, Va.

But eyebrows were raised when Times Mirror subsequently sold the two TV stations for an estimated $208 million to the Gillett Group Inc. of Nashville.

This meant, in effect, that Times Mirror had paid $50 million less for the newspapers than previously estimated.

Newspaper analysts say monopoly papers have been selling for 2.9 times revenues and as much as $1,300 per subscriber. With Sun circulation at 356,927 daily and 427,785 Sunday as of March 31, Times Mirror got the prosperous Sunpapers for 2.3 times 1985 revenues and only about $1,068 per subscriber.

Newspaper numbers

12—percent of 1985 journalism school graduates who were unemployed four months after completing their education.

20—percent of newspaper readers who read more than one paper every day.

124—number of U.S. Sunday newspapers selling for $1 or more at the end of 1985.

1,196,556—number of metric tons of newsprint consumed by California daily newspapers in 1985. By contrast, Wyoming dailies used 5,997 tons.

Chronicle
Chronicle
Chronicle
Chronicle

A newspaper's design involves much more than the front page

When a newspaper decides to spruce up and change its colors, the logistics are considerable, as dailies in Houston and in Toronto can attest.

The Houston Chronicle enlisted an advertising agency to come up with a total new look that features new vending machines of four different colors.

The 3,000 new coin-operated racks are shining black, with a bar of either blue, green, magenta or reddish orange. In going to the multicolored scheme, Chronicle executives say they believe it will make a pleasant contrast to have one color on one block, another color on the next block, etc.

The Globe and Mail
The Reading Edge

Over the next six months, the Chronicle will refurbish 3,000 older racks in the new color scheme. And the new look is being extended to billboards and perhaps to delivery vehicles.

In Canada, meanwhile, The Globe and Mail is repainting about 30,000 vending machines in addition to 16,000 signs at dealer outlets and about a dozen delivery vehicles.

The newsracks had been a bright orange; the new colors are a subdued gray and blue.

Circulation Director Nick Russo says the new look "is more contemporary and understated (and) better reflects The Globe's stature as Canada's newspaper of record and the nation's leading business journal."

Knighthood for a publisher

Much of the British press makes a point of sensationalizing the lives of British royalty. As a result, word has it that Her Highness and family are not especially enthralled with many media subjects.

There are notable exceptions, however.

Gordon Linacre, deputy chairman and chief executive of United Newspapers of London, will be knighted for his "services to the press."

Queen Elizabeth II will officially "dub" Sir Gordon a knight at a date yet to be announced.

Linacre is president of the International Federation of Newspaper Publishers. The organization's newly elected first vice president is K. Prescott Low, publisher of The Patriot Ledger in Quincy, Mass.

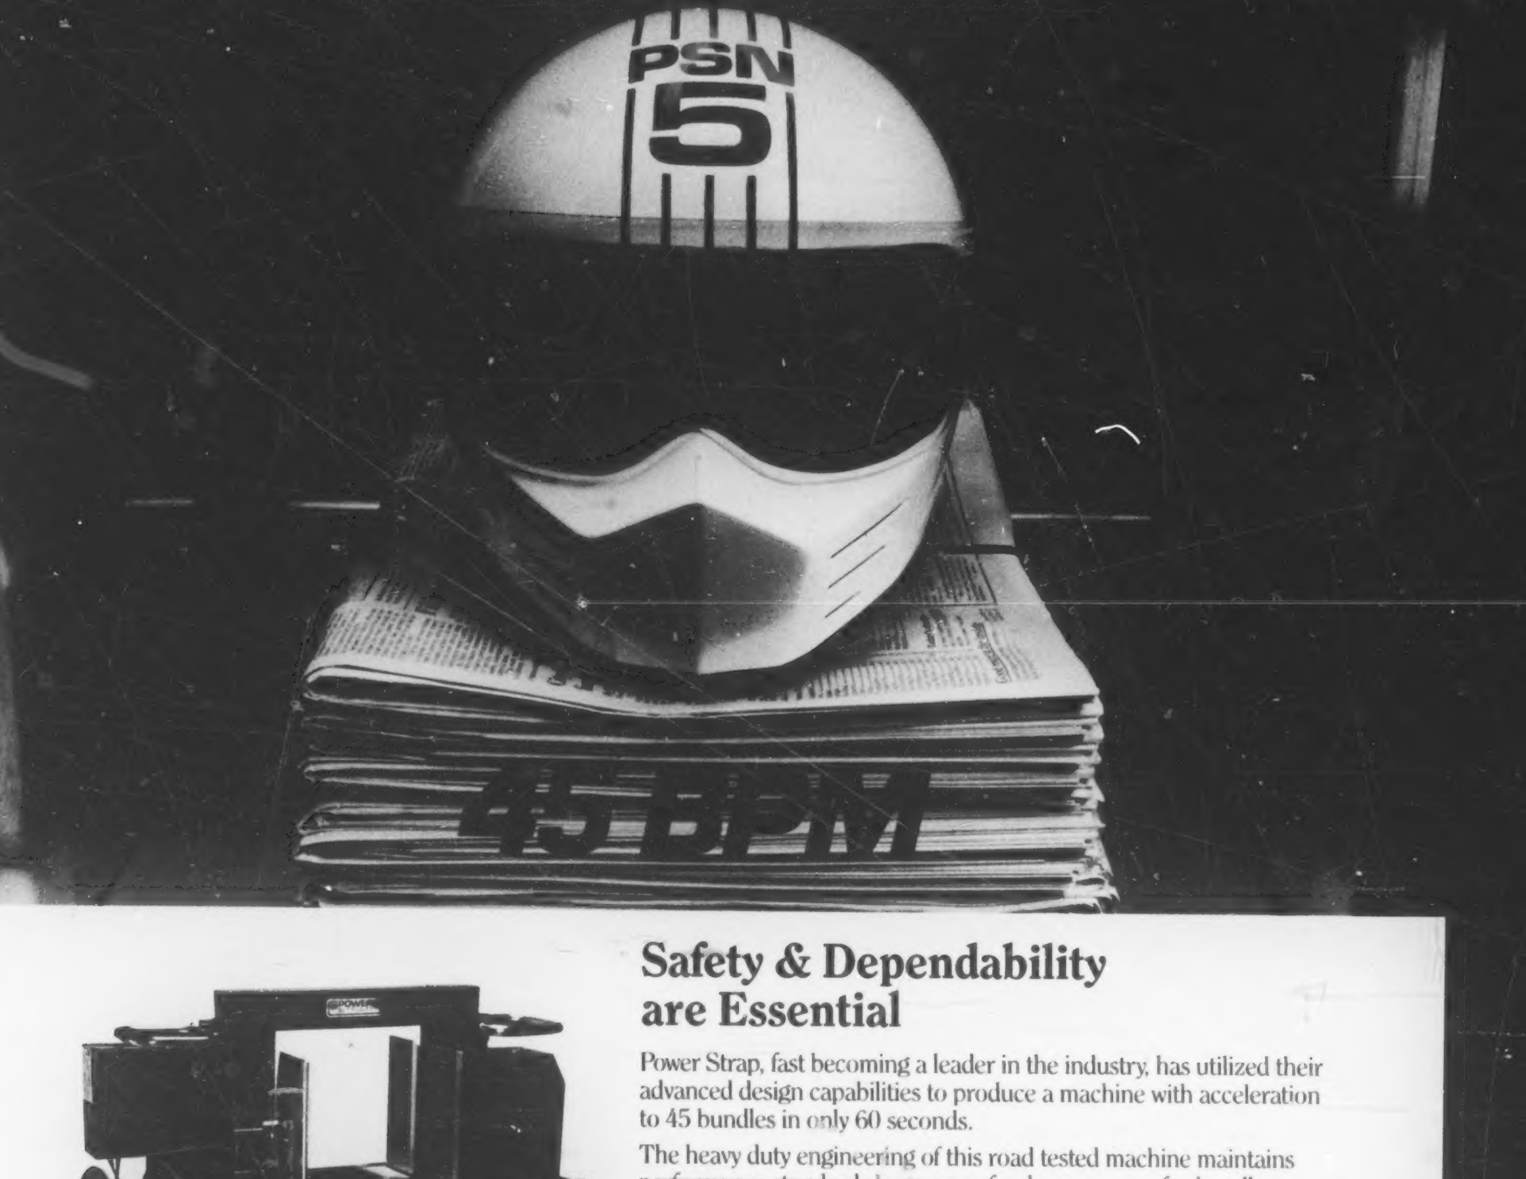
Display ads

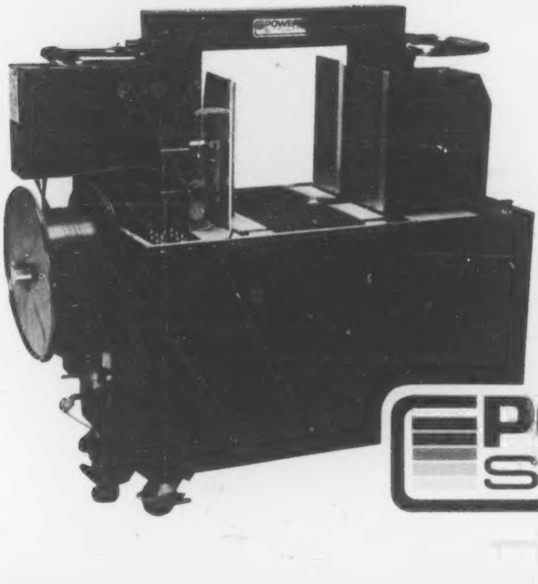
The American Advertising Museum, believed to be the only museum devoted exclusively to the history of advertising, opened June 26 in Portland, Ore.

It contains more than 5,000 print ads dating from 1683, along with radio and TV commercials. The Oregon Newspaper Publishers Association and the Oregonian Publishing Co. in Portland were among the chief benefactors of the 6,000-square-foot museum, each contributing $10,000.

Elsewhere, a newspaper museum was dedicated May 1 at the North Dakota State School of Science in Wahpeton in conjunction with the 100th anniversary convention of the North Dakota Newspaper Association. The project is sponsored by NDSSS, NDNA and the NDNA Education Foundation.

FAST
IS FUNDAMENTAL





Safety & Dependability are Essential

Power Strap, fast becoming a leader in the industry, has utilized their advanced design capabilities to produce a machine with acceleration to 45 bundles in only 60 seconds.

The heavy duty engineering of this road tested machine maintains performance standards by means of a slow conveyor for bundle stability and sacrifices no safety feature to provide you increased production.

Test drive a Power Strap machine today. Contact Power Strap, Inc., 29299 Clemans Road — 1H, Westlake, Ohio 44145, (216) 871-1053, Toll Free: (800) 346-4600.

POWER
STRAP
INC.

The most reliable, most economical scanner yet – thanks to a DS breakthrough.

The 608 dot-generating scanner features the same quality performance, Integrated Color Removal System, multi-color recording program and high-speed output you expect from a DS scanner. It also has the first red-laser dot generator, which makes the 608 less expensive to build and less trouble to run. It's now the best-selling scanner in North America.

Its big brother, the 688, has the same advantages and does sizes up to a 40" poster. They both make ideal first scanners and both integrate with DS Sigmagraphs as part of a complete pagination system.

So put that economical, reliable red laser to work – making beautiful separations and beautiful profits.

WINNING TEAMS SCORE WITH FLINT INK

Arrowlith AD-LITHO™ and Arrowhead AdPro® Inks

No doubt about it: quality four-color printing scores points with newspaper subscribers and advertisers alike. That's one reason Kodak holds its annual "Run for the Money" color reproduction contest.

This year, the *Orlando Sentinel*, Syracuse *Post-Standard* and *Florida Times-Union/Jacksonville Journal* used Flint Arrowlith AD-LITHO™ and Arrowhead AdPro® inks for their contest entries, and won first place honors in the large offset, direct letterpress and DI-LITHO™ press categories, respectively.

We're not surprised!

High standards, strict quality control and expert technical support will make Flint Ink a valuable member of *your* team . . . and insure a winning performance every time!

AD-LITHO™ and DI-LITHO™ are trademarks of ANPA.
AdPro® is a registered trademark of ANPA.

How FMC systems keep business in motion

FMC systems integration. The power to offer you a complete line of roll handling equipment, software, and technical service. Designed to work in harmony. Keeping complex systems in motion, reliably and efficiently, day after day.

That's why the nation's leading dailies have turned to FMC for over twenty-five years for their roll handling needs. Because FMC knows the newspaper business can never stop.

If you're looking for a total roll handling system—start with a good role model. Contact FMC Corporation, Material Handling Systems Division, 3400 Walnut Street, Colmar, PA 18915. WE OPEN DOORS TO A WIDER WORLD

For some 27 million functionally illiterate people in the U.S., the door has slammed shut. Not only are they cut off from an ever-expanding world of ideas and concepts, they can't even read simple items like menus, road signs, rules for operating equipment or directions for giving a child medicine.

What this means is a world of frustration and darkness for more than one in 10 adults. And the high cost of this lost productivity and human misery is ultimately borne by every American.

Scripps Howard has joined the effort to change this picture – to open doors with programs and funds to tackle illiteracy. Already, the El Paso Herald-Post has launched a community literacy program designed to serve as a national model. The Scripps Howard National Spelling Bee annually attracts more than eight million youngsters to the joys of words and the world of ideas they represent. And now the Scripps Howard Foundation is offering grants to support community programs to combat illiteracy.

The problem of illiteracy is not new, but in the interest of an educated America, we must begin to shine light on solutions.

INDEX **VOLUME 8, NUMBER 9** **SEPTEMBER 1986**

Special Report *Critics accuse newspapers of murder—of the English language. Others rise to newspapers' defense, saying their quality of writing was never better. Regardless of point of view, all can agree on this point: Newspapers face several problems that can make good writing elusive. Among them are tight deadlines, lean staffs, computer technology that can lead to sloppy work habits and less-than-ideal reporter-editor relationships. Management commitment is key to making improvements. And there are outside sources of help.* **24**

Space shots *Satellites can take detailed earth photographs, yet the press has been slow to perceive the news possibilities, and controversy looms.* **8**

Graphic presentation *Knight-Ridder Inc. was the first to develop a computer network to deliver newspaper graphics, but others are in the wings.* **12**

What gets a head read? *Headlines sell stories, so they've got to be good. Here are some dos and don'ts on writing ones that will be best sellers.* **16**

Reading numbers *Illiteracy estimates often don't agree. And high newspaper readership statistics add to the confusion. A look behind the numbers.* **18**

Odd ads *From the tops of taxis, to the backs of theater tickets, to the sides of trash cans—ads are showing up in the strangest places.* **20**

Getting it together *Installing something as intricate as a press is a job for specialists. Companies that do such work say business is booming.* **22**

Eroding employment-at-will *Employers' traditional prerogative to fire employees at their discretion is being weakened by laws and labor contracts.* **32**

Essay: The language lives *In the debate over the state of the English language, writing coach Paula LaRocque sides with those who say it's strong.* **34**

Profile: Janet C. Sanford *The former associate director of the American Press Institute switched back to practicing journalism and is thriving.* **36**

High school journalism *A summit meeting will be held next year to discuss the "crisis" in secondary school journalism education.* **43**

Solidarity forever? *International Typographical Union's convention endorses consolidation with Communications Workers of America.* **56**

CHAIRMAN'S CORNER

A quiet but effective effort on the tax revision front

As Congress prepares to vote on the House-Senate conference report on tax revision, it's appropriate for us to recall that ANPA has been very active in this area on behalf of our newspaper business. As is often the case in our government relations activities, our success shows not for what is *in* the new tax bill—but what is *not* in it.

We did not inject ourselves into the major, public-policy debates on which many member newspapers were editorializing. We targeted our resources on a few specifics that would have affected the newspaper business directly.

The greatest threat to newspapers appeared on the Treasury Department's list of possible "revenue raisers." It was a suggestion that 20 percent of business expenses for advertising be denied as a tax deduction.

That could have drastically affected decisions by your advertisers on how much advertising to place because it could have meant a significant increase in the after-tax costs of every business person's advertising budget. And for many newspapers it might have resulted directly in reduced local display advertising linage—some guessed a reduction of 15 percent.

ANPA worked with other media, advertising and business organizations to oppose that unwise and unnecessary suggestion. The timing was fortuitous because the threat appeared just prior to our spring Government Affairs Committee meeting. Those who serve on that committee were quick to raise the issue with members of the Senate Finance Committee, including Chairman Bob Packwood.

Alvah H. Chapman Jr.

The result of the expressions of concern by ANPA and others was that when Sen. Packwood put a draft bill before his committee it contained no reference to denying any portion of advertising expenses for business deductions. And neither did the final draft that emerged from the Senate Finance Committee.

But our work did not end there. Once suggested, these kinds of ideas do not die easily. Indeed, as the Senate prepared to act on the measure, at least one senator admitted he was considering a denial of advertising deductions among methods of raising revenue with which to pay for restoration of the tax deduction for popular Individual Retirement Accounts the Senate committee had pared back.

In a single day of phone calls to newspaper executives (something ANPA seldom does), we encouraged constituent contacts to some 70 U.S. senators alerting them to the situation and asking them to speak against this method of revenue raising if they felt that appropriate. Clearly, some of those senators contacted their colleague about his planned amendment; it never was offered.

I stress this one successful tax effort as an example of the kinds of detailed, painstaking, unending governmental relations activities ANPA carries on constantly on behalf of the newspaper business—activities which could not be successful without your specific assistance from time to time.

NEW! REUTER BUSINESS REPORT

The world's financial decision-makers–governments, bankers, brokers, foreign exchange dealers and commodity traders–rely on Reuters for daily business and financial information.

Now, your readers can too.

Reuters is offering–for the first time–its expert business coverage in a new service specially tailored for American newspapers: The Reuter Business Report.

It gives you Reuter quality and expertise in business writing compiled by our new team of business reporters and editors.

ANALYSIS

Throughout the world, Reuter reporters monitor world markets and financial and business communities. Their minute-by-minute reports, analyses of trends and breaking news–plus our expanded U.S. business coverage–form the backbone of The Reuter Business Report. It draws on the expertise of 892 Reuter journalists and culls information from 93 securities and commodities exchanges and over-the-counter markets.

Analysis is a cornerstone of The Reuter Business Report. We place daily developments in the context of existing trends and identify new ones. We give you the 'why.'

And we have the best *international* perspective–tying developments in the U.S. financial community to happenings around the world and providing speedy business news and analyses from foreign financial centers.

Our *Washington* business reporters add perspective and exclusives from the Securities and Exchange Commission, the Federal Trade Commission and others. And from across the U.S., Reuter specialists file the latest in regional and national news.

We keep business editors abreast of changing events with an *early morning outlook* of expected developments and *market updates* every hour.

WORLD VIEW

You get a *daily feature package, daily business briefs* and *weekly columns* on regular topics like high technology, oil and energy.

The Reuter Business Report: bringing Reuters expertise to your business pages.

Reuters. Our Commitment is to Excellence in News.

INSIDE: What Makes A Champion?...By Dick Schaap

Six reasons why Parade is America's Sunday magazine.

Who. Who they read week after week: Pulitzer Prize-winning authors like Norman Mailer, David Halberstam, Carl Sagan.

What. What they read avidly: "Personality Parade"—America's best-read feature in print. Touching stories like that of James Stephens—a man who dedicated his life to saving children of lepers. And opinion makers/newsmakers like John Kenneth Galbraith and President Reagan.

Where. Where they read articles that are some of the most quoted in the world.

Why. Why they read it. Because Parade captures the fabric and texture of their lives. Sunday after Sunday.

When. Sunday morning. With Jack Anderson on Washington. Dick Schaap on sports. Earl Ubell on health. And colorful profiles and useful information from James Brady and Gail Sheehy. As well as helpful tips and recipes from food editors Sheila Lukins and Julee Rosso, authors of the best-selling Silver Palate cookbooks.

How. How does all this affect you? Newspapers respond to their readers. And readers respond to Parade. So, last year, more than 150 newspapers responded by adding Parade. Find out more about Parade for your newspaper. For more information, call Parade's Publisher, Carlo Vittorini at (212) 573-7000.

A CLOSE LOOK

PICTURES BY SATELLITE

Media are awakening to the potential of photographic coverage through 'remote sensing' technology

BY GENE GOLTZ
presstime staff writer

Taking pictures by satellite, called "remote sensing," is capable of adding a revolutionary dimension to newspaper graphics. But many newspapers haven't yet grasped the possibilities.

In addition, federal regulatory agencies are grappling with the problem of how to control news pictures taken from outer space. Under the "open skies" doctrine espoused by the United States and most major nations, there are no limitations on taking pictures from outer space. Space belongs to everyone and to no one.

Of more immediate concern is the fact that many newspaper editors are not yet fully aware of the present-day capabilities of satellite pictures. "Despite its significant promise for news coverage," says attorney Robert J. Aamoth, "remote sensing has remained a resource largely untapped by the press." Aamoth, a Washington lawyer, wrote a report on the commercial use of space for the nonprofit National Legal Center for the Public Interest.

Day-to-day examples of missed photo opportunities are not hard to find. As one possible example, The Washington Post, in an exclusive story Aug. 1, quoted intelligence reports, military officials and analysts as saying that Cam Ranh Bay in Vietnam now contains the largest Soviet naval base outside the Soviet Union.

Post Reporter William Branigin quoted U. S. intelligence reports as saying the Soviets had 20 to 25 Navy vessels, surface-to-air missile batteries, 3,000-meter runways, a variety of aircraft and other installations at the base.

The story, obviously thoroughly researched, was accompanied by an artist's map of the Pacific Ocean and Far East with dots showing military bases.

But, assuming weather conditions were favorable, experts say, the story could have been accompanied by satellite pictures actually showing the Soviet ships, missile batteries and runways in detail.

"No problem at all," says Clark Nelson, publications editor for the European satellite operation SPOT. SPOT is an acronym for Systeme Probatoire d'Observation de la Terre. The company, owned by government and private interests in France, Belgium and Sweden, launched its satellite Feb. 21, and access—for a price, of course—is available to all. The U. S. commercial office of SPOT is the SPOT Image Corp. of Reston, Va.

©1986 CNES, courtesy of SPOT Image Corp.

New Orleans Superdome (arrow) visible in SPOT picture.

Paul Stares, a military space-system expert at the Brookings Institution, says the SPOT satellite could provide a picture with identifiable Soviet military installations. "I would definitely caveat it had to be a clear day. Other than that, with the capabilities of SPOT, it would be no problem."

In fact, The New York Times demonstrated the point when on Aug. 25 it published two SPOT satellite pictures of construction activity at a Russian space center in central Asia. In an accompanying news story, experts said the pictures were proof that the Soviets were beefing up their Baikonur space center, possibly to launch a space shuttle.

The pictures were part of a package made public by the Space Media Network, a Swedish concern that sells satellite images to the news media. A SPOT satellite took the pictures May 19, the Times said.

Edwin L. Heminger, editor and publisher of The Courier, Findlay, Ohio, addressing the International Federation of Newspaper Publishers in May on media access to space, spelled out some of the possibilities for the media of such remote sensing devices.

> *"It may be that the public no longer will have to settle for officials' accounts . . . be they accounts of military strength or activity, or of population movement, or agriculture forecasts."*

"It may be that the public no longer will have to settle for officials' accounts . . . be they accounts of military strength or activity, or of population movement, or agriculture forecasts," he told the gathering in Lisbon, Portugal.

Heminger, a member of the ANPA Board of Directors, added: "A close look could reveal the locations of . . . ports and military bases."

But access to satellite pictures is new, and indications are that newspaper editors haven't quite grasped the possibilities—or are not convinced the pictures would be clear enough to warrant their use.

Even though The Washington Post apparently did not seriously consider ordering up a SPOT picture for its Cam Ranh Bay story, the assistant editor for foreign news, Virginia Hamill, notes, "I think there's an awareness of it since the Chernobyl incident."

That incident was the April 26 explosion and meltdown at a Soviet nuclear plant near the city of Chernobyl.

Three days after the explosion, and only 36 hours after the accident became known to the Western world, 60 couriers and a host of newspaper and broadcast reporters were standing outside the Lanham, Md., office of Earth Observation Satellite Co., waiting for copies of a space-generated photographic image of Chernobyl. EOSAT, a private venture jointly owned by Hughes Aircraft Co. and RCA Corp., has operated NASA's Landsat satellites since 1972 and currently has two such devices in orbit.

"We were mobbed," recalls EOSAT spokeswoman Deborah Williams. She says that when the Chernobyl disaster became public knowledge, the media began to call EOSAT asking whether its satellites had any images of the site. As a matter of fact, the Landsat satellite, in its routine orbit, had passed over the site shortly after the explosion.

Realizing the potential for instant worldwide publicity for its commercially oriented satellite operation, EOSAT suspended much of its normal contract operations for clients such as geologists, geophysicists and agriculturalists and spent the next 36 hours processing the Chernobyl picture for the news media.

Landsat had a Chernobyl picture available for the news media April 29. SPOT, which made a pass over Chernobyl at a later date, made one available, with better detail, May 6.

Some photo editors felt the "pictures" weren't all that great for news-media use.

"With the naked eye, we didn't know what we were looking at," said Ken Paik, who at the time was photo editor for The Baltimore Sun and now is assistant managing editor for The Evening Sun. "We had to use experts and cutlines to explain what the blurred images were." Paik said he was referring to the Landsat images.

Hank Wilson, photo editor at The Charlotte (N.C.) Observer, agrees. "The Chernobyl pictures (furnished by Landsat) weren't any good," Wilson says.

But what about SPOT, the European company's satellite with resolution several times greater than Landsat's? Neither Wilson nor Paik was familiar with it.

"The media's relative indifference to remote sensing," says attorney Aamoth, "is a direct result of Landsat's limitations."

HOW THEY WORK. Satellites obtain their images from sensors that record land-surface electromagnetic waves. The result is an image of terrain in varying colors, or, in a black-and-white picture, an image of varying shades.

In Landsat's Chernobyl shot, the reactor's coolant pond was clearly visible, but the damaged reactor itself was a tiny blurred image hardly the diameter of a pencil eraser. Experts could and did point out indications in the picture of damage

Now
It's Here.™

- Superb, ready-to-print weather graphics.

*Macintosh is a registered trademark of Apple Computer, Inc.

A newspaper could order a satellite image of, for example, the Soviet military buildup at Cam Ranh Bay. But it would have to be reconciled to a delay of several weeks.

to the plant. But the average reader could not have even located the plant itself without cutlines telling what to look for and arrows pointing to it, devices which were liberally used by papers that ran a Chernobyl picture.

The reason for this is because the two Landsat satellites have a resolution of 30 meters, meaning a football field would be hardly more than a small dot in a picture.

SPOT, on the other hand, has a resolution of 10 meters, meaning the smallest discernible object in its photographic image is 10 meters square. With a SPOT image, one can easily make out the New Orleans Superdome in a picture of that city, or the Capitol and White House in a picture of Washington, D.C.

The top-secret U.S. and Soviet military satellites combing the earth's surface have much sharper capabilities than even SPOT. Stares of the Brookings Institution says he is reasonably sure both countries have satellites that can pick out objects with a resolution of one foot. This would mean, for instance, that the make of an automobile could easily be ascertained in a satellite image, Stares said. And it may mean an individual could be identified.

Furthermore, says Stares: "I am reasonably sure this technology will be available on a commercial basis by the 1990s."

It must be recognized, however, that currently Landsat and SPOT aren't exactly the corner drugstore where you deposit your film and pick it up the same day. Both have advance schedules and usually require lead times of at least 30 days to get a desired shot. That is partly because orbital patterns can limit photo opportunities. Additional weeks might be required to process the picture.

SPOT repeats its identical orbit 517 miles above the earth once every 26 days. The orbit is a solar one and is synchronized with the sun, so the satellite is always in the daylight. It doesn't take 26 days to visit the same *approximate* location, though, because as the earth rotates the SPOT satellite visits the same general area on earth every three days. Because it has two moving cameras, SPOT can take a picture of the approximate same locale about twice a week.

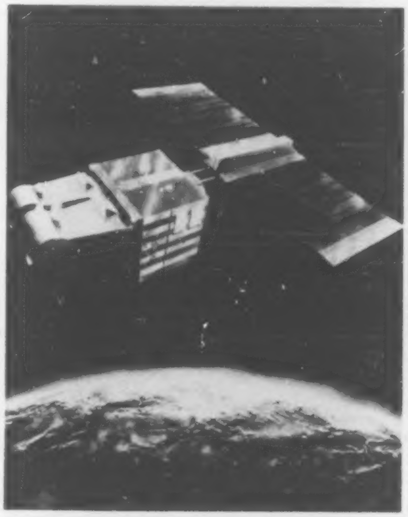
Landsat, with a fixed camera and an orbit about 400 miles above the earth, requires about two weeks to pass over the same location.

This means a newspaper could indeed order a satellite image of, for example, the Soviet military buildup at Cam Ranh Bay. But it would have to be reconciled to a delay of several weeks because both SPOT and Landsat have a backlog of commercial orders, and it is not practical to disrupt their entire programming for a specific news picture.

Further, the cost may be prohibitive for some.

SPOT pictures start at $155 and Landsat's at $50, but that doesn't get you much. The lowest prices are for lower-quality, black-and-white prints. Depending on a customer's specific needs, with complex computer enhancement and detailed state-of-the-art color, the cost of a picture from either system could escalate to $3,000 or more.

In August presstime asked SPOT if it could furnish a top-quality picture of Cam Ranh Bay. Although SPOT had pictures on file of the Cam Ranh Bay area, the company had never concentrated specifically on the bay and military operations. SPOT agreed to have its satellite take a look at such operations on its next pass over the area.



© 1986 CNES, courtesy of SPOT Image Corp.

Artist's rendition of SPOT satellite at work

The word came back that cloud cover had obscured the view. And the monsoon season is now in full force in the Viet Nam area, so the Soviet military activity at Cam Ranh Bay is reasonably safe from prying satellites for now. Even had SPOT been able to obtain a good picture, to enhance it to the best quality would have cost approximately $3,400, SPOT spokesman Nelson said.

Prices are expected to drop as more satellites take to the skies. Among those planning remote-sensing systems are Germany, Japan, the European Space Agency, India, China, Canada, Brazil and Indonesia. Many of these should be in place within the next 10 years. And the quality may be startling. "The Europeans are said to be exploring the possibility of a one-meter camera," said Aamoth.

CONTROVERSY LOOMS. As public-access satellite photography proves itself and comes into greater demand, it is expected the debate over its uses will escalate.

Heminger of The Courier wonders, "What restrictions might be encountered on the use of these photos by the press? Will governments object? Without a doubt, this technology will produce a number of controversies."

The U.S. departments of Commerce and Transportation already have published proposed rules affecting the news media's role in space. On March 23, the National Oceanic and Atmospheric Administration, a unit of the Commerce Department, published rules authorizing search and seizures of organizations including news media if NOAA thinks national security or foreign policy are affected.

The rules are based on the Land Remote-Sensing Commercialization Act of 1984. The act was passed to define the conditions under which private commercial satellite firms can operate.

The act also gives NOAA authority to deny, revoke, suspend or terminate a license to operate a satellite, and to assess a fine of $10,000 a day, for violations.

The Department of Transportation also has partial jurisdiction. Approval of DOT is needed for the actual launch of a satellite. DOT said in proposed rules that it will take into account First Amendment concerns. It would not halt a launch by private organizations unless the launch would threaten "distinct U. S. national security or foreign policy interests" or would be "inconsistent with international obligations of the United States," it said.

In order to track the government's regulatory efforts, a news media task force was organized by the Radio-Television News Directors Association. It includes ANPA, the American Society of Newspaper Editors, the Society of Professional Journalists, Sigma Delta Chi, and various broadcasting associations.

In comments on the Commerce Department's proposal, the task force said May 23 that the proposed rules would violate the media's First Amendment rights because the rules are vague in defining national security and international obligations.

In separate comments May 30, ANPA Vice President/General Counsel W. Terry Maguire told NOAA that no greater restrictions should be applied to remote-sensing images than are applied to cameras on earth.

Maguire also said the government should take into account existing legal safeguards before adopting regulations dealing with search and seizure.

On Aug. 13, NOAA, responding to the news media task force, said it would recognize the First Amendment rights of all remote-sensing applicants. Remote-sensing rule-making for the news media could be years ahead of its time, however. It appears to be aimed at the distant future when news organizations might band together and launch their own satellite to obtain pictures from space.

CIA director William Casey told ASNE in April that he expects the media eventually will launch their own satellite. When the time comes, says Casey, "We will try to live with it and do what we can to protect our interests."

In the forefront of the movement to make sure no abridgment of the First Amendment takes place when the media finally have their own eye in the sky is Mark Brender, an assignment editor for ABC News and founder and chairman of the media task force on the subject.

Estimates of the cost for the news media to launch their own satellite start at $300 *million. But Williams of* EOSAT *points out there are many more costs involved than just the launch.*

Brender is also the foremost enthusiast for the news media's own satellite. "I've been trying to get people to talk about this for two years," he says.

Estimates of the cost for the news media to launch their own satellite start at $300 million. But Williams of EOSAT points out there are many more costs involved than just the launch. Sophisticated equipment is needed around the earth to track the satellite, and another batch of computers, equipment and manpower is needed to process the sensory images at home base.

Further, assuming the news media wanted a reasonable crack at getting pictures in a short time, several satellites would have to be in operation at once, crisscrossing the earth. Williams estimates the cost of a news media satellite system could be upwards of $500 million.

Nonetheless, many observers say eventually such a system will be feasible. Of more immediate import is the fact that remote-sensing images are here now. And in a few years the quality of satellite pictures will be so much improved, according to observers like Aamoth and Stares, that newspapers will not be able to ignore them. ☐

GRAPHICS

BY LOUIS MINTZ

Liberty Weekend is two days away, and Dennis Haas is putting the finishing touches on a graphic slugged "Statue:Logo." Satisfied, the graphics systems coordinator at the Akron Beacon Journal sends his work by electronic mail to the National Press Building in Washington, D.C. There, minutes later, Roger Fidler inspects the design, makes a few changes and puts it on the "bulletin board."

But this is no ordinary bulletin board. There is no cork. No pins. No paper. You don't even have to be in the same room with Fidler to see what Haas has designed.

In fact, once on the bulletin board, Haas' handiwork can be seen by graphics personnel in newsrooms around the country. It can be customized immediately to meet a newspaper's special needs. Moreover, Haas need not be inconvenienced by future requests for this particular creative effort, because anyone wanting "Statue:Logo" can find the original on the bulletin board.

All of this is possible because Knight-Ridder Inc. has developed a telecommunications capability that no other newspaper publishing company has . . . yet.

It's a communications network and database called PressLink. Just a vision a year and a half ago, PressLink now is providing each of the group's 28 newspapers with access to the Knight-Ridder Graphics Network headquartered in Washington, D.C. PressLink also has electronic mail capability, and Knight-Ridder is using it to provide technical and graphics-related information to its newspapers.

The excitement surrounding the Macintosh-based network stems from its ability to deliver timely, inexpensive, camera-ready graphics. Artists can retrieve graphics—stored in digital form—from numerous databases, alter and update them as desired, and produce graphics ready for paste-up in less than an hour. This allows Knight-Ridder's graphics staff in Washington and artists at the group's newspapers to respond more quickly to late-breaking stories.

Industry observers believe that PressLink and similar networks will someday be a fixture at most newspapers. In fact, efforts to develop computer graphics networks are already under way at some of the nation's leading media organizations, including Gannett Co., the Associated Press and United Press International.

DEMAND AND DELIVERY. Top executives in the newspaper industry view the rise of networks as the next stage in the rapid evolution of informational graphics. This follows a period of rapid expansion in services provided by syndicates, wire services and other sources [presstime, Aug. 1985, p. 26].

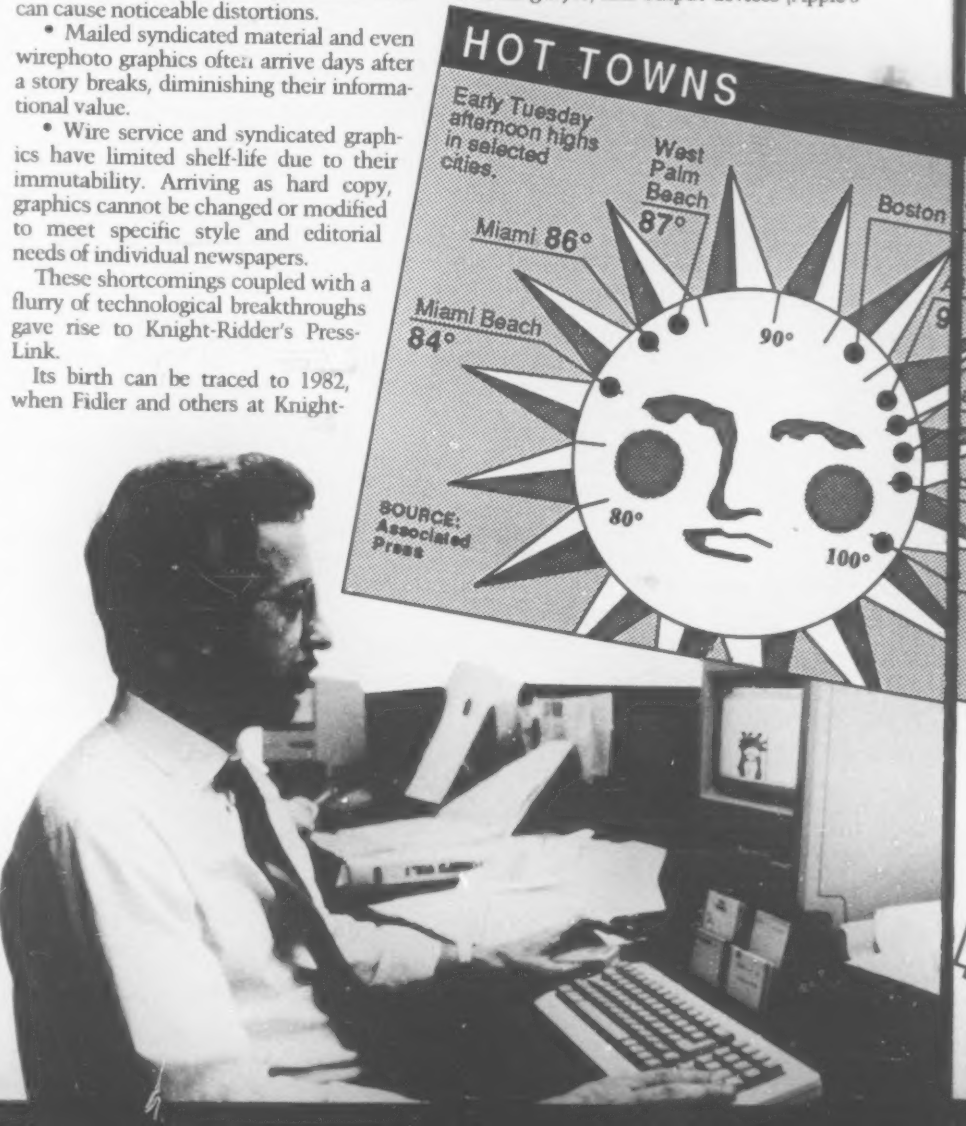
As demand has continued to grow, the limitations of the delivery systems for these services has become increasingly apparent. For example:

- Graphics sent over continuous-tone photo wires tend to lose clarity and sharpness when reproduced. Furthermore, small disturbances during transmission can cause noticeable distortions.
- Mailed syndicated material and even wirephoto graphics often arrive days after a story breaks, diminishing their informational value.
- Wire service and syndicated graphics have limited shelf-life due to their immutability. Arriving as hard copy, graphics cannot be changed or modified to meet specific style and editorial needs of individual newspapers.

These shortcomings coupled with a flurry of technological breakthroughs gave rise to Knight-Ridder's PressLink.

Its birth can be traced to 1982, when Fidler and others at Knight-Ridder began toying with the idea of developing a graphics-transmission network. At that time, however, the computer memory required to accommodate complex graphics carried a high price tag. And there was no suitable software to link personal computers, according to Fidler, the company's director of graphics and newsroom technology.

In 1983, Apple Computer Inc. introduced the affordable Macintosh personal computer, and Fidler says subsequent enhancements to its memory (now up to one megabyte) and output devices (Apple's



Mintz, a Duke University senior, was a 1986 summer intern at presstime.

NETWORKS

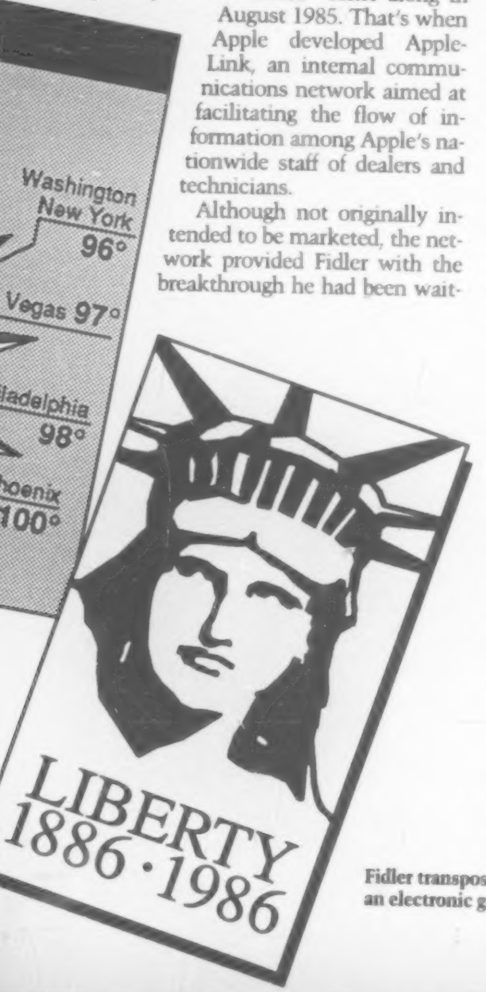
Knight-Ridder Inc. has developed a telecommunications capability that no one else has—yet

plain-paper LaserWriter can yield camera-ready graphics) made a Macintosh-based system the obvious choice for the network [**presstime**, April 1986, p. 23]. Thus, by January 1985, he had the computer equipment needed to generate and reproduce high-resolution graphics.

Network development stalled, however, because no software had yet been developed that could link several Macs and LaserWriters. This obstacle was overcome several months later when Apple introduced AppleTalk, a software package that made possible the formation of local communications networks.

The ability to link terminals and printers at a multitude of sites—the network capability Fidler wanted—came along in August 1985. That's when Apple developed AppleLink, an internal communications network aimed at facilitating the flow of information among Apple's nationwide staff of dealers and technicians.

Although not originally intended to be marketed, the network provided Fidler with the breakthrough he had been waiting for. "It was obvious that AppleLink had potential far beyond the dealers," says Fidler, who developed PressLink after working for two months with Apple and General Electric Information Services Co. executives. PressLink is believed to be the first outside application of AppleLink.



Fidler transposes the facial features of the Liberty graphic on an electronic graphic showing "Ol' Sol."

Testing of the PressLink network began last October, and the network started operating in March.

All but one of the group's newspapers were on-line in late August, and success within Knight-Ridder has prompted management to begin marketing the network and graphics service outside of the group.

DIVERSE OFFERINGS. Knight-Ridder currently manages five graphics and informational databases—"bulletin boards"—on the PressLink network. They are:

- Today's Graphics, providing timely graphics for breaking news and stories carried on the KNT News Wire, Knight-Ridder's supplemental wire service. Graphics are created by KRGN staff artists in Washington and by newsroom artists at the group's newspapers around the country.
- Knight-Ridder Graphics, the main storage database. Graphics can be pulled out of this archive and be easily updated or modified.
- Knight-Ridder Maps, featuring hundreds of base maps used to construct locator graphics for breaking news stories in minutes.
- PressLink News, an informational bulletin board that provides subscribers with tips on how to get the most out of PressLink and applications software.
- Training, which supplies current information about a number of regional Macintosh seminars offered by the Knight-Ridder Institute of Training.

"The network has proved to be a godsend for us," says James A. Chapman, assistant to the editor at Knight-Ridder's Macon (Ga.) Telegraph and News. "We've been able to do things we never would have been able to do otherwise."

Good, timely artwork was hard to come by prior to PressLink, he explains, but now the paper uses an average of two graphics a day. Between 80 and 90 percent of them appear on the front page, and half run in color.

Most of the work the Macon daily uses is generated by the parent company's graphics staff in Washington but adapted by the newspaper staff for a local angle.

Chapman believes PressLink's value will grow once more graphics are produced locally by the various subscribers.

C.D. Schmidt, graphics editor at the News-Tribune and Herald in Duluth, Minn., agrees. "The network's impact will increase when more local stuff is produced," he says.

Still, Schmidt believes PressLink has enabled his Knight-Ridder paper "to use a lot of things we could not have used before, especially locator maps. My editor loves those things because this paper covers a huge geographic area, and maps are used a lot."

Schmidt points out that the News-Tribune and Herald used few graphics before the network was started. "We had no newsroom artist, and AP's stuff was not reproducible" in the Duluth daily's opinion. He adds, "We have four or five artists in our advertising department and could occasionally get some work out of them, but it would take two or three days. With the network, the base maps are already in the database and are available in only 15 to 20 minutes."

RIVALS IN THE WINGS? Knight-Ridder may be the first to roll out such a network, but it will not be the last.

Gannett, with Macintosh computers in place at all of its 92 daily newspapers, has been working on a network and database for the last year and expects it to be operational "sometime in the foreseeable future," according to Richard Curtis, managing editor/graphics and photography at USA Today. Although Gannett did not have a network in mind when it chose the Macintosh for graphics in 1984, enhancements to the Mac have made a linkup desirable, he notes.

Unlike Knight-Ridder, however, Gannett has no plans to market its network outside of the group. "It's only for an in-house pooling of resources," says Curtis.

The Associated Press since January also has been exploring a number of network alternatives, but Graphics Director Donald C. DeMaio says that "despite our commitment, I have to say there are still a lot of unanswered questions. Our R&D department is exploring all of the hardware and software options and later this year will make some recommendations."

DeMaio views Knight-Ridder's progress as "very positive." Yet a two-way dial-up network like PressLink fails to meet all of AP's needs, he says.

"Two-way communications are fine for networks dealing with a small number of papers," he explains. "But for our needs—that is, simultaneous transmissions to thousands of members—a call-in system is not manageable." AP is primarily concerned with developing a one-way transmission network that utilizes existing satellite technology.

Another hurdle for AP is the lack of compatible equipment. DeMaio points out that while all of Knight-Ridder's newspapers have at least one Macintosh, many of AP's members lack this crucial common denominator.

"It's all very exciting," he says. "We have no precise answers . . . but we are committed to the R&D process."

Similar efforts are "currently at the talking stage" at United Press International, says Graphics Director Joseph Scopin. "Given our situation during the past year, we have not gotten real far," he says, referring to the wire service's period in bankruptcy, which ended June 10. "But the new ownership seems interested. It is really just a matter of time and research."

The expansion planned for PressLink to non-Knight-Ridder newspapers initially will be targeted at the 107 subscribers to the KNT News Wire. Testing at some of those newspapers will begin this month. If the test is successful, Fidler believes PressLink could be made available soon to any newspaper wanting the service and to other segments of the publishing industry.

Prices have not been determined, but Fidler estimates a fee of 50 cents per minute of connect time for access to the two informational bulletin boards and for electronic mail. Access to the graphics bulletin boards would be sold separately for between $25 and $100 weekly, depending on the nature of the material.

Of course, to retrieve both graphics and text, users need a Macintosh Plus computer, a LaserWriter Plus printer and at least a 1200-baud modem. If a newspaper wants to alter graphics locally, a 20-megabyte hard disk is also recommended. A number of software packages are also essential.

FUTURE USES. Fidler emphasizes that his group is still deciding what else to do with the technology, which he says is "still an innovation at this stage and is not yet clearly understood as a larger vision."

Perhaps a glimpse into PressLink's potential is provided by Multi-Ad Services of Peoria, Ill. The firm, which supplies newspapers with co-op advertising information, on Aug. 7 became the first non-newspaper entity to manage its own PressLink bulletin board.

"It looks to be a big timesaver," says Rob Jennings, Multi-Ad microcomputer manager. "Now we won't have 300 papers trying to call us at once or have to send information to each individual customer."

Fidler says the PressLink network will eventually be available for users with IBM and IBM-compatible personal computers. Like Multi-Ad's users, however, these users will not have access to the graphics service.

Kathleen Criner, ANPA director/telecommunications affairs, thinks there is a future for this kind of electronic-messaging use. PressLink, she says, is the "foundation for a very sophisticated type of communications network which could be used to communicate more effectively with customers, with advertisers and within the newspaper."

Others see the network as yet another stage of the visual revolution in newspapers.

"I think you have to look at what happened to text processing and use that as a guide to what is happening to image processing," says Robert Susskind, programmer/analyst in ANPA's Technical Research Department. "The generation of text processing that we are looking at now is fully developed, and that evolved over a 10-year span going from electric typewriters to terminal-based computers."

Susskind thus views graphics networks as yet another progressive step in image processing—an evolution he sees culminating in color-photograph networks after certain technical hurdles are cleared.

"Graphics are less complicated and cheaper (to transmit and reproduce) than pictures," he says, "but (PressLink) is definitely an element in the revolution." ☐

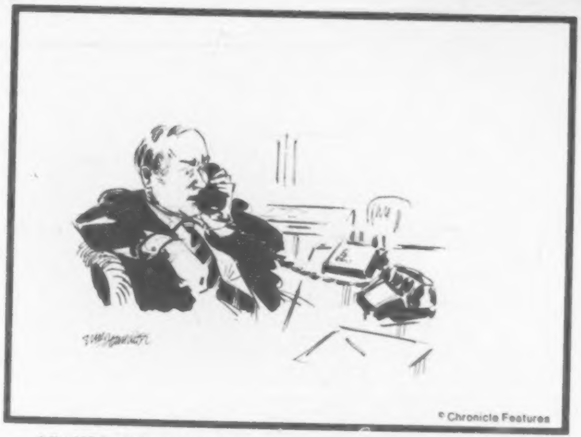
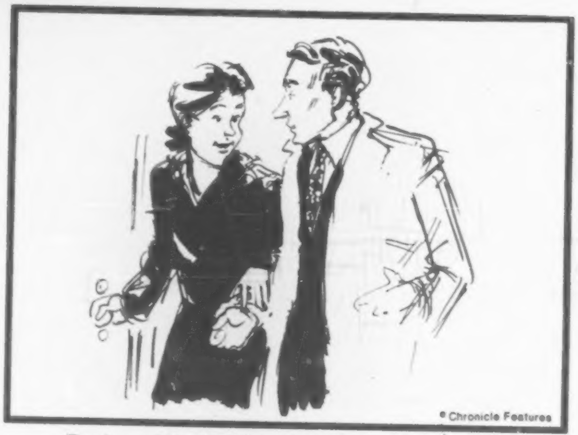
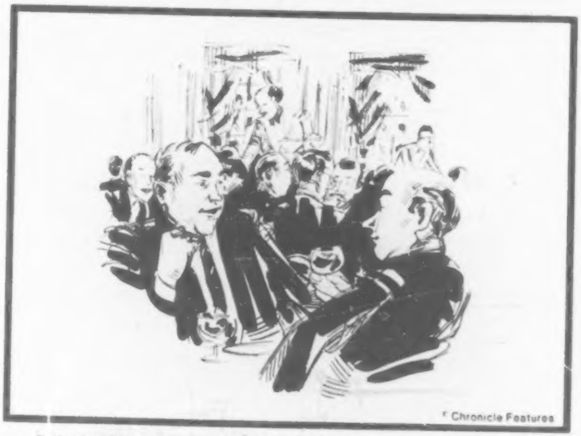
Before William Hamilton, success was nothing to laugh at.



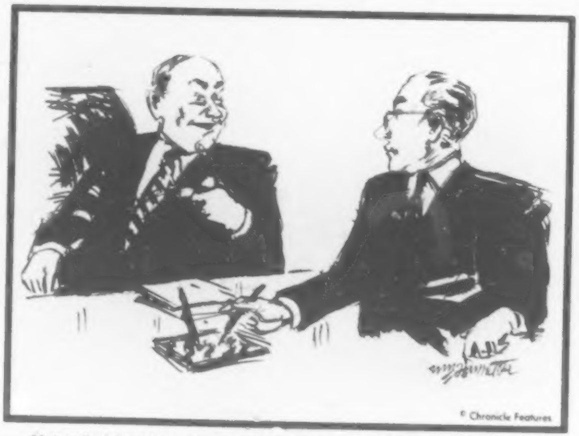
Miss White, I thought I told you never to put through anyone who said they wanted to share something with me.



Thanks, once in a while it's kind of a relief to just be superficial.



Call me old-fashioned, but I like the way kids are thinking money again.



Naturally, I don't know how you feel inside about this deal—but I know some self-congratulations are in order for me.

Hamilton's "KEEPING UP" is a cartoon panel specially drawn for newspaper syndication. Its client list includes such noted journals as *The Boston Globe, Dallas Morning News, Denver Post, Los Angeles Times, New York Post, San Francisco Chronicle* and *Washington Post.* Once a week. Contact us now to reserve Hamilton's unique humor for your newspaper.

Writing Headlines

Never underestimate the role the head plays in how newspapers are read and how they sell

BY ELWOOD M. WARDLOW

What headline would you write on a story about the increased use of acroynyms? The Seattle Times came up with this one:

"You CETA Words, but They Have NOAA Meaning"

Some of the earliest writings of antiquity used headings to announce the subject. The first newsletters (and later newspapers) used them, too. And many modern newspapers cherish quality headlines as much as they prize quality stories.

That is as it should be, for the average newspaper headline will have a higher readership than the story it promotes. Readers working their way through the paper use headlines as signposts. If the headline is inviting and somehow touches their lives, they will tarry. If the headline is dull or distant, they will pass on and leave the story unread.

So remember well: Headlines sell.

In another day, newsboys on New York City street corners understood that premise. If headlines in the paper they were hawking weren't good enough, the newsboys were prone to cry out their own, such as, "BLOODY MURDER IN THE BRONX!!"

Editors, publishers and circulation directors are paying more attention to headlines once again. One evidence of that: For the past three years, seminars for news editors and copy desk chiefs have been the most oversubscribed programs offered by the American Press Institute in Reston, Va.

There seems to be a three-part rationale:

- Headlines sell.
- Good headlines sell best.
- An investment in good headlines is a good investment.

What goes into a good headline?

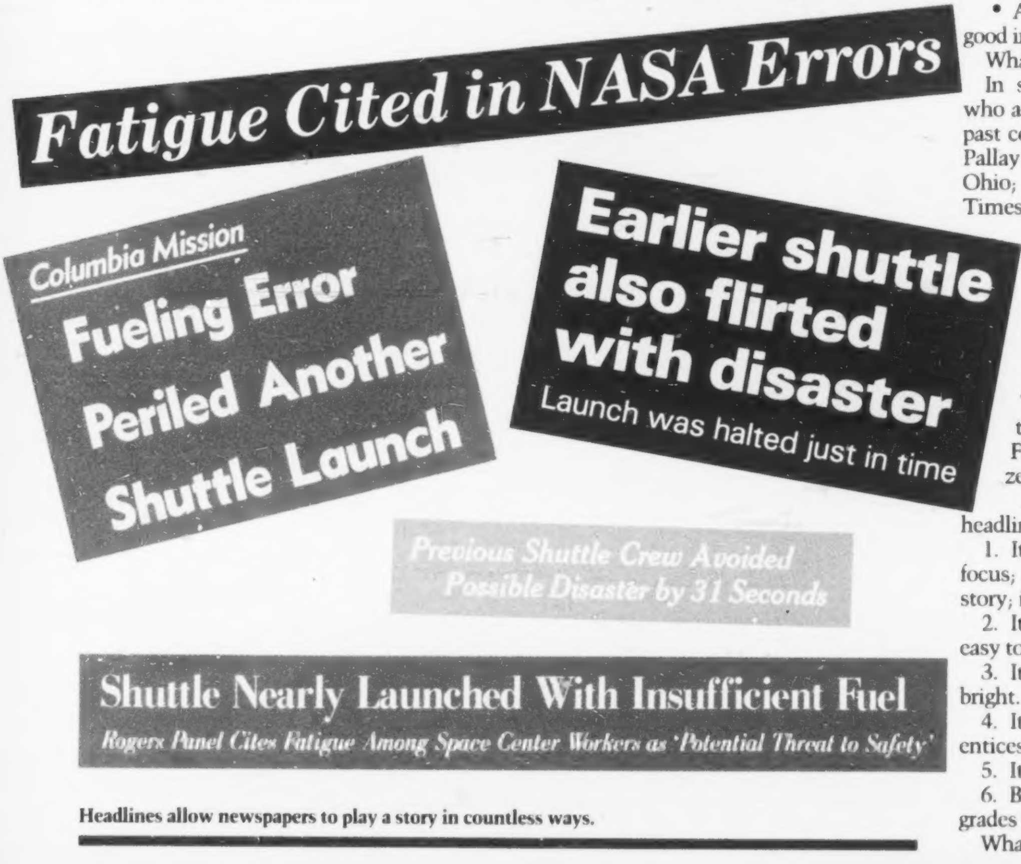
In search of answers, 10 desk chiefs who attended API editing seminars in the past couple of years were canvassed: John Pallay of the News Journal, Mansfield, Ohio; Steve Wainwright, The Seattle Times; Fred Sacksteder, Wisconsin State Journal in Madison; Frederick S. Vondy, The Baltimore Sun; Donald Manley, The Globe and Mail in Toronto; Christina Diebold, Bangor (Maine) Daily News; John Kafentzis, The Spokesman-Review of Spokane; Lisa Chandler, The Orlando Sentinel; Clay Morton, The Dallas Morning News; and Florence R. Niles, The Evening Gazette in Worcester, Mass.

Here are their descriptions of a good headline, in order of frequency.

1. It is accurate in fact, tone, scope and focus; emphasizes the main themes of the story; is balanced and fair, in good taste.
2. It is clear, succinct, grammatical, easy to read and understand.
3. It has vitality; is strong, active, bright.
4. It catches the readers' attention and entices them into the story.
5. It has freshness and immediacy.
6. By its size and shape, it accurately grades the news.

What about don'ts? Here is the list from

Wardlow is associate director of the American Press Institute in Reston, Va., and former managing editor of The Buffalo News.



Fatigue Cited in NASA Errors

Rogers Panel Cites Fatigue Among Space Center Workers as 'Potential Threat to Safety'

Headlines allow newspapers to play a story in countless ways.

those 10 editors, in order of mentions:

1. "Never wear a clown hat to a funeral." Match the tone of the story. "Clever" heads must be appropriate; as a general rule they should not be used on serious stories or involve a play on a person's name. And they should be used sparingly.

2. Don't repeat the lead in the headline.

3. Don't be puzzling, mysterious, esoteric or circuitous.

4. Don't sacrifice accuracy for brightness (or wordplay or anything else).

5. Don't complete the headline until you understand the story.

6. Don't use "officialese," "headlinese," cliches or passive verbs.

7. Don't forget to check for double meanings.

8. Don't play up secondary details.

9. Don't take chances with libel.

10. "Don't dismiss the headline as the last 10-second chore in the editing process."

Behind each headline writer is usually a final backstop, or chief copy editor, and for that newspapers should be grateful. At the 10 newspapers mentioned above, an average of one headline in every five is either revised by the chief or bounced back to the head writer for revision. They achieve good headlines the old-fashioned way—they earn them.

TRENDS NOTED. What are the main trends for headlines in recent years? These were mentioned by the 10 editors:

- Fewer kickers (overlines)
- Fewer single-column heads on major stories
- Better, brighter headlines because of an upgrading of copy desk personnel
- Willingness to state negative or distasteful information plainly, rather than in euphemisms
- Split heads—compound nouns, verbs or phrases broken from one line to the next—have become more accepted
- Greater care to avoid libel and legal problems
- More experimentation with decks (and without decks, too).

Are there any special tricks to writing headlines? No, but the editors say techniques such as these can help:

- Think simple. Avoid trying to pack in too much information.
- Try to condense the story into a single sentence of conversation.
- Write the gist without worrying about the count, and then pare it down and dress it up.
- Talk it over with your colleagues and see if they have any quick inspirations.
- Highlight the key words in the story, and then brainstorm about them.
- *Listen* to the headline, rather than look at it.
- If all else fails, take a short walk.

GUIDES AND COMPUTERS. Given the importance of headlines, do most newspapers have written guidelines for their copy editors?

Surprisingly, they do not. Sometimes there might be a wispy list of don'ts, but on most copy desks there is nothing at all in writing. Training and standards are usually imparted verbally.

More and more newsrooms, however, are circulating occasional "Winners and Sinners"-type critiques. In those, headline successes and failures are often given as much attention as reporting and writing.

Where once most headlines were written with pen or pencil, and later with typewriter, now the video display terminal is used almost universally. Vondy of The Baltimore Sun calls it "the best thing that ever happened to headline writers."

It's too early to foretell the consequences of full pagination, but most desk editors believe that when it comes to their newspapers, it too will be a positive help, giving the newsroom still greater control over the nature and quality of the daily product.

But new tools are not the end; they cannot, in themselves, produce better headlines.

That kind of quality can only come from the minds of talented editors who are made to feel that their work is of great value to the newspaper.

As the reporter gives each story its first wing, the headline writer gives it the second. Without good work by both, the story cannot fly.

No matter what the developments in technology, a generation from now the desk chief in Bangor will still reject this head on a flooding story:

"The Rain It's Plain Was Gates Lane Bane"

And that same desk chief will still welcome this headline on an unusual wedding:

"Two Transplanted Hearts Beat as One"

And Orlando will still cherish the headline writer who can describe an open house with such dexterity:

"Nudists Invite Public to Take Look at How They Live"

Remember well: Headlines sell. ☐

DEFINITIONAL DILEMMA

Ill Feelings About Measuring Illiteracy

Bogart-Kozol disagreement highlights problems of interpreting the figures

BY MARGARET GENOVESE
presstime staff writer

Newspapers in the United States are making a concerted effort to attack the problem of adult illiteracy. But if publishers are perplexed about how much of a problem there is, it is understandable. Frequently cited estimates of the American adult illiterate population range from 75 to 78 million to less than 1 million.

Further confusing matters are estimates of newspaper readership cited by the newspaper business.

The issue has put one of the foremost figures on illiteracy and an official of the Newspaper Advertising Bureau at loggerheads.

NAB Executive Vice President and General Manager Leo Bogart recently took issue with Jonathan Kozol, author of *Illiterate America,* who told the ANPA Convention in April that "45 percent of American adults do not read newspapers. Only 10 percent abstain by choice; the rest can't understand them" [presstime, May 1986, p. 42].

Kozol "misread" the readership statistics, says Bogart, pointing to a recent estimate that 84 percent of American adults read a daily newspaper within the five previous weekdays.

Kozol stands by his contention that about a third of American adults, or 60 million people, cannot read and understand newspapers. "To state it bluntly, if Mr. Bogart is correct in stating that 84 percent of the American public is able to read a paper at least once a week, then we have to retract all scholarly opinion upon which I relied for 20 years," he says.

The controversy worries Carolyn Ebel, director of ANPA Foundation's new literacy project, because it tends to make people "focus on the statistics and get away from the fact that [illiteracy] is a tremendous problem for the country, regardless of the variation in the numbers."

According to Ebel, the statistical differences have to do with the populations tested and the tests used.

Karl O. Haigler, director of the Adult Literacy Initiative of the U.S. Department of Education, agrees that the problem is largely definitional. Asked how many American adults are illiterate, Haigler responds: "My question is, 'What do you mean by literate or illiterate?' "

Depending on the definition, the word "literacy" can mean being able to read and write at a low level; or it can mean myriad skills, of which reading is only one, that enable an adult to function effectively in society.

Leo Bogart

NUMBERS EXPLAINED. Each definition yields a different estimate of the number of "illiterates." And those doing the estimating offer the following explanations for their numbers:

- **75 to 78 million adults**—This estimate is usually attributed to Jeanne S. Chall, professor of education and director of the reading laboratory at Harvard University. Although she endorses the estimate, it is not, strictly speaking, hers. Instead, it comes from another source.

In a paper prepared for a 1984 national conference on adult literacy, Chall described three levels of literacy—totally illiterate, "up to 4th grade reading levels"; functionally illiterate, "able to read somewhat but unable to use reading and writing for purposes beyond minimal survival and coping"; and the "new illiterates," people "who have 'survival' functional literacy but who lack a high school graduate level that is more functional for a technological society."

"Although no one seems to know for sure what numbers of illiterates fall within these three groups," Chall wrote, "I think the numbers suggested by Renee Lerche of the Network [an Andover, Mass., educational consulting firm] have some merit—1 million estimated for the basic literacy group, 23 to 26 million for the functional literates, and 51 million for the 'new illiterates.' "

A recent article in The New York Times stated that Chall had estimated that as many as 75 million to 85 million adults are unable to read or write. This points up another problem with illiteracy statistics: They are easily misquoted and misunderstood.

- **60 million, or one-third the adult population**—Kozol's 1984 estimate is contained in a chapter in *Illiterate America* devoted to the disagreement on illiteracy numbers. Reviewing numerous literacy studies conducted since 1970, he arrived at his own estimate that at a minimum, 25 million adults were reading either not at all or at less than fifth-grade level, and another 35 million were reading at less than ninth-grade level.

"It requires ninth grade competence to understand the antidote instructions on a bottle of corrosive kitchen lye, tenth grade competence to understand instructions on a federal income tax return, twelfth grade competence to read a life insurance form," he wrote. "I have argued, therefore, that all of these 60 million people should be called 'illiterate in terms of U.S. print communication at the present time.'"

In an interview, Kozol notes that "in numerous readability studies, it has been found that the average local daily newspaper in the United States is written at approximately the ninth to 10th grade level."

Of course, he adds, in every edition there is some material written at a lower level, such as the comics, the weather map and perhaps the TV listings. But, he emphasizes, "if we are speaking of the editorial content of a newspaper, of items of significant journalistic value, it is generally agreed that 60 million adults will find it either impossible or very difficult to understand."

- **27 million, or about 1 of 5 adults**—Perhaps the most commonly cited statistics, they are used in the Advertising Council's current public service advertising campaign titled "Volunteer Against Literacy." The source is the U.S. Department of Education.

According to Paul V. Delker, director of DOE's Division of Adult Education, the "1-out-of-5" figure was taken from a study published in 1975 by researchers at the University of Texas. The Texas study, known as the Adult Performance Level Project, reported on the competency of adults not only in reading but also in occupational knowledge, consumer economics, government and law, health, community resources, problem solving, computation, and writing. Overall, researchers determined that about one-fifth (19.7 percent) of U.S. adults between the ages of 18 and 65 were "functioning with difficulty."

The 27-million estimate was derived, Delker says, by applying the 19.7 rate to the number of 18-to-65 year olds in the 1980 census.

- **17 to 21 million, or nearly 13 percent of U.S. adults**—This estimate was contained in the English Language Proficiency Survey released last December by DOE. Despite the fact that the recent figure is drawn from new information, the Ad Council and groups such as Literacy Volunteers of America continue to use the previous, higher DOE figure of 27 million.

DOE's Delker says the studies are "not at all comparable." The recent one, commissioned by DOE and conducted by the Bureau of the Census in 1982, "wasn't really a test designed to test literacy." Rather, he says, it was designed to determine if clients of human-services programs could handle the "typical kinds of written instructions they might receive."

The test was comprised of 26 questions; the literacy cutoff was 20 or more answered correctly.

Also, while the previous DOE test was of adults 18-65, this one was of adults 20 years and older.

- **Fewer than 1 million.** On the low end of the illiteracy scale is the 1979 study by the Census Bureau that found a rate of about one-half of 1 percent. "Approximately 981,000 persons aged 14 and over were reported as unable to read and write in any language," it reported.

That conclusion was based on answers to a verbal question asked by an interviewer, according to Paul Siegel, chief of the bureau's Education and Social Stratification Branch. People 14 years and older who did not attend the sixth or a higher grade were asked whether they could read and write. (Those who spoke a language other than English at home were asked if they could read and write in that language. People who attended at least the sixth grade were presumed to be able to read and write.)

The question has not been asked since that time, says Siegel. "That question doesn't measure illiteracy any more," he says. The problem, he observes, is the lack of a universally agreed-upon test. "We're sort of waiting for someone to develop a short test that we can administer in the context of the kind of survey we do."

MEASURING READERSHIP. The dispute between NAB's Bogart and literacy authority Kozol focuses attention on how readership is measured, as opposed to literacy.

Bogart says Kozol's contention that 45 percent of American adults do not read newspapers was drawn from a 1982 article in U.S. News & World Report magazine, "which makes the unsubstantiated statement that 55 percent of the public read newspapers 'every day.'" Bogart noted in a recent speech to the International Circulation Managers Association that this does not mean "they don't or can't read them."

The source of Bogart's 84-percent readership figure is the recent Simmons Study of Media & Markets.

Simmons Market Research Bureau based its estimate on 20,000 interviews conducted around the country. According to Deborah A. Moroney, Simmons' director of marketing, interviewees were asked: "What daily, weekday newspaper have you read or looked into at any time in the last seven days, either at home or anywhere else outside your home."

Kozol suggests several reasons the 84-percent measurement might be wrong, including less-than-honest answers by respondents. "We have no way of knowing how many adults questioned about their newspaper reading habits would be likely to provide an answer that betrays the fact that they cannot read," he says. "Many people unquestionably tell pollsters they do read a paper out of fear if they don't, it will reveal the fact that they don't read at all."

If the statistic has "any value at all," says Kozol, "it might refer to people who buy newspapers. It certainly does not describe the people capable of reading that part of the newspaper that justifies a newspaper's existence."

Kozol adds: "I understand that this is an extremely sensitive issue for publishers, one that cuts two ways at once. In the short run, the prosperity of the newspaper depends on the ability to convince advertisers that its readership is strong. . . . In the long run, on the other hand, it is essential that newspaper publishers be able to ensure their future strength. This strength would be eroded if a problem of this sort is not confronted." ☐

"Sixty million American adults, one-third of our adult population, cannot read and understand the Bill of Rights, a daily paper . . ."

—Jonathan Kozol

"A variety of current surveys indicate that between 85 percent and 89 percent of adults have read a newspaper within the last seven days."

—Leo Bogart, Newspaper Advertising Bureau

". . . 27 million Americans are functionally illiterate, about one adult in five."

—Ad Council and Coalition for Literacy

"Between 17 and 21 million U.S. adults are illiterate, for an overall rate of nearly 13 percent."

—U.S. Department of Education

"The proportion of the U.S. population 14 and over who were illiterate, which now stands at about one-half of one percent, has been approximately halved in each decade since 1959."

—U.S. Bureau of the Census

Advertising in Unusual Places

They're springing up all over, adding to 'clutter' and siphoning off some ad dollars

BY MARCIA RUTH
presstime staff writer

Turn over an airline ticket jacket, look on the side of a grocery cart, stop for a truck, put something in a trash can, go to a movie, attend a sports event at an arena with a fancy electronic scoreboard. What do you see? Advertising.

The proliferation seems endless as advertisers stretch the traditional bounds of media. But experts in the industry doubt that this increasing "clutter" is turning off the public about advertising generally.

Most of these experts also consider the amount being spent on what might be classified as "odd ads" is relatively small, having minimal effect on newspapers and other traditional advertising media.

"Ingenious use of out-of-the-way devices like theater tickets or skywriting is not a major competitive threat to the newspaper business," says Leo Bogart, executive vice president and general manager of the Newspaper Advertising Bureau.

Even so, it is an aspect of the advertising industry that is growing and bears watching, observers say. "From the standpoint of available dollars," odd ads "have a way of eating into" planned advertising budgets, notes Mac Morris, NAB's vice president for national advertising.

In general, odd ads represent an intense form of "targeting"—hitting not only the right people, but at a time and place when they're likely to buy. "Basically, what we are trying to do is seek out innovative ways to reach people," says Paul Mulcahy, president of CSC Advertising Inc., a house agency of Campbell's Soup Co. "If it looks legitimate," he says, "we'll experiment."

In this pursuit, Campbell's has shown its products in places not often viewed as "media." According to Mulcahy, soup ads on ski lifts worked fine in the first trial run of 200 resorts, and meatless recipes on church bulletins brought an "incredibly high result" from Roman Catholics during Lent. But dog-food ads on Baltimore parking meters proved "too hard to read."

No one really knows how much money is being spent on such advertising. Despite their proliferation, these ads remain too small to measure as a separate category, says Rodney E. Nebocat, forecasting project director of McCann-Erickson Worldwide, who works with Senior Vice President Robert J. Coen in compiling the ad agency's yearly statistics for the industry.

Even within companies, expenditures for such advertising may go unmeasured. At Campbell's, for example, the ads do not come from brand-advertising or promotion budgets but from an "experimenting" fund at the corporate level, says Mulcahy.

Targeting the cold-and-hungry, Campbell's may sell soup on ski lifts, but for the hot-and-thirsty, it's beer on beach-bound blimps by Anheuser-Busch, and for the sophisticated snacker, it's a restaurant promoted on the envelope containing theater tickets.

REVENUE PRODUCERS. Although critics charge that these new types of advertising are further cluttering the market-

AY

Marcia Ruth

Striking ads on phone booths are common in New York City.

place, they are welcomed by their hosts as added income. At Safeway Stores Inc., "we got involved to generate money to help defray operating expenses," says Ernest Moore, public affairs manager of the Washington, D.C., division, which gets 25 percent of the amount the advertiser pays to have its ads in the stores.

A company specializing in placing advertising in supermarkets, New York City-based Actmédia, claims gross income of $44 million in 1985, nearly double the $24 million of 1984.

Other examples of successful enterprises include:

- Operating from New York City and Los Angeles, Screenvision Cinema Network claims a national network of ads on nearly 5,000 of the approximately 17,000 screens in first-run movie theatres, up from about 2,000 in 1981. A nationwide run—seven days a week for four weeks—costs an advertiser $500,000.
- Rembrandt George, a taxidriver-turned-inventor who took out a patent on taxi-top signs more than 10 years ago, says his new medium has added more than $10 million to the taxi business in New York City alone, has already spread to other U.S. cities such as Boston, Philadelphia, Minneapolis and Baltimore, and will start abroad with London in the fall.
- Nieman Marcus sells advertising for its NM magazine, which reaches 900,000 customers of that exclusive store. An inside-cover position sells for $25,000, says Kit Hughes, director of advertising planning at Neiman Marcus.
- When research showed that "because of the advertising Coca-Cola had done over the years, people associated the name with good times," Murjani International decided to launch a "Coke" line of sportswear, says Carol Fox, Murjani's director of public relations. "It's not advertising and it is advertising," says Fox, who describes the line now featured in "Fizzazz" stores as "brand migration."

Not all attempts at new forms of advertising are instant successes, however.

Mobilmedia, an Illinois company that claims to have developed the most desirable way to display ads on 18-wheel trucks, is still waiting for its first million dollars to roll in. "Everybody's talking about it, but nobody's doing it," complains vice president, Joe Commerford. Companies use the ads on their own trucks, but agencies are slow to suggest this medium for "third party" use because "it's a medium they know nothing about," he says.

Some other kinds of vehicular advertising also have floundered.

In Manhattan, advertising vans that are driven slowly through mid-town during rush hour incurred the wrath of motorists and pedestrians alike. And when some taxis were equipped with electronic message boards that flashed ads to passengers in the back seat, so many complained that the devices were removed.

Other new advertising forms are welcomed because they fill a public need.

Bus shelters are a good example—"the best of all possible worlds," says Connie Bary, president of the Minneapolis-based Shelter Advertising Association. She predicts that the number of ad-equipped shelters, now 4,000, will triple in the next five years. Were it not for the advertising potential, many cities operating under tight budgets would not be able to provide these shelters, she reasons.

Even trash collection is gaining from "odd ads." When recent budget cuts left sanitation officials saying New York City was short 50,000 trash cans, an "Adopt-a-Basket" campaign netted corporate patrons like McDonald's.

Clean City Squares of St. Louis, one of the firms making such "ad cans," is expanding. Thus, merchants in other cities may soon find not only a new advertising medium but a new responsibility: emptying the trash. ☐

Soup ads on ski lifts worked, as did meatless recipes on church bulletins during Lent; but dog-food ads on parking meters just proved to be "too hard to read."

Reliable technology.

☐ The X-Rite B318 battery powered color reflection densitometer is unmatched in accuracy, stability, and reliability ☐ Powered by **rechargeable ni-cad batteries**, this small, but mighty quality control tool provides thousands of printers precise density measurements day in, day out. ☐ The B318 incorporates X-Rite's exclusive **electronic filter selection** capability which enables you to move from one color channel to another with the push of a button. ☐ For added convenience the B318 is equipped with a **"low battery" indicator** along with an **AC power source adaptor**. And you can order the B318 with either standard graphic arts or narrow-band response. ☐ To learn more about how X-Rite's technology can benefit your printing operation call us toll free at **1-800-248-9748**. Press Installers

Demand Grows for Experts Who Put All the Pieces Together

BY ROSALIND C. TRUITT
presstime technical writer

When something is a block long, weighs 400 tons and will stand three stories high, you don't assemble it with a screw driver, a pair of pliers and a monkey wrench.

So when the time comes for newspapers to erect their presses, whether spanking new models or reconditioned units, they rely on experts to assemble the hundreds of components that make up a press.

With many newspapers in the process of updating or expanding their pressrooms, business for installation specialists is booming, according to specialists in the field.

"We're very busy these days. We have a significant backlog because a lot of newspapers are changing their printing processes," says Richard A. Taylor, general manager of George R. Hall Contracting of Westlake, Ohio. "There was a flurry of press-buying activity 12 to 24 months ago, and we're installing those presses now."

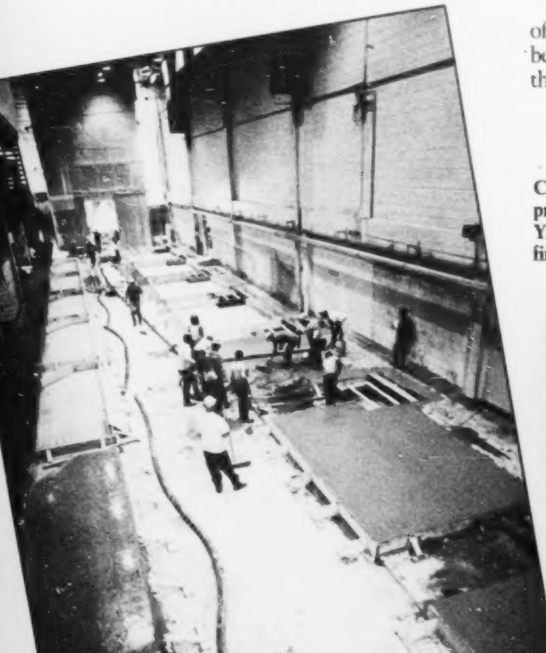
Indeed, many of the equipment installers that exhibited at the ANPA Operations Management Conference & Exposition in Atlanta last June say they received a number of serious inquiries for future work. Not surprisingly, with demand for their services rising, the companies describe theirs as an extremely competitive industry, both for installations here and overseas.

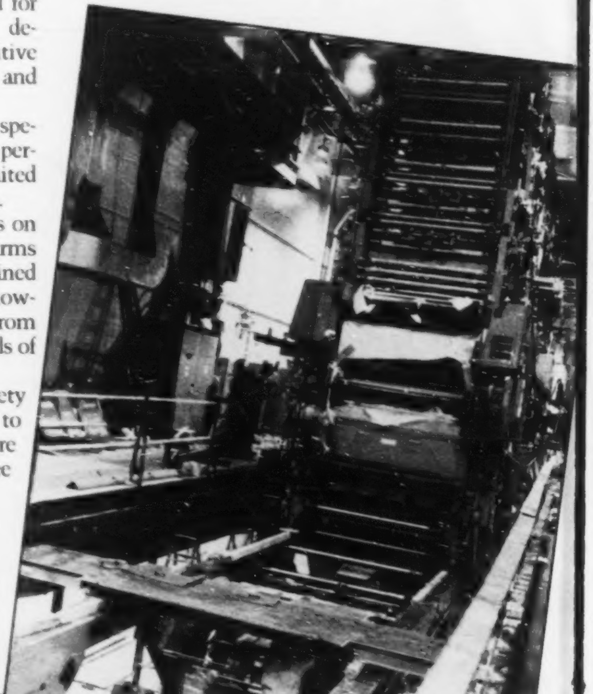
Estimates vary on how many firms specialize in press erections. There are perhaps as many as 25 across the United States, with about 10 or so major firms.

It's also hard to obtain exact figures on the cost of installations, with the firms maintaining that each bid is determined individually. One company says, however, that its installations can range from $25,000 for a very small job to hundreds of thousands of dollars for a large one.

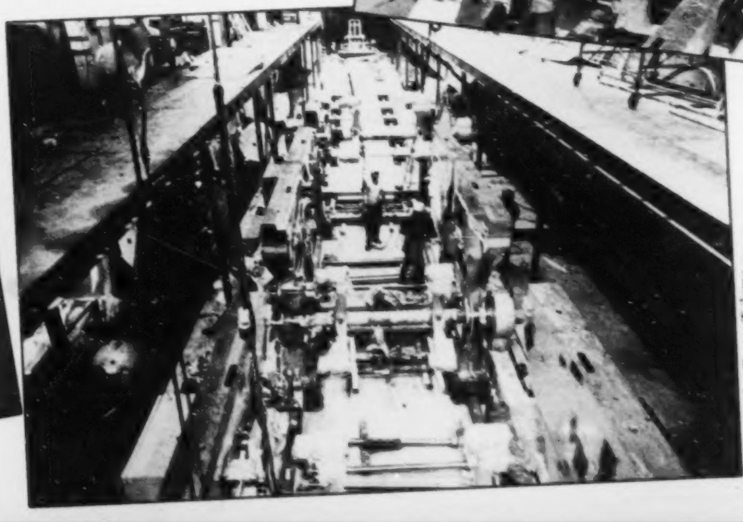
Bids take into consideration a variety of factors, including the type of press to be installed, the building level where the press will be located and the degree of access to the room. Obviously, press installers note, it is easier to move a press into a new, specially designed building than to fit a press into an existing configuration.

Some companies—32-year-old George Hall Contracting, for example—handle





Concrete work for Tampa Tribune's pressroom floor (left) preceded erection of Y columns (below) and installation of first seven TKS press units (right).



August Staebler, Tampa Tribune

more new press installations than reconditioned ones. Others, like Northeast Industries Inc. of Los Angeles and International Press Services Inc. of Decatur, Ga., have the opposite experience. Northeast and International also recondition and sell previously owned presses.

Most of the firms contacted by presstime install offset as well as flexographic presses.

An exception is Taft Equipment Sales Co. of Lake Zurich, Ill., or TESCO, which installs offset presses only. TESCO has been the U.S. marketing agent for Tokyo Kikai Seisakusho offset presses since 1976, and the firm primarily installs TKS presses. But President James R. Price says TESCO occasionally installs other brands for longtime customers.

Newspapers contract with press installers in a variety of ways. In the most common case, known as a "turnkey" agreement, a newspaper signs a contract with a press manufacturer which in turn agrees to provide the newspaper with an up-and-running press; the newspaper need only "turn the key" to operate it.

According to Harshad Matalia, ANPA research associate/engineering, although larger companies like the Graphics Systems Division of Rockwell International have their own press installers on staff, independent installers do the lion's share of the work at newspapers.

In other instances, a newspaper deals directly with press installers after buying a press. Still other papers use architectural-engineering firms to coordinate everything from the building of a new pressroom to the installation of the press.

MONTHS OF COORDINATION. Erecting a press is a time-consuming, highly detailed process.

Installation of an eight- or nine-unit offset press may take five to seven months, Taylor of George Hall Contracting says. However, the planning to bring the press to the newspaper usually begins months before that.

The various parts of a press, which may be shipped in as many as 25 truckloads, arrive in the order in which they are to be installed—if all goes well, that is.

The floor is prepared, usually requiring that a new foundation be laid, and the columns that support the machinery are anchored in place. The reel stands for rolls of paper, tensions and pasters come next. Finally, the units themselves are installed.

Machinists, electricians and plumbers erect presses, literally from the ground up, their handiwork ensuring that ink and water flow properly, cylinders revolve smoothly and newsprint webs flow tightly through the press configurations.

Some press-erection companies use all their own people for a job; others provide a crew of supervisors who hire local machinists, pipefitters, plumbers and others to complete the work.

Price says TESCO's supervisory workers spend several months on a job, and many of them put down temporary roots, taking along their families and traveling in mobile homes.

MAKING PLANS. Some newspapers plan well in advance for their future plant requirements. But others operate on the edge, waiting for a crisis before they act, according to Jack Kelly, printing manager for Chas. T. Main, a Boston architectural firm that handles newspaper projects.

> *"We have a significant backlog because a lot of newspapers are changing their printing processes."*

"It's embarrassing sometimes how reluctant newspapers are to plan for the future," Kelly says.

"Suppose you just knock down a wall tomorrow because you have a new press coming in. That may be where your new front-end system will have to go 10 years from now," he notes.

Whether plans are being made much in advance or not, Kelly says he sees a great many press installations these days, particularly reconditioned units being upgraded and resold.

"With presses having million-dollar price tags, it's a lot less costly for some newspapers to purchase a reconditioned offset or to convert letterpress to flexo or offset than to buy a new press. There are a lot of revitalized presses out there—a lot of good, used, late-model presses—and it makes sense to use them," Kelly says.

At The Arkansas Democrat in Little Rock, Northeast Industries is installing this array of equipment: a new eight-unit Goss Headliner offset press, a used superstructure and reel stands purchased from The Wall Street Journal, and a used folder bought from The Boston Globe.

Lynn Hamilton, the Democrat's vice president for operations, says the press installers have been in the plant for several months. "We've been pleased with them. They're right on schedule." In addition to the pressroom equipment, Northeast Industries is installing new mailroom equipment there.

Having confidence in a press installer's track record results in peace of mind during the laborious installation period, notes W. Scott Trundle, vice president and business manager of the Tampa Tribune. TESCO is currently installing the first of four 10-unit TKS offset presses at the newspaper. The Tribune is spending $45.8 million for the improvements, including just over $39 million for the presses.

"When you're spending that much money, you want to be sure it's done right," Trundle says. "We looked at other installations they'd done, and they have a proven track record. Just out of curiosity, we might go down and look over their shoulders to see how things are going. But we know they know what they're doing, and we let them do it."

More and more newspapers are letting the press installers "do it." No wonder Sam W. Boyles, president of 11-year-old Northeast Industries, comments, "It's a good business to be in these days, it really is." ☐

NEWSPAPERS AND LANGUAGE

There is disagreement over how well newspapers use English. Some observers are critical; some lavish praise. This much is certain: Many newspapers are trying to improve.

BY DANIEL L. REEDER

Next to the skunk, the critic may be the most despised creature in the world. His existence caters to no one, and when his ire is roused, his friends scatter. But, like the skunk, the critic raises a stink when real or imagined danger encroaches.

During the past 10 years, a loosely organized but growing group of critics has formed a school of thought that goes something like this: Newspaper writers and editors defile the language, bury information in fuzzy organization, and shirk journalistic duty with lazy, irresponsible attitudes and habits.

Many who make these charges recall a romantic era in American journalism, largely apocryphal, when William Allen White wrote Pulitzer Prize-winning editorials deep from within America's heartland; when all writers knew the difference between "who" and "whom," and between "that" and "which"; when elegant, graceful prose educated and inspired; when clear-headed reporters worked for literate editors on newspapers that valued the English language.

When The Washington Post confused—and misused—the verbs "lie" and "lay" recently, one reader reacted by writing an "Ode to Grammar School." The Post published the poem, which read:

Should I laugh or should I cry
At The Post's misuse of lay and lie
Or should I mount a strong assault
At this, The Post's, quite favorite fault
Whose writers do not seem to know
After which verb objectives go.
Perhaps The Post could learn the rule
If it went back to grammar school.

Reeder is president of Reeder & Co., a writing, design and editorial consulting firm in Lawrence, Kan. He also is a free-lance writer and teaches magazine journalism at the University of Kansas.

To back up their contentions, critics, unlike skunks, use reason. They point to published errors of spelling, grammar, syntax, logic. They abhor encroaching jargon and bureaucratese. They decry the presence of buried leads and poorly organized stories. They reject as irrelevant any excuse that as a first draft of history, written on the run, newspapers face challenges that make perfect use of the language unattainable.

Defenders of modern newspapers react angrily when confronted with the language critics' charges. They argue that the premise is wrong. We shouldn't be concerned with whether newspaper writing is better or worse than it was, say, 50 years ago, they explain. Besides, who's to say? What's important is improving today's use of the language.

So the debate continues. Language use is good or it's bad. The state of the language is robust or dying. Consensus is possible in one area only: The language continues to change.

DIFFERING VIEWS. "Where there is a drive to improve the language, there has been improvement," says John B. Bremner, who retired this year as distinguished professor of journalism at the University of Kansas. "Some papers are doing better—some newspaper groups are doing better—than they used to do."

Bremner, described by his former dean as "the world's finest teacher of editing," has studied enough newspapers to know. In 1980-81 and 1983-84, he conducted a series of workshops on behalf of the Gannett Foundation. He analyzed—cover to cover—468 newspapers, plus a week's content from United Feature Syndicate and Universal Press Syndicate. He also conducted 52 seminars for 3,608 participants from 671 newspapers in 38 states

Because Since Flout Flaunt Whom Who Its It's All Ready Already Compare Contrast Their Its Currently Presently As Because Anxious Eager

Some problem words send journalists to the dictionary every time.

and the District of Columbia.

"There is greater language awareness today," he says. "But at this point, you have to go within a newspaper itself and be frank and say that some reporters and some copy editors are very aware of the need to polish the language. Others just don't give a damn."

Language use is only one part of the job of reporters and editors, observes Lauren Kessler, co-author with Duncan McDonald of *When Words Collide*. "The mass media must do a number of things at once," she says. "If merely signaling an event is all that the media are supposed to do, we would just grunt at TV and point at the pictures. The fact that words are the tools of the trade means that newspapers have the responsibility to use them well—in addition to presenting correct and accurate information."

A reporter could communicate the fact of a robbery, Kessler says, by misspelling most of the words and by writing incomplete sentences. Readers would get the idea. "It's true that the information is more important than how it is communicated, but if that stands in the way of people wanting to read it, you're failing," she notes.

How language is used in newspapers, despite specific errors of fact, grammar, spelling, syntax and logic, often depends on time. William K. Zinssner, whose third edition of *On Writing Well* has sold more than 50,000 copies, contends that writing well means rewriting. But reporters may not have time to rewrite, he says.

"What makes newspaper writing in general so banal is that reporters tend to reach for the nearest cliche," he says. "When you do read something memorable, you say, 'Listen to this!' It's because that reporter has made the effort to write with originality, has avoided cliche, has used humor or anecdote or unusual detail or surprise. That's easier to do if you have more time.

"The only way to fight it is from the beginning, trying not to use cliche. Still, I sense a pervading pedestrianism in American newspapers and magazines."

Nonsense, replies Roy Peter Clark, director of writing programs for The Poynter Institute For Media Studies in St. Petersburg. "The quality of writing in American newspapers is better than it has ever been on newspapers large and small," he says. "I don't believe that we're in an era of decline in the use of the language. Quite the contrary.

"When I sit down to breakfast and open the St. Petersburg Times, I might find some errors—occasionally an embarrassing one. But let's put this into context. For me, a former teacher of English, the production of a newspaper of that quality, so relatively free of significant error, is a miracle of writing and editing. It is false to say that language is in decline. It reveals a profound misunderstanding of the language."

Retired journalism professor Bremner acknowledges that given the opportunity to make errors, newspapers can be commended for avoiding many of them. Even so, he wonders, "Why is it . . . that every issue of every newspaper that I've ever studied professionally is *replete* with errors? Why is it that, recently, I read one issue of one of the leading newspapers in the country—it took me 13 and a half hours—and I had enough material for 10 pages, single-spaced, for commentary on errors?

Yes, it was the first edition. I know that. It gets cleaned up in later editions, but it shouldn't happen in the first place."

MISTAKES AND MEANING. Grammatical errors such as subject-verb disagreement, faulty antecedents, defects in parallel structure, errors in case, confusion about restrictive and non-restrictive clauses—all these and hundreds more slip through the system of checks. The question that must be asked is "Why?" If the reporter makes errors, shouldn't the copy editor—as the final guardian—catch and repair them?

Many reporters and copy editors simply don't know what error is, says Bremner. "When you don't know that you don't know, you tend to have more errors," he says. "You talk to them about 'false concession' or 'false condition.' They don't know what you're talking about." Bremner expresses chagrin that working journalists need to be reminded of basics such as using consistent voice and proper sequence of tenses.

"I had a call recently from the executive director of a state press association—not in Kansas—after we had set up a seminar. He wanted some information about the content of the session for his newsletter. I reeled off a few things, and a couple of weeks later I saw the newsletter. He had me talking about the *secrets* of tenses!"

Roger Tatarian, professor of journalism at California State University/Fresno and a former executive of United Press International, agrees with Bremner. "The copy desk is the last hope of humanity," he says. "These little things we're talking about affect credibility tremendously. All it takes is one error to injure credibility, but the cumulative effect can be devastating."

"Credibility, schmedibility," says Glassboro (N.J.) State College Professor Richard Mitchell. "Pleasure is what newspapers give. It's not related to credibility. So they lose credibility. Is that an impediment to profit?"

Mitchell, who publishes "The Underground Grammarian" newsletter, distinguishes between language and communication.

> *"Some reporters and some copy editors are very aware of the need to polish the language. Others just don't give a damn."*
>
> **John B. Bremner**

"If you say, 'Twenty-six thousand chickens exploded yesterday,' that's perfect. If you say 'Twenty-six thousand chickens went and exploded yesterday,' that's OK, too. It doesn't matter that you say between 'Mary and I,' or 'I could care less.' " At least the message may be understood in these instances, Mitchell reasons. Obscuring the message with 'educationese' and 'bureaucratese' is a far worse sin, as he regularly points out in his newsletter.

Bremner concedes that communication is possible without considering language niceties. "Does this mean we have to go through life saying, 'I don't know nothing' or, 'I could have went?' " he asks.

Clark of the Poynter Institute amplifies Bremner's thesis by saying that proper grammar and punctuation strengthen emphasis and argument. "The question of proper usage has no meaning for me outside making meaning through writing," he says. "The problem with too specific an emphasis on things such as spelling and the 'etiquette of language' is that we're going to create writing that is mechanically correct but in other ways lifeless."

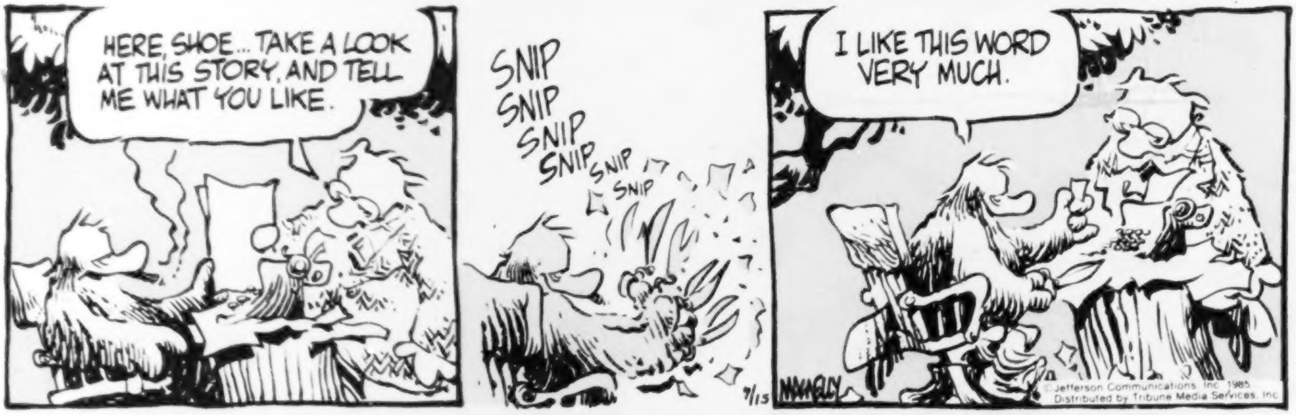
Clark uses an example to illustrate his point. If young students are told that every paragraph must have a topic sentence and that a typical paragraph has five sentences and three supportive examples, he says, their paragraphs tend to read: I like cars. I like red cars. I like green cars. I like blue cars. As you can see, I really like cars.

"What we ought to be striving for is creating a generation of writers who can use the conventions of language powerfully in order to write good stories and to create meaning," he says.

To create meaning, writers use words. "Words convey ideas," Bremner has roared to thousands of copy editors. "Sloppy words convey sloppy ideas," which is the best reason to use words correctly.

The Associated Press' general news editor, Jack Cappon, says the most frequent abuses can be divided into three groups:

'Shoe' **By Jeff MacNelly**



HERE, SHOE... TAKE A LOOK AT THIS STORY, AND TELL ME WHAT YOU LIKE.
SNIP SNIP SNIP SNIP SNIP SNIP
I LIKE THIS WORD VERY MUCH.
7/15 MACNELLY

Reprinted by permission of Tribune Media Services

wordiness, abstract writing and poor usage. "It's not a question of cadence or rhythm," he says. "It's wordiness in a superfluous way. And I hate bureaucratese and jargon. Too many reporters use synonyms interchangeably. A residence is not a home, for example. There is a lack of succinctness and precision."

Imprecise use and poor story organization lead inevitably to a charge of muddled thought. Reporters and editors who think with precision also write clearly. But the biggest problem facing the writing coach at The Seattle Times, Rick Zahler, centers not on thought but on reporters' inability to organize their information.

"It's the analytical, focusing part of writing that seems to break down more than anything else," Zahler says. "It's the result of reporters and young writers being insecure about taking control of their material. You have to have a certain strong sense of yourself to make those decisions and to be secure with your selections. Too many reporters have not learned mental discipline. It's a psychological and intellectual discipline. It's learning to be a writer."

WHY THE PROBLEM? If, as Bremner contends, the most important word in the language is "why," the word ought to be used to explore the reasons for lack of precision and discipline. One answer, most agree, lies in what schools don't teach.

Many reporters and copy editors have not been educated sufficiently in the language to avoid error, Bremner says. "They have not had the advantage of going through a first-class school of journalism that emphasizes the language. You can go to some of the top schools in the country and take a program that doesn't include this emphasis," he says.

"The fault lies with the system of teaching in the (public) schools," Bremner continues. "Generations have been brought up in the permissive school that says anything goes. This may sound old-fashioned—it *is* old fashioned, but it's still true—that if they had been *drilled* in the parts of speech and sentence diagramming, they would be speaking and writing much clearer English. Unfortunately, although this is changing, not only are the future teachers not being taught this approach, they are being taught not to teach this approach!"

Glassboro State's Mitchell concurs that public schools share the blame. "A careful examination of freshmen (composition) themes reveals emptiness," he says. "They all sound like pseudo-sociology. That's the way their teachers have taught them. College freshmen are utterly opaque."

Not so fast, cautions Donald Murray, professor of English at the University of New Hampshire, Pulitzer Prize winner, and

Language Is Fodder for Some Good Columns

William Safire's column, "On Language," provides eye-opening instruction on how to make words live. His dexterity with English often dazzles, as he illustrated recently when he justified the use of current dictionaries. He wrote: "Anyone who tries to deal with today's neologisms using an old dictionary is like an architect plotting a cantilevered aerie with a blunt pair of calipers."

Now *that*'s a sentence.

Other columnists who write on language, Michael Gartner and James J. Kilpatrick among them, practice what they teach. They possess a gift for writing that makes words seem to flow effortlessly and gracefully.

Despite what writer Donald Murray calls a "pervading pedestrianism" in American newspapers, these columnists and many other American reporters lead by example. Their prose and their ideas enliven newspapers.

Gartner, whose column "Words, Words, Words" appears three times a week, points out that serious readers of newspapers supply wonderful examples and ideas for columns. "There's a whole subset of word junkies out there," he says. "These people get terribly incensed when they see words misused. They hate to see adjectives used as adverbs. They believe that there is a role for the comma and for the semicolon. They distinguish between *presently* and *currently*, between *flaunt* and *flout*."

To curb language abuses, Gartner says, writers and editors must read. "Read the columns of Red Smith, the essays of Vermont Royster and Calvin Trillin, Frank Deford in Sports Illustrated," he says. "Read the front page of The Wall Street Journal, the editorials in The New York Times, the cover stories of USA Today. Keep these things by your bed. You don't have to reread Hemingway every night to find good writing. You can pick up The Des Moines Register and see some beautiful writing."

Having done so, what writer could fail to learn something?

In his essay, "Writing is an art, not a craft," Kilpatrick defines the writer's charge: "Our task as writers is eternally to translate the particular event in terms of the universal experience. When we succeed, we lance through a reader's inattention with the blaze of a watchman's torch. We read such a line and say, 'Ah. That's how it is; that's *exactly* how it is.' "

Publishers who want to enliven their pages—and perhaps inspire their staffs—with such words of wisdom may choose from several columnists who write on language:

- William Safire, "On Language." Distributed through The New York Times News Service by The New York Times Syndication Sales Corp., 130 Fifth Ave., New York, N.Y. 10011. Once a week.
- Michael Gartner, "Words, Words, Words." Cowles Syndicate Inc., 715 Locust St., Des Moines, Iowa 50304. Three times a week.
- James J. Kilpatrick, "The Writer's Art." Universal Press Syndicate, 4400 Johnson Drive, Fairway, Kan. 66205. Once a week as part of a three-times-a-week package.
- Sally Bright, "On Lively Language." Distributed by the author. Route 5, 12969 E. 131st St., Broken Bow, Okla. 74011. This question-and-answer column is available once a week.

—D.L.R.

Tony Lopez, St. Petersburg Times and Evening Independent

Editors polishing copy at St. Petersburg Times' North Suncoast copy desk are (from left) Joyce Lee (back to camera), Anne Glover, Jim Tyrrell and Ron Reason.

part-time writing coach for the Providence Journal and Bulletin. He argues that the educational system does emphasize grammar—but at the expense of meaning.

"I work with teachers," he says. "There is far better writing in schools than when I attended. My students are much better prepared than I was. They've been taught the rules and traditions of grammar over and over again.

"That it *isn't learned* is what we should be concerned with. Students aren't using language to make meaning that's important to them. We keep saying that students should pay attention to language, but they have fewer and fewer opportunities to use language in important and significant ways."

Poor preparation, were it the only problem, could be overcome. But it is not the only problem. Others include: deadline pressures, the introduction of computer technology that leads to sloppy habits (see story below), lean staffs, poor communication between reporters and editors, distrust by writers of the editing function, and on and on.

Some reporters insist that their prose will be butchered by copy editors regardless of how it is submitted. These reporters cannot be helped, Bremner says. "The badness of bad writing is never visible to the bad writer," he says. "If a reporter doesn't think that his copy can be improved, he's not a good writer. But if the copy editor is merely making the copy conform to the stylebooks, very important though that is, he's not a true copy editor."

Reporters often have a legitimate complaint, says Roscoe Born, who was an editor for the now-defunct National Observer and who has served as a consultant for The Detroit News. "Many copy editors believe that if they let something pass without doing something to it, they somehow have failed. There are many copy editors busily taking adverbs out of the middle of infinitives, thinking that they're doing God's work."

VDTs: Help or Hindrance to Good Writing?

The computer is down!

Few words strung together can prompt such feelings of panic and dread among newsroom veterans. These usually are the pros who recall a time when, with a single fluid motion, they could rip out a piece of copy paper—a "take"—and holler for the copy boy while rolling another sheet of paper into the old Underwood.

A new generation of journalists learned on word processors, and even most of the older professionals agree, sometimes grudgingly, that the computer is a nifty piece of machinery that affords time-saving improvements. Except when it's down. Except when the machine isn't so friendly to the user as promised.

The machinery can do only what it is instructed to do. At this point, anyway, humans provide the instruction and write the so-called software.

If humans make mistakes in entering information, those errors may well end up in print. The introduction of computers into the newsroom led to the abandonment of proofreaders in most instances. Computerized spelling checkers and other types of software that scan sentences for incorrect punctuation and grammatical error are just coming into use, performing a limited proofreading function.

Even so, some people continue to object to the machines in newsrooms and classrooms. Their view is that the operation of computer terminals involves a process that comes between thoughts and words.

One who thinks that journalists and editors rely too heavily on machines is John B. Bremner, Stauffer distinguished professor emeritus of journalism at the University of Kansas.

"You can't give what you don't have," he instructs. "Who is putting the information into the machine? Spell-checkers? Sure. We've had one for a long time, since a fellow named Noah Webster put together his spell-checker.

"I'm particularly annoyed at what has happened to the editing process as a result of the video display terminals," he says. "The promise in the first place was that you would have more time to write and edit copy, and it's the opposite of that. Why? Because the managers have given the extra time to circulation."

Bremner makes the case that machines are squeezing out teachers and editors. To illustrate his point, he uses a poem in his newspaper seminars:

Word has come down from the Dean
That by use of the teaching machine
Old Oedipus Rex could have learned
about sex
Without ever disturbing the Queen.

Clearly, technology is here to stay. But whatever comes between the mind and the ability to express what is on that mind can be a detriment to clear communication.

It is an idea worthy of consideration. I will think about it as soon as I figure out how to sign off from this word processor.

—D. L. R.

Bremner also worries about the "Miss Thistlebottom approach" to editing. "The best example of this narrow-mindedness was illustrated recently by a copy editor on a daily newspaper that uses the *AP Stylebook,* in which you use the day of the week—not 'yesterday,' 'today' or 'tomorrow,' " he says. "A piece of copy came over the wire about the purchase of The Detroit News by the Gannett Co." The copy editor changed a reference in the story to say that Gannett also publishes "USA Thursday."

WHAT TO DO? Placing blame on poorly prepared reporters and copy editors does little to reduce the frequency or severity of error. Those who want to improve face many options.

None is worth a nickel, however, without the direct and active participation of the writer. James J. Kilpatrick, the great wordsmith, has observed, "The best writing I encounter is the work of writers who have trained themselves to look intently, to listen carefully and to read voraciously."

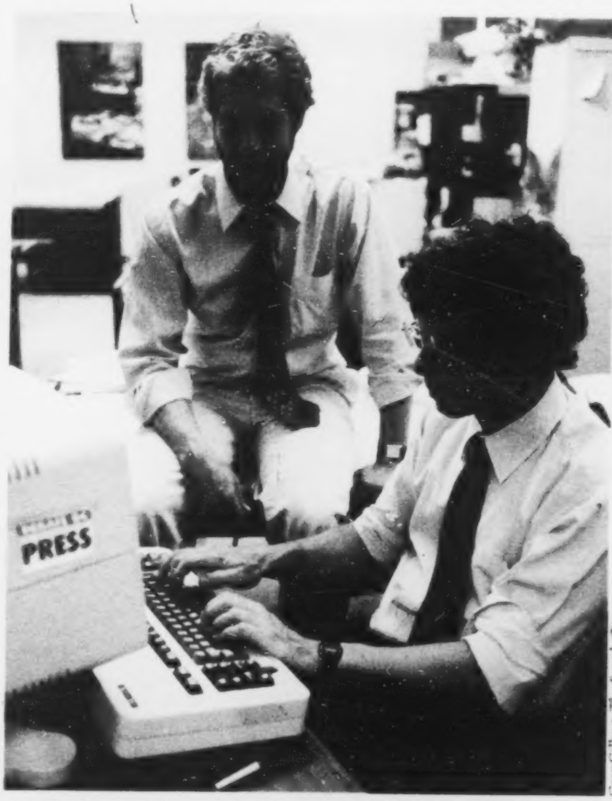
For those journalists who lack the ability or the motivation to heal themselves, their employers can search for word physicians offering other cures.

The search during the past decade has prompted some newspaper publishers to hire writing coaches. A few work full-time. Others travel like circuit-riding preachers from paper to paper, spreading the gospel of the finite verb. The Poynter Institute's Clark was one of the first full-time newspaper writing coaches. The St. Petersburg Times hired him from his job as an Auburn (Ala.) University professor of English in 1977, and since his year there he has consulted for scores of newspapers.

"This movement to hire writing coaches," Clark says, "has been described by others as the second most important and influential movement in American journalism, the first being the design and color revolution prompted by USA Today. But the writing movement certainly predates 1977." On every newspaper, he says, newsroom veterans vividly recall a tradition of teaching editors. "The master craftsman . . . has been replaced by the M.B.A. editor," he laments.

Yet Monroe Dodd, managing editor of The Kansas City Times, says the tradition of editor as teacher lives. "You have to go in steps. Before you can get to the point where everyone is writing compactly, with great verbs, you first must make sure that they have all the facts. These days, we demand more of stories than we used to. We make different choices. We set different priorities. In the process, the reporting sometimes takes precedence over writing."

Reporters also must know the theme of the story and organize around it, Dodd observes.



Greg Gilbert, The Seattle Times

Seattle Times writing coach Rick Zahler (left) has one-on-one session with a reporter. He's one of the few full-time coaches.

In abandoning the tradition of rewrite, "We've eliminated some opportunities to improve and tighten stories that newspapers had 20 to 25 years ago."

"Then, and only then, can reporters make the writing great."

That's true so far as it goes, says Tatarian of Cal State. "But former students and reporters tell me that they don't get enough editing—conceptual editing," he says. "Nobody is saying, 'Maybe we ought to take a different approach.' "

The news editor at The Milwaukee Journal, Thomas Barber, supports the idea of writing coaches (which no doubt will please the Journal's own coach, Paul Salsini). Younger staff members and part-time reporters frequently lack experience, Barber says. They need help in sharpening their writing.

"Like many newspapers," he says, "we've all but abandoned the tradition of rewrite, and we expect reporters to dictate or use portable terminals in the field and to send copy ready to turn in to the copy desk. We've eliminated some opportunities to improve and tighten stories that newspapers had 20 to 25 years ago."

Fewer than 10 newspapers have full-time coaches, but hundreds bring in part-time instructors. The St. Joseph (Mo.) Gazette alternates between professionals and professors twice a year. In the intervening periods, says Managing Editor Robert V. Waldrop, the Gazette conducts critiquing and coaching sessions. Its approach is typical.

"We send several weeks' worth of papers to the coaches before they arrive," Waldrop says. "Most stay about three days, during which time they have a group session to discuss the overview and the generalities. Then they have a separate session for editors, and the remainder of the time is spent in individual critiques with the reporters: one on one, coach and writer. Editors don't sit in."

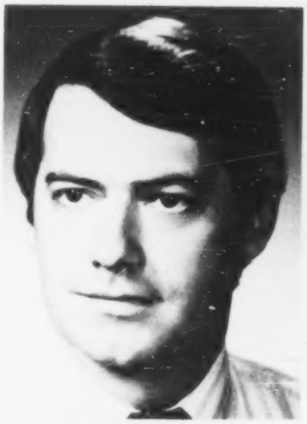
Waldrop says the Gazette's reporters appreciate the critiques from someone other than a staff editor. "They (reporters) let their hair down and seem to get a lot out of the process," he says. "Unfortunately, there is not as much residual effect as we'd like. It's great for a week or two, and then it slips."

The Gazette, like many newspapers, also publishes an in-house critique sheet that includes good examples and provides instruction on how to fix bad examples [presstime, March 1983, p. 31].

But the preparation of these published critiques requires time and talent that some newspapers simply don't have. Harris Enterprises Inc., a Hutchinson, Kan.-based newspaper group, produced six issues of its "Off-the-Wall-Journal" before ceasing publication.

John Lee, Harris' vice president for newspapers, started the Journal during his first month on the job. The idea, he says, was to consign successive issues to other editors. "It was tough to get people to do this," he says. "The job was incredibly time-consuming. And there is a reason for that: If you're going to do a creditable job, you must have more than a nodding familiarity with grammar and usage. The unfortunate fact is that about 95 percent of people in journalism don't know the rules that well. We haven't studied grammar since high school. We know when something appears to be cockeyed, but we have to search for the precise explanation. If we were grammar teachers, it would be a little easier."

Whether the Journal helped solve grammatical and usage problems is uncertain, Lee says. After pointing out a common error, he still would see the mistake repeated often in print. Continuity is important in any effort to improve the language, and for that reason Harris Enterprises has hired a part-time writing coach who will work at the invitation of the group's various editors.



"To dismiss good grammar as not being necessary authorizes misunderstanding. And that's foolish."

John Lee

"We must do something," Lee says. "If it is the job of a person to communicate with the written word, that person ought to know how. If you're inattentive to grammar, you lead the reader into mistakes. It's so easy to drop a comma and make a man a polygamist—I call it polygamy by punctuation." An example: John Smith traveled to Las Vegas with his wife Betty.

"The rules are there because they help the reader understand what's being said," Lee says. "To dismiss good grammar as not being necessary authorizes misunderstanding. And that's foolish."

Paula LaRocque, writing coach at The Dallas Morning News, agrees with Lee. Her biweekly critique sheet, F.Y.I., jumps on grammatical lapses and comments on balance, fairness and content. The point, she says, is precision.

"But precise writing demands precise thinking," LaRocque says. "We can't separate writing and thinking; fuzzy writing is the necessary product of fuzzy thinking. And the converse is true. I subscribe to (George) Orwell's statement: 'The English language becomes ugly and inaccurate because our thoughts are foolish, but the slovenliness of the language makes it easier to have foolish thoughts.' "

MANAGEMENT COMMITMENT. Writers and editors can avoid these foolish thoughts, but it's easier to do if newspaper management insists on clear writing and competent editing. On this point, nearly everyone agrees. When management pays money to improve the written word, staffers take notice.

"Even the smallest newspaper could find someone to read the paper for a month and analyze it, get specific suggestions for how to improve it and bring that person in for a week," Tatarian says. "It's not going to make any substantial dent in any newspaper's bottom line to invest in this way. There isn't a newspaper in the country that can't afford it. The notable thing is that those papers that do this are those least in need of it. The really rotten papers regard it as a frivolous luxury."

What else can publishers and editors do? The first thing they ought to do is read Murray's chapter, "Developing and Keeping Writers," in *Improving Newswriting*. They also can stock small libraries and insist that staffers consult them. They can post good and bad examples on bulletin boards. They can schedule brown-bag lunches specifically to discuss the language and how it is used in their papers. They can call writers' hotlines for help with specific questions. (See list, p. 31.) They can *think*.

They also should reserve a place in the paper once a week or once a day that celebrates fine writing, says Murray. "You can't say that writing should be improved and not have it demonstrated in the paper," he says. "The paper should reward its best writers. Why do editors become editors? It isn't because of some religious calling. It's because of money. The payoff comes to editors. We need to make payoffs to writers."

Most important, publishers and editors can *read*—a piece of advice offered so frequently that it somehow has lost impact.

And they can follow the advice Bremner gave recently to the managing editor of one of the country's largest newspapers: "The first way to improve writing in your paper comes before the fact," he wrote. "Be painstakingly careful when you hire. Don't rely on clips. Test your prospects on the spot. Give them a couple of outside feature assignments. Hire only on probation. Don't be afraid you'll lose them if you hire them on probation. Your reputation will retain great prospects. If it doesn't, you're better off without these mental giants.

"Your immediate problem, however, is after the fact. What do you do about the staff you already have? You can arouse their enthusiasm and reinforce their resolve with temporary fixes from wandering gurus. But these surges are only temporary. I know of no approach better than the resident guru, or writing coach. But the guru approach won't work unless: 1.) He is full-time; 2.) He is well-paid; 3.) He has a solid reputation as a writer and a teacher. He is personable and compassionate, but authoritative, and his patients come to him voluntarily."

LaRocque of The Dallas Morning News adds to Bremner's advice. "The temptation is strong for editors to hire writing coaches and then assign all sorts of other duties," she says. "This will sabotage the other effort. The coach must have the time and freedom to devote to the job."

Writing coaches, workshops, seminars, critiques and all the other efforts to improve language constitute a positive sign for American newspapers. "They realize that they need help," Bremner says. "That's the most important point."

If the movement to improve the language continues, newspapers one day may become repositories of great writing. Until then, the critic, unlike the skunk, can perform a valuable service. □

Writing Coach Paula LaRocque says newspapers are not major abusers of English. See essay, p. 34.

Help with Grammar Is Just a Phone Call Away

You're on deadline. You have a question about some fine point of grammar. There's no writing coach or other language expert available in the newsroom. What do you do?

You pick up the telephone.

You might try calling the English Department at the local college. Or you can dial one of the special numbers that go by names like "Grammar Hotline," "Grammarphone" or "Writer's Hotline," in which case you'll be talking with a faculty member of an English department at some college or university.

Donna Friedman of Tidewater Community College in Virginia Beach compiles an annual directory of such listings. The 1986 list includes 31 hotlines in 20 states and two Canadian provinces. It shows that most are open only on weekdays and generally from about 9 a.m. until about 4 p.m. Friedman cautions that many of the services reduce hours during the summer and suspend operations during college breaks.

One, that of Frostburg (Md.) State College, accepts long-distance collect calls by virtue of grants from the Maryland Committee for the Humanities, Frostburg State College Foundation and C&P Telephone Co.

Another hotline, that of Raymond Walters College in Cincinnati, tape records the grammar question for a subsequent return call; long-distance calls are returned collect.

The hotlines, listed alphabetically by state, are:

Alabama

- (205) 826-5749—Writing Center Hotline (Auburn University; Thomas E. Nunnally)

Arkansas

- (501) 569-3162 (University of Arkansas at Little Rock; Marilynn Keys)

California

- (805) 529-2321 (Moorpark College; Michael Strumpf)

Colorado

- (303) 549-2787 (University of Southern Colorado, Pueblo; Margaret Senatore and Ralph Dille)

Florida

- (305) 475-7697—Grammar Hotline (University School of Nova University, Fort Lauderdale; S. Solomon)

Georgia

- (404) 658-2904 (Georgia State University, Atlanta; Dabney Hart)

Illinois

- (217) 581-5929 (Eastern Illinois University, Charleston; Jeanne Simpson)
- (309) 438-2345 (Illinois State University, Normal; Janice Neuleib and Maurice Scharton)
- (312) 456-0300, ext. 254 (Triton College, River Grove; Marie Saeli)

Indiana

- (317) 494-3723 (Purdue University, West Lafayette; Muriel Harris)

Kansas

- (316) 343-1200, ext. 380 (Emporia State University; Linda Palmer)

Friedman of Tidewater Community College takes a call.

Louisiana

- (318) 231-5224 (University of Southwestern Louisiana, Lafayette; Sylvia Iskander)

Maryland

- (301) 689-4327 (Frostburg State College; A. Franklin Parks)

Massachusetts

- (617) 437-2512 (Northeastern University, Boston; Stuart Peterfreund)

Missouri

- (417) 624-0171 (Missouri Southern State College, Joplin; Dale W. Simpson)
- (816) 276-2244 (University of Missouri at Kansas City; Judy McCormick and David Foster)

New York

- (718) 739-7483 (York College of the City University of New York, Jamaica; Joan Baum and Alan Cooper)

Ohio

- (513) 745-4312 (Raymond Walters College, Cincinnati; Phyllis A. Sherwood)
- (513) 475-2493 (University of Cincinnati; Jay A. Yarmove and Jim Crocker-Lakness)
- (513) 559-1520, ext. 133 or 202 (Cincinnati Technical College; Cathy Wiesner and John Battistone)
- (614) 369-4431, ext. 301 (Ohio Wesleyan University, Delaware; Ulle Lewes and Jean Hopper

Pennsylvania

- (215) 437-4471 (Cedar Crest College, Allentown; Karen Coleman and Bea Meyer)
- (215) 932-8300, ext. 460 (Lincoln University; Annabelle Linneman)

South Carolina

- (803) 792-3194 (The Citadel, Charleston; Angela W. Williams)
- (803) 777-7020 (University of South Carolina, Columbia: Marian Rhame)

Texas

- (713) 221-8670 (University of Houston Downtown; Barbara G. Bartholomew)
- (512) 733-2503 (San Antonio College; Vivian Rudisill)

Virginia

- (804) 427-7170 (Tidewater Community College, Virginia Beach; Donna Friedman)

Wisconsin

- (414) 498-5427 (Northeast Wisconsin Technical Institute, Green Bay; Rose Marie Mastricola and Joanne Rathburn)

Canada

- (403) 483-4393 (Grant MacEwan Community College, Edmonton, Alberta; Karl Homann)
- (506) 453-4666 (University of New Brunswick, Fredericton; A. M. Kinloch)

Friedman's directory includes the operating hours of each hotline. The 1987 version will be available in January. To obtain one, send a stamped, self-addressed envelope to Grammar Hotline Directory, Writing Center, Tidewater Community College, 1700 College Crescent, Virginia Beach, Va. 23456.

Lawsuits Are Eroding Employers' Right to Fire

BY CLAUDIA M. JAMES

Employers traditionally have considered it their prerogative to fire an employee "at will." Exceptions to this rule stemmed from special statutes that protect employees, such as the Civil Rights Act of 1964, or collective-bargaining agreements that contain "just cause" discharge provisions.

But since the late 1970s, there has been intensifying erosion of the "employment-at-will" doctrine. The trend began when California, Michigan, New Jersey and Pennsylvania began to recognize more exceptions to the doctrine, allowing employees to pursue wrongful-discharge actions for other reasons [presstime, Feb. 1983, p. 39].

Courts in about 30 states now recognize that in certain circumstances beyond those spelled out in federal law or labor contracts, an employer cannot simply dismiss an employee.

While there have been only a few wrongful-discharge cases in the newspaper business, such lawsuits are here to stay, and avoiding them is a prudent part of a newspaper's personnel policy.

One of the troubling aspects of these cases from management's perspective is that they are tried before a jury and, as in libel suits, juries are generally sympathetic to plaintiffs.

There have been some astronomical awards to aggrieved employees. In California, where a number of the cases have been tried, the average award has been about $400,000.

The suits are based on several theories, including public-policy doctrine, implied contract theory and tort theory. Very often, plaintiffs cite two or more of these theories and may throw in "intentional infliction of emotional distress," libel or slander.

DIFFERENT EXCEPTIONS. Treatment of wrongful-discharge actions can vary from state to state.

Courts have carved out an exception to the at-will doctrine most readily where the discharge is in violation of a public policy. For example, if an employee is discharged for exercising a right protected by law—such as serving on a jury, filing a worker's compensation claim or refusing to take a lie detector test—many courts have found that the employee was wrongfully discharged.

Similarly, many courts have recognized a wrongful-discharge action if an employee is discharged for refusing to commit an illegal act. Courts also have invoked the public-policy exception to the at-will doctrine when an employee is discharged for "whistle-blowing."

Some courts have made exceptions to the at-will doctrine by recognizing an *implied contract* between the employer and employee. The contract may be based on an employment application, a personnel handbook or, in some instances, simply an oral promise.

Margaret Genovese

It is not as easy as it once was to tell an employee to pack his belongings and leave.

In one instance, a writer employed by The Christian Science Monitor filed suit after being fired allegedly because of her homosexuality. The Massachusetts Supreme Court said she could be discharged at will because there was no written contract and no showing of bad faith on the part of the newspaper. However, the court did allow the plaintiff to pursue her claims of defamation, invasion of privacy and intentional infliction of emotional distress [presstime, Oct. 1985, p. 52].

This year, the Wilkes-Barre (Pa.) Times Leader prevailed in a wrongful-discharge suit brought by a copy editor. The employee sued after being dismissed for advertising her ice cream stand in a competing newspaper, the Citizens' Voice. A Pennsylvania court held that absent a violation of public policy or a statutory or contractual provision, employment is at the will of the employer. The plaintiff argued that her employment was protected by the Times Leader's employee handbook, but an appeals court upheld a lower court conclusion that the handbook could not be considered a contract [presstime, Aug. 1986, p. 49].

In contrast to the ruling in Pennsylvania is the Oregon Supreme Court's recognition of handbooks as contracts.

In 1978, the Albany (Ore.) Democrat-Herald lost a wrongful-discharge action based on a provision in its handbook. The newspaper, without warning, discharged a proofreader after three months, and the person sued.

The court held that handbook statements could be considered terms of a contract, even though the employee received the book two days after starting work. The court also found that the company had not followed the handbook's counseling and transfer provisions.

Some courts have recognized a contract on the basis of a verbal promise, usually coupled with some type of additional

---

James is ANPA assistant general counsel.

"consideration"—an action the employee takes based on the promise. For example, a jury returned a verdict of $25,000 against The Free Press in Quakertown, Pa., for wrongfully discharging a reporter who had moved from another city in reliance on an editor's promise of a year's employment.

MAIN CONSIDERATIONS. In dealing with the reality that employees no longer serve totally at the whim of the employer, newspaper executives should keep these points in mind:

- A number of states have not recognized any new exceptions to the employment-at-will doctrine. Many allow only wrongful-discharge suits based on the public-policy-violation theory. Manuals, employment applications and oral promises can be the basis of a lawsuit only in states that recognize the implied-contract theory.
- Handbooks generally are a valuable tool allowing an employer to set uniform policy and avoid arbitrary treatment that can breed suits. However, newspapers in states where courts might liberally construe a handbook as a contract should review provisions to which they are not willing to be held—for example, a just-cause standard for termination or a requirement for counseling prior to dismissal.

In addition, language should be added to the effect that "this handbook is a statement of employer policy, which does not constitute a contract and which may be changed at any time." A newspaper also may want to consider writing the discharge clause to specify that employment is at-will and may be changed at any time. Some employers are also getting signed statements from employees acknowledging that the handbook is simply a policy statement.

A newspaper should also consider adding a statement to its employment application form setting forth the employer's right to discharge employees, and requiring the signature of a prospective or new employee.

- Personnel administrators or anyone else involved in hiring should be cautious about oral or written statements made to a prospective employee, keeping in mind that depending on state law, an employer may be held to them later.
- An accurate personnel file, including realistic performance appraisals and fair warnings, will serve the employer well if it becomes necessary to terminate an employee. This is especially true where an employer will be held to a just-cause provision contained in a collective bargaining agreement or an employee handbook. ☐

If you can read these words you have a lot to be thankful for.

Sixty million people in America cannot read these words nor can they write their own. The rest of us often take these basic tools of life and living for granted.

There is no censorship so absolute as illiteracy. And many of the basic human rights of one-third of our adult population are denied because of their inability to read and write.

We all have a responsibility to those who cannot.

In the last five years the Gannett Foundation has helped establish adult literacy projects and supported many local literacy programs with nearly $2 million. However, we know that a key ingredient for success of these programs has been people, not money. Volunteers give the time and caring needed to help challenge and conquer the anguish of illiteracy.

During September, we salute all the volunteers across America who are helping teach lessons of literacy, of human rights, and the more equal pursuit of happiness. We have a lot to thank you for.

Gannett Foundation

Funding national projects in support of volunteerism, literacy, journalism education, and local programs to help local communities.

If you want to volunteer your help, write to us
and we will put you in touch with your local literacy program directors.
Gannett Foundation, Lincoln Tower, Rochester, New York 14604.

Despite Writing Woes, Journalists Are Not Destroying The English Language

BY PAULA LAROCQUE

Anyone who spends much time leafing through the public's catalog of press ills is familiar with the fashionable description of journalists as illiterate contributors to the demise of the English language.

The absurdity of such criticism is manifest: The English language is thriving, not dying, and whoever reads and writes cannot correctly be called illiterate. But absurdity aside, what spurs such criticism? Errors in grammar, spelling, punctuation and usage, in part. Typos. The over-simplification of complicated and specialized material. Clumsy, cliche-ridden, faceless prose.

Those flaws are lamentable, and most journalists are working hard to eradicate them. But are such flaws anything new? Are they chiefly the province of journalism? Do they destroy the language?

A larger question is whether journalism fails in function. Two professors, having written a provocative but unreadable treatise, approached a journalist of my acquaintance. A magazine would publish the work, they said, if they rewrote it so that people would understand it. Could my friend rewrite it for them? He could and did. And the academics studied the new manuscript dispiritedly. *You've popularized our work*, they said.

God forbid it should be popular.

Are journalists trashing the language? *Is* it moribund in their hands? Language is a code that transfers meaning; its function is to communicate. The journalist's task is to communicate effectively with a mass audience of varying levels of experience, intelligence and expertise.

Journalists not only must find the code shared by most, they must find it with great haste. Many newspaper stories are conceived, assigned, researched, written, edited, typeset, printed and distributed within hours. Those stories must be clear, accurate, fair, complete and economical. If they are also interesting, imaginative and entertaining, so much the better.

Could the academics in the above anecdote communicate? They took months to write a piece that few could understand. When the spare skeleton of their message was drawn from its shroud of academic obscurity, they stared in horror. Translated, "popularizing" a piece means making it accessible. Accessibility is not the priority in most academic, governmental, legal and other bureaucratic communications.

Paula LaRocque

Just about everybody contributes to the general shoddiness of the language. The mass media's chief guilt is that they disseminate it.

Some readers assume that grammatical, spelling and punctuation errors occur because journalists are stupid or careless or both. Doubtless some are. But most such errors happen because of time constraints. Deadline pressure is no excuse, but it is a reason.

Errors in usage are another matter. They do spring from ignorance. But much of what would-be purists protest is simply the natural, inevitable evolution of the language. We don't speak Elizabethan English because we're not Elizabethans. The vocabulary changes; words die, are born, metamorphose.

I'm reminded of a reader's note excoriating a reporter for misusing enormity. That word's traditional meaning is "morally deviant or wicked," but the reporter had used it to denote size. Upon that slender thread hung the heavy accusation that journalists are *illiterate*. The imprecision called for correction rather than eternal damnation.

Words don't have "real" meanings, after all; they must mean, finally, what most people think they mean. That's not to say that journalists should jump on the bastardization bandwagon the instant they see a word in transition. They should adhere to accepted usage—not because they can keep the language from changing or because the old meaning is better than the new, but because misusing a word alienates knowledgeable readers.

All that said, it's still true that some newspaper writing is lame, formulaic, dull, graceless, chaotic and lacking the meaningful transitions that ease and clarify the flow of ideas. The newsroom cannot be unaffected by the erosion of verbal skills shown by a decline in college entrance examination scores beginning in 1964 and persisting for nearly two decades. Errors in basic English continue to debase newspapers. Typos, poor things that they are, will always be with us. Because of time constraints, journalists must continue to use language for craft rather than art.

Does that mean journalists are killing off the language? Of course not. America has linguistic geniuses of every kidney—novelists, playwrights, poets, artists who have the time, talent and inspiration to use language for art rather than craft.

Are journalists among them? Sometimes, only sometimes.

But their product—a successful product, all things considered—is out on the front step. Every day. ☐

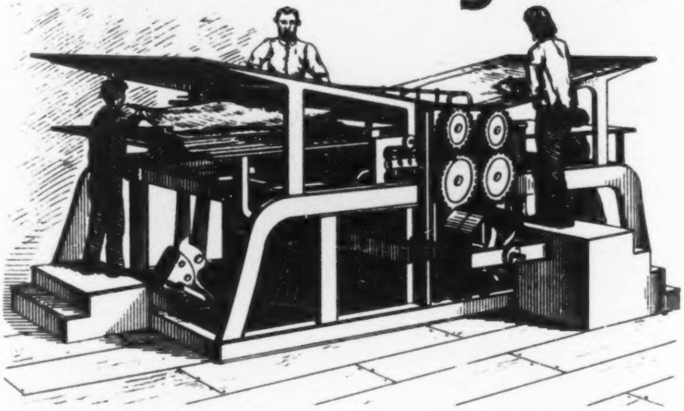
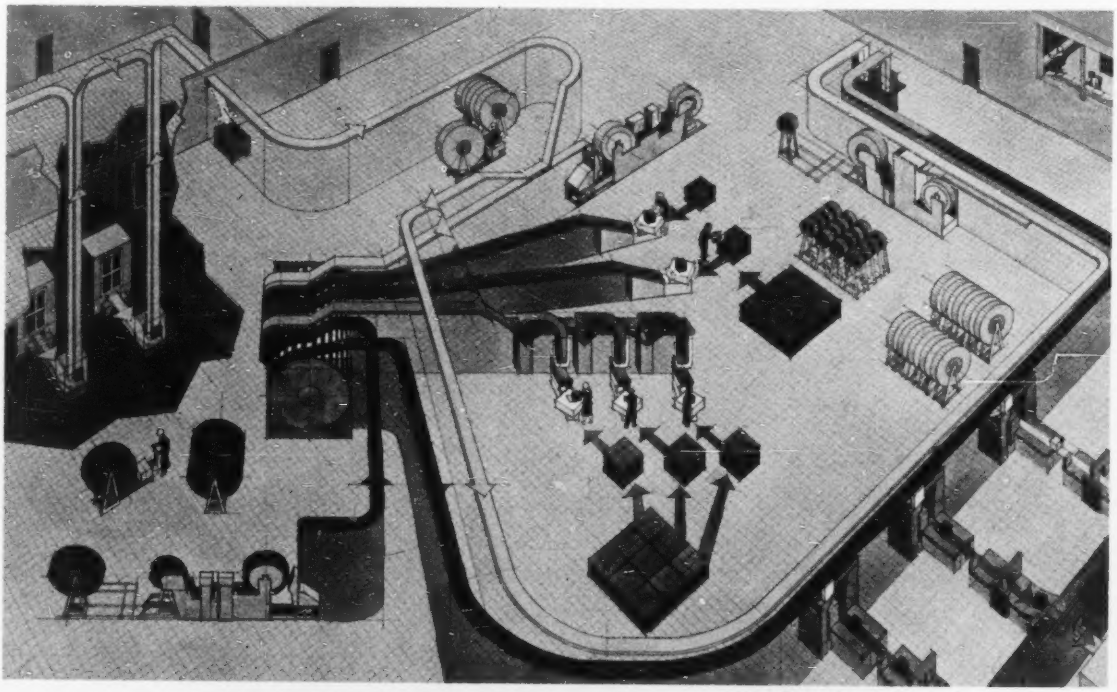
Time to Integrate.



Two impression cylinder press, circa 1845, for printing flat forms used in newspapers of that period.

In the early days newspaper production crews would have welcomed any integration – or combination of systems that would take the finished product from the press folder out to the loading dock. . . Today, FERAG is known the world over for their customized, fully-integrated, automated newspaper processing systems – making publishers' distribution systems efficient and profitable.

When you're ready to integrate your operation, we're ready to show you how. . . FERAG, Inc., Keystone Industrial Park, Bristol, PA 19007 . . . (215) 788-0892



This is FERAG's fully automated conveyor linked system network which integrates all phases of newspaper processing: palletizing, storage, depalletizing, with both on-line and off-line inserting capability every day of the week.

FERAG

First in automated Processing Systems

Janet C. Sanford

Former API discussion leader makes meteoric career moves to publisher

BY MARGARET GENOVESE
presstime staff writer

In nearly four years as an associate director of the American Press Institute, Janet C. Sanford organized and moderated 23 seminars and sat in on numerous others. By mid-1982, close to 700 newspaper people had crossed her path at the Reston, Va., newspaper-industry training facility.

And she was "restless."

"I had all of this information and all of this knowledge and I couldn't put it to use," she recalls. So when the right opportunity came along, she jumped from the theoretical back to the practical side of newspapering.

First, she went to Gannett Co.'s USA Today as senior states editor. Two years later, she took over as president and publisher of Gannett's Visalia Times-Delta, a 21,166-circulation daily in California's San Joaquin Valley.

In the two years Sanford has been there, the Times-Delta has installed a 10-unit offset press, begun a building expansion project, switched from afternoon to morning publication and made editorial changes.

"She's a terrific idea person," says Nancy J. Woodhull, senior editor of USA Today. "She knows a lot about journalism and the way the industry operates. But she comes at it from a very entrepreneurial point of view. She doesn't allow the traditions of the past to dictate how she does something."

At 56, Sanford's "just beginning to take off," says Woodhull.

The story of Sanford's career path began with a tragedy, the suicide of her journalist husband in 1977. Thomas K. Sanford Jr. shot himself the day after he resigned as assistant managing editor of The Arizona Republic. Janet Sanford was editor of Today's Living section of the Republic's sister newspaper, The Phoenix Gazette.

With two children in college and a third who was a junior in high school, Sanford decided to leave the newspaper. "I needed to double my income, and there was no way in that organization that that was going to be possible," she says.

At that point, Sanford had been in newspapering in Arizona on and off for about 30 years. Raised on a farm, she had worked part time as a reporter for the Mesa Journal Tribune during high school and became the weekly's full-time women's editor when she graduated. Three years later, after the paper went daily and her women's section won a statewide competition, Sanford was hired as assistant women's editor by The Arizona Republic, the state's largest newspaper.

She left the Republic two years later, in 1952, to have her first child, returned a year later as women's editor and shortly after left again, to have her second child. For the next 16 years, she worked from home, writing a column for the Republic and filling in for staffers on leave. She also wrote a column for the Chicago Daily News and, for six years, covered Phoenix for Fairchild Publications.

To help pay for her oldest child's college costs, Sanford returned to work full-time in 1970 as women's editor of The Phoenix Gazette.

It was then that she attended her first API seminar, for women's-page editors. Sanford so impressed the API staff that she was asked to come back as a discussion leader five times.

When she began looking for a job after her husband's death, she contacted Dorothy Jurney, a retired editor for Knight-Ridder who was working as a head-hunter specializing in identifying talented women journalists. Jurney recalls she was "extremely impressed" by Sanford and set up a series of interviews.

Sanford took the "first job that interested me in the salary range," with the Farm Journal in Philadelphia. She had been there only six months when API offered her the job as its first female associate director.

Sanford says she had already discovered that she didn't like the slower pace of magazine journalism. "I'm a person who thrives on rapid change," she says. "I want to be on top of things, out there on the cutting edge."

"She was everything that we wanted an associate director to be," says API's Director Frank Quine. "She had a marvelous way of working with the seminar members," of being in command of the group, but not dominating it.

But after a while, Sanford says, she began to think: " What next?" The answer came when she saw prototypes for USA Today. "I just thought the idea was sensational," she says. "I had been sitting in this conference room and listening to what we should be doing to build readership . . . and here was a newspaper that I thought was designed in response to reader needs."

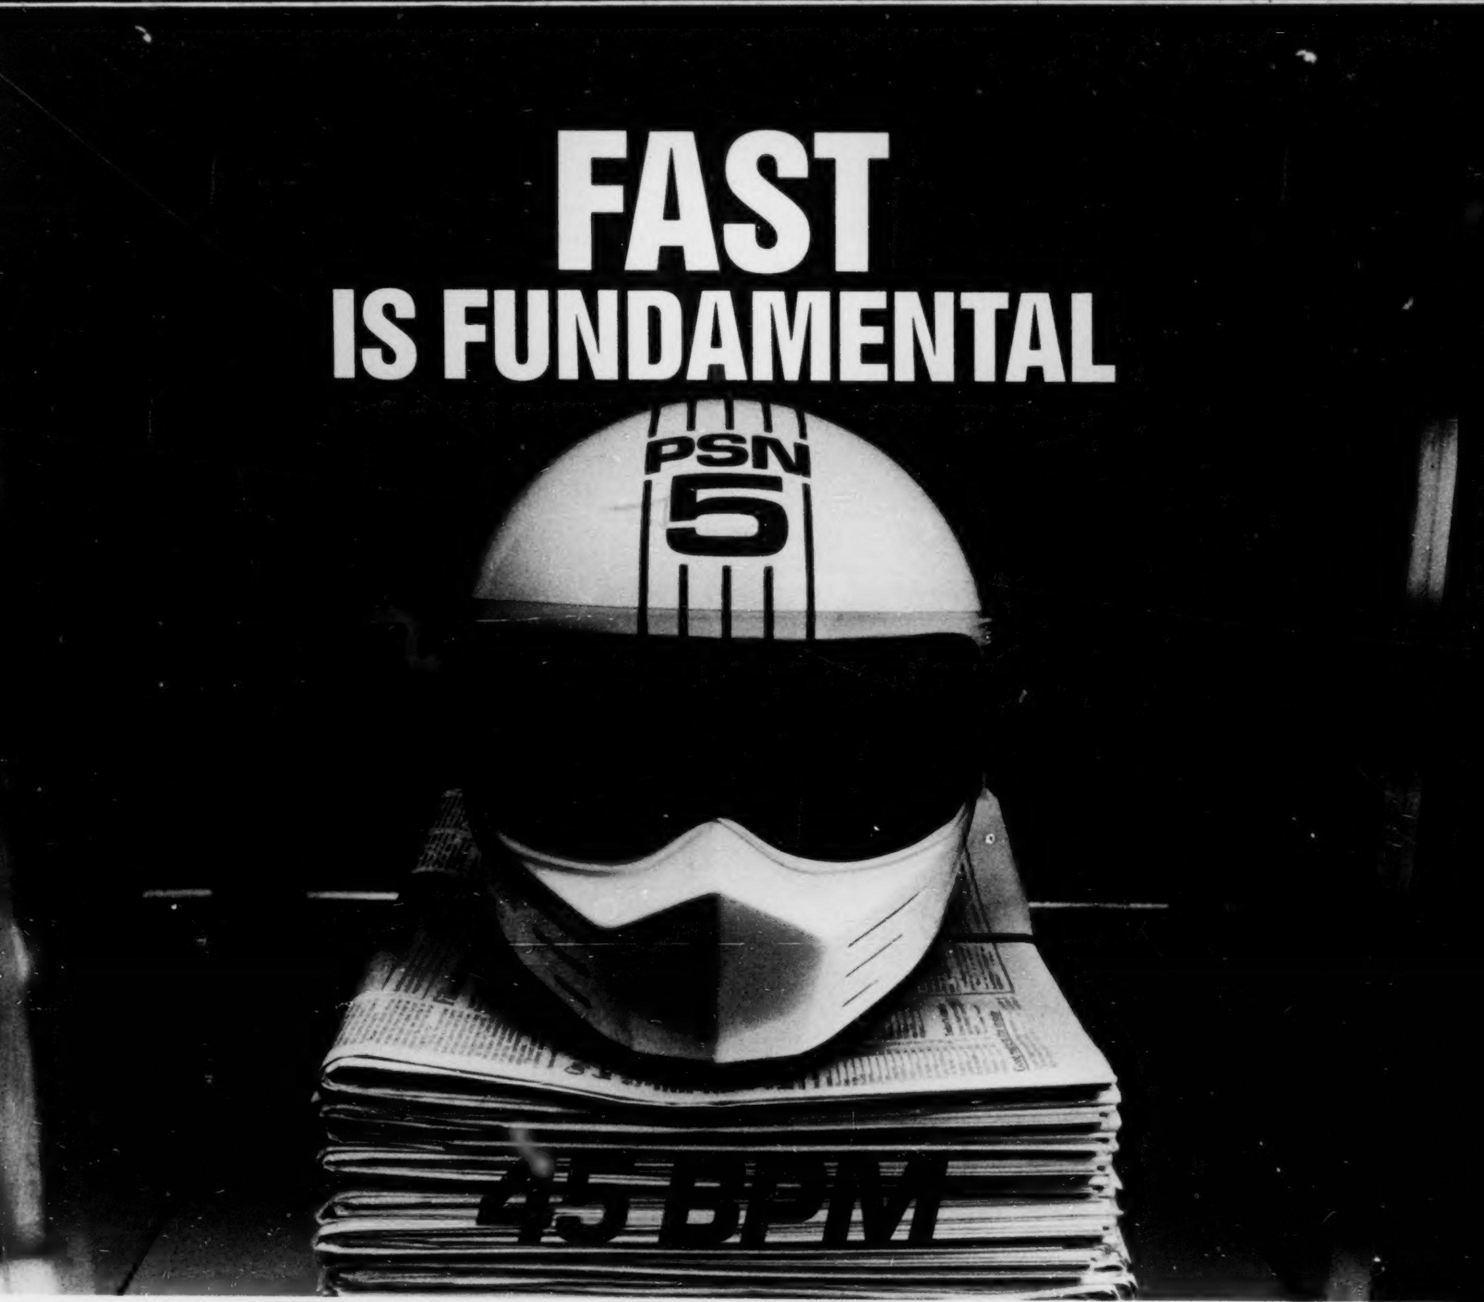
She was hired in July 1982 and given the task of organizing coverage for the national daily's "Across the USA" section, which is comprised of news briefs from all 50 states.

Although she calls working on the start-up of USA Today "an incredible life experience that I wouldn't trade for anything," it wasn't long before she was ready to move on. She indicated that she would be interested in becoming a publisher, and Gannett obliged, naming her a general news executive at the San Bernardino (Calif.) Sun in April 1984 and about a month later to publisher in Visalia.

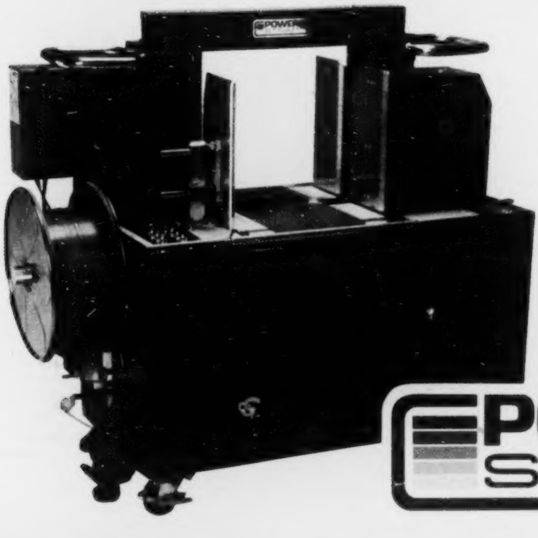
She says she is "not bored yet." One reason is that in this job, "unlike any other job I've ever had . . . you are really in charge."

A vigorous woman who enjoys golfing, hiking and running, Sanford is involved in several community projects and also spends time visiting her four children, all of whom live in California.

She also has returned twice to API. But now, instead of sitting in that conference room listening, she's doing the talking. □



Safety & Dependability are Essential



Power Strap, fast becoming a leader in the industry, has utilized their advanced design capabilities to produce a machine with acceleration to 45 bundles in only 60 seconds.

The heavy duty engineering of this road tested machine maintains performance standards by means of a slow conveyor for bundle stability and sacrifices no safety feature to provide you increased production.

Test drive a Power Strap machine today. Contact Power Strap, Inc., 29299 Clemans Road — 1H, Westlake, Ohio 44145, (216) 871-1053, Toll Free: (800) 346-4600.

REGULATIONS

Newspapers asked to include more minorities in real estate ads; Post enters agreement

A national lawyers' organization has targeted seven U.S. cities where it intends to review newspaper real estate advertising for racial bias.

William L. Robinson, director of the Lawyers' Committee for Civil Rights Under Law, said he will meet Sept. 19 with representatives of local lawyers' committees in Boston, Chicago, Denver, Los Angeles, Philadelphia and San Francisco. "The preliminary indications are [that] our local directors are quite interested in this problem," he said. Robinson said he expects a law firm in New York City to work with the committee there, also.

Already, a local chapter has negotiated an agreement with The Washington Post to include at least 25 percent blacks among the people in its real estate display ads and to increase the prominence of the Equal Housing Opportunity logo. It is in negotiations with The Journal Newspapers, a group of five dailies that circulate in the Maryland and Virginia suburbs surrounding Washington.

However, another newspaper contacted by the chapter, The Richmond (Va.) Times-Dispatch, has declined to work with the group. "We don't have any intention of negotiating agreements with various groups around the country," said J. Stewart Bryan III, president and publisher of Richmond Newspapers Inc. "We believe in following the law and doing what's right, but not negotiating with groups such as theirs."

The Washington Post adopted specific standards on the use of human models in real estate display ads and on the size of the Equal Housing logo, effective Sept. 5, after the Washington Lawyers' Committee for Civil Rights surveyed 1,600 Post real estate ads between Jan. 1, 1985, and April 19, 1986. The committee found that slightly more than 98 percent of the people in the ads were white. According to the Metropolitan Washington Council of Governments, blacks make up approximately 28 percent of the Washington metropolitan region's total population.

The logo sizes adopted by the Post are those suggested in 1980 by the Department of Housing and Urban Development to assist the media and advertisers in complying with Title VII of the Civil Rights Act of 1968, which prohibits discrimination in advertising of housing on the basis of race, color, religion, sex or national origin [presstime, Oct. 1980, p. 12].

The guidelines also advise that: "If models are used in display advertising campaigns, the models should be clearly definable as reasonably representing majority and minority groups in the metropolitan area and both sexes. Models, if used, should portray persons in an equal social setting and indicate to the general public that the housing is open to all without regard to race, color, religion, sex, or national origin, and is not for the exclusive use of one such group."

Terry Alan Scanlon, an attorney with the Washington lawyers' committee, said surveys had been done of ads in The Journal Newspapers and the Richmond newspaper but declined to give findings. "I don't want to make it look like we are trying to make the case in the press at the same time we are negotiating with these companies," he said.

Geoffrey Edwards, publisher of The Journal Newspapers, said his group is "likely to come to agreement" with the committee. However, he said, the agreement would not be the same as the one with the Post because the newspapers do not have the same circulation area.

Copies of the HUD fair-housing guidelines are available from ANPA. □

Clarion-Ledger sued, will change practices

The Clarion-Ledger of Jackson, Miss., agreed to a consent decree with the Justice Department Aug. 22 requiring the newspaper to cease publishing housing rental ads that indicate racial, religious and sexual preferences and limitations.

The decree resolves a civil suit, filed by the Justice Department that same day, charging the newspaper with violating the Fair Housing Act of 1968.

The suit cited eight ads, published between Sept. 25, 1985, and Jan. 4, 1986, containing such words as "white male," "room to rent to female," "ladies preferred," "white house," "Christian home," "female only," "black mature person," "gentleman," "settled man preferred," and "white refined middle-aged Christian lady."

Kenneth W. Andrews, president and publisher of the Clarion-Ledger, said the complaint stemmed from housing-to-share classifieds. "We had been following a practice of allowing people to say 'Christian male' or 'Christian female,' or 'white female' or 'black female.'"

"We weren't aware at that time that this was a violation of the act, but when it was called to our attention, as the consent decree said, we certainly agreed to comply," said the publisher of the Gannett Co. daily.

REGULATORY NOTES

- Effective July 21, the Occupational Safety and Health Administration lowered the permissible **occupational exposure limit to asbestos** to 0.2 fiber per cubic centimeter of air from 2 fibers per cc as an eight-hour, time-weighted average.

In light of this new, "much more restrictive" standard, newspapers would be well-advised to determine whether they have asbestos in their plants and, if so, whether it is in good repair, said Richard W. Neergaard, ANPA manager/environmental services. It is possible that in some older newspaper plants, asbestos was used to insulate pipes and/or boilers, he said.

- An administrative law judge Aug. 4 dismissed a Federal Trade Commission **complaint against an R.J. Reynolds Tobacco Co. advertisement.** Montgomery K. Hyun ruled that the ad in question, which took issue with a government study, constituted "noncommercial speech and as such lies beyond the subject matter jurisdiction" of the FTC. The FTC staff, which argued that the ad was commercial speech, will appeal the dismissal to the commission [presstime, July 1986, p. 63].

ANPA Health, Safety Symposium Oct. 2-3 in Denver

Scientists overseeing the federal government's studies of black news ink and video display terminals will be among the speakers at the sixth annual ANPA Health and Safety Symposium Oct. 2-3 at the Denver Marriott Hotel-City Center.

William C. Eastin Jr. of the National Institute of Environmental Health Services will report on the status of the National Toxicology Program's study of black ink for possible cancer-causing effects. Teresa M. Schnorr of the National Institute of Occupational Safety and Health will discuss NIOSH's study of possible adverse effects on pregnancy from the use of VDTs.

Registration fee is $375. Forms have been mailed to ANPA-member newspapers. For more information contact Edward E. Kastenhuber, ANPA technical specialist, at The Newspaper Center, Reston, Va. □

FCC sets new 'must-carry' rules

The Federal Communications Commission Aug. 7 unanimously adopted new "must-carry" rules that for the next five years will govern inclusion of local broadcast TV channels among cable TV offerings.

The new, less-restrictive rules replace those struck down last July by a federal appeals court as violating the First Amendment rights of cable operators.

The commission said the rules are only interim regulations, to be in effect while cable subscribers' TV sets are equipped with devices that will allow switching between cable and over-the-air TV reception [**presstime**, April 1986, p. 48]. □

Detroit JOA delay

The Justice Department Aug. 22 extended for one month the time for filing public comments on the proposed joint operating arrangement between the Detroit Free Press and The Detroit News. The extension was made because the department had not yet ruled on the newspapers' requests that some documents submitted in connection with their JOA application be kept confidential. The new deadline is Sept. 23 [**presstime**, Aug. 1986, p. 36]. □

LEGISLATION

ANPA faults tobacco ad-ban bill

ANPA's concern over a proposed ban on tobacco advertising stems from its concern about the "free flow of information," not about the flow of dollars to newspapers, the Association's executive vice president told a congressional subcommittee.

Tobacco advertising accounts for less than 1 percent of the approximately $25 billion spent on newspaper advertising per year, Jerry W. Friedheim said in response to a question from a member of the House Commerce Committee's Subcommittee on Health and the Environment.

At the Aug. 1 hearing, the subcommittee heard testimony on tobacco advertising in general, as well as on a bill (HR 4972) that would ban all advertising of tobacco products [**presstime**, Aug. 1986, p. 37].

ANPA's Friedheim testifies.

Friedheim said the "free flow of information—including competitive, commercial information—is a bedrock essential to a free society."

"Banning truthful advertising of legal products is wrong," he said, "and it is a misguided approach to health issues."

Also testifying was William F. Gorog, president of the Magazine Publishers Association. "If you really want to do something to cure the ills you perceive, develop programs to educate people," he said. "Bans don't seem to work, yet the censorship will have lasting, adverse impact."

Reagan administration representatives testifying on the bill were divided. Surgeon General Dr. C. Everett Koop said he personally endorsed the bill. But Douglas W. Kmiec, deputy assistant attorney general, said the proposed ban "raises difficult First Amendment questions" and "serious issues of legal policy."

The First Amendment issue has been "greatly clouded by an inconsistent Supreme Court jurisprudence," Kmiec said, referring to the U.S. Supreme Court's recent decision in *Posadas de Puerto Rico Associates v. Tourism Company of Puerto Rico*, which upheld a ban on the advertising in Puerto Rico of local casino gambling [**presstime**, Aug. 1986, p. 34]. The constitutionality of the bill "depends on whether *Posadas* represents an entirely new approach to the constitutional evaluation of restrictions on commercial speech or whether it is an aberrational decision," he said. □

Justice would back JOA change

The Justice Department would support legislation to bring distribution of total-market-coverage publications within the scope of the antitrust exemption provided by the Newspaper Preservation Act.

However, in a July 22 letter to the chairman of the Senate Judiciary Committee, Assistant Attorney General John R. Bolton said the agency would not support extending the exemption to "electronic publication" because, unlike TMC, such activity is not currently "part and parcel of the business of publishing a newspaper."

The Preservation Act gives antitrust immunity to newspapers with joint operating arrangements in cases where one paper is "failing" economically. The Judiciary Committee is considering S 2314, which would extend the immunity to TMC and to electronic publishing by making several changes in the act.

Bolton said the department would not endorse the bill as introduced, and he suggested some changes.

"We think the Justice Department letter is very positive and helpful and provides a meaningful approach to the problem, which in most respects is satisfactory to us," said Donald B. Holbrook, who represents The Salt Lake Tribune, The Deseret News and the Newspaper Agency Corp. of Salt Lake City, which conducts business operations for both. □

Dole bill concerns addressed

The chairman of the Senate Commerce Committee has declared that newspapers' concerns about the proposed transfer of jurisdiction over the AT&T consent decree "merit attention."

Sen. John C. Danforth (R-Mo.) made the statement in the Senate Aug. 11 while discussing a bill (S 2565) offered by Senate Majority Leader Robert J. Dole (R-Kan.) that would order the transfer from a federal court to the Federal Communications Commission.

In a 132-page document submitted to Danforth's committee in July, ANPA said any legislation that affects the consent decree should retain the decree's provisions restricting AT&T and the spun-off Bell operating companies from offering electronic information services over their own facilities [presstime, Aug. 1986, p. 62].

Danforth said his staff is drafting amendments to the Dole bill to ensure that the FCC has "no doubt about congressional intent." He said it was important that the commission consult with the appropriate executive branch agencies on matters of telecommunications policy, trade policy and antitrust policy.

"In addition," he said, "the newspaper publishers have expressed some concerns to me, and I believe that their concerns merit attention."

Saying he shares Dole's goal of getting the bill passed this year, Danforth said he intends to hold hearings on the bill immediately after Congress reconvenes Sept. 8 following its August recess.

Although the Senate is expected to take the lead on telephone issues, a bill has been introduced in the House that would allow the BOCs to go into information services (and the manufacturing of telecommunications equipment), subject to rules developed by the FCC.

As introduced, HR 3800 would maintain the consent decree's prohibitions regarding electronic publishing. The bill's authors, Reps. Al Swift (D-Wash.) and Thomas J. Tauke (R-Iowa), have said they may introduce additional language "to address some of the concerns that had been raised by newspaper publishers," according to an aide to Tauke. ☐

LEGISLATIVE NOTES

- The Senate Judiciary Committee Aug. 14 voted 13-5 to **approve the nomination** of Justice William H. Rehnquist to be chief justice. The vote to approve the nomination of Court of Appeals Judge Antonin Scalia to the Supreme Court was unanimous [presstime, Aug. 1986, p. 37].

  The nominations are expected to be considered by the full Senate the week of Sept. 8.

- The House Energy and Commerce Committee Aug. 7 approved legislation that would create a "media advisory board" to advise the government on **drug abuse education**. Members of the print media would be included.

  Initially, a House subcommittee had considered naming associations, such as ANPA, to membership. That idea drew opposition from ANPA and was withdrawn. "Media organizations should not, in our society, be made formal parts of any government entity. Rather, the volunteer advice of experienced individual media executives may be sought by government leaders," the Association said.

- The Senate July 29 voted 78 to 21 to permit live, gavel-to-gavel **TV and radio coverage** of its proceedings on a permanent basis [presstime, April 1986, p. 48].

  However, still cameras are still barred. The Standing Committee of Press Photographers, which has been trying to gain access to the Senate for still photographers, recently asked that they be permitted there during "important debates and votes."

  The Senate Rules and Administration Committee discussed the request briefly but did not take any action.

- After protests from media organizations including ANPA, Sen. Ted Stevens (R-Alaska) agreed to amend his proposal to create new penalties for persons **convicted of espionage** in such a way that it would not apply to the media [presstime, Aug. 1986, p. 37].

- The Canadian Pulp and Paper Association warned that the Omnibus Trade Bill passed by the U.S. House of Representatives **could raise the price of Canadian newsprint** imported into the United States.

  The bill currently deals only with softwood and other natural resources, not newsprint. But CPPA said the bill's language "could be used to impose large duties on all Canadian forest product exports to the United States."

  ANPA, which has expressed concerns about HR 4800, is monitoring its movement.

COURTS

Newsrack ordinance fights have different outcomes in U.S., Canada

Canadian and U.S. newspapers met with differing results in recent newsrack cases.

The Toronto Globe and Mail won the right to place newspaper vending boxes in public places in Quebec City and now is taking aim at Montreal. However, The Plain Dealer in Cleveland lost its bid to overturn the full effects of an anti-newsrack ordinance in Lakewood, Ohio.

The Quebec Superior Court dismissed the city's attempt to bar the boxes. The court ruled that the law preventing newspaper vending boxes violated Canada's Charter of Rights and Freedoms.

Nicholas Russo, The Globe and Mail's circulation director, said the newspaper studied similar cases in the United States. Quebec is the only province that allows cities to forbid vending boxes on street corners and in other public places.

In the Ohio case, a three-judge panel of the 6th U.S. Circuit Court of Appeals upheld a lower court ruling that Lakewood's ban of newsracks in residential areas is constitutional. The court overturned other parts of the ordinance having to do with permit approval, design approval and insurance.

The Plain Dealer has asked for a rehearing by the entire appeals court. ☐

5 media groups blast contempt conviction

Five media organizations filed two separate briefs with the 1st U.S. Circuit Court of Appeals, which will consider an appeal by The Providence Journal of its criminal contempt-of-court conviction.

After the Journal violated a temporary restraining order forbidding it to publish information about a reputed organized crime figure, it was fined $100,000 and the executive editor given a suspended 18-month sentence and ordered to perform 200 hours of public service [presstime, May 1986, p. 62].

In their brief, CBS Inc., The New York Times Co. and The Washington Post argued that the order was "a transparently invalid order that could be disobeyed." The Hartford Courant and the Concord (N.H.) Monitor focused on the penalties, calling them "grossly excessive and totally without justification." ☐

WHAT'S BLACK AND WHITE AND GRAY ALL OVER?

A story that needs the libel coverage of Mutual Insurance.

Because the truth is often neither black nor white, but a lot of gray, libel suits have become an unpleasant fact in the newspaper business. And because a single unfavorable ruling can mean financial disaster, more and more newspapers are turning to The Mutual Insurance Company of Hamilton, Bermuda, for the protection that libel insurance provides.

During the twenty-five years that Mutual has served the unique insurance needs of the newspaper industry, Mutual has handled more than 4,500 suits in the libel field. Only Mutual has the experience and the policies to provide complete protection against loss due to libel suits.

Mutual offers ANPA-member publications libel insurance that provides punitive damage coverage across the United States. A policy from Mutual pays up to 10 million dollars per occurrence, rather than an annual aggregate. With low deductibles to minimize your loss, a libel insurance policy from Mutual is your best protection when the black and white of a news story turns to gray.

TV becomes a shopping center

Discount shopping on cable and UHF television stations is sweeping the country with all the rage of the hula-hoop fad. Whether it's a passing fancy that will abate in time remains to be seen, but currently the market is expanding almost daily.

The leader in the field is Home Shopping Network Inc., based in Clearwater, Fla. Home Shopping announced in August it had purchased three UHF television stations that will form the nucleus of what a spokesman called "a new national broadcast network."

The three stations are WWHT in Newark, N.J., and WSNL in Smithtown, N.Y., from Wometco Broadcasting Co.; and WVJV in Boston from Channel 66 Associates. Home Shopping said it paid $45 million for the three.

The ink was hardly dry on that announcement when Home Shopping announced the purchase of a fourth UHF station, WKJL, in Baltimore from Family Media Inc., and said it had agreed to buy yet another, WSJT, in Philadelphia.

Ultimately, the company plans to own 14 UHF stations in the 25 top broadcast markets in the country, said Public Relations Director Judy Luden.

Meanwhile, Crazy Eddie Inc., a discount electronics chain in Brooklyn, N.Y., announced it is negotiating with cable TV systems across the country to start over-the-air sales.

And there are about two dozen other cable operators producing their own discount-shopping shows, said industry analyst Gary Arlen of Bethesda, Md.

Home Shopping began in Clearwater in 1982 as an experiment and began to broadcast nationally in March 1985, said Luden. So far, the company has attracted 350,000 home-shopping "members" who spend an average of $32 a year in purchases, she said. As an incentive, the company offers newcomers a $5 gift certificate applicable to their first purchase.

The company sells an estimated 40,000 different items, including household goods, appliances, electronic equipment, luggage and china. The programs feature live hosts describing the discounted products and their prices. A toll-free 800 number is available for customers to place their order.

The company offers 24-hour continuous programming, but most cable companies purchase a segment of two to four hours, Luden said. Sales for the past nine months totaled $106.8 million, according to company financial statements, and they are growing by the month.

The company began offering its stock publicly in May. The first day a share opened at $18 and rose steadily to $42 by the close, Luden said. It was selling at more than $100 in late August.

Arlen said the antics of the hosts, who sometimes come on like high-pressure used-car salesmen, contribute to the entertainment factor of the home-shopping television show. "I don't think it's necessarily a passing fad," Arlen said, "but it may level off after it hits its peak, like home video games." ☐

Louisville papers stop cable project for text, ads

The Courier-Journal and Louisville Times Co. is ending a five-year project to deliver text news and classified ads over cable television. The company said the program would cease Sept. 3.

"We never found a winning formula," said Bernard L. Block, senior vice president of the newspaper company, which was acquired by Gannett Co. in May. "There just was not sufficient viewership and revenue to justify continuing."

The company began with a 50-50 format of news and classified ads, said Robert Anderson, the cabletext director. The first two years after the program started, the classified ads "sustained" the program but not enough to put the enterprise into the black, he said.

If the paper had deleted the news and simply run continuous classified ads, it might have been profitable, he suggested. But the paper felt it had an obligation to carry the news.

Surveys showed people watched local news but were not interested in wire copy, Anderson said. ☐

Postal Affairs

ANPA wants change in proposal governing mail permits

ANPA has asked the U.S. Postal Service to ease up on a proposed rule change that could make it easier for USPS to revoke second-class mailing privileges.

The change, USPS said, is designed to strengthen the Postal Service's right to revoke a mail permit when a mailer does not pay adequate postage.

Postal officials said the proposal stems from a problem in which many mailers have not covered deficits in their USPS accounts that are maintained to pay postage bills. USPS wants clear-cut power to revoke privileges "for any noncompliance" of regulations.

ANPA said the proposal has "serious due process flaws." It said that before a permit is revoked, mailers should be able to have a postage-bill dispute heard by a court, not just by postal administrative authorities as regulations now specify.

Mailers need such protection because mailing account deficiencies "sometimes result from legitimate legal or policy disputes," ANPA said, or from newspapers' receiving "unreliable guidance" from post offices.

ANPA also said regulations should contain a "hardship exception" for publishers who would suffer severe economic consequences if forced to make deficiency payments. ☐

Tisch named postmaster general

Loews Corp. President Preston Robert Tisch Aug. 6 was named U.S. Postmaster General. He succeeded Albert V. Casey [**presstime**, Aug. 1986, p. 38].

The 60-year-old Tisch, the nation's 68th postmaster general, said after his appointment that no postal rate increase is imminent. "We are not talking at the Postal Service about a rate increase," he said. "We are not even in the process of putting together a rate case" to be submitted to the Postal Rate Commission. ☐

Subsidy reconsidered

Congress once again is considering reinstating the subsidy for mailing fewer than 5,000 copies of a second-class publication in a contiguous county of publication.

A similar proposal was defeated in late June [**presstime**, Aug. 1986, p. 38]. ☐

Education

High school journalism in crisis, college educators are told

The president of the national organization of journalism school administrators has announced plans for a "summit meeting" on high school journalism education.

"I think we need a coming together for a concerted effort on the part of journalism education in the high school because there definitely are some problems," said Richard R. Cole, president of the Association of Schools of Journalism and Mass Communication.

The gathering is planned for May 3, 1987, in New York City, immediately preceding the ANPA Convention. Representatives from a wide range of media organizations will be asked to participate, said Cole, dean of the School of Journalism at the University of North Carolina.

Problems besetting high school journalism were brought to the attention of the nation's college journalism professors in August.

In a speech to the Association for Education in Journalism and Mass Communication, a leader in the high school journalism field said the situation has reached "crisis proportions." Dorothy McPhillips, president of the Journalism Education Association that represents high school journalism teachers and publication advisers, said there are multiple causes: "students without time, teachers without training, schools without curriculum . . . administrators with fears, counselors with prejudices and parents with misinformation."

In addition, she said, "we have journalism professors and professionals who do not believe (in high-school journalism) and therefore do not support" it.

According to McPhillips, the matter has serious implications for college journalism programs and for professional media. "The feeling seems to be that you don't really get trained in journalism until you get to college, and you don't really begin journalism training until you're a college junior or senior," she said. Although that may be true, she said, it "ignores the reality of where the spark of interest is ignited."

Addressing AEJMC's Aug. 3-6 convention at the University of Oklahoma in Norman, McPhillips traced some current problems to the 1983 report, "A Nation at Risk," by the National Commission on Excellence in Education. The report recommended increased requirements in English, science and math, and that had the effect of "pushing journalism programs out of the high school curriculum," she noted.

According to a proposal McPhillips distributed at the convention, two problems need to be addressed: how to change attitudes toward secondary school journalism and how to improve teacher training.

Several papers presented at the convention also dealt with high school journalism.

One, by Jack Dvorak of Indiana University, found that college freshmen who had been on the staff of a high school newspaper or yearbook earned "significantly higher" scores in 10 of 12 academic categories than those without such experience. The study examined 19,249 college students who completed their freshmen year in 1984.

A second phase of Dvorak's study supported McPhillips' contention that high school journalism sparks interest in journalism as a career. Students who had high school publications experience were found to be four times as likely to choose journalism/communications as a college major and career goal.

Another study found more than two-thirds of high school principals but only one-third of publications advisers believe school administrators should prohibit publication of "harmful" articles, even if they are not libelous, obscene or disruptive. In their nationwide study, J. William Click of Louisiana State University and Lillian Lodge Kopenhaver of Florida International University received responses from 222 schools.

Also at the AEJMC convention, members passed a resolution noting "disturbing trends" in journalism and directing the organization to consult with professional media groups to "design an appropriate response." Among the negative trends cited were:

- An increase in the proportion of journalists, especially minority journalists, who say they plan to leave the field
- Difficulty many media companies, especially small ones, are experiencing in finding quality personnel
- Starting salaries that do not compare favorably with those in other occupations.

Sharon M. Murphy, dean of the School of Journalism at Marquette University, who was elected in the spring, assumed the AEJMC presidency at the convention. ☐

NABJ examines impact of press on blacks; names director

The impact of the press on blacks at home and abroad was the focal point of the mid-August convention of the National Association of Black Journalists.

Dennis C. Schatzman

In a speech largely devoted to criticism of U.S. policies toward South Africa, the Rev. Allan Boesak also addressed the issue of press coverage of the current conflict in his country.

"As you know," he said, "the press (in South Africa) is not allowed to tell you the truth, and even if they could there are too many newspapers in South Africa who would not have the courage to tell you what is happening to our people."

He urged American black journalists to accept the "awesome responsibility" to report the truth about South Africa. "You know what it means to be discriminated against. You know what it means when one's dignity is not recognized."

Another speaker, U.S. Civil Rights Commissioner Mary Frances Berry, urged black journalists in the United States to challenge racial perceptions that stigmatize blacks on such issues as poverty, crime and family life.

One particularly well-attended session looked critically at the negative image of the black family as frequently conveyed by the media.

Also at the association's 11th annual convention, which had the theme "Freedom of the Press, Freedom of the People," hiring and promotion of minority journalists continued to be a major concern. About 1,200 black journalists registered for the Dallas meeting.

More than 50 recruiters interviewed job candidates at the convention, and NABJ awarded a total of $15,000 in scholarships to six journalism students.

The organization also announced the selection of its first executive director, Dennis C. Schatzman. Currently deputy controller of the Pittsburgh school system, he is a former city editor of The New Pittsburgh Courier and former reporter for Afro-American Newspapers in Baltimore.

Schatzman will open NABJ's first permanent headquarters at The Newspaper Center in Reston, Va., this month. ☐

Hartford Courant editorial board establishes public-member seat

In an effort to strengthen communication between the newspaper and the community, The Hartford Courant has created a public seat on its editorial board.

Community leaders selected by the Courant will participate in the board's decision-making process several days a week. Each will serve for a three-month period.

Announcing the new editorial-board slot, Editor and Publisher Michael J. Davies said it is "the first to our knowledge on any newspaper in the United States." Other newspapers have taken less dramatic steps to obtain community input for their opinion pages, such as occasionally inviting civic leaders to sit in on editorial conferences or to write op-ed pieces.

Robert Wiles, outgoing director of a non-profit organization, the Hartford Institute of Criminal and Social Justice, became the first public member of the Courant's editorial board Aug. 1.

By mid-August, Editorial Page Editor John J. Zakarian said Wiles' presence had already contributed to the Courant's understanding of issues. For example, Wiles' contacts revealed that what initially appeared to be a "couple of shootings" was "drug-related and bigger than we thought," said Zakarian.

This development was in line with the Courant's July 13 announcement of the new position: "It's possible that the insights offered by the public board member will alter the thrust of an editorial position, although the intent of opening up the process is not to change the basic tone of the editorial page. We hope the public board member will suggest new topics for discussion," wrote Davies.

For the three-month term beginning Nov. 1, the newspaper will consider people from "every sector we can imagine," he said.

According to the editorial page editor, one problem is that "the people we are looking for are people who are very busy," and it is difficult to ask them for such a substantial time commitment.

Zakarian said, though, that the program "is certainly worth trying" and that he has "expectations" it will work.

Gay Freeman

Public member Wiles (third from left) participates in meeting with editorial board members (clockwise, from left) Robert Schrepf, Norman Pattis, Kathleen Palm, Editorial Page Editor Zakarian, Bill Williams and Elissa Papirno (back to camera).

More cartoonists ask newspapers to run comics in larger, more readable size

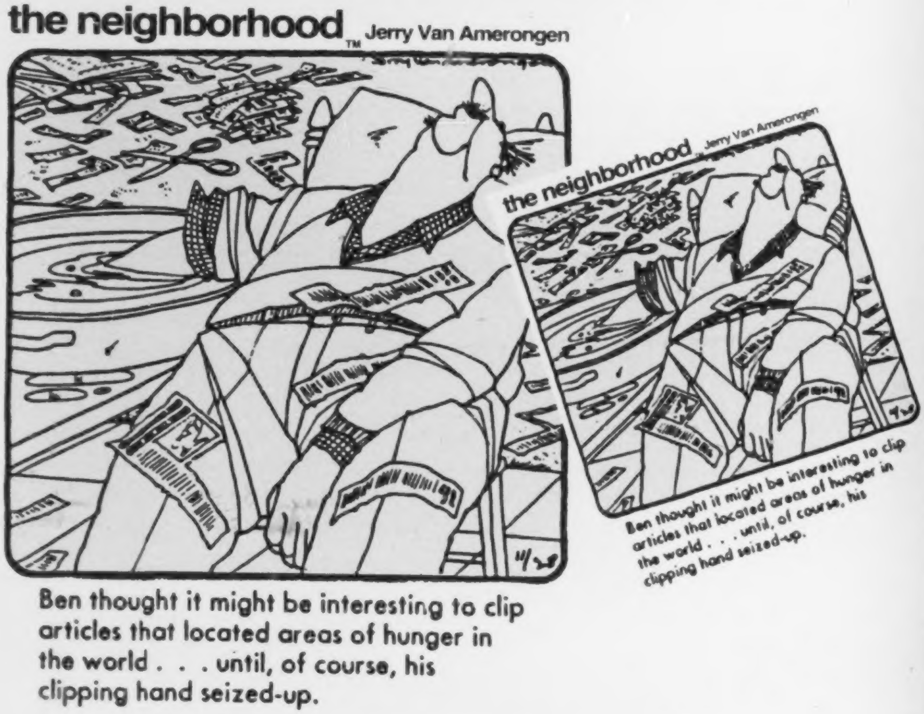
Protest over the shrinking size of newspaper comics has spread beyond the demands of one cartoonist, with about 40 cartoonist members of the Newspaper Features Council calling for a halt to the trend.

They asked newspapers to print comic strips at least 38½ picas wide—that's half a page wide in the Standard Advertising Units format—and comic panels (such as "the neighborhood") at least 19 picas wide. This appeal emerged from a survey of their fellow cartoonists by Mort Walker and Jerry Van Amerongen, representing an ad hoc Committee for Limiting the Size Reduction of Features.

The features council board will be asked to endorse the cartoonists' protest in October.

While some editors run comics at least this minimum size, "many papers have been reducing them still farther to the point of obscurity," Walker and Van Amerongen said in a letter that accompanied their survey. Claiming "the survival of our art may be at stake," they pointed out that "as we are forced to make lettering larger and drawings simpler to conform to the size reduction, we have lost the chance to draw attractively and (to) have the scope to develop larger ideas."

Walker noted that the request to make strips no smaller than half-a-page wide is more reasonable than the demand by cartoonist Garry Trudeau that his Doonesbury comic strip be published 44 picas wide [presstime, March 1985, p. 49].



the neighborhood™ Jerry Van Amerongen

Ben thought it might be interesting to clip articles that located areas of hunger in the world . . . until, of course, his clipping hand seized-up.
the neighborhood Jerry Van Amerongen
Ben thought it might be interesting to clip articles that located areas of hunger in the world . . . until, of course, his clipping hand seized-up.

Artists say small panels are hard to read; they want a minimum width of 19 picas (left).

"We would all like to have them (strips) larger, but if they ran as large as he (Trudeau) wanted, that would have left the editor with an awkward space to fill and might have eliminated some cartoonists," Walker noted.

Asked whether cartoonists as a group would issue an ultimatum, as Trudeau did, that strips be run a specified size or not at all, Walker said, "We've hedged on using that language, but we may eventually get to that." ☐

Military press pool tested again

The Pentagon conducted the fourth test of the national press pool in August during war exercises in the Southern California desert.

Thirteen print and broadcast journalists, including correspondents from The Baltimore Sun and The Christian Science Monitor, left Washington, D.C., Aug. 1 and returned the next day, according to a Pentagon spokesman. The last previous test of the national pool had been late last year [presstime, Jan. 1986, p. 48].

Program launched to educate public about press; free-ad campaign planned

Project Watchdog, a program to educate the public about the value of a free press, got started last month when its public-service advertising campaign was approved.

That action, by the Advertising Council, means ads can be offered for use free of charge in print and broadcast media, and that the council will take an active role in their placement.

The Society of Professional Journalists, Sigma Delta Chi, announced at its convention last December that Project Watchdog would be a major focus of the organization for the next five years [presstime, Dec. 1985, p. 45].

SPJ,SDX Executive Officer Russell Tornabene said the society needs to raise more than $1 million to produce the ads, which are expected to attract as much as $25 million in free advertising space and air time.

The national campaign will be complemented by programs sponsored by local chapters of SPJ,SDX.

Project Watchdog is the first "free press" campaign approved by the Advertising Council. It will be in operation while the nation observes the 200th anniversaries of the ratification of the U.S. Constitution in 1988 and of the Bill of Rights in 1991. ☐

SPJ,SDX acts to curb loss of members

With membership having dropped 5 percent a year over the past four years, the Society of Professional Journalists, Sigma Delta Chi, has launched a two-pronged effort to stem the tide.

Beginning this month, a full-time manager of membership development will be working out of the society's headquarters in Chicago, and a pilot program, Quest, will get under way at 48 local chapters.

The national effort will include a direct mailing to at least 10,000 working journalists, journalism teachers and college journalism students who have not joined the organization, which now has about 21,500 members. Former members will be contacted by phone and mailed a questionnaire to ascertain why they dropped out.

On the local level, chapters participating in the pilot study will be asked to achieve a net membership gain of 10 percent by Dec. 15.

Two professional and two campus chapters in each of the organization's 12 regions will be asked to participate in the program.

The society's board has announced that the national goal is also 10 percent, or a net gain of about 2,000 members.

Based on their efforts, the national office will compile a guide to help other local chapters recruit. This guide to local recruiting will be available for a national membership drive scheduled for the spring of 1986.

SPJ,SDX also will publish a national membership roster.

The organization said several factors have contributed to the membership decline:

- A 33-percent dues increase for professional members, beginning in 1982, plus initiation of $10 annual dues for students
- Declining enrollments of news-editorial majors in journalism schools
- Formation of other journalism organizations
- Increasing competition for the time and energy of young professionals.

Heading the society's national membership drive will be Annie Carpenter Hayashi, a former employer relations coordinator in the Cooperative Education Program at the University of Colorado in Boulder.

Newsday and others campaign against drug abuse

"You can really go places with crack." About three times a week since mid-June, full-page ads in Newsday have provided graphic illustrations of where this especially potent type of the drug cocaine can take people—cemeteries, hospitals and jails.

Beginning this fall, New Yorkers will also see these and similar ads in subway stations and on billboards, as the public-service campaign spreads beyond the tabloid pages of Newsday's Long Island and New York City editions. The subway posters, about 1,500 of them, were financed by the Association for a Better New York; Newsday devoted its 60 promotional billboards to the anti-drug campaign.

And that's not all. Responding to "all kinds of requests for reprints from schools, community groups and social service agencies," the newspaper is sending similar posters to every junior and senior high school in the two counties on Long Island and in the five boroughs of New York City, according to Promotion Director Jack Squire.

Additionally, in a late August mailing to 150 of the nation's largest newspapers, Newsday offered to make its "crack" ads available free of charge. Later, they will also be distributed through the International Newspaper Promotion Association for a nominal fee.

All of this activity is in response to what Newsday columnist Denis Hamill has called the "bubonic plague" of "crack," a relatively inexpensive, highly potent and increasingly common form of cocaine.

According to Publisher and President Robert M. Johnson, Newsday took on the campaign because "we have a public responsibility to do something" about the escalating problem.

Announcing the ads in a June 8 editorial, the daily explained why the efforts of New York City police to combat the drug's spread should be augmented by education: "Law enforcement, however bold, can only scrape the surface of the problem unless the demand for the drug itself is curtailed. That's where education comes in. The war will be fought not in the trenches of the dope dealers, but in the recesses of the human mind."

Other campaigns are also under way.

Over the past few months, the Advertising Council has distributed five anti-cocaine ads to newspapers that are members of the International Newspaper Advertising and Marketing Executives.

According to Ad Council Campaign Manager Jack Taylor, the ads aim "to deflate some of the myths about cocaine"—primarily, the misconceptions that it is "safe and non-addictive."

In contrast to the council's earlier "Just Say No" campaign aimed at drug abuse among teenagers, the new campaign seeks to reach a wider segment of the population. To drive home the council's message, ads feature stories about a variety of "people who have hit bottom with cocaine," he said.

Also, the American Association of Advertising Agencies announced at its annual meeting in May a nationwide anti-drug campaign expected to place $1.5 billion worth of anti-drug advertising in print and broadcast media over a three-year period.

Called The Media-Advertising Partnership for a Drug-Free America, it could turn out to be "the largest volunteer advertising campaign in history," according to a spokesman for the 4-As.

Plans call for television commercials to be available starting in October, followed by camera-ready ads for print-media—all prepared free of charge by ad agencies.

YOU CAN REALLY GO PLACES WITH CRACK.
YOU CAN REALLY GO PLACES WITH CRACK.

Cable TV-Sunday paper link has few takers so far

Linkage of cable television to subscriptions of Sunday newspapers appears to be an idea whose time has not come, at least for most markets.

As of late August, three newspapers were bolstering their circulation by distributing the Sunday edition—including a TV book that includes cable listings—to cable-television subscribers at half price. They are The Denver Post, which was the first to try the idea, the Las Vegas Sun and the Long Beach (Calif.) Press-Telegram.

This is a net loss of one. The Colorado Springs Sun, which had adopted the idea two weeks after the Post, was closed earlier this year after being purchased by the Colorado Springs Gazette Telegraph [**presstime**, April 1986, p. 76]. The cable TV link perished with the paper.

C. Roy Smith, publisher of the Gazette Telegraph, has been one of the most vocal critics of the concept of enticing cable-TV subscribers to buy a Sunday newspaper because of the television guide that comes with it.

"We thought the whole thing was bogus," Smith said. "All the papers that tried it were in a secondary position. The only place where it's ever gone in is where there's a need to pump up circulation."

Yet among the three papers still making the newspaper-cable television connection, executives are unanimous in their praise of it. Moreover, they said they have received numerous inquiries from other newspapers.

"We'd been looking for a way to do this for three or four years," said Brian Greenspun, vice president of the Las Vegas Sun. "We couldn't find the key to ABC (Audit Bureau of Circulations) approval. The Denver Post opened the door."

On March 31, 1985, the Post gained an estimated 65,000 Sunday circulation by automatically delivering a Sunday paper with a cable and broadcast TV supplement to all customers of United Cable Television of Colorado.

Following a protest from the rival Rocky Mountain News of Denver, the ABC Board of Directors decided to allow counting such deliveries as paid circulation if cable customers signified their desire to receive the paper, and if the subscription price appearing on cable TV bills was at least half the regular price. Also, ABC ruled, if a cable customer decided not to take the newspaper, that amount had to be deducted from the cable bill [**presstime**, Sept. 1985, p. 46].

For ABC's six-month reporting period ending March 31, The Denver Post reported Sunday circulation of 412,102, compared with 345,097 a year earlier. Meanwhile, the Rocky Mountain News dropped from 329,381 to 320,441.

The Long Beach Press-Telegram, which competes against the Los Angeles Times, The Orange County Register and several smaller Southern California papers, implemented its cable-TV tie-in March 16, adding about 10,000 to Sunday circulation that on March 31 stood at 136,748.

The Las Vegas Sun, which began its program Sept. 1, 1985, showed Sunday circulation of 80,917 March 31, an increase of about 22,000 from a year earlier. The rival Las Vegas Review-Journal also increased in Sunday circulation during that period, by about 6,000 copies to 122,090.

Smith of the Gazette Telegraph offered this assessment of why the idea has not expanded to more markets: "It's no small chore to deliver to Sunday-only customers. They're scattered, and it's costly. A metropolitan Sunday paper can easily have a few hundred pages; it's a 4- or 5-pound package.

"It's not something you want to get into unless you want to pump up your subscriptions. These papers are going to say to advertisers, 'Look how our numbers grow.' It's supposed to justify ad rate increases." *—Gene Goltz*

Proposals on liability, appeals approved by ABC board

The Audit Bureau of Circulations Board of Directors plans to take final action in November on proposals to limit the bureau's liability and to give members a greater opportunity to appeal decisions.

The board gave preliminary approval to both provisions at its Aug. 15 meeting and must approve them in a second vote before they become final [**presstime**, Aug. 1986, p. 47].

The two proposals, under discussion for more than a year, will be voted when the board meets in conjunction with the ABC's annual conference Nov. 12-14 in New York City.

The first proposal is to revise Bylaw 2.17 to prohibit members from making any monetary claims against ABC for any action or negligence, except when intentional misconduct is involved.

In a letter to ABC members, Chairman David K. Braun said the waiver was being sought because of escalating costs of liability insurance and because of increasing costs of litigation involving the bureau. Similar waivers of damages are common among similar organizations, Braun said.

The second proposal provides for creation of a six-person panel to which members can appeal a decision or interpretation of the bureau's managing director. An appellant must deposit $5,000 when requesting that a panel be convened. If the appellant wins the case, the deposit is refunded. If the appellant loses, panel expenses will be deducted from the deposit.

The panel procedure will be tested for 18 months and then reviewed.

Although the creation of the panel enforces the concept that attempts should be made to settle disputes internally, members still retain the right to file suit, the ABC board said.

In a related action, the ANPA Executive Committee endorsed re-election of three newspaper directors of the ABC board.

They are James M. Moroney Jr., chairman and chief executive officer, A. H. Belo Corp., Dallas; Thomas B. Sherrill, vice president/marketing, The Dispatch, Columbus, Ohio; and R. David Threshie, publisher of The Orange County Register, Santa Ana, Calif.

Daily newspaper directors are elected for two years. Edward W. Estlow, chairman of the ANPA/Newspaper Advertising Bureau liaison committee for the ABC, said the incumbents had demonstrated great skill and integrity in their positions. "It is extremely important that senior newspaper executives participate in shaping ABC policies," Estlow said. ☐

Speeches

Frank Batten

William C. Eisenbeiss

John Luby

Kenneth A. Banks

Single copies of the following speeches are available from the ANPA Public Affairs Department at The Newspaper Center, Box 17407 Dulles Airport, Washington, D.C. 20041:

Foreign Policy and the Media
Katharine Graham, chairman, The Washington Post Co. Women's National Democratic Club biweekly meeting, Washington, D.C., July 24

Elements of a Good Newspaper
David Lawrence Jr., publisher and chairman, Detroit Free Press. Alabama Press Association Better Newspaper Contest banquet, Gulf Shores, July 19

The 'Total Newspaper' Approach
Joseph H. Frederickson, promotion manager, The Press-Enterprise, Riverside, Calif. International Newspaper Promotion Association annual conference, Fort Lauderdale, May 23

Changes and Challenges for Management and Unions
Roy W. Anderson, ANPA vice president/human resources, Reston, Va. International Typographical Union annual convention, Hershey, Pa., Aug. 12

Handling and Use of Chemicals in the Canadian Newspaper Industry
A report prepared for the Canadian Daily Newspaper Publishers Association by Robert J. Dell, president, Dell Tech Laboratories Ltd., London, Ontario, June 1986

From the Texas Daily Newspaper Association summer meeting, Williamsburg, Va., July 24-27:

Newspapers' Recovery From Complacency
Frank Batten, chairman, Landmark Communications Inc., Norfolk

An Update of Current Newspaper Issues
Jerry W. Friedheim, ANPA executive vice president and general manager, Reston, Va.

From the International Newspaper Advertising and Marketing Executives annual sales conference, Vancouver, British Columbia, July 27-30:

Keynote Address: Marketing the Total Newspaper
Gerald Haslam, publisher, Pacific Press Ltd., Vancouver, British Columbia

Alternate Delivery
William C. Eisenbeiss, vice president and advertising director, The Virginian-Pilot and The Ledger-Star, Norfolk

Alternate Distribution of TMC Products
John Luby, circulation director, The Charlotte (N.C.) Observer

Ideas: The Keys to Profitability
Craig C. Standen, president, and Leo Bogart, executive vice president and general manager, Newspaper Advertising Bureau, New York City

The Value of Networking to Chain Retailers
Kenneth A. Banks, vice president/advertising and sales promotion, Eckerd Drug Co., Clearwater, Fla.

CPPA reports increase in U.S. newsprint demand

Newsprint demand in the United States increased from 11.4-million metric tons in 1984 to 11.6 million tons last year, according to an annual survey by the Canadian Pulp and Paper Association. Japan had the world's second greatest demand, with 2.7-million tons, the survey showed. Results were published in CPPA's 28-page Newsprint Data booklet.

It also reported that China led the world last year in growth in newsprint capacity, with an increase of 187,000 metric tons. Latin America was second, increasing by 85,000 tons, followed by the United States at 67,000 tons.

Canada was first in production with 9 million tons. The United States was second at 4.9 million and Japan third at 2.6 million.

Among other facts cited in the report:

- World newsprint demand reached 27.9 million tons, an increase of 1.4 percent over 1984. World demand was 88.3 percent of capacity compared with 88.1 percent in 1984 [**presstime**, Dec. 1985, p. 52].
- World capacity reached 31.6 million tons, a 1.1-percent increase from 1984—the smallest year-to-year rise in 10 years.

A limited number of copies of the report are available from ANPA's Newsprint and Transportation Department at The Newspaper Center in Reston, Va.

Meanwhile, a separate report by a United Nations agency has projected that world capacity for newsprint production will grow modestly, 1.3 percent per year, through 1989. ☐

July statistics delayed

Newsprint statistics for July were not available at press time. They will be published in the October issue.

UPIU ratifies pact; British Columbia mill closed by pickets

A three-year contract has been ratified between the United Paperworkers International Union and Garden State Paper Co. at the company's Pomona, Calif., newsprint mill.

Workers will receive pay increases in lump sums of $1,200 in the first year and $1,000 in the second, and a 2-percent pay increase in the third.

Also, terms were disclosed for an agreement reached between the UPIU and Manistique Papers Inc. of Manistique, Mich. The two-year contract there calls for an increase of 3.5 percent in the first year and 3.25 percent in the second [**presstime**, Aug. 1986, p. 56].

Meanwhile, in Canada, MacMillan Bloedel Ltd.'s newsprint mill in Port Alberni, British Columbia, has been down since Aug. 4, when International Woodworkers of America members set up picket lines that the mills' union workers refused to cross. ☐

TECHNIDYNE MICRO TB-1C

CAN YOU MEASURE THE QUALITY OF YOUR NEWSPRINT?

IF YOU CAN'T FILL IN THE BLANKS, YOU PROBABLY AREN'T GETTING THE NEWSPRINT YOU NEED.

Quality printing demands quality newsprint . . . especially for quality color reproduction.

Today's increasing demands for color, by advertisers and consumers, require greater control of newsprint brightness, opacity and color. And now you have it.

Technidyne's MICRO TB-1C allows everyone to clearly communicate these values with real numbers that everyone understands. The simple-to-operate MICRO TB-1C provides accurate, reliable, standard measurements . . . a common language. Every time.

Newspapers can order quality newsprint with confidence, and check those orders when they arrive. Mills know what to produce. Exactly. Everyone will be talking the same language. At last!

Contact us today for more information or a demonstration.

Views vary on health of Advo

The impending sale of Advo-System Inc. to a limited partnership has resulted in speculation that the direct-mail firm will scale back its operation and operate only in the more lucrative markets.

"We might see Advo consolidate" and reduce the number of markets in which it operates, said Kevin R. Gruneich, vice president of publishing/information analyst of The First Boston Corp., New York City.

The sale could result in a "leaner, meaner" Advo, he said—especially if the buyer does not sink a lot of money into the direct-mail firm.

Some newspaper executives already have detected a move toward a leaner Advo. "We don't see their presence in many of the smaller markets just because of the cost" to operate in them, said Jack Condon, senior vice president for retail advertising of Knight-Ridder Newspaper Sales.

Executives look for that trend to continue. For example, Robert C. Momsen, vice president of marketing at the St. Paul (Minn.) Pioneer Press and Dispatch, said he expects Advo to "decide where they can do their best and go for those markets."

Advo will be sold to Warburg, Pincus Capital Partners under a sale agreement in which its parent firm, John Blair & Co., will be sold to Reliance Capital Group Inc.

A competing bidder for Blair, Macfadden Holdings Inc., disagrees that Advo will scale back operations. It now believes Advo holds promise of being a very strong and profitable company. Just six months ago, Macfadden considered Advo to be on the brink of failure. It indicated that if successful in purchasing Blair, it would dump Advo for a mere $100,000—1 percent of what Warburg, Pincus will pay.

"I guess you could say we were doubting Thomases," said Macfadden President Michael J. Boylan. But in the intervening months, after examining Blair and Advo closely, "We have seen a remarkable turnaround in Advo. . . . It is an extremely valuable business that is going to surprise an awful lot of people."

Boylan also said, "I think six months ago, Advo was on its heels and ready to fall backward. Now they're on their toes ready to run."

Among those who expect Advo to retrench, the apparent reason is its financial situation. The direct-mail firm has faced stiff competition from newspapers and others, analyst Gruneich said. "It has been getting attacked on all sides."

Purchased by Blair in March 1984, Advo went through a period of vigorous expansion that triggered a flood of red ink. Advo became largely responsible for financial woes of the parent firm.

However, Blair reported July 31 that it and its direct-mail subsidiary were finally seeing black ink. For the second quarter ending June 30, Advo reported a profit of just over $5 million on revenues of $119.5 million; for the same period last year, it lost $5.7 million on revenues of $116 million.

Blair in the second quarter reported a profit of $1.7 million on revenues of $171.5 million; it lost $5.9 million on revenues of $162.3 million for the same period a year earlier.

Advo's sale got a green light Aug. 15 in a legal ruling clearing the way for Blair to be sold to Reliance. The ruling came from a U.S. Circuit Court of Appeals judge in New York. She reversed a lower court that had blocked Reliance's $356.5-million bid for Blair. The lower court action came in response to protests from competing bidder Macfadden, which had complained about the way Reliance represented its offer.

A previous delay centered on a Federal Communications Commission investigation of the deal [presstime, Aug. 1986, p. 45]. The FCC subsequently approved the transaction.

According to the plan involving Advo, one-sixth of the direct-mail firm's equity—a controlling interest in preferred stock shares—would be sold to Warburg, Pincus for about $10 million. The rest of Advo equity would be given to Blair stockholders in the form of new Advo common stock.

For another $1 million, Warburg would buy the right to acquire an additional 12 percent of Advo common stock. A company spokesman said that would require a new stock issue.

The Warburg limited partnership has a reputation for making "intelligent investments," said Gruneich of First Boston. It tends to stay out of the routine management of companies in which it has an interest, he added. A Warburg, Pincus spokesman previously said the firm plans to let daily operation of Advo "remain in the hands of present management."

Warburg, Pincus' limited partners include a wide range of investment firms, retirement plans, insurance companies and universities, according to documents filed with the New York state government. *—C. David Rambo*

Ad spending estimate revised downward

Growth in total U.S. advertising expenditures appears to have slipped, at least in projections for this year.

Robert J. Coen, senior vice president and director of forecasting at McCann-Erickson, predicted last December that total advertising expenditures would grow 8 percent in 1986. He now believes the figure will be closer to 7.6 percent.

"This lower projection is explained by continued sluggishness in the U.S. economy and a much lower than expected inflation rate," Coen said.

However, he noted that 7.6-percent growth "still compares favorably" with economic growth in general and with most other industries.

That full-year projection for all advertising is considerably higher than what daily newspapers managed to attain through May of this year. According to the Newspaper Advertising Bureau, ad expenditures in newspapers were up 5.8-percent through the first five months compared with the same period last year.

Coen expects overall ad expenditures to pick up toward the end of this year. And next year there should be a "modestly larger gain of probably about 8 percent," he said. □

Reggie Hall named INAME staff chief

Reggie R. Hall was appointed general manager and secretary-treasurer of the International Newspaper Advertising and Marketing Executives. He succeeded Sidney W. Bordelon, who announced plans to resign during INAME's 137th sales conference July 27-30 in Vancouver, British Columbia.

Hall, formerly INAME assistant general manager, is a former sports columnist for The Commercial-News in Danville, Ill., who joined the association in 1978.

Bordelon's resignation was effective Aug. 31. He joined INAME in 1968 as administrative assistant and became general manager and secretary-treasurer in 1974. □

Syndicated research to continue with broader choice of firms

BY CRAIG C. STANDEN

Many newspaper people were surprised when the Simmons-Scarborough research coalition, which in 1985 produced a $2-million syndicated study of newspaper audiences, announced its dissolution in July.

The bureau has received a number of inquiries about the end of the Simmons-Scarborough alliance and what it means to the newspaper business.

First, and most important, it does *not* mean the end of syndicated newspaper audience research.

Both the Simmons Market Research Bureau and Scarborough Research Corp. are committed to continue doing studies of newspaper audiences independently, just as they did in 1982 and 1983 before joining forces [presstime, Aug. 1986, p. 46]. This was the real breakthrough for newspapers: the very first nationwide syndicated studies of newspaper audiences.

Craig C. Standen

Many advertising experts regarded these studies as the most important advance in newspaper advertising research since the emergence of television as a major advertising medium. For the first time since the advent of television, media planners could make meaningful comparisons between newspapers and the other national media, and could include newspapers in the media planning process used for national advertisers.

The leading on-line, media-information services were able to include newspaper information from the syndicated studies in their databases, enabling agency planners to have our readership and demographics at their fingertips via computer terminals as well as in printed volumes.

It is important to our business that syndicated research continue to be available to agencies and advertisers. It allows us to sell newspaper advertising the way our customers want to buy it.

Today's advertisers think in terms of market segmentation, and they look at a medium in terms of its ability to deliver specific customers. Syndicated research provides the market-by-market, product-by-product data they need to buy newspapers over other media.

With the weakening of television's hold on national advertisers, our business is in an excellent position to increase our share of national advertising. Long-range, national offers newspapers their greatest opportunity for growth.

Second, the end of Simmons-Scarborough means that newspapers in the larger markets will again have a choice of research companies, and those in middle-sized and smaller markets will be courted more vigorously by the companies.

This increased competition will probably result in more attractive pricing for research proposals. You also may find yourself receiving proposals from research companies you haven't dealt with in the past.

Third, the Simmons-Scarborough breakup reminds us how important it is that each newspaper keep its own readership research current and acceptable in terms of the Advertising Research Foundation's guidelines. Realistically, this means letting no more than three years go by between studies of your readership. Some newspapers think that because they carry little or no national advertising they don't need readership research. However, retailers increasingly are demanding audience data—and if you don't have it, they may turn to media that do provide it.

Fourth, the dissolution of Simmons-Scarborough points up the importance of the bureau's CAN DO system, which provides readership, audience and demographic information on *every* daily and Sunday newspaper in the United States. CAN DO is widely used by agencies.

The bureau's Marketing Service Department, which operates CAN DO, will be happy to answer your questions about Simmons-Scarborough, CAN DO, and readership research in general. Uldis Grava, who heads the department, can be reached at (212) 704-4550. ☐

Standen, president of the Newspaper Advertising Bureau in New York City, is a regular contributor to presstime.

Local, national ad-rate parity is paying off

Earlier this year, The Wichita Eagle-Beacon began a real-life test of the theory that newspapers could increase their national advertising dollars by ignoring traditional rate structures and charging the same for local and national ads.

For the Kansas daily, such audacity is already paying off [presstime, March 1986, p. 52]. And in Canada, another newspaper is vigorously promoting a single rate structure.

At the Eagle-Beacon, national ad linage increased in three of the first four months after the program's introduction—2.9 percent in April, 21.5 percent in May and 12.7 percent in July. Robert Hobson, director of marketing services, says a 17.9-percent drop in June was related to temporary conditions.

How much of this change is attributable to the ad-parity program or to aggressive selling against the declining power of television commercials is unclear.

While Hobson said most national advertisers approached by the Knight-Ridder paper thought ad parity "an extraordinarily worthwhile project," they noted several obstacles to making an immediate decision to place more dollars in Wichita:

- The program is limited to advertisers placing at least six full pages in a year.
- Wichita is not among the top 50 markets (where national advertisers place most of their ads).
- Ad parity exists in few markets and therefore might impede an advertiser wanting to make a multiple buy.

"It's important for other newspapers to understand this is not a quickie," said Hobson. "Some of the long-range results won't be in 1986 budgets, but we expect to see more coming in 1987."

Meanwhile, The Toronto Sun went to ad parity with a "bite the bullet" campaign. Enclosing a piece of bubble gum shaped like a bullet in a mailing to about 3,500 advertisers, agencies and other interested parties, the Sun drew almost a 30-percent response—all enthusiastic, said General Manager Thomas G. MacMillan.

While the mailing "generated a lot of favorable publicity and a lot of nice letters saying 'congratulations,'" MacMillan said it is still too early to chart the results on the bottom line. "That's the toughest question to answer," he said. "It's very difficult to say we got extra business because of it (ad parity), but intuitively we think we have." ☐

ANPA schedules 42 seminars for 1987

ANPA, through its Training Services Department, Technical Services Department, Human Resources Department and Foundation, has announced 42 training sessions to be held during 1987. Additional seminars and conferences are under consideration. Announcements will be made at a later date.

Any changes in the schedule listed below will be announced in presstime. More information and registration forms will be included in brochures to be mailed to the membership.

General seminars and workshops

Except where otherwise noted, additional information about the following seminars is available from Stephen E. Palmedo, ANPA manager/training services, at The Newspaper Center, Reston, Va.; (703) 648-1123.

Leadership in the Newsroom **Jan 26-28, San Francisco**
May 11-13, Washington, D.C.
Oct. 5-7, Chicago
Nov. 30-Dec. 2, St. Petersburg

Helps skilled journalists with the management part of the editor's job. A practical three-day workshop on the management skills needed by the mid-level newspaper editors. Instructors from the University of Chicago work with participants in role play exercises, small group assignments and other activities to perfect leadership, delegation, decision-making, communication and other necessary skills. Cosponsored with the American Society of Newspaper Editors and the Associated Press Managing Editors Association. Registration fee: $550 for members of ANPA, ASNE and APME, $675 for non-members.

Newspaper Executives Marketing Seminar **Feb. 8-14, Houston**

Helps newspaper executives learn more about their newspaper and its market by being immersed in actual situations faced by newspapers and their management. An intense one-week seminar featuring 14 case studies—11 about newspapers—that challenge the participants to define, decide and act on problems of the modern newspaper environment. Cosponsored with the International Newspaper Promotion Association. Registration fee: $1,900 for members of ANPA and INPA, $2,300 for non-members.

Management Development Workshop **Feb. 16-19, Miami**
Sept. 21-24, Austin, Texas

Leadership, decision-making, communications techniques, motivation and coaching, team building, meeting management, problem identification, and resolution—these and other important topics are addressed. Workshop participants take part in role plays, small work groups, and class discussions of real newspaper problems suggested by their colleagues. Registration fee: $675 for ANPA members, $800 for non-members.

Telecommunications Management Training Workshop **Spring**
Site: To be determined
Fall
Site: To be determined

A hands-on training workshop designed to teach the day-to-day management skills required to operate a telecommunications system successfully. Training will focus on areas such as local and long distance telephone traffic analysis, inventory control, equipment acquisition and long-range system planning. Registration fee: To be announced. For more information, contact Deborah Walker, ANPA telecommunications specialist, (703) 648-1142.

Advanced Labor Relations Seminar **March, Seattle**

Strengthens the ability of experienced labor relations executives to achieve desired goals at the bargaining table. The legal aspects of hard bargaining will be highlighted as will strategies for attaining desired contract language to utilize the latest technology most effectively commensurate with productive allocation of personnel. Participants will select the topics they wish to have discussed in depth. In general sessions and informal workshops, they will share each other's expertise and the knowledge of expert panelists. Registration fee: $350. For more information, contact Charles D. Cole, ANPA manager/labor relations (703) 648-1070.

Human Resource Strategies in the Newspaper **March 1-4, Houston**

Focuses on why and how to develop effective and bottom-line-oriented human resource strategies for the newspaper. In-depth discussions will allow attendees the time for participation, problem solving and strategy development in such areas as positive employee relations, compensation, and employee selection and development. Cosponsored with the Newspaper Personnel Relations Association. Registration fee: $350 for members of ANPA and NPRA, $375 for non-members. For more information, contact Patricia P. Renfroe, ANPA manager/personnel relations (703) 648-1069.

Advanced Management Workshop **March 2-4, San Antonio**
June 1-3, Washington, D.C.
Dec. 7-9, Amelia Island, Fla.

Designed for senior-level managers and directors from all departments and those who have completed one of these workshops: ANPA Management Development, ANPA/ASNE/APME Leadership in the Newsroom, ANPA/International Circulation Managers Association/NPRA Managing People in the Circulation Department or ANPA/INPA Management Skills for Newspaper Promotion. It reviews the management skills addressed in these workshops and involves study and practice with several other management challenges including managing change and conflict, and coalition or team building. Registration fee: $550 for ANPA members, $675 for non-members.

Total Newspaper Conference **March 15-18, St. Petersburg**

Since 1966, this conference has helped prepare more than 800 newspaper men and women for greater responsibility and more authority. Participants explore the goals, challenges and capabilities of each newspaper department, while emphasizing the interdependence of all. Respected newspaper professionals lead sessions focusing on the editorial, advertising, circulation and production departments and on general management. Registration fee: $850 for ANPA members, $1,000 for non-members.

Newspaper in Education Conference **March 18-20, Chicago**

Provides an opportunity for NIE coordinators, directors and other newspaper personnel with responsibility for NIE programs to learn and work with those NIE coordinators with successful Newspaper in Education programs. Presentations by newspaper managers and educators cover starting and enhancing a NIE program. Small group sessions focus on specific educational newspaper and professional concerns and give participants suggestions and direction that can be used at their newspapers. Registration fee: $350, $450 for NIE vendors. For more information, contact Linda B. Skover, assistant director, ANPA Foundation (703) 648-1051.

Post-Press Packaging and Distribution Symposium **March 24-26, Chicago**

This will be the second symposium sponsored by the ANPA Technical Committee focusing on developments in newspaper inserting, packaging, conveying and distribution, including robots, computer systems and total-market-coverage programs. Registration fee: $375. For more information, contact George R. Cashau, ANPA director/technical research (703) 648-1183.

Participants in Newspaper Quality Control Seminar at The Newspaper Center prepare photograph for reproduction.

Managing People in the Circulation Department **March 30-April 1, Miami** **Nov. 9-11, Washington, D.C.**

Problem solving, motivation, performance appraisal—these and other key management skills are studied and practiced at this workshop. The workshop program was developed by the University of Chicago in consultation with representatives of ICMA. Cosponsored with ICMA and NPRA. Registration fee: $550 for members of ANPA, ICMA and NPRA, $675 for non-members.

Labor Relations and Technology Seminar **June 5-6, Las Vegas**

Held just prior to the ANPA Operations Management Conference & Exposition, this seminar examines how rapidly changing technology has altered traditional concepts of labor relations. It covers the effects of technology and mergers on traditional bargaining concepts and their impact on employees. Drawing upon the expertise of panelists and one another, participants will develop strategy and language in both workshops and general sessions to combat resistance to technological change. Tours of selected Exposition displays will be conducted. Registration fee: $350. For more information, contact Charles D. Cole, ANPA manager/labor relations (703) 648-1070.

Strategic Planning Seminar **June 14-18, Houston**

To help top newspaper executives interpret evolving market changes and prepare strategies taking advantage of—or defending against—these changes. Building of the concepts introduced at the ANPA/INPA Newspaper Executives Marketing Seminar, this seminar offers a greater emphasis on environmental variables and a longer planning horizon for a special focus on long-range strategic planning. Cosponsored with INPA. Registration fee: $1,700 for members of ANPA and INPA, $2,100 for non-members.

Connections III **Fall**
Site: To be determined

This annual seminar focuses on newspaper applications of telecommunications systems and services. Topics of discussion change each year to reflect current developments in the field. Registration fee: To be announced. For more information, contact Deborah Walker, ANPA telecommunications systems specialist (703) 648-1142.

Newspaper Training Conference **Sept. 16-19, Baltimore**

An annual event designed for and by newspaper trainers, this conference enables training and development managers to meet and exchange ideas. The design and format allow for an interchange of information. General sessions feature speakers from inside and outside the newspaper industry, while smaller group activities focus on specific newspaper training issues. Cosponsored with NPRA. Registration fee: To be announced. For more information, contact Patricia P. Renfroe, ANPA manager/personnel relations (703) 648-1069.

Labor Relations Seminar **October**
Site: To be determined

For over 13 years, this two-and-a-half-day seminar has assisted general managers, managing editors and employee relations executives to prepare for and to conduct union contract negotiations. It examines the impact of technology on contract language, the recapturing of management rights, Title VII regulations and court decisions, equal pay and comparable worth, and the challenges of union mergers in the publishing industry. Registration fee: $450. For more information, contact Charles D. Cole, ANPA manager/labor relations (703) 648-1070.

NIE Instructor Training Seminar **Oct. 6-10, Warrenton, Va.**

Participants will learn to become self-reliant in giving presentations on the use of the newspaper as a teaching tool. They will study a variety of workshop models to develop flexibility, creativity, effectiveness and confidence. The seminar is designed to create highly motivated leaders with a firm knowledge of modern teaching and training techniques and a strong grasp of NIE curricula covering all grades and content areas. The program will be conducted by Dr. Edward DeRoche, dean of the School of Education at the University of San Diego, and Linda B. Skover, assistant director, ANPA Foundation. Registration fee: $500. For more information, contact Skover at (703) 648-1051.

Pressroom Options IV Symposium **Oct. 19-21, Chicago**

This symposium is for newspaper publishers, production executives, pressroom personnel, press manufacturers, paper, plate, ink and blanket suppliers and others. It will be the fourth symposium sponsored by the ANPA Technical Committee focusing on current technical developments, operational experiments and quality enhancements in the pressroom, including flexographic, letterpress and offset configurations. Registration fee: $375. For more information, contact George R. Cashau, ANPA director/technical research (703) 648-1183.

Management Skills for Newspaper Promotion **Nov. 16-18, Chicago**

Successful newspaper promotion requires participation and creative contributions of many people from different departments; this requires a special set of management and communications skills that are both studied and practiced at this workshop. Participants examine the promotion manager's creative, professional and managerial role. They also observe and practice several skills, including leadership, motivation and attitude setting. Cosponsored with INPA. Registration fee: $550 for members of ANPA and INPA, $675 for non-members.

Health and Safety Symposium **Date and site: To be determined**

Topics will include VDT issues, "right-to-know" laws including federal hazard communications regulations, industrial hygiene surveillance, assessment of alleged hazards, ink research, waste management and regulations, health and safety litigation, ANPA's accident reporting system, and health surveillance programs. Registration fee: $375. For more information, contact Richard W. Neergaard, ANPA manager/environmental services (703) 648-1221.

Hands-on technical seminars

Hands-on technical seminars, conducted by the Association's Technical Services Department, are held at The Newspaper Center in Reston, Va. Registration fee for each is $575.

The schedule for the second half of 1987 will be announced later.

Newspaper Quality Control **Jan. 5-9**
May 11-15

This seminar reviews procedures needed to establish quality standards throughout the newspaper production cycle. Through lectures, demonstrations and "hands-on" operational experience, a complete system for documenting, measuring and maintaining high quality printing will prepare participants to initiate their own systems. The quality control system will proceed through the following steps: copy standards and photographic reproduction density ranges (color and black-and-white); establishing and maintaining typesetting procedures and equipment; process camera control of line copy and halftones; color separation standards for scanners and direct screen operations; and maintenance and set-up procedures for newspaper presses.

Adanced Offset Press Operations **Jan. 19-23**
Feb. 23-27
March 23-27
April 27-May 1
June 22-26

Pressmen will learn advanced techniques such as web offset trouble shooting and quality control programs for consistent results on the press. Non-pressroom personnel will gain hands-on experience operating a newspaper press. This seminar will utilize ANPA's double-width M.A.N.-Roland 4/2 press and the single-width Goss Urbanite Press. Specific areas to be covered include offset press unit components, precise adjustment of all systems, registration systems, plate processing and control, printing problems, and offset press care and maintenance.

Newspaper Process Camera Techniques **Jan. 19-23**
April 27-May 1

Production and management personnel will obtain working knowledge of the customary instruments used for process camera operation at a newspaper. Also, the seminar will introduce attendees to the proper use of contact screens, processor control, chemistry, films and diffusion transfer material. Lectures and demonstration on the Hell and Royal Zenith Scanners will be conducted. Instruction and operation of the ECRM Autokon camera will be provided.

Newspaper Color Scanner Operation **Feb. 2-6**
April 6-10

Newspaper production and management personnel will learn the skills needed for utilization of electronic scanning systems. The program encompasses newspaper processes relative to producing consistent, high-quality color. Through a combination of classroom instruction and hands-on training, attendees learn the essential techniques for printing high-quality ROP process color for both editorial and advertising departments on offset and/or letterpress presses. Participants are given a thorough background in color reproduction, including the purpose of masking additive and subtractive color theory, the relationship of ink and paper in color printing, and proper evaluation of colors.

Direct Screen Color Separation for Newspapers **Feb. 9-13**

This seminar covers the skills needed for utilization of direct screen color systems. Participants are given a thorough background in color reproduction, including the purpose of masking, the relationship of primary and secondary colors, and how to properly evaluate colors. Attendees learn the essential techniques for printing high-quality ROP process color for both editorial and advertising departments on offset and/or letterpress presses. Elements covered include: evaluation of color originals and reproduction standards; color correction techniques; instruments and controls for predictable quality; operation of the direct screen separation equipment; proofing of color by color key and actual press runs; and safety in the camera room and dark room, including chemical handling, ventilation, problems and working with high intensity lights.

Management Introduction to Newspaper Technology **March 9-13**
May 18-22

Management personnel are introduced to the latest developments in electronic editorial and production systems. The seminar is intended to create increased awareness of the capabilities and limitations of modern newspaper production equipment. Instruction includes personalized sessions that assist attendees in achieving an understanding of the new technologies. They experience hands-on operation of modern phototypesetting equipment plus electronic editorial and advertising copy processing systems. Participants also produce their own four-page newspaper, working through all the procedures from copy preparation to the actual press run.

For more information on these technical seminars, contact Arthur M. Boudreau, manager/technical training, ANPA, The Newspaper Center, Reston, Va.; (703) 648-1217. ☐

ANPA Calendar

SEPTEMBER

Newspaper Executives Marketing Seminar sponsored by ANPA and the International Newspaper Promotion Association
Scottsdale (Ariz.) Conference Center, Sept. 2-7

ANPA Technical Committee and Operations Management Conference & Exposition Arrangements Committee meetings
The Newspaper Center, Reston, Va., Sept. 4-5

ANPA Board of Directors meeting
Sonesta Beach Hotel, Southampton, Bermuda, Sept. 10-11

ANPA Foundation Newspaper in Education Committee meeting
Biloxi Hilton, Biloxi, Miss., Sept. 11-12

ANPA Advanced Offset Press Operations Seminar
The Newspaper Center, Reston, Va., Sept. 15-19

ANPA Convention Arrangements Committee meeting
The Waldorf-Astoria, New York City, Sept. 16

ANPA Human Resources Committee meeting
The Mayflower, Washington, D.C., Sept. 22-23

ANPA Management Development Workshop
The Knickerbocker, Chicago, Sept. 22-25

ANPA Government Affairs Committee meeting
The Mayflower, Washington, D.C., Sept. 23-24

Leadership in the Newsroom Workshop sponsored by ANPA, ASNE and APME
Omni International Hotel, Norfolk, Sept. 29-Oct. 1

ANPA Direct Screen Color Separation for Newspapers Seminar
The Newspaper Center, Reston, Va., Sept. 29-Oct. 3

OCTOBER

ANPA Health and Safety Symposium
Denver Marriott, Oct. 2-3

ANPA Management Introduction to Newspaper Technology Seminar
The Newspaper Center, Reston, Va., Oct. 6-10

ANPA Advanced Management Workshop
Sir Francis Drake Hotel, San Francisco, Oct. 13-15

ANPA Postal Committee meeting
J. W. Marriott Hotel, Washington, D.C., Oct. 14-15

ANPA Labor Relations Seminar
Hyatt Regency Minneapolis, Oct. 15-17

ANPA Legal Affairs Committee meeting
The Mayflower, Washington, D.C., Oct. 16

ANPA/American Bar Association Task Force meeting
The Mayflower, Washington, D.C., Oct. 16

ANPA/Canadian Pulp and Paper Association Technical Section Joint Standing Committee meeting
Laurel Point Inn, Victoria, British Columbia, Oct. 16-17

ANPA Creative Marketing Strategies Conference
Hyatt Regency O'Hare, Chicago, Oct. 16-17

ANPA Foundation NIE Instructor Training Seminar
Airlie House, Warrenton, Va., Oct. 20-23

ANPA Newsprint Committee meeting
Ritz Carlton, Washington, D.C., Oct. 23

ANPA Telecommunications Committee meeting
J. W. Marriott Hotel, Washington, D.C., Oct. 23-24

ANPA Newsprint Committee/CPPA Newsprint Section meeting
Ritz Carlton, Washington, D.C., Oct. 24

Managing People in the Circulation Department Workshop sponsored by ANPA, the International Circulation Managers Association and the Newspaper Personnel Relations Association
The Knickerbocker, Chicago, Oct. 27-29

ANPA Advanced Offset Press Operations Seminar
The Newspaper Center, Reston, Va., Oct. 27-31

ANPA Newspaper Process Camera Techniques Seminar
The Newspaper Center, Reston, Va., Oct. 27-31

ANPA Circulation and Readership Committee meeting
The Newspaper Center, Reston, Va., Oct. 28-29

Manager/Newsprint and Transportation, Joseph F. Prendergast Jr.
Manager/Personnel Relations, Patricia P. Renfroe
Manager/Public Affairs, William Schabacker
Business Manager, Anthony G. Tesoriero
Research Manager/Engineering, Frederick L. Warner
Assistant General Counsel, Claudia M. James
Assistant General Counsel, Tonda F. Rush

ITU convention endorses merger; membership approval expected

There are many who believe that the venerable International Typographical Union's 127th convention in August will end up having been the last one.

That's because the union is expected to merge with the Communications Workers of America by the end of this year. The ITU would become the Printing, Publishing and Media Workers Sector of the giant CWA [presstime, Aug. 1986, p. 48].

"We will next meet as a sector of the CWA, less than a year from now," ITU President Robert S. McMichen said at the conclusion of the Aug. 9-15 convention in Hershey, Pa.

Earlier, the 199 delegates representing 145 local unions approved a recommendation by the ITU's Convention Committee on Graphic Arts Unions Merger that the convention urge the membership to approve the merger in a Nov. 19 referendum. Approval came on a weighted roll call vote of 14,266 to 14,042.

However, "the roll call vote is not indicative of how the membership will vote," said Leon Olson, president of San Francisco Bay Area Typographical Union No. 21. He expects the membership vote will favor CWA by a much wider margin than that of the convention.

The principal reason for this, according to veteran observers of ITU referendums, is the absence at the convention of a voice for the 27,000 ITU retirees who are expected to strongly favor the merger. Retirees will vote in the mail-ballot referendum. Ballots will be sent out in October.

A presstime poll of 20 convention delegates also found high expectations that the merger will win ratification. Of the 14 printers and six mailers interviewed at random, 17 predicted membership approval while three were undecided.

Fred M. Leathem, a member of Southern California No. 17 and a candidate for international vice president, predicted the membership will ratify the consolidation by a 2-to-1 margin.

Leathem pointed out that most of those who voted against the committee's favorable report on the merger were strong advocates of a merger with the Teamsters, which the membership rejected in 1985 by a 2-to-1 margin.

Even mailers who voted against the committee's recommendation said they expect the merger will gain rank-and-file approval.

The chairman of the Graphic Arts Unions Merger Committee, Bertram A. Powers, cited a number of benefits that would flow from the merger. It would provide "a breath of fresh air" and "bring unity back to us," said Powers, president of New York City Typographical Union No. 6, which represents 2,067 active members.

Among those predicting approval, the principal reason cited was that the consolidated union would assess lower dues. Each ITU member currently pays monthly international dues of 1.5 percent of straight-time earnings plus $1. The dues after a merger would be 0.46 percent of earnings, plus 50 cents to the CWA Defense Fund and $1 to the new Printing, Publishing and Media Workers Sector for its Mortuary Fund.

ITU

Larry Cohen (left), assistant to CWA President Morton Bahr, answers question on proposed merger. Left to right from Cohen are ITU's McMichen, Heritage and Boarman.

With average monthly earnings of ITU members currently at $2,301, the savings would be $23.44 a month on international dues, according to a calculation by ITU Vice President William J. Boarman.

In lengthy and spirited convention debate over the merger, one of the biggest issues concerned the CWA's policy of basing strike benefits on need. The ITU provides strike benefits of 50 percent of the weekly pay scale, with a maximum of $250 a week. Because the average weekly scale for ITU members is $531, most are eligible for the maximum.

Of particular concern was what will happen to printers and mailers currently receiving strike benefits. Some delegates called for a written guarantee that strikers, such as those walking a picket line at the Chicago Tribune, would continue to receive assistance.

Larry Cohen, assistant to the CWA president, noted that his union has a $15-million defense fund for benefits and other expenses in support of strikes. "It would be hard for me to imagine our (executive) board not supporting any strike of this organization," Cohen told the convention. He noted that newly organized CWA members striking a nursing home this year received, "on the average, nearly $200 per week."

To resolve the strike-benefits issue, ITU President McMichen told delegates that in return for their support of the pro-merger committee report, he would initiate a proposition to establish a $200 weekly supplemental strike benefit for members of the proposed new CWA sector. It would be funded by an additional monthly assessment of 0.50 percent of straight-time earnings. The membership will vote on that proposition at the same time it votes on the merger document.

WARM RECEPTION. The merger discussions took place in a decidedly pro-CWA setting. A banner stretched behind the speakers' dais read: "Stepping into the future with CWA."

And that union's president received

standing ovations both before and after his speech. "By joining with CWA," Morton Bahr said, "you will be an integral part of an international union with 650,000 members located in every community of the United States. We are committed to allocate the necessary resources to strengthen and widen the ITU's presence and activity in Canada."

The much smaller ITU has about 40,000 active members, of which 9,000 are Canadian workers. The CWA does not currently represent workers in Canada, and ITU President McMichen noted in his closing address that the ITU will help the CWA "re-establish itself in Canada." The CWA had a presence in Canada until 1972, when its Canadian wing broke away to form a separate organization. (The union is planning to change its name at its 1987 convention to the "Communications Workers of North America" if the merger is approved.)

Bahr told the delegates that he views the proposed Printing, Publishing and Media Workers Sector as a home for other unions in the printing and publishing industry. He described it as "the natural place for them to come."

Looking at the future shape and direction of the communications industry, Bahr noted that his union has about 7,000 members in directory publishing. "These numbers will expand as our primary employers begin to do their own work in directory publishing which heretofore outside printers had been doing, and as deregulation permits them to expand into other industries and across the country," Bahr said.

"I suggest to you that the real question to be asked is how many CWA and ITU members are going to be involved in a single, integrated industry tomorrow," he said. "The ITU is involved in an industry that is rapidly moving in the direction very similar to us in CWA. Telecommunications, laser printers, fiber optics, satellite facsimile systems and other technological advances are used today for graphic and electronic communications."

Speaking in the same vein, ANPA Vice President/Human Resources Roy W. Anderson told the convention the time has come "to recognize the importance of the 'diversity principle,' which provides us with a fair competitive situation in the growing field of telephone-based electronic information services."

Anderson added: "The interpretation of the diversity principle created by the divestiture of AT&T will have an impact on all of us in the newspaper business as significant as any of our previous technology developments. Our business has faced the competitive challenge of radio, television, direct mail and others. Today we must recognize that our future together will require an understanding of how information services and electronic publishing will affect the newspaper of tomorrow."

SPLIT EVIDENT. Throughout the convention, the longstanding 3-to-2 split on the Executive Committee was evident, with President McMichen and Vice Presidents Boarman and Billy J. Austin forming the majority, and Vice President Allan J. Heritage and Secretary-Treasurer Thomas W. Kopeck the minority. Both Heritage and Kopeck, while not speaking against the CWA, supported a minority report of the merger committee that called for a delay in taking action on the proposed merger, "with this time used to renegotiate the merger document."

That Executive Council split had manifested itself over an earlier proposal for the ITU to affiliate with the Teamsters. That proposal, opposed by the three-member leadership majority, eventually failed. But the continuing interest of Teamsters President Jackie Presser was apparent in Hershey, nonetheless.

In a letter to mailer delegates, Presser stated that any mailer local affiliating with the Teamsters will have its own charter and will be an autonomous local entitled to all of the services provided affiliates. "I have pledged to create a Mailers Branch within the IBT so that you can continue your identity and proud tradition," he said.

About 13,000 of the union's 40,000 active members are mailers. And among the immediate problems facing the ITU are the possible disaffiliation of more mailer locals (see story below), as well as a declining strike fund and financial problems at the union's largest local—the 3,800-member Local 145 in Montreal.

Heritage, the mailers' vice president from Toronto, was nominated to oppose McMichen in the coming presidential election. (Because of a change in the ITU constitution, it was the first time nominations were made during a convention.)

Members will vote for international officers in the same Nov. 19 referendum that will decide the merger question.

Also in the election, Boarman will be opposed by Robert L. Wartinger of Seattle, a former ITU vice president. Austin is being challenged by Gerald J. Miller of Philadelphia, and Secretary-Treasurer Kopeck by William F. Frazee of Detroit, who is currently assistant to McMichen.

Leathem of the Southern California local and Joel K. Wilson of Detroit are running for a third vice president's position.

Under the merger agreement, the five elected officers would become officers of the proposed new CWA sector during a three-year transition period. In 1990, the number of elected officers would be reduced to three.

The ITU's headquarters in Colorado Springs would be moved to CWA headquarters in Washington, D.C., during the transition period. *—Clark Newsom*

Disaffiliation vote

Members of San Francisco-Oakland Mailers' Union No. 18 voted 388-75 July 27 to disaffiliate from the International Typographical Union. The local union has about 870 members. Approval for the disaffiliation required a three-fourths' majority vote of those attending the special meeting.

Recent contract settlements

Atlanta Journal and Constitution, GCIU: Two-year agreement covering pressroom employees; retroactive to March 1, 1986.

Chicago Sun-Times, ITU: Six-year agreement covering composing room employees; retroactive to Jan. 15, 1983.

Los Angeles Herald Examiner, GCIU: Three-year plant-wide agreement; retroactive to March 6, 1986.

Milwaukee Journal and Sentinel, ITU: Four-year agreement covering composing room employees; retroactive to March 4, 1985.

Nashville Newspaper Printing Corp., ITU: Three-year agreement covering mailroom employees; retroactive to Jan. 1, 1986.

San Diego Union and Tribune, Teamsters: Three-year agreement covering drivers; retroactive to Aug. 5, 1985.

Toronto Globe and Mail, GCIU: Two-year agreement covering pressroom employees; retroactive to Jan. 1, 1986.

(Details in August and September 1986 ANPA Labor & Personnel Relations Letters.)

Settlement made with printer in job-guarantee case

An out-of-court settlement has been reached with a former printer at The Daily Press in Escanaba, Mich., who was laid off in 1982. The settlement came after a federal judge ruled that the layoff breached a lifetime-job-security agreement.

The printer, Victor Stock, and Typographical Union No. 278 contended that his layoff violated a job-guarantee provision that had been reached with the former owner of the newspaper during 1973 negotiations for a new labor agreement. A "memorandum of understanding" protecting Stock and 11 other printers from layoff was attached to the contract.

In 1980, The Daily Press was purchased by Thomson Newspapers from Panax Corp. During negotiations for a 1982 agreement, the job-guarantee provision was deleted from the basic labor contract and became a separate agreement. The new contract contained no restriction on layoffs except for the requirement that layoffs generally be made in seniority order.

The union filed a grievance following Stock's layoff, and the dispute went to arbitration. The arbitrator dismissed the grievance, ruling that the matter was beyond the scope of his jurisdiction because the job-guarantee provision had been deleted from the contract that he was empowered to interpret.

In 1983, Stock and the union filed a lawsuit in the Circuit Court for Delta County seeking damages from the company. The case was sent to U.S. District Court on grounds that it was a civil action for alleged violation of a labor contract.

U.S. District Judge Douglas W. Hillman refused to grant the company's request for summary judgment. "Although this is a close and difficult case," he said, "I am persuaded that the parties to the 1973 agreement intended by the Memorandum of Understanding to create a perpetual, non-negotiable lifetime employment guarantee." He said this constituted "an obligation enforceable against the employer despite the expiration of the various collective bargaining agreements."

Hillman further held in his Jan. 24, 1986, opinion that the guarantee against layoff was enforceable by Stock against Thomson, as successor to Panax, and that the layoff was a breach of contract.

Terms of the settlement, reached in late July, were not disclosed under a confidentiality agreement.

(Escanaba Typographical Union No. 278 and Stock v. Thomson Newspapers [Mich.] Inc. and The Daily Press, USDC W.D. Mich., Northern Div. No. M83-158 CA2) ☐

NLRB judge recommends second election at Anchorage Times

An NLRB administrative law judge has recommended that the board set aside the results of a representation election at The Anchorage Times that was lost by two unions.

In the June 21, 1985, election, a unit of all workers except carriers, composing room and pressroom employees voted 118-74 against representation by Local 327 of the Graphic Communications International Union and Local 341 of the Alaska State District Council of Laborers, joint petitioners.

However, Judge George Christensen found in a July 18, 1986, decision that a former managing editor had held a so-called "captive audience" meeting of newsroom employees within 24 hours of the polls' opening. Christensen noted that since 1953 the board has followed a policy of setting aside any election in which an employer had addressed a captive audience within 24 hours of the election.

Christensen recommended that the second election be conducted whenever the NLRB regional director determines that the effects of the company's "election interference" have "dissipated."

(Anchorage Times Publishing Co. and Alaska State District Council of Laborers and GCIU, JD[SF]-86-86) ☐

Court finds union not liable for back pay

In a discharge case that has been the subject of NLRB and court decisions since 1980, a new ruling has been issued by a federal appeals court in favor of the union that represented the two discharged workers.

The 9th U.S. Circuit Court of Appeals held in a 2-1 ruling that because no tribunal has yet concluded that the two were discharged in breach of a labor agreement, they are not entitled to a back-pay award. "We hold that the employees must show both a wrongful discharge by the employer and a breach of duty by the union to collect back pay from the union," the court said.

The court upheld that portion of an earlier NLRB decision directing the union to make attempts to get the matter before an arbitrator and to hire outside counsel at the union's expense. At the same time, the court said it recognized that a four-year statute of limitations may bar a lawsuit seeking to compel arbitration.

The dissenting opinion noted that the decision leaves the workers without a remedy if arbitration is found to be time-barred.

The case stemmed from the 1978 discharge of pressmen Gil Fowler and Michael Tenorio by the San Francisco Newspaper Agency.

In 1984, on remand from the 9th Circuit, the NLRB had decided that Web Pressmen and Platemakers' Union No. 4, which is affiliated with the Graphic Communications International Union, was liable for back pay to the two men because it inadequately represented them in handling their discharge grievance [presstime, Jan. 1985, p. 63].

Union officials could not be reached for comment.

(San Francisco Web Pressmen and Platemakers' Union No. 4 v. NLRB, USCA Nos. 83-7701, 83-7822) ☐

Motor-route drivers ruled not employees

Motor-route drivers delivering the Fond du Lac (Wis.) Reporter are independent contractors and not employees of the daily, according to a recent ruling by the NLRB regional director in Milwaukee.

By virtue of that finding, Regional Director Joseph A. Szabo dismissed a petition by Local 298 of the Graphic Communications International Union to represent the drivers and two other classifications of delivery drivers.

Szabo determined that the motor-route drivers control their customer list, derive a profit from delivery and can suffer a loss from non-paying customers.

He also found that "paid-in-office" drivers and bundle haulers—who own their own delivery vehicles and make deliveries for other clients—are independent contractors.

(Fond du Lac Reporter and Neenah-Menasha Printing Pressmen Local 298, Case No. 30-RC-4580) ☐

Circulation employees found to be managers exempt from contract

Circulation zone managers and their supervisor have been excluded from a bargaining unit represented by The Newspaper Guild at The Union Leader of Manchester, N.H.

Robert S. Fuchs, the NLRB regional director in Boston, found that the zone managers are managerial employees and that the person they report to is a supervisor within the meaning of the Taft-Hartley Act.

Fuchs noted that the zone managers independently enter into and cancel contracts with independent contractors and use their own judgment to make decisions affecting the newspaper's circulation.

The zone supervisor hires and fires the zone managers, schedules their work and evaluates them at the end of probationary periods, the regional director also observed.

His decision came on a petition filed by the newspaper to "clarify" the bargaining unit. The union did not appeal the decision.

(Union Leader Corp. and The Manchester Newspaper Guild, Case No. 1-UC-461) ☐

Kansas City attorney named to NLRB

President Reagan has nominated Mary M. Cracraft, a Kansas City, Mo., attorney, to fill the fifth seat on the NLRB.

The board has been at four-member strength since June 25 when Patricia Diaz Dennis joined the Federal Communications Commission [**presstime**, Aug. 1986, p. 36]. If confirmed by the Senate, Cracraft will be appointed to a five-year term expiring Aug. 27, 1991.

Cracraft, 40, was a field attorney for the NLRB from 1977 to 1981. Since 1981, she has been an associate with the Kansas City law firm of Gage & Tucker. ☐

EEOC head confirmed

The Senate Aug. 12 confirmed Clarence Thomas for a second five-year term as chairman of the Equal Employment Opportunity Commission [**presstime**, July 1986, p. 74].

The Labor and Human Resources Committee had recommended confirmation Aug. 6 by a 14-2 vote. ☐

Status of reinstated cartoonist at issue in Philadelphia

The status of an editorial cartoonist fired by The Philadelphia Daily News and ordered back to work by an arbitrator may be at issue in another arbitration.

Cartoonist Rob Lawlor was discharged Jan. 23, 1985, for including his estranged wife's unlisted telephone number in a cartoon depicting a starving Ethiopian child behind the bars of the computerized Universal Price Code.

In July, Arbitrator Louis Aronin converted the discharge to a two-week disciplinary suspension. He directed that Lawlor be reinstated to his former "or substantially equivalent" position. Philadelphia Newspapers Inc., publisher of the News and The Philadelphia Inquirer, restored Lawlor to work in the advertising art department.

Local 10 of The Newspaper Guild, however, wants Lawlor reinstated to the position of editorial cartoonist. The company has refused to do so on grounds that the position is filled and that editorial content is within the discretion of the editors.

The company contends that its right to choose an editorial cartoonist is protected by the First Amendment. It cites a court ruling involving the North Jersey Herald-News of Passaic as precedent [**presstime**, Dec. 1985, p. 48].

The Guild has asked Aronin to clarify his ruling on whether he meant Lawlor had to go back to his former position. The company, however, contends that another arbitrator should consider the Guild's argument on the remedial effect of the decision. ☐

Additional arbitration awards

New York Times, Guild: Stanley L. Aiges sustained the discharge of a classified advertising department employee for refusing to meet with her supervisor unless a union representative was present.

St. Paul Pioneer Press and Dispatch, Guild: William J. Berquist upheld the discharge of a circulation department assistant district supervisor for failing to turn in carrier bill payments the same day as collected.

St. Louis Post-Dispatch, Guild: Bert L. Luskin found the company violated the labor agreement by transferring an outside classified salesman to the position of outside retail salesman without his consent.

San Diego Union and Tribune, Guild: Lionel Richman reinstated with back pay a relief circulation district manager who had been discharged for failing to meet a deadline for dropping off papers for carriers.

San Francisco Chronicle, Guild: Gerald R. McKay dismissed a columnist's compensation claims for unauthorized work on holidays and for unauthorized use of her automobile.

San Francisco Newspaper Agency, ITU: Armon Barsamian upheld the company's position in a dispute over the accounting method used to compensate substitute composing room employees for work lost because of a reduction in the regular workforce.

San Francisco Newspaper Agency, ITU: Robert E. Burns ruled that the company violated the labor agreement when it reorganized the mailroom management structure to create more than one foreman position.

San Francisco Newspaper Agency, ITU: Joseph F. Gentile sustained the discharge and permanent bar from employment of a mailroom union steward for his participation in a work stoppage.

Tacoma (Wash.) News Tribune, GCIU: Richard B. Peterson ruled that the newspaper did not violate the labor agreement by refusing to hire as a regular, full-time employee a pressman referred by the union.

Victoria (British Columbia) Times-Colonist, ITU: Richard M. Brown found that the labor agreement did not prohibit the newspaper from installing labor-saving equipment in the mailroom.

Washington Post, Guild: Robert J. Ables found that the newspaper improperly used free-lancers to perform bargaining unit work.

ANPA prepares guide on wellness programs

In an effort to help newspapers improve employee health and reduce costs, ANPA has developed a guide for implementing a wellness program.

"Wellness" is defined in the booklet as "experiencing the physical, mental and emotional sense of well-being." Proponents of wellness programs say they can lead to reduced employee absenteeism, lower medical claims, improved job performance, fewer incidents of job burnout, enhanced morale and other benefits [**presstime**, May 1986, p. 44].

The booklet was prepared by the Environmental Task Force of the ANPA Technical Committee and is scheduled to be distributed to ANPA-member newspapers in October.

An introduction to the guide notes that the traditional focus on curative treatment of acute illnesses has given way to emphasis on health promotion, prevention and early detection of disease, and management of chronic illness. "There is a growing recognition of the importance of such elusive non-medical factors as lifestyle, behavior and stress in morbidity and mortality," the publication notes.

It says a wellness program may consist of any number of complementary components depending on the needs, goals and resources of the individual newspaper. Four key components are considered to be the cornerstone of a wellness program:

- Health education
- Smoking cessation
- An employee assistance program
- Health assessment.

The outcome of a wellness program should be measurable in order to assess its success, the guide says. This can be accomplished through comparisons of both inter- and intra-newspaper data. Participation in the ANPA Accident Reporting System is one means of data comparison that will allow newspapers to measure the results of their programs and compare them confidentially with other papers.

"I think it's going to be very important to our business that newspapers take a look at health promotion," says George Cashau, the Association's director/technical research. "Newspapers have an opportunity through wellness programs to not only get a happier, healthier workforce but to significantly affect the bottom line," he says, noting that General Motors Corp. has reported a 3-to-1 return on its wellness investment.

The guide points out that there are numerous community resources available that can be used for little or no cost. They include organizations such as hospitals, universities, chambers of commerce, the American Heart Association, the American Cancer Society, the American Lung Association, Weight Watchers and Alcoholics Anonymous.

Also included in the booklet are a bibliography and a wellness-program cost analysis based on circulation size and number of employees. ☐

Guild files charges over pay cuts

Northern California Newspaper Guild No. 52 filed unfair labor practice charges with the NLRB Aug. 6, alleging that The Sacramento Union bargained in bad faith by implementing the terms and conditions of its most recent contract offer prior to an impasse in bargaining.

Effective Aug. 4, the Union implemented a 15-percent wage cut along with other changes in the contract that expired May 5, 1986. The Guild represents newsroom, advertising, circulation and business office employees at the newspaper. ☐

Salary milestone reached at Newsday

The minimum salary for experienced reporters and copy editors at Newsday will top $52,000 a year on April 1, 1989.

Under the terms of a labor agreement ratified Aug. 3 by members of Local 406 of the Graphic Communications International Union, which represents editorial employees at the Long Island, N.Y., daily, reporters with five years' experience will receive $900 a week effective April 1, 1987, $951 in 1988 and $1,002 in 1989.

Why is Bill Hogan in newspaper pagination?

There are people in the newspaper industry who believe pagination is 'somewhere down the road.' But not Wm. R. "Bill" Hogan, vice president and general manager of Phoenix Newspapers, Inc., publishers of The Arizona Republic/The Phoenix Gazette.

"Pagination is a necessity for us to remain competitive. Without it today, we would not have the production flexibility to meet the challenges of the future."

With that in mind, Hogan and Phoenix Newspapers chose Information International's Newspaper Pagination System. "Triple-I has a proven, completely integrated system that works," Hogan says, "and that's why we're in pagination today."

As Bill Hogan knows, there's no need to wait for pagination. Find out why Information International systems produce hundreds more full pages every day than any other pagination equipment.

Call triple-I today.

There's no business like 'show' business

Vendors credit ANPA's 1986 Exposition for increased sales.

In June, glowing accolades were offered to describe the 58th Annual ANPA Operations Management Conference & Exposition in Atlanta. The kudos ranged from "heavy traffic" to "super show." Now, after a few months to assess the situation, vendors continue to express enthusiasm for what happened during the largest equipment exhibition in ANPA trade-show history.

For example, Royal Zenith Corp., which manufactures color scanners, and Baldwin-Gegenheimer Division, which makes counting-stacking machines and other equipment, reported a large increase in sales after this year's show, in contrast to their experiences following 1985's version in New Orleans.

In a random sampling of eight exhibitors by presstime, other companies reported receiving a number of inquiries as a result of contacts made in Atlanta. They said newspapers appear to be in a spending mood but are taking time to make sure they select the right equipment—particularly major purchases.

"I think potential customers take a 'wait and see attitude' for the big items," Ruthann Medina, manager of marketing services for Autologic Inc., said. At the Exposition, her company demonstrated its APS-6 Laser Imager, among other products.

"The show is an opportunity for [newspaper personnel] to look at several vendors at once—and at that one feature that convinces them to choose one system over another," Medina said.

"It's basically an information-gathering session for a lot of people, though, and the actual decision to buy comes later. They can ask questions, touch the machine, see how it works. But in most cases, they don't come to the show to buy things right off the floor" [presstime, July 1986, p. 49], he added.

Indeed, because ANPA is a non-profit organization, sales can't be made directly on the floor. ANPA sponsors the OMCE to give newspaper executives and others an opportunity to exchange technological information and to see a wide variety of the latest in systems and equipment in one place.

Martin W. Sussman, vice president of Royal Zenith, reported that in the two months since the OMCE, his company sold 12 scanners. The Moonachie, N.J., firm expects to double that figure by the end of the year, he said.

"It was a very successful show for us," Sussman said. "This was our third year [of exhibiting at ANPA], and it was definitely our best yet."

Sussman said he believed the surge in business can be attributed to an increasing belief that good color reproduction is essential for the newspaper business and to the perception that Royal Zenith's 200S scanner is a good product.

At Baldwin-Gegenheimer, 17 orders for Count-O-Veyor counting and stacking systems have been placed since the June 21-25 show.

"ANPA was a huge promotional success for us this year," said Robert Soderlund, vice president of sales and marketing. "The mood and enthusiasm of publishers and exhibitors reflected the optimism that is currently prevalent in the newspaper business. There was a lot of interest shown by publishers in buying new products to help them expand and upgrade existing facilities and equipment."

According to a spokeswoman, Baldwin-Gegenheimer was more aggressive this year, sending out a lot of promotional materials before the show, offering to accept some older equipment as trade-ins and following up on contacts made in Atlanta.

Like Autologic, several companies including Idab Inc. and Morris Publishing System reported no surge in sales since the show, but they still judge their participation in the event a success.

Karl Ziegler, marketing manager for Hialeah, Fla.-based Idab, said buying decisions likely will be made before the end of the current fiscal year. Of particular interest in Atlanta was Idab's non-contact counter, which uses a stream of air to count newspapers, he said.

Morris Publishing System was a first-time vendor in Atlanta, demonstrating a personal computer-based front-end system that had been developed by Southeastern Newspapers Corp. for its own publications.

Joseph E. Kelly, vice president of Southeastern Newspapers, said the Augusta, Ga., company is still receiving inquiries from across the country and abroad as a result of its ANPA booth.

Although the Morris Publishing System is still awaiting a first outside buyer, Kelly said he is confident a sale will be made soon. "It's not the kind of thing you make a decision on overnight," he commented. "We expected people to go back and think about it before they made up their minds."

In fact, from the vendors' standpoint, the major lure of the ANPA trade show is the audience it attracts, said Ned Boudreau, marketing communications specialist for Scitex America Corp. of Bedford, Mass.

"At some shows, you see everyone from artists to typesetters, and that's good to let people know about your product," said Boudreau, whose company manufactures pre-press products. "But if you want actual sales, you have to let the decision makers see what your equipment can do." And the OMCE brings in "the people who make the purchases at the newspapers," he noted.

Lester A. Kraft, vice president and general manager of Graphic Systems Division of Rockwell International, described visitors to the June show as the most serious group he had seen in five years. They were doing their homework, not just casually wandering through booths, he said.

"We were extremely busy with serious discussions of technology," Kraft said, adding that he feels there will be a "high level of purchasing activity" between now and the next show June 6-10, 1987, in Las Vegas. *—Rosalind C. Truitt*

Rockwell replaces 56 cracked Goss folders, estimates 20 more will need same treatment

The Graphic Systems Division of Rockwell International Corp. is about two-thirds the way through a program to inspect, modify and—if necessary—replace Goss 3:2 press folders that last year were discovered to have design flaws.

To date, the company has found it necessary to replace 56 cracked folders. In all, the company is projecting that 76 folders will need to be replaced, according to Lester A. Kraft, the division's vice president and general manager. Of the 720 such folders in use, 505 have been machined to eliminate the sharp corners that engineers believe contributed to the cracking.

Kraft said the company hopes to complete its inspection/modification/replacement program by the end of October.

A team of Rockwell and independent engineers determined the cause of the flaw. After considerable review, Kraft said, the decision was made to modify uncracked folders or replace ones that had cracked, rather than scrap the entire design. New folders are being built with the modifications.

The problems with the 3:2 folders, which yield three folded copies of a newspaper for every two revolutions of the folder, first surfaced in June 1985 at The Oregonian in Portland. Less than two weeks after cracks were discovered in The Oregonian's folder, others at The Boston Globe and The Orange County Register in Santa Ana, Calif., threw off pieces of metal [**presstime**, Oct. 1985, p. 54].

There have been no other reports of folders throwing metal, Kraft said, adding: "We believe we addressed the problem in time." Prior to last year, the folders had been in use since 1957 without incident, he noted.

Once all the folders have been modified or replaced, 13 to 15 selected newspapers—particularly ones with big press runs—will be visited to determine whether the folders are performing satisfactorily. Kraft said these reviews will take place every few months for an indefinite period. ☐

Equipment exchange

For sale: Two Dymo Mark V Pacesetter Phototypesetting machines. Purchased February 1977; machine serial numbers 3292 and 3289. Each machine has a 16-font disc and 16 point sizes (5, 6, 7, 8, 9, 10, 11, 12, 14, 18, 24, 30, 36, 48, 60, 72). Any reasonable offer accepted. Please contact Peter P. Romano, ANPA director/technical services, The Newspaper Center, Reston, Va.; (703) 648-1215.

For sale: Raycomp Adset system, complete with two work stations, graphic digitizing worktables, TI-700 terminal, spare drive, boards and manuals. In good working condition. Contact Glen Cornwall or Garth Anderson, Fairbanks Daily News-Miner, Fairbanks, Alaska 99707; (907) 456-6661.

Editor's note: Exchange notices are published without charge as a service to ANPA-member newspapers. ☐

CARY FLYING PASTERS

BUILT-IN INFEED AND TENSION CONTROL INCREASES PRODUCTION UP TO 40%

Cary reliability means you can have up to 16 pasters on a single-width press. Cary Pasters are easily retrofitted or are available with new presses.

Cary Pasters compliment newspaper presses in construction and simplicity and are easily maintained by press mechanics.

Our world-wide field service team provides experienced start-up training and back-up. Quotations, including turnkey installations, to suit your requirements.

Paint shaker mixes developer for plates

Mixing plate-developing solution is no easy task. Anyone who's tried to blend the mixture by shaking one of the heavy bottles manually would likely attest to that fact.

Thomas R. Crossett, mechancial supervisor for The Daily Journal in Kankakee, Ill., offers a different solution.

"Our developer shaker may not be a major breakthrough in printing technology, but it is innovative and does solve the problem it was created to correct," Crossett said.

During storage, the plate-developing solution his newspaper uses reverts to heavy sediment and thin solvent. "Manual shaking did not work due to the (human) shaker wearing out before the chemical was mixed," Crossett noted. "We tried an obsolete paint shaker from a local paint store, but the plastic container would fret through and cause a considerable mess."

The newspaper hit upon the idea of using the body of the paint shaker with a 5-to-1 reduction drive and a ¼-horsepower motor. A foam-filled box was attached to the shaker and wired into a time-delay relay in the plate-developing machine. The reduction drive slows the shaker so that the bottles don't shake too violently; the foam-filled box keeps the bottle in one place during mixing.

Each bottle is shaken 30 minutes or less, depending on the type of developer used. The newspaper uses between two and four bottles per day, depending on the number of pages it processes.

"The pressman simply puts the container into the box, presses the button to turn it on, and it shuts off when finished," Crossett explained. He says the machine has been in operation several months and works very well.

The cost and method of constructing a similar machine would depend on a printing plant's capacity for self-manufacture and the availability of "scroungable" parts, Crossett said. But he added, "I hope this idea can help others as it has helped us."

Editor's note: The preceding was submitted in response to ANPA Technical Committee requests for innovative ideas. Send submissions to Alan Tepper, Technical Services Department, at The Newspaper Center in Reston, Va. ☐

TECHNOLOGY NOTES

- Illinois Tool Works Inc., a manufacturer of tools, fasteners and plastic items, reached an **agreement to acquire Signode Corp.** for an estimated $500 million.

Chicago-based Illinois Tool Works estimated Signode's annual sales at $750 million. Signode, a Glenview, Ill., company, manufactures bundle-strapping and other equipment for newspaper mailrooms.

- **Cuneiform Systems** Inc. of Nashua, N.H., a manufacturer of electronic publishing systems, has **gone out of business,** according to published reports.

Company officials could not be reached for comment.

Cuneiform, which has an estimated 100 newspaper customers, was formed last year after another company, Unitex, failed. Chorus Data Systems Inc. purchased 51 percent of Unitex stock, and Indian Head National Bank owned the remainder [presstime, May 1985, p. 68].

- A group of shareholders brought a **class action suit against Scitex** Corp., charging that some of the company's prospectuses were fraudulent.

The suit was filed in U.S. District Court in New York City on behalf of those who purchased stock between April 24 and Nov. 14, 1985.

The company, which manufactures color imaging systems and other pre-press equipment, denied that false information was provided to potential investors. The Israeli firm has U.S. corporate offices in Bedford, Mass.

- In unrelated developments, Scitex reported a **second quarter loss** of $9.9 million, and it announced a **joint marketing agreement** with Iris Graphics Inc. of Stoneham, Mass., for Iris' color ink-jet proofing systems.

- Nearly a year after the possibility was first broached, Sun Chemical Corp. agreed in principle Aug. 19 to **sell its graphic arts materials group** to Dainippon Ink and Chemicals Inc., a Japanese firm, for $550 million.

The transaction, which is subject to various approvals, includes Sun Chemical's General Printing Ink Division in Chicago and its Pigments Division in Cincinnati.

Sun Chemical, a New York City-based firm, is the largest American maker of printing ink.

- Publishers Equipment Corp., Koenig & Bauer, and Windmoeller & Hoelscher announced an agreement Aug. 20 that gives PEC the sole marketing, sales, service and engineering responsibility for the **flexographic equipment** produced by the three companies.

TECHNOLOGY CALENDAR

- Seybold Seminars will hold its first **Desktop Publishing Conference and Equipment Exposition** Sept. 3-6 at the Hyatt Regency San Francisco.

- The Flexographic Technical Association will sponsor a **Prepress Seminar** Sept. 10-11 at the Rochester Institute of Technology.

- The **ADMARC Newspaper Users Group** will meet Sept. 17-19 at the Hyatt Regency Chicago.

- The **Creative Data Systems Users Conference** will be Sept. 18-20 at the Marriott Tan-Tar-A Resort, Lake of the Ozarks, in Osage, Mo.

- The annual **Lasers in Graphics/Electronic Publishing in the '80s Conference** will be Sept. 21-29 at the Anaheim Hilton in Anaheim, Calif.

- The annual **New England Newspaper Operations Conference** will be Sept. 25-28 at the Sheraton Islander Hotel and Conference Center in Newport, R.I.

- **Composition Technologies,** a seminar sponsored by the National Composition Association, will be Oct. 2-3 at the Key Bridge Marriott in Arlington, Va.

- The **50th Annual Western Newspaper Production Conference** will be Oct. 2-4 at the Monterey (Calif.) Sheraton.

- The **Digital Equipment Computer Users Society Symposium** will be Oct. 5-10 at the Moscone Center in San Francisco.

- **Computer Graphics for Design '86** will be Oct. 6-7 at the Hyatt Union Square in San Francisco.

- The Society of Photographic Scientists and Engineers will hold its fall symposium and annual **International Conference & Exposition on Electronic Imaging** Oct. 13-16 at the Hyatt Regency Crystal City in Arlington, Va.

- The **International Newspaper Conversions Group** will meet Oct. 15-17 at the Capital Hilton in Washington, D.C.

- **Graph Expo '86 East** will be Oct. 19-22 at the Philadelphia Civic Center.

Evansville JOA goes topsy-turvy

Daily newspapers will change hands in Evansville, Ind., in a complex deal that has one newspaper company selling its evening paper in order to purchase the larger morning paper. The Justice Department will look into the transaction.

Under agreements announced Aug. 1, Scripps Howard will purchase The Evansville Courier (morning, circulation 63,335) from the Robert C. Enlow Trust and a group of minority stockholders. Scripps Howard will sell The Evansville Press (evening, 41,414) to Robert H. Hartmann, a former executive of the company.

The two papers are partners in a joint operating arrangement in which their news and editorial operations are separate but their business functions are performed by a jointly owned printing company.

In addition, Scripps Howard will acquire sole ownership of the printing company, Evansville Printing Corp., and of Evansville's Sunday newspaper. Terms of the sales, which the parties expect to complete in mid-September, were not disclosed.

Currently, Scripps and the owners of the Press hold equal shares of Evansville Printing. Under an arrangement unique among JOA newspapers, the Sunday Courier & Press is published by the printing company's employees using a separate news staff. The only part of the Sunday edition for which the morning and evening papers are responsible are the editorial pages.

As of late August, the editorial staffing situation was only beginning to shake out. According to Bill D. Jackson, editor of the Courier, he and Press Editor Thomas W. Tuley will trade jobs and will take their managing editors with them. Additional shifts in the two newsrooms are expected to take place.

Although it does not represent employees at either Evansville paper or at the joint publishing agency, The Newspaper Guild has asked for an investigation by the Antitrust Division of the Justice Department into the sale price of the Press and the source of the funds used by Hartmann to purchase it.

Guild President Charles A. Perlik Jr. charged that by buying the Courier and selling the Press to Hartmann, Scripps Howard "has altered the nature of its joint operating agreement so as to guarantee the permanent subordination and decline of the Press."

A department spokesman said the agency will "look at" the matter "from an antitrust point of view."

"That doesn't mean we're investigating it, and it doesn't mean we've come to any conclusion about it," said spokesman Mark T. Sheehan. "I don't know whether the look will be any more than simply examining the modification of the JOA." The department likely would look at the deal even without a request to do so, he added.

Under the Newspaper Preservation Act, which legalizes JOAs, the Justice Department must be notified of changes to an existing arrangement, but prior departmental approval is not required.

William R. Burleigh, senior vice president of Scripps Howard's Newspaper Division, said an amended JOA contract will be filed with the Justice Department after the twin sales are completed. Burleigh was named to oversee Scripps Howard's newspaper and publishing activities after Hartmann resigned as general business manager of the Newspaper Division to buy the Press.

Scripps Howard is not unique in swapping JOA newspapers. In 1979, Gannett Co. sold the Nashville Banner to buy The Tennessean.

This will be the second time this year that Scripps Howard has obtained the morning publishing slot in a JOA market. Its Knoxville News-Sentinel became a morning newspaper July 1 when the JOA agreement there was renegotiated [presstime, March 1986, p. 69].

The existing JOA agreement in Evansville is not due to expire until 1998. According to Burleigh, the recent death of the widow of Robert C. Enlow, former publisher of the Press, prompted trustees to consider selling the paper. The sale requires the approval of a probate court. ☐

California seeks big boost in papers' workers' comp costs

Newspapers in California may have to pay 34 percent more for workers' compensation coverage for a major portion of their employees than commercial printing operations pay. Currently, rates are similar for both.

If the proposal from the California Workers' Compensation Insurance Rating Bureau is implemented, the California situation would sharply contrast with other parts of the country where workers' compensation costs are higher for commercial printers than for newspapers.

The rating bureau has proposed a 32-percent increase in premiums for coverage of blue-collar employees at newspapers and a 2-percent decrease for those in commercial shops.

The big swing in rates reflects a pattern of more frequent claims for workers' compensation on the part of newspaper workers, according to the bureau.

Data sent to the California Newspaper Publishers Association showed that for the eight years 1976-1983, the number of serious workers' compensation claims per $10 million of payroll averaged 2.24 for commercial printers and 3.44 for newspapers.

The state's Insurance Commission, which acts on recommendations from the rating bureau, has scheduled a public hearing Oct. 22 on the proposed rate modifications. Michael B. Dorais, CNPA general manager and general counsel, said the association will appear at the hearing to request that the commission delay action until an independent evaluation can be made.

Richard W. Neergaard, ANPA manager/environmental services, pointed out that there is a difference between workers' compensation claims and occupational injuries and illnesses reported to the federal Occupational Safety and Health Administration. "While linked," he said, "there is not a direct relationship."

The injury and illness incidence rate for newspapers is below that for commercial printers. According to the most recent figures from the U.S. Bureau of Labor Statistics, covering 1984, the incidence rate for newspapers was 6.5 per 100 full-time workers, compared with 7.5 for commercial printers. □

Canada gets new French daily

After four years of planning and controversy, a new French-language daily finally began publishing Aug. 11 in the Canadian province of New Brunswick.

Le Matin, a six-column "slim tabloid" 17 inches in depth, has its headquarters in Moncton. The paper is published mornings Monday through Friday.

The controversy arose when the federal and New Brunswick governments contributed $2 million and $4 million (Canadian), respectively, to a trust fund to help the provincial daily get started.

New Brunswick's 250,000 French-speaking people had been without a province-wide daily since the 17,000-circulation L'Evangeline ceased publication in 1982. That newspaper had been subsidized by the government of France. There is a regional French-language daily—L'Acadie Nouvelle—published in the northeastern New Brunswick city of Caraquet. It receives no government aid [presstime, July 1984, p. 71].

Charles D'Amour, publisher of Le Matin, said the newspaper cannot touch the capital in the trust fund. The trust can transfer revenue from the fund only to assist in the collection and distribution of news over a wide area, he said.

"This venture is compared to none in North America," said D'Amour. He noted that Le Matin serves an area as far as 300 miles from Moncton.

The newspaper is "not viable as a commercial venture," the publisher said. "That's why the governments helped with contributions."

D'Amour said the initial press run was 37,000, with heavy sampling. He said he expects paid circulation to be between 20,000 and 25,000 one year from now. The single-copy price is 50 cents.

Le Matin has a staff of about 50, of whom 21 work in the newsroom. The newspaper is printed commercially in Moncton. □

Tax proposal pulled

A proposal for a 2.5-percent sales tax on the sale of advertising in New Orleans was withdrawn before it could be acted upon by the City Council Aug. 7 [presstime, Aug. 1986, p. 40]. □

UPI expansion includes reopening 5 U.S. bureaus

United Press International said it will reopen five domestic bureaus shut down in recent years because of financial difficulties. The wire service also said it will add 37 editorial positions and establish a new bureau in Bahrain for improved coverage of the Persian Gulf.

In other developments, Maxwell McCrohon was named president and chief operating officer by UPI's new owner, Mario Vazquez-Rana [presstime, July 1986, p. 19]. McCrohon, formerly UPI editor-in-chief, was succeeded by Malcolm Hughes, a 30-year UPI veteran who had been serving as executive editor.

McCrohon said bureaus should be reopened by the middle of this month in Dayton, Akron and Youngstown, Ohio; Charlotte, N.C.; and Roanoke, Va.

UPI staff sizes will be increased in Pennsylvania, Ohio, California, Florida, New Jersey, Illinois, North Carolina, Georgia, Virginia, Indiana and Washington, D.C., the company said. Correspondents also will be added in South Africa, East Africa, Nicaragua and Honduras.

McCrohon said more staffing increases are planned. □

Boston Herald becomes latest metro for sale

Another metro daily newspaper is on the seller's block—the Boston Herald. Its future was charted when Rupert Murdoch added to his television holdings in August with an agreement to buy a UHF Boston television station, KXNE-TV.

Under Federal Communications Commission rules, Murdoch will have to sell the Boston Herald to comply with the ban on common ownership of a television station and newspaper in the same market.

Murdoch said he will ask the FCC for a waiver to give him a reasonable time to sell the paper. His Fox Television Stations Inc. already owns TV stations in Chicago, Dallas, Houston, Los Angeles, New York City and Washington, D.C.

In June, Murdoch sold the Chicago Sun-Times in order to keep his Chicago station, WFLD-TV [presstime, July 1986, p. 58].

Murdoch reportedly paid Christian Broadcasting Network $27 million for KXNE-TV. In addition, CBN will receive 26 films from Murdoch's Twentieth Century Fox Film Corp. □

12 named minority fellows by ANPA Foundation

Twelve employees in various newspaper departments have been awarded ANPA Foundation minority fellowships for the second half of this year.

The fellowships cover registration, travel and accommodations during seminars sponsored by ANPA and other newspaper organizations. Awarded twice a year, the fellowships are designed to increase opportunities for minority workers at newspapers to move into higher positions [**presstime**, March 1986, p. 67].

They and the training sessions they will attend are:

- Monte I. Trammer, assistant to the publisher, Poughkeepsie (N.Y.) Journal—Newspaper Executives Marketing Seminar, Scottsdale, Ariz., sponsored by ANPA and the International Newspaper Promotion Association, Sept. 2-7
- Porus P. Cooper, foreign desk copy editor, The Philadelphia Inquirer; Becky Gonzalez, personnel director, Corpus Christi Caller-Times; and Peggy Takahashi, office manager, The Stockton (Calif.) Record—ANPA Management Development Workshop, Chicago, Sept. 22-25
- Sabrina Y. White, copy editor, The Syracuse (N.Y) Herald-Journal—The Poynter Institute Seminar on News and Informational Graphics, St. Petersburg, Sept. 28-Oct. 4
- Dwight Cunningham, assistant news editor/development, The Record, Hackensack, N.J.—Leadership in the Newsroom Workshop, sponsored by ANPA, American Society of Newspaper Editors and Associated Press Managing Editors, Norfolk, Sept. 29-Oct. 1
- Marie Betancourt, assistant editor of suburban bureau, The Miami Herald; and Armando V. Durazo, assistant city editor, Tucson Citizen—ANPA/ASNE/APME Leadership in the Newsroom Workshop, Austin, Texas, Dec. 8-10
- Ernest R. Sotomayor, associate editor, Dallas Times Herald—ANPA Advanced Management Workshop, San Francisco, Oct. 13-15
- Edwin K. Franze, zone sales manager, The Baltimore Sun—Managing People in the Circulation Department Workshop, sponsored by ANPA, International Circulation Managers Association and Newspaper Personnel Relations Association, Chicago, Oct. 27-29
- Sam Gonzalez, promotion/marketing manager, The Modesto (Calif.) Bee—ANPA/INPA Management Skills for Newspaper Promotion Workshop, Sarasota, Fla., Nov. 17-19
- Curtis K. Uno, director of personnel and industrial relations/general counsel, Hawaii Newspaper Agency, Honolulu—American Press Institute: News-Editorial Management for Non-News Executives Seminar, Reston, Va., Dec. 14-19 ☐

Recent acquisitions

TAGC Holdings Inc. of Alexandria, Va., is acquiring from Sing Tao International Inc., Hong Kong, The Alexandria Gazette, daily circulation 7,857.

CENTRAL

The Record

A wedding fit for royalty

Lawyer aided bribery, state says

Video and print marry well for timely coverage of Great Britain's royal wedding

On the day when Britain's Prince Andrew married the former Sarah Ferguson, The Record in Hackensack, N.J., wanted a color picture to complement its front-page story.

The afternoon paper did manage to publish two same-day, full color shots of the wedding, but not by conventional means. The feat was made possible by an agreement The Record has with CBS television to make still pictures from the network's broadcasts on a trial basis [presstime, Dec. 1985, p. 55].

"The Associated Press did not move any color shots until 10:30 a.m. or so, and we were on the press at that time," notes Record President Michael H. Heath. "I believe using video is a good way to get a high impact, timely shot into our newspaper."

At The Record, a broadcast receiving antenna atop the newspaper building feeds a Sony videocassette recorder. For the wedding pictures, editors monitored the broadcast and selected frames for photographing with a Polaroid camera on 3-by-5-inch instant-print film. Then, using a scanner, separations were made for the day's later editions.

"There are a lot of advantages to using this," Paul Lynch, The Record's quality control manager, says. "We can get good color into the newspaper quickly."

Graphics editor makes a splash with his ingenuity

The job of graphics editor requires a sense of good art, typography and style, and a resourceful spirit. Sometimes you have to go heavy on the resourcefulness.

Take the case of Randy Dieter, graphics editor of The Kentucky Post in Covington. Dieter needed to illustrate a feature story on keeping cool in summer. He set up a photograph in which he and summer reporting intern Laurie Layman fell backwards off a diving board—fully clothed—into a swimming pool.

The shot came off fine, but what really endeared Dieter to the business office was the unusual way he outfitted himself. Unlike Layman, he lacked wash-and-wear clothes in his wardrobe, so he purchased a $5.50 suit, $4 shoes and a $4 briefcase from a Goodwill store.

For the Record, Congressmen read newspapers

Newspapers hold a wide lead for citations in the Congressional Record.

A five-month poll of media mentions in the Record, the daily transcript of proceedings on the floor of the House and Senate, found newspapers cited as sources 1,301 times compared with only 37 for broadcasters. Newspapers were also far ahead of magazines and trade journals.

The Washington Post was mentioned most often, 235 times. Among newspapers, others in the top 10 were: The New York Times, 200; The Wall Street Journal, 60; The Washington Times, 39; Los Angeles Times, 29; The Boston Globe, 24; The Christian Science Monitor, 21; The Baltimore Sun, 13; USA Today, 12; and The Journal of Commerce, 10.

"You cannot equate frequency of mention with influence" on Congress, "but the fact that it's in the Record means somebody's paying attention," observes Jean Rainey, whose Washington, D.C., public relations firm conducted the study.

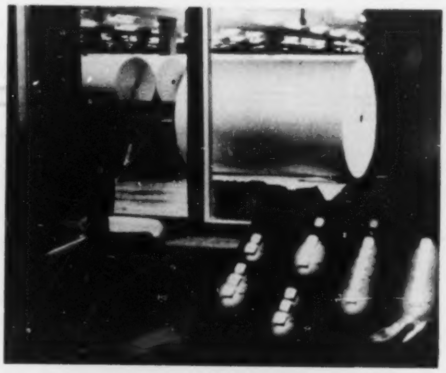
Newspaper numbers

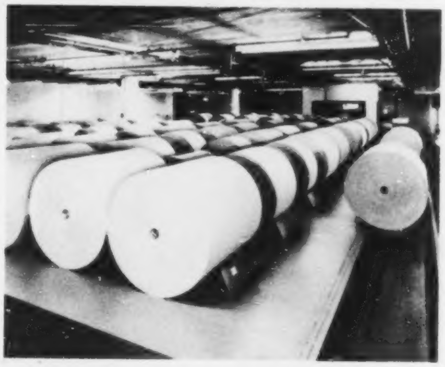
105—number of U.S. daily newspapers that have switched from afternoon to morning publication in the past 10 years.

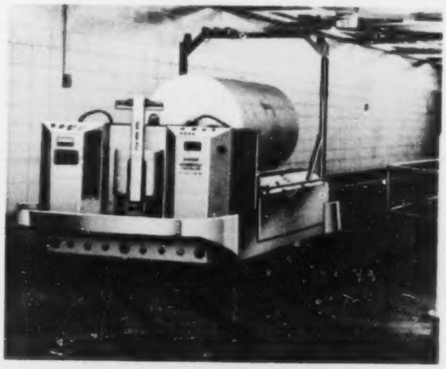
1.52—number of accidents per 100,000 miles driven by newspaper delivery vehicles participating in the 1985 ANPA/International Circulation Managers Association Safe Driving Campaign.

29—number of elements contained in the Standard Advertising Invoice developed by the International Newspaper Financial Executives.

An Automatic Approach To Newsprint Roll Handling.







With today's trend towards automation, Webb automatic newsprint roll handling systems are fast becoming a key area for trimming production costs in the newspaper industry. From wrapped roll storage to the reel stands, time and efficiency are critical when handling the necessary tonnage of paper rolls to meet daily production schedules. Webb newsprint roll handling systems feature state-of-the-art equipment and controls ranging from simple gull wing conveyors to sophisticated AGVS (automatic guided vehicle systems). With basic information from the customer, Webb can custom-design a cost efficient, automatic system including preliminary concepts, rough pricing, and project scheduling. Innovative experience has earned Jervis B. Webb an unparalleled, worldwide reputation of quality and reliability in newsprint roll handling.

For more information on paper and newsprint roll handling systems call our Material Handling Hotline: 313/553-1220.

Mycro-Tek Innovations:

New Systems, Upgrades and Add-Ons That Won't Send You Back To Square One.

▬ You've played the game before. The our-tech-is-higher-than-your-tech game. Or the "off-the-shelf" hardware and software gambit. It may come from your boldest competitor, your systems analyst, or a consultant. But it's enough to strike panic into the heart of any publisher.

You think your operation could be more efficient with a new product. You want to be more efficient. You *have* to be competitive. But keep in mind that new state-of-the-art systems require new state-of-the-art software which may not be compatible with your present equipment. And service and support may still be in the learning stages. Before you're through, you'll have invested a tidy sum in the name of high technology.

Mycro-Tek creates new systems too. But our new systems are designed for compatibility. So you build on your capabilities gradually, while your profit margin grows. And you don't have to spend a fortune adding to your present system. With a Mycro-Tek system you know exactly where you're going. Into the future.

Not back to square one ▬

WHAT'S BLACK AND WHITE AND BLUE ALL OVER?

A newspaper that needs the special coverage of Mutual Insurance.

All too often, insurance companies leave the newspaper industry out in the cold. They simply won't cover the special insurance needs that only newspapers have. That's why more and more newspapers are turning to The Mutual Insurance Company of Hamilton, Bermuda, for policies which address the particular needs of the newspaper industry.

Mutual is the newspaper insurance specialist, with twenty-five years' experience in protecting ANPA-member publications against the unique hazards of the newspaper industry. Mutual has extensive experience in serving newspapers and related publications, and is continually working to develop new ways to secure the free press.

With Mutual, you don't have to hold your breath to get the protection you need. We encourage publishers, editors, and journalists to contact us at the address below with suggestions and inquiries about your particular insurance needs.

Tiburon's champ

17-year-old takes U.S. Open title

- Hakami plans future as pro

By George Lauer

Independent Journal reporter

ELLY Hakami is on her way home to Tiburon today trying to decide which was more fun — hobnobbing with the pros or winning the Junior Girls title at the U.S. Open Tennis Championships.

"I talked to Gabriela Sabatini, and Pam Shriver and Martina," Hakami said early this morning. "I got a chance to hit with Andrea Leand. All that was really neat."

Almost as an afterthought, Hakami added, "Winning was great, too. I don't know which was better."

Hakami, a 17-year-old senior at Redwood High School, took 63 minutes to defeat Shaun Stafford of Gainesville, Fla. 6-2, 6-1 Saturday afternoon in the Junior Girls championship final in Flushing Meadows, N.Y.

Elly Hakami

The match may have been her last as an amateur. Hakami hopes to join the Women's Tennis Association professional tour.

"That's my goal, but I've got an awful lot of work to do."

After a week's rest at home, Hakami will play in the Florida Federal tournament in Tampa and then enroll at the Nick Bollettieri School of Tennis to improve her game.

Hakami qualified for the main draw as well as the juniors at the U.S. Open — a rare feat.

She won four matches in a qualifying tournament the week before the Open started, giving her the chance to play against the professionals. She made it through the first round by defeating Patricia Medrado of Brazil, but lost in

See Hakami, page A14

LETTER TO OUR READERS

- Editor's message/C3

Dear readers,

We're proud to welcome you to the pages of the Sunday Marin Independent Journal.

This new newspaper completes the cycle on the 125th year of publication of the IJ. We've been a weekly and a six-day daily, and now we enter the world of complete newspapers on Sunday.

And that's appropriate. The IJ has grown over those 125 years as Marin County has grown. The news goes on for seven days — and so shall the IJ.

We have you, our readers, to thank. You told us you wanted this Sunday newspaper. You've given us great encouragement since our decision to proceed.

We dedicate this first edition of the Sunday IJ to Marin County, its people and its future.

Sincerely,

Jim Barnes

21 die in new terrorist attack

Combined news services

Two terrorists stormed the main synagogue in Istanbul, Turkey, Saturday, killing 21 worshipers with submachine-gun fire.

The two gunmen then blew themselves up with hand grenades, Turkish officials said.

The episode was the second brutal terrorist attack within 24 hours.

Seventeen people died in Karachi, Pakistan, Friday during an attempted hijacking of Pan Am flight 73 bound for New York City.

Here are the latest developments:

- The identity of a second man killed during the Karachi raid was released. According to The Associated Press, he is Syed Nesar Ahmad of Arlington, Mass. The wire service said Ahmad was a scholar at Harvard returning from his first visit to Pakistan in 10 years.
- Late Saturday night, a U.S. Air Force medical transport plane arrived in West Germany carrying 11 people, including six Americans wounded during the incident.
- The Reagan administration said it does not know what terrorist organization is responsible for the commandeering of the jet in Pakistan but warned it is searching for the backers of the "cruel and sinister terrorist act."
- Five security personnel at Karachi airport were suspended Saturday on suspicion of negligence, officials said.
- In Turkey, news agencies received calls from anonymous persons who claimed groups including the Islamic Jihad were all responsible for the synagogue attack. The U.S. State Department was trying to determine if any Americans were among the wounded and dead.

Worshiper Rafi Saul, 17, said: "I pretended to be dead. But I lifted my head briefly to see what they were doing and saw them pouring gasoline on bodies."

SHARK!! The great white lurks off Marin County's coast

California's 'Red Triangle' got its name because of recurring great white shark attacks there

'All I could see was his eye'

By [illegible]

Independent Journal reporter

More divers have been attacked by great white sharks off Tomales Point than at any other spot in the world. Today, victims of shark attacks, including three who tell their stories for the first time, detail their experiences. On Monday, researchers describe their studies of great white sharks off Marin and in other coastal waters.

PAUL PARSONS knew something was wrong as he swam near Marin's Bird Rock searching for abalone.

An eerie silence had fallen over the ocean off Tomales Point — the site of the most great white shark attacks in the world.

The seals, sea lions and fish that swim in waters near the Tomales bluffs had vanished on that misty day in September — the month during which great white sharks are most likely to strike in California.

Parsons stopped and gazed at the small boat in which his wife and brother waited 75 yards away. He felt uneasy and motioned for them to come closer.

Then he plunged deep into the 35-foot waters. The water was murky, and the ocean floor was barren. He headed back to the surface.

Suddenly, it hit.

A 14-foot-long great white shark shot up behind Parsons like a torpedo, clamped its enormous jaws, rolled back its eyes and sank its saw-edged teeth deep into his backside. The creature raised Parsons out of the water and shook him from side to side.

"He grabbed me right around the middle," the 35-year-old Parsons said. "There's no other feeling quite like it. At first it felt like a truck hit me. I turned around and all I could see was his eye. It was black and just staring out. Then I knew right away what it was. It's an image I'll never forget."

Parsons used his abalone prying iron to pound the shark in the eye. After a few long seconds, the shark spit him out and disappeared.

Parsons took a deep breath and swam toward the boat, leaving a trail of blood in his wake.

There was little pain and at first he wasn't sure he'd been cut. The shark's incisions were as clean as a surgeon's.

"Shark! Help! Shark!" Parsons screamed.

Weekend car buyers swamp Marin dealers

- How to use new auto loans/F1

By Haya El Nasser and Lindajoy Fenley

Independent Journal reporters

New-car sales in Marin — strong all week because of low-interest loans — sped to an even faster pace this weekend.

One dealer reported selling 10 cars in three hours Saturday.

Another said he had to lock his doors at closing time to get customers off his lot.

"We're looking for an onslaught this weekend," the sales manager at Redwood Chevrolet in Novato said Saturday morning. In the first three hours of business, he watched 10 buyers drive new cars off his lot.

Since Thursday, interest rates as low as zero on two-year loans and up to 9.9 percent on five-year loans have resulted in more than 300 car sales: 130 sales at the county's two Chevrolet dealerships; 80 at Novato Ford; 50 at John Irish AMC; 40 at San Rafael Chrysler Dodge; and about 20 at Scripture Oldsmobile.

"Frankly, we don't have enough sales

Reagan: 'Say no to drugs'

- Reagan enjoys using radio/B4

Associated Press

SANTA BARBARA — President Reagan urged young Americans Saturday to "say no" to drugs and said those who do will "be a hero in my book."

The president used his weekly five-minute radio address to appeal directly to young people:

"I'm going to ask you a favor: say no to drugs, and tell your friends to say no, too."

He also announced that Mrs. Reagan and Education Secretary William Bennett will issue a handbook later this month "for communities to use to rid schools of drugs."

He gave no details of what the handbook would contain, but said, "Just as surely as it will require the diligence of parents, teachers and principals, beating drugs in our schools will require the involvement of neighbors, community groups, law enforcement officials,

BRIEFLY

U.S. will mint gold coins

WASHINGTON — The U.S. mints will start churning out gold coins Monday for the first time since 1932.

The government hopes to start collecting some of the estimated $1 billion a year that Americans have been spending for foreign-made gold coins.

They will be issued in denominations of $50, $25, $10 and $5 and will be legal tender but will cost probably 10 times that amount.

Since the $50 coin will contain an ounce of gold and gold is selling for about $400 per ounce, the $50 gold coin is likely to sell for more than $600 when it goes on sale Oct. 20.

Women to lead in Japan

TOKYO — A woman legislator was overwhelmingly elected Saturday to head the opposition Japan Socialist Party, becoming the first woman to head a major political party in Japan.

Takako Doi, 57, who had been the vice chairwoman, takes office Monday.

"I want to make a new start, to open the party to the public," Doi said.

Doi's victory was an unusual success for a woman in the male-dominated Japanese political world.

Takako Doi

New hope for infertility

CHICAGO — In what they say is a medical first, doctors have opened an infertile woman's blocked Fallopian tube without surgery by using the same balloon catheter technique used to clear clogged heart arteries.

If the new technique, called balloon tuboplasty, leads to pregnancies, it could save some women from costly surgery to remove Fallopian tube blockages or the expense of test-tube fertilization, said Edmond Confino, a researcher at Mount Sinai Medical Center in Chicago.

Confino said the outpatient treatment takes about 15 minutes and could cost less than $1,000.

CHAIRMAN'S CORNER

ABC board's bylaw change will safeguard auditing operations

The Board of Directors of the Audit Bureau of Circulations at its last meeting took a prudent first step to protect ABC from the high costs of litigation when it gave preliminary approval to Bylaw 2.17, "Waiver of Damages and Indemnification."

The ANPA/Newspaper Advertising Bureau-ABC Liaison Committee chaired by Ed Estlow, Scripps Howard Executive Committee chairman, has worked with ABC officers and directors for more than a year to help ABC develop a bylaw that would be fair to publishers while at the same time giving ABC the protection it needs. The committee, the ANPA Board and the NAB Executive Committee all agree that the present bylaw is needed and deserves the full support of newspaper publishers. We believe ABC should adopt the bylaw at its November board meeting.

Because ABC is a non-profit membership organization, it has not until very recently been exposed to serious financial loss due to litigation costs. However, in just one recent case, ABC's legal costs were nearly $1 million, even though that case was settled before the trial.

Added to the possibility of such losses is the problem of obtaining professional-liability insurance. The cost of such insurance has been found by ABC to be excessively high, and the bureau is concerned that such insurance may become unavailable at any price without a bylaw like 2.17.

Alvah H. Chapman Jr.

Because litigation and insurance costs must be borne by ABC members, it is in everyone's interest to limit these costs. We believe the new bylaw will do that in a fair and reasonable manner.

During the course of our discussions with ABC on litigation costs, we urged the bureau to improve its appeals procedures so that publishers who dispute the ABC staff's interpretation of rules and bylaws could present their cases to someone other than the ABC staff or board. ABC responded by establishing a procedure for an appellate panel that will serve as an intermediate appeals level between the staff and the board. The new procedure will become effective when the new bylaw does, and we believe it will benefit newspaper publishers.

Your ANPA Board and your ANPA/NAB-ABC Liaison Committee greatly appreciate the advice and assistance you have given in our continuing efforts to encourage ABC to improve its auditing and reporting procedures while at the same time maintaining the integrity of the ABC reports that serve the interests of both the buyer and the seller of advertising.

Some people think the American press is too powerful.

©1986 Knight-Ridder, Inc.

Ferdinand Marcos, for one.

For 20 years, rumors circulated that the Marcoses and their friends were stashing away a fortune overseas.

But the public had no proof.

Reporter Lewis Simons of the San Jose Mercury News had made several trips to the country dominated by Ferdinand and Imelda Marcos. Conversations, he recalled, "often led to comments like – you know she owns such-and-such. And he owns so-and-so."

Simons wanted to find out how much of this was fact, and how much was fiction.

He plugged into every rumor pipeline in the Philippines. Weeks turned into months. Eventually, he sent back a massive file.

San Jose Mercury News reporters Pete Carey and Katherine Ellison took over. They sifted through thousands of pages of legal documents from California to New York.

On July 23, 1985 they broke the story. It documented how the Marcoses and eight associates were "systematically draining vast amounts of wealth from their nation and hiding it overseas." They owned banks, condominiums, office buildings, mansions and other properties in the U.S. and Europe. They had spent $10 billion since 1979.

The stories created a political tidal wave.

There were calls for impeachment. Marcos promised early elections.

The rest, really, is history.

Corazon Aquino is the new Philippine president.

Pete Carey, Katherine Ellison and Lewis Simons won the 1986 Pulitzer Prize for International Reporting.

The whole project was a gigantic effort. A year of research, reporting and writing. Of probing elusive off-shore holding companies and dummy corporations. Then, staying with the follow-up.

Most papers, regardless of size, wouldn't have invested that kind of effort on a story 7,200 miles away.

But the San Jose Mercury News is a Knight-Ridder newspaper.

Waste Management

As EPA *cracks down on 'hazardous' waste, newspapers seek disposal options for waste ink and solvents*

BY MARGARET GENOVESE
presstime staff writer

For years, The Repository of Canton, Ohio, put its waste ink in 55-gallon drums for its ink supplier to cart away the next time it made a delivery.

No fuss, no muss.

About five years ago, rules and regulations governing waste disposal changed, and the ink company decided it no longer would be the repository for The Repository's waste ink. So, Production Director Phillip H. Robison began looking for alternatives.

Dumping it in a local landfill was out of the question because Ohio bans the disposal of liquids in landfills, even if the liquids are contained in drums.

Paying a company to take the ink away and burn it seemed the only acceptable disposal method. And, at one point, the 58,103-circulation daily, a member of the Thomson Newspapers group, contracted with an incinerating company to haul away 90 drums that had accumulated in the basement of its plant. But this was too expensive to become a regular practice.

Another nagging concern is newspapers' potential liability if there's a problem with a dump site.

"You get a little bit desperate," says Robison. One person offered to put him in touch with a "friend" who would take the waste ink and "get rid of it." He found out that the friend was a farmer who was going to let the ink drums sit in the corner of his farm. "We turned thumbs down on that for obvious reasons."

Philadelphia Newspapers Inc. helped pay for cleanup of Pennsauken, N.J., lagoon.

Finally, Robison hit upon a solution. The newspaper purchased an ink recycling unit. Today, the volume of waste ink it must worry about disposing has decreased dramatically. The small amount that is generated is taken away by an incinerating company.

As The Repository and other newspapers are discovering, options for disposal of some types of newspaper production wastes are decreasing at the same time costs are climbing and regulations governing disposal are growing.

For example, on Sept. 22, new U.S. Environmental Protection Agency rules took effect requiring companies that generate small quantities of hazardous waste—between 100 and 1,000 kilograms, or at least half a 55-gallon drum, a month—to comply with EPA's tough waste-management regulatory program. This might affect some newspapers that previously had enjoyed a small-quantity-generator exemption.

Another nagging concern of newspapers is their potential liability should there be a problem with a dump site. Under the EPA's Superfund program, if a company is found to have contributed waste to a hazardous waste dump site that has been designated as a problem site, that company is potentially liable for contributing to its cleanup [**presstime**, Oct. 1984, p. 46].

More than 20 newspapers already have been identified as "potentially responsible parties" at Superfund sites. (See story, facing page.)

At the Sept. 4-5 meeting of the ANPA Technical Committee, Joe Hladky III, chairman of the Newspaper Ink Study and Research Task Force, called the Superfund specter "frightening."

"To have an unknown contingent liability that could run into hundreds of thousands of dollars is really tough," said Hladky, president and publisher of The Gazette Co. of Cedar Rapids, Iowa.

A Superfund claim against a newspaper for ink it may have disposed of 20 or 30 years ago "could have the potential for bankrupting the newspaper," says William D. Rinehart, ANPA vice president/technical.

The Technical Committee's Environmental Task Force is overseeing development of a comprehensive manual on waste management for newspapers. The document has been dubbed "Wastepak," after the highly successful Hazpak developed by ANPA to help newspapers comply with the Occupational Safety and Health Administration's "hazard communication" program [presstime, July 1986, p. 63].

When you talk about waste management for newspapers, you are talking about "number one, ink waste management, and, number two, solvent waste management," says Richard W. Neergaard, ANPA manager/environmental services.

As part of its initial research for Wastepak, ANPA staff has determined there are three primary options for disposal of waste ink and solvents: recycling, incineration and landfill. "The incineration method is extremely attractive when coupled with recycling," Neergaard says.

RULES AND REGULATIONS. Federal law governing the disposal of "solid" waste is the Resource Conservation and Recovery Act, enacted in 1976. (The term solid waste includes liquids, semi-solids or contained gaseous materials.) The first EPA regulations implementing RCRA took effect in late 1980. The law has been amended twice, the most recent being the

Newspaper Firms on 'Preliminary' EPA List

More than 20 companies that publish newspapers have been identified by the U.S. Environmental Protection Agency as "potentially responsible parties" at Superfund sites.

Under the 1980 Environmental Response, Compensation and Liability Act, EPA may pay for the cleanup out of the Superfund trust fund. But first it attempts to identify the owner, operator or other parties responsible for the contamination at the site and negotiates with them to finance the remedial work. In cases requiring fast action, EPA may use Superfund money to clean up a site and take legal steps later to recover the costs.

A review by presstime of an EPA computer printout of about 8,000 so-called "potentially responsible parties" at Superfund sites found many newspapers or companies that publish newspapers listed.

According to EPA, the list represents the agency's "preliminary findings on the identities of potentially responsible parties," and inclusion "does not constitute a final determination concerning the liability of any party for the hazard or contamination."

Newspaper companies on the list are: Press Enterprise Co., Riverside, Calif.; Albuquerque Publishing; The Denver Post; Rocky Mountain News, Denver; Bloomington (Ind.) Herald-Telephone; The Courier-Journal and The Louisville Times; The Indianapolis Star and The Indianapolis News; Battle Creek (Mich.) Enquirer; Federated Publications (Lansing [Mich.] State Journal); Knight-Ridder Inc. (The Charlotte [N.C.] Observer); Toledo Blade Co.; Gazette Printing Co. Inc., Jefferson, Ohio; Plain Dealer Publishing Co., Cleveland; The Star-Beacon, Ashtabula, Ohio; Newspaper Printing Corp., Tulsa (The Tulsa World and Tulsa Tribune); Oklahoma Publishing Co., Oklahoma City (The Daily Oklahoman); Erie (Pa.) Daily Times and Morning News; The Philadelphia Inquirer (Philadelphia Newspapers Inc. and Triangle Publications Inc.); Evening Times, Pawtucket, R.I.; The Providence Journal and The Evening Bulletin; and The Seattle Times.

Some of the newspapers are listed under more than one site.

The computer printout is not complete, however. In addition to those listed, at least three other newspapers, The Boston Globe and The Worcester (Mass.) Telegram and The Evening Gazette, have been notified by EPA that they are potentially responsible parties at Superfund sites.

Identification by EPA is not the only way a newspaper could become liable for cleanup costs. For example, EPA conducted emergency cleanup work several years ago at a dump site in Delaware. It then sued Consolidated Rail Corp., the owner of the land on which the dump was located, and several other parties to recover its costs. Those parties, in turn, have sued others they said contributed waste to the site, including several newspapers. According to Catherine Henn, corporate counsel for The Boston Globe, the newspaper defendants include the Globe, The Washington Post and the Army Times.

Cleanup may be completed or well on its way to completion at some of the other sites. For example, the liquid waste in a lagoon on the Swope Oil & Chemical Co. site in Pennsauken, N.J., has been transported to an EPA-authorized dump site in Alabama, reports Joseph D. Priory, vice president/legal of Philadelphia Newspapers Inc.

Since PNI was identified as a "potentially responsible party" at the site, it has taken a leadership role in cleanup efforts. But the company still contends that the mixture of roller wash and waste ink it allegedly contributed to the site is not a hazardous waste.

The argument over whether the waste was or was not hazardous is an argument the company can have later with the other potentially responsible parties identified at the site, says Priory. "Right now, we want to get on and clean up the site as a responsible corporation."

It already has been a major undertaking. According to Priory, what was estimated to be a seven-week cleanup of the surface of the Swope site—phase one of the project—turned into a nine-month endeavor because dump sites eligible to take the liquid "kept closing." There also were "huge cost overruns" because of an underestimate of the volume of liquid in the lagoon. The estimated $800,000 cleanup cost more than $1 million, he says.

Phase two will involve cleanup of structures on the site, capping the former lagoon area and conducting a study to determine whether there has been any contamination of the ground water in the area. Phase three, if warranted, will involve remedial work in that area. *—Margaret Genovese* partial repeal of the small-quantity-generator exemption.

Under RCRA, companies are responsible for determining whether their waste is hazardous. EPA has established a set of elaborate criteria for this.

If their waste is deemed hazardous, generators are required to:

- Obtain an EPA identification number
- Prepare a manifest to accompany the transportation of the hazardous waste to a disposal facility
- Deal only with hazardous waste treatment, storage and disposal facilities that have EPA permits
- Retain hazardous waste on-site for only a limited amount of time—ranging from 90 to 270 days depending upon the circumstances—unless they obtain an EPA permit to operate a hazardous waste storage facility.

There are substantial civil and criminal penalties for failure to comply.

How do waste ink and spent solvents fare under the RCRA rules?

According to ANPA's Neergaard, black inks and AdPro® and AD-LITHO™ color inks should not be considered hazardous under federal regulations. However, other color inks could contain metals of concern to the EPA and might fall into the hazardous category.

He adds, however, that to maintain its non-hazardous status, waste ink should not be mixed with other pressroom wastes. A pressroom solvent may have a flashpoint below the 140-degrees-Fahrenheit limit EPA sets for an ignitability hazard. If mixed with waste ink, it could cause the entire mixture to be considered hazardous [presstime, Oct. 1985, p. 33].

Under RCRA, states may have different waste management regulations. They must be at least as stringent as the federal program and may exceed federal restrictions. For example, Massachusetts, California and some other states classify all oily waste as hazardous, which applies to oil-based news inks.

ANPA does not keep statistics on the quantity of waste ink and solvents generated by newspapers or on methods of disposal.

THE OPTIONS. Neergaard indicates, however, that some newspapers continue to dispose of their non-hazardous waste ink in sanitary landfills. That option, however, may be foreclosed shortly.

EPA is in the process of revising its regulations for non-hazardous waste landfills. It must have new rules in place by March 1988. One of the questions it has raised is whether liquids should be banned.

Some states, such as Ohio, already have restrictions in place on liquids, and some other states have proposed them.

According to Herbert L. Edelman, vice president, operations, United States Printing Ink Corp., material is available that will harden non-hazardous waste ink into a solid so that it will pass muster for disposal at landfills with such restrictions.

Some newspapers have balked at landfill disposal. For example, it is the policy of The Boston Globe "not to landfill wherever possible," says Luis Azeredo, a facilities engineering manager who is in charge of the Globe's waste management program.

Few landfills are available, and "there are too many headaches downline," he says. Moreover, there is "something wrong with landfilling liquids that have a very high Btu (British thermal unit) value," says Alzeredo. He reports that waste ink has the same heating characteristics of Number 4 oil, which is used in commercial and industrial boilers and furnaces.

The Globe's disposal method of choice is incineration. Every seven weeks, an incineration company hauls waste ink from the newspaper at a cost of $110 a barrel for offset ink and 65-70 cents a gallon for letterpress ink and solvents.

To deal with the disposal problem and also recoup some of their costs, some newspapers have turned to recycling, and some, like the Repository, have coupled it with incineration.

A manufacturer of waste ink recycling units says interest in recycling is up. "The economics of recycling are so favorable that medium-sized plants are flocking to us," says Kent T. Delano, national sales manager for Semler Industries Inc.

Some ink companies will help with equipment or advice on recycling. "We are happy to do this although, obviously, it cuts into sales," says Edelman of United States Printing Ink.

In addition, at least one ink company, J.M. Huber, will take ink back for recycling under very strict standards. "We have to ascertain it's a non-hazardous, reclaimable material before we touch it," says Andrew J. McDonnell, market manager, newspapers. ☐

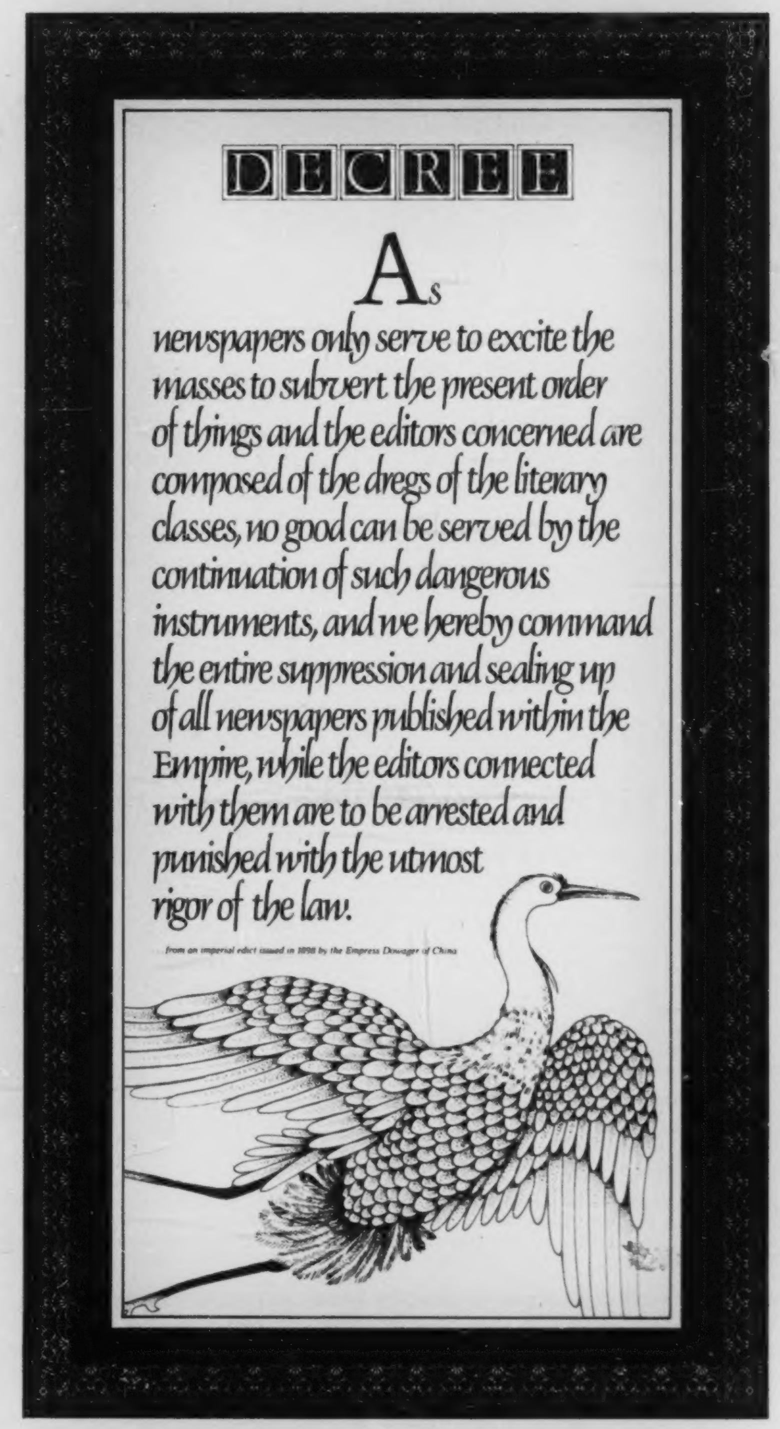
The Empress Dowager didn't think much of the First Amendment.



DECREE

As newspapers only serve to excite the masses to subvert the present order of things and the editors concerned are composed of the dregs of the literary classes, no good can be served by the continuation of such dangerous instruments, and we hereby command the entire suppression and sealing up of all newspapers published within the Empire, while the editors connected with them are to be arrested and punished with the utmost rigor of the law.

... from an imperial edict issued in 1898 by the Empress Dowager of China

About 25 years ago, we stumbled on this edict—attributed to the Empress Dowager of China in the late 1800s.

We shared it with a good many of you in the media then, along with the thought that a free press and tyranny must forever remain adversaries.

The message is no less true today as challenges to First Amendment rights here at home and to free media access to events elsewhere in the world are brought to our attention daily.

So we remind ourselves, once again, of the news media's enormous responsibility in and immeasurable contribution to a free society. We do it with this replica of the Empress Dowager's edict and hope you'll find a place for it on your newsroom or office wall.

And if you find yourself working on a story about insurance—and need facts, figures or commentary—remember State Farm writes more auto and home insurance than any other company (and is among the leaders in life and health insurance as well). Maybe we can help. Just call or write the Public Relations Department, State Farm Insurance, One State Farm Plaza, Bloomington, Illinois 61710.

For your full color reproduction of the Empress Dowager's edict, write on your letterhead to the address below.

F's highrise insiders: How they work
Tax plan packed with special favors

The many awards and honors for outstanding journalism that our newspapers receive year after year belong to the innovative, talented people in the Hearst Newspapers Group. They have made the Times-Union and the Knickerbocker News in Albany the most important media voices in New York's state capital and the Seattle Post-Intelligencer a respected editorial voice in the Pacific Northwest. From the boldly revitalized San Francisco Examiner to the newly redesigned San Antonio Light, Hearst newspapers are setting standards of excellence all over the country.

Throughout The Hearst Corporation, the innovative ideas of our people...all 12,000 of them working in more than 135 different businesses...have helped us become one of the largest and, we think, one of the best communications companies in the world.

SOME BENEFITS REDUCED

Tax Bill May Benefit Newspapers, But Early Effects Could Hurt

BY MARTIN CASEY

Most analysts list the newspaper business among "winners" under the Tax Reform Act of 1986, which in late September was awaiting final congressional action. However, if the bill passes intact, newspapers may suffer a heavier federal tax bite over the next 18 months of tax liability because deductions and credits will be eliminated right away, and lower tax rates won't take effect until July 1, 1987.

Especially hard hit will be those making substantial capital investments now.

Newspapers that have been paying an "effective" tax rate of more than 40 percent are expected to benefit in the long run, as the top corporate rate drops from 46 to 34 percent. (The "effective" tax rate reflects actual taxes paid as a percentage of income; it factors in the various deductions and credits that can be subtracted from income or tax liability.) Most newspapers have been able to take relatively few deductions and credits and thus have been paying relatively high effective rates.

Even so, at the outset, newspapers may find themselves hard hit by the new tax law—especially if they had planned on taking a sizable investment tax credit on their 1986 tax return. The House-Senate conferees agreed to eliminate investment tax credits for property placed in service after Dec. 31, 1985. This retroactivity will hurt companies with large capital investments this year—and publishers responding to ANPA's 1986 survey on capital expenditures were projecting they would exceed $1 billion [presstime, June 1986, p. 86].

> *Especially hard-hit will be those making substantial capital investments now.*

Repeal of the investment tax credit has been in the works since 1984. The major flat-tax bills in Congress and the Treasury Department's November 1984 tax-revision proposal all included its repeal. President Reagan's 1985 proposal also contained a repeal provision, as did the bill that passed the House late last year and the Senate bill that passed in May.

The Senate and House versions contained different provisions to phase in the repeal. But in the conference committee that reached agreement Aug. 16, both sides folded on their transition rules as conferees struggled to formulate new language that would not cost the U.S. Treasury any revenue loss.

The conferees did allow staff to write a transition rule on the investment tax credit to cover property contracted for in 1985 but not delivered until early 1986. The agreement also allows carryovers to 1987 and 1988 but at reduced amounts.

DILUTED COST RECOVERY. Depreciation goes hand-in-hand with the investment tax credit in today's tax considerations involving capital investment. And the new tax law generally slows down the process of cost recovery through depreciation for property placed in service after Dec. 31 of this year.

The new law stretches allowable depreciation under the Accelerated Cost Recovery System, or ACRS, over more years. (See accompanying chart.) Although there is acceleration of cost recovery in some cases, the net result appears to be less of a tax advantage than under current law.

Changes in the tax treatment of capital investments for minimum tax purposes may force some newspapers to pay more federal taxes in some years.

Newspapers generally have not been subject to minimum tax provisions—again due to their relative inability to take advantage of substantial tax preferences. But the new law would impose a 21-percent "alternative" minimum tax on a broader base of tax benefits, including ACRS as well as a sum equal to half the amount by which book value exceeds the alternative minimum tax income. These provisions are effective for years after 1986; the book-value provision is controversial and changes in 1989 to one-half of earnings and profits.

Effect of Tax Bill on Accelerated Cost Recovery (Depreciation)
(For equipment placed in service after Dec. 31, 1986)

Equipment	Current law		New law	
	Years	Method	Years	Method
Cars and light trucks (Under 6.5 tons unloaded)	3	1.5DB[1]	5	2DB[2]
Office equipment and furniture, presses and other printing equipment, pulp and paper manufacturing equipment	5	1.5[1]	7	2DB[2]
Non-residential real estate (excluding land)	19	1.75DB[3]	31.5	SL[4]

[1] One-and-a-half declining balance, in which 150 percent of the annual equal share may be deducted in the early years.

[2] Double-declining balance, in which up to twice the annual equal share may be deducted in early years

[3] One and three-quarters declining balance, in which 175 percent of an equal share may be deducted in early years

[4] Straight line, in which equal shares of the investment are deducted each year

Rostenkowski (left) and Senate Finance Committee Chairman Bob Packwood discuss tax bill.

AP

The inclusion of ACRS may make some smaller newspapers especially vulnerable to minimum tax for years in which large capital investments are made. Those newspapers will benefit from the ACRS provisions but probably not to the extent they would under current law.

Another effect of the new tax law may be to foster a hurry-up strategy this year in business mergers and acquisitions—possibly followed by a decline in those activities in 1987. This is due to repeal of what is called the "General Utilities" rule. Current corporate tax laws generally do not recognize gain in distributions of appreciated assets, but the new law recognizes full gain for acquisitions completed after 1986.

In the long term, this change may not result in significant changes in acquisition trends. In the short term, it means that negotiations going on now may be speeded up in an effort to close deals before the end of the year.

There will be more taxes paid after this year when acquisitions occur. This will affect price negotiations, and it may take a year or so for prices to become once again attractive both to buyers and sellers. (Some media organizations attempted unsuccessfully to oppose repeal of the "general utilities" rule.)

Several other elements of the new law are of interest to newspapers, as they are to all businesses. Among them:

- Corporate capital gains tax rates effectively move from 28 percent to 34 percent, effective 1987.
- Only 80 percent of business meals and entertainment costs will be deductible, effective 1987.
- Changes affecting employee plans and benefits may force managers to reassess their pension plans. For example, current rules offering an alternative for plans not covering at least 70 percent of employees will be tightened for plan years beginning after 1988.

Also, effective after this year, increased penalties on pension plans will apply in some cases of early separation from service.

And a new 15-percent excise tax will be levied on aggregate annual plan distributions of more than $112,500 (indexed) on benefits accrued after Aug. 1, 1986. Deferrals under 401(k) plans will be limited to $7,000 after 1986.

Another change provides that employees achieve full pension vesting in five years for plan years beginning after 1988.

INDIRECT EFFECTS. The new law may help newspapers in some states where pressure for increased revenue is threatening current exemptions from state sales and use taxes. States with income taxes based on federal taxable income will be taxing a higher figure that results from the cutbacks in allowable deductions and credits. This may provide states with financial windfalls—and thus ease pressures for removing existing sales tax exemptions.

An unknown factor is whether the lower tax rates will encourage businesses to spend more on advertising. Some analysts stress this as part of the reason they view newspapers as "winners" under the new tax law.

But some publishers are skeptical. Advertisers looking closely at their after-tax advertising costs will note that the lower tax rate reduces the advantage of the business deduction—including advertising costs. Today's deduction is worth up to 46 percent. After July 1, 1987, it will be worth no more than 34 percent. Thus, advertising and other business expenses could cost about 22 percent more in after-tax dollars.

WHAT'S NOT IN IT. For newspaper publishers, what's not in the bill may be as important as what's in it.

During the two years of legislative skirmishes over tax revision, the newspaper business was effective in fending off several proposals that would have directly affected it [**presstime**, Sept. 1986, p. 4].

The threat that loomed largest was a proposal to disallow 20 percent of business tax deductions for advertising costs. Similarly, there was a plan to deny all deductions for the costs of tobacco advertising.

Neither proposal became a part of any legislative version of the tax act, owing at least in part to opposition from newspapers and other media.

Several of the early flat-tax plans posed another threat by suggesting amortization of the deduction for newspaper and magazine circulation costs. ANPA and the Magazine Publishers Association worked to explain why circulation is more a normal business cost than a "tax preference," even though it is listed among "preferences" for minimum tax purposes. In final form, the tax act keeps the full deduction for circulation costs.

In another matter important to newspapers, the news-gathering exemption to federal excise taxes on long-distance telephone calls was not changed in the new tax law.

Regardless of the landmark nature of the tax-revision measure that is close to becoming law, congressional work on the tax front will continue in the months to come. There has been talk about another tax bill that would generate additional revenues—for example, through an oil-import or excise tax increase—to combat the huge federal deficit. Among other things, such legislation could serve as a vehicle to "correct" any problems that materialize as a result of the new tax law.

And House Ways and Means Committee Chairman Dan Rostenkowski (D-Ill.) has said income tax rates will need to be raised relatively soon to deal with the deficit. It's this kind of political talk in Washington that's beginning to make business leaders wonder whether they should have supported, as many did, the Senate tax bill last spring. The prospect of lower rates was driving that support. Congress conceivably could raise those rates before they are fully effective in calendar 1988. ☐

PLATES MAKE A

BY ROSALIND C. TRUITT
presstime technical writer

ANPA and manufacturers address the subtle, nagging plate problems that can mar print quality

With quality reproduction paramount in the minds of those who print newspapers, every aspect of the printing process is being scrutinized to determine whether improvements can be made—and plates are no exception.

Contemporary plate research by the ANPA Technical Research Department and by plate manufacturers centers on making long-wearing flexographic, letterpress and offset plates that hold up after thousands of impressions. This is a major concern because stopping to replate a press during a run is a costly procedure, both in time and materials.

"The research is important to newspapers," says ANPA Director/Technical Research George Cashau, "because of everyone's desire to print quality, and good plates are a large part of that. I don't think anyone takes plates for granted."

Another factor highlighting the importance of plate research, Cashau notes, is the fact that "The new environmentally safe inks and fountain solutions required a change in the chemistry of plates."

In addition to the common objective of plate durability, manufacturers of direct and offset printing plates have separate concerns.

Offset plate manufacturers continue to refine their products, working to ensure that plate chemistries keep up with environmental standards, for example.

But the most concerted plate research and development these days seem to be in the area of letterpress and flexographic plates.

Letterpress plate companies are working to hold on to the customers they have by developing plates that lock up more easily on the press. A surer lockup means better registration.

Manufacturers of flexographic plates, meanwhile, are moving into an entirely new era. Flexography, which has been in use for many years in the packaging and labeling industry, is new to the newspaper industry. Platemakers have been required to develop products that satisfy the unique properties of newsprint and water-based ink, a project that heavily involves ANPA technical researchers.

Of late, the manufacturers have been moving away from making just serviceable flexo plates and toward plates that are consistent—a move they feel will draw even more converts to flexography [presstime, July 1986, p. 44].

LIGHTWEIGHTS. Regardless of the process involved, the printing plates of today are a breed apart from those of the old hot-metal age. It doesn't take a beefy weightlifter to plate a press anymore. Plates are now made from lightweight, flexible materials ranging from aluminum to plastic.

Costs range from 60 cents to about $3 per plate, and a newspaper of 50,000 circulation might expect to spend about $200,000 a year on them.

More than 25 companies currently manufacture printing plates for the newspaper industry.

Most of the newspapers contacted by **presstime**—letterpress, offset and flexographic users—indicate that more often than not they're pleased with the reproduction plates now yield. They hold dots better and offer sharper reproduction than did the plates of five or 10 years ago, experts say.

They are quick to add, however, that nagging, random problems remain.

To achieve optimum printing quality, ink, fountain solutions, paper and plates must work together in a delicate balance. This is not always the case. And although ANPA technical staffers and newspaper production personnel are reluctant to single out plates as the lone culprit when problems develop, some cast a suspicious eye in their direction.

The primary problems include:

- **Plugging**, a letterpress and flexographic problem. Shadow dots on the plate fill in with lint, ink and other foreign matter, resulting in "muddy" halftones and blurred letters.
- **Toning**, a graying of background that affects offset printing. Experts believe ink particles fill in on the non-image areas of the plate.
- **Tinting**, also an offset problem that results in a dirty or gray background. It is believed to be caused by the incompatibility of ink and fountain solutions.
- **Scumming**, an offset plate problem that is believed to be caused by an ink and water imbalance. Water fails to keep the non-image area of the plate clean, and once again, a gray background is the result.

Solving these problems is a primary concern of the ANPA Technical Committee's Direct and Offset Printing Developments Task Force. In that regard, the Association's Technical Research Department is seeking to develop plates that can resist tinting, toning, scumming and plugging and can withstand long press runs.

Plate manufacturers, while defending their current offerings, acknowledge that the next generation of plates is in research and development.

"Continuing development in plate technology is important to newspapers, and there's a lot of serious research going on," notes ANPA's Cashau.

FLEXOGRAPHIC RESEARCH. In the plate field, "Flexography is the driving force right now," says Richard J. Finn, national sales manager for W.R. Grace & Co., which manufactures both flexographic and letterpress plates and platemaking equipment.

"There's still a lot of work to be done," Finn says. "I agree with those who say the best flexo is better than the best letterpress but the best flexo isn't better than the best offset—yet. Of course, most newspapers don't print the very best offset every day. It's hard to do that consistently."

He acknowledges there were plugging problems early in the testing of flexography's application to newspaper publishing, but he questions whether plates alone were responsible. And he says such problems have been largely eliminated with changes in plate chemistry.

The Grace executive adds that most plugging problems have cropped up in the

BIG IMPRESSION

Andrea Mihalik

Wolfe of The Morning Call checks dots on letterpress plate.

early stages of new flexographic installations or when new combinations of ink and paper are used.

That's been the case in Long Beach, Calif., where Pressroom Supervisor Fred Kelliff says that until recently the Press-Telegram experienced serious plugging problems with its new flexo units.

"The situation isn't such that the layman picking up the newspaper on the newsstand would notice it," Kelliff says. "But we can see it, and we don't want it."

Besides the plates, ink viscosity is being studied as a possible cause of the plugging, Kelliff says.

The problem has been confined primarily to the two newest black-and-white units. He reports that the older flexo units, printing both black-and-white and color, haven't been a problem.

The Journal and The Bulletin in Providence, which have been testing the flexographic process since 1981, have been pleased enough to purchase 18 units of flexo for a new printing plant currently under construction. Pressroom Superintendent Thomas Pendergast Jr. says the plates being used are due a large measure of the credit for the newspapers' consistent printing quality.

The plates hold dots well, he says, adding that even after 165,000 impressions, the pages look as good as those printed at the beginning of the press run.

"Everything's changed," says Pendergast, who's worked in production at the newspaper since 1969. "Quality demands are much different now. They're much higher. In those days, your primary concern was getting to the street corner first with your news. Now, we're concerned with how the newspaper looks. The plates are part of that."

Research has resulted in flexographic plates that primarily use steel for their backing or "substrate." Aluminum plates are too soft to stand up to the flexographic printing process, and polyfibron—a paper-like material—cannot be used because it is water soluble and won't hold up to a press run with water-based inks, plate companies say.

The manufacturers say their latest research focuses on making flexo plates even more impervious to water.

Cashau and newspaper production executives urge another research and development goal: a softer flexo plate that would permit a smoother ink transfer while providing a crisper image. In the past, softer plates experienced plugging after 2,000 impressions or so, a problem that could be solved only by stopping the press and washing the plate.

Equally as important as the plate backing is the plate chemistry—a light-sensitive polymer that is laminated to the plate. Research and development into plate chemistries is a constant process, and companies closely guard their formulas.

Another goal newspapers have is to be able to produce flexographic plates faster; processing flexo plates takes longer than offset, and critics say that makes flexo more labor intensive.

ANPA will conduct additional flexo plate research after its new flexographic press, donated by press manufacturer Tokyo Kikai Seisakusho, is up and running—perhaps by the end of this month, Cashau says.

LETTERPRESS LIVES. Understandably, much of the research attention these days is focused on flexography, but that doesn't mean work has ceased on letterpress plates. Several different types of letterpress plates have been developed since ANPA researchers first came up with a plastic letterpress plate in the late 1960s.

Allen C. Wolfe, composing supervisor for The Morning Call in Allentown, Pa., says the letterpress plates being used there are much improved. "When we first switched from zinc to plastic plates about 10 years ago, neither of us, the newspaper or the manufacturer, knew what we were doing. They had to learn to make them, and we had to learn to use them," he says.

But Wolfe has few complaints with today's plates. "In the beginning, plates were too thick and too soft to get good impressions. The halftones were muddy, shadow dots were plugged up and reproduction was 'squishy,' not sharp. We worked with the manufacturer, and now the plates are much improved. We don't have those problems. Dots are sharper and overall, reproduction is better."

Although some people in the business might find it difficult to believe, the letterpress process still is responsible for a large portion of newspaper printing. Recent statistics compiled by ANPA indicate that more than 300 U.S. daily newspapers have about 3,400 letterpress units.

Albert Lenos, national marketing manager for the BASF Corp.'s Information Systems Printing Products division in Bedford, Mass., whose products include letterpress and flexographic plates, says flexo hasn't completely overshadowed letterpress.

"It's a fairly constant market in that it's not growing, and other processes, flexography and offset, are encroaching on it," Lenos said. "It's a good market, though, and we want to preserve the market we have. We do that by making quality improvements so that letterpress stays competitive with the other processes and those who use it don't feel compelled to switch to another process."

Although letterpress no longer is the dominant newspaper printing process in the United States, it is still the favored method in many other countries around the world, observes Lynn Laing, marketing services coordinator for NAPP Systems (USA) Inc. in San Marcos, Calif.

Aluminum is the material most widely used in manufacturing letterpress plates, because aluminum plates are easy to handle, easy to mount on the press and have scrap value, production experts say.

Steel plates are becoming more popular because they can be used with magnetic lockups, giving surer registration. They do have a small disadvantage, though. Some pressroom workers using them for the first time have cut their hands on the plates' sharp edges. Such mishaps become less frequent the more they are used, says Finn of W.R. Grace.

Polyfibron plates are the cheapest but the most difficult to lock up on the press, plate manufacturers say. Many newspapers use steel or aluminum plates on the color or front-page work and use the polyfibron plates for all other pages.

Because polyfibron plates are more difficult to mount, they don't yield as accurate registration as do steel or even aluminum plates, nor do they last for as many impressions, production managers say.

OFFSET PROBLEMS. As for the majority of daily newspapers—those being printed by offset—production executives say they are generally pleased with their plates, although periodic problems occur.

John M. Saltisiak, assistant production director for The Virginian-Pilot and The Ledger-Star in Norfolk, says his newspaper goes through some 350,000 plates annually, and he has seldom encountered a bad one since the paper switched to offset in 1980.

On the other hand, pressroom manager Charles Edwards says The Orlando Sentinel has had what he feels are plate-induced tinting and toning problems for several months. By backtracking through the printing process, he has eliminated other possible causes.

Edwards notes that the stops and starts to put on new plates have caused considerable newsprint waste.

E.G. Mills, pressroom supervisor for the St. Petersburg Times and Evening Independent, also has played detective and concluded that plates are responsible for some printing problems there. For instance, he says, the newspapers sometimes get an almost imperceptible and unwanted black line at the top of the printed page.

For a time, Mills thought the chemical reaction between the plates and the developing solution was to blame, but now he's not so sure.

Robert T. Weaver, product manager for Western Lithotech, a St. Louis offset plate manufacturer, says offset plate technology is a slow evolution, with minor improvements rather than major breakthroughs the norm. Unlike the quicksilver world of computers, "plate technology is measured in subtle differences," Weaver says.

"Newspapers are printing much better color with much of the same equipment they had five years ago," Weaver observes "The big difference is in the plates, which are much improved over what they were five years ago. The total amount a newspaper pays out for plates may not be large when you look at presses or other equipment, but that one plate can have a dramatic impact on the printing process as a whole." ☐

A Solution to 'Toning' Is Tested

Less than a month ago, The Tampa Tribune experienced perhaps its worst run of toning problems. The graying of the background on the pages ruined about 30,000 copies.

Since then, the newspaper has cut its waste to less than 2,000 copies on a 260,000-copy press run by exposing its gummed offset plates a second time with an ultraviolet light.

Andy Sheppard, the newspaper's quality assurance manager, says his staff scoffed at the idea when proposed initially by an Anchor/Lithkemko sales representative. The company makes press and plateroom supplies. "But," Sheppard says, "We were so desperate, we'd try anything."

Developing an offset plate has meant following these steps: The plate is coated with the photosensitive chemical, diazo resin, and then exposed with the negative on a light table that fuses the diazo as an image to the plate.

When the plate is washed, the exposed diazo in the image area becomes ink receptive and unexposed diazo in the non-image area washes away. Gum is applied to keep the non-image area water-receptive, but fountain solution often washes it away during the press run.

Toning, many experts believe, is caused when the non-image areas of the plate become sensitive to ink. They believe the sensitivity occurs when particles of diazo fail to wash off the non-image areas, thus attracting ink to them.

What Anchor/Lithkemko discovered was that the exposure to the plate the second time with ultraviolet light seems to cause a chemical reaction; the gum bonds to the plate and prevents the diazo particles from attracting ink in the wrong places. Apparently, the process also enables the plate to attract water more easily to the non-image areas, which also helps to prevent toning.

Sheppard says the Tribune has positioned an ultraviolet light about an inch above the plate conveyor. The second exposure made with the light lasts three to four seconds—about one-third as long as the original exposure.

Sheppard says the newspaper is "saving a lot of money because we don't have the waste we've had."

James F. Meister, president of Anchor/Lithkemko, says the discovery was made a few weeks ago as the Orange Park, Fla., company ran a variety of tests to pinpoint the cause or causes of toning.

"Obviously, this isn't anything we'll make any money from, but it's been such a problem in the industry, we wanted to let people know about it," Meister says.

Harshad Matalia, ANPA research associate/engineering, says about a half-dozen newspapers have been using the re-exposure method for several weeks, and all report good results. Further study is necessary to determine whether this is a permanent solution, but Matalia suggests newspapers with toning problems try it. *—Rosalind C. Truitt*

Any color scanner makes separations. This one makes deadlines.

Good news! Now there's a scanner that can handle the daily grind of producing the daily paper.

Our extremely reliable SG-608 is truly a workhorse of a different color. That's because it features a unique red-laser dot generator for greater on-the-job dependability and up to twice the service life with less downtime and fewer maintenance headaches.

The SG-608 lets you routinely handle the quick turnarounds and high-volume production that are a way of life in the newspaper business. And, unlike most scanners, you don't have to be a genius with computers to set up and operate one.

The economically priced SG-608 is probably all the scanner you'll ever need. But it's also the logical place to start if you're considering a complete page make-up system later on.

When we designed the SG-608, we had one thing in mind—reliability. That's because we understand. If you don't get your paper out today, there may not be a tomorrow.

GOSS *Newspaper Products*

WE PUT OUR NAME ON

The introduction of a Goss press is an event of major significance. You can be sure it isn't undertaken lightly. The Goss Flexo press design first had to prove itself. And it has—convincingly. Under deadline pressure. Producing four-color 112-page newspapers and advance runs in the pressroom of a major metropolitan daily. Only a flexo press that measures up to that kind of evaluation, to our uncompromising standards of performance, reliability and ease of operation, could qualify for the Goss name, which represents a century of leadership.

The 70,000 cph Goss Flexo press incorporates advancements that make flexo a viable option for the industry today. As customer needs grow for color and paging, modular design permits the Goss Flexo press to grow with added units, halfdecks, full decks and upper decks. With a variety of cylinder arrangements, up to six colors can be printed. Uniform ink application is provided by an inker developed by Paper Converting Machine Company, our flexo partner and a leading manufacturer of flexo equipment for the packaging industry for 40 years.

Ink cleanup is made easy by an automatic washup system. The press is protected by an interlock system. Plating of units and halfdecks is fast and accurate with the Goss magnetic lockup. Simple, reliable press control is maintained

Goss **FLEXO**

FLEXO.

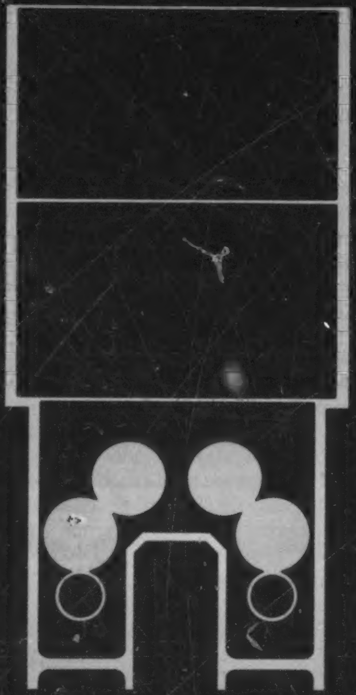
from a touch-sensitive unit panel or remote console. And the press is available in a variety of cutoffs, 50" to 60" web widths, and with a range of folders for product versatility.

In short, the Goss Flexo press can give you all of the recognized advantages of the flexo process in a high-volume pressroom. Start-up is reduced to an armful of papers. Very few on-the-run adjustments are necessary. Bright spot and process color is achieved with water-based flexo inks — and with no rub-off.

Above all, you can share our confidence in the process as carried forward by the Goss Flexo press — confidence earned by performance. We have the same commitment to leadership in flexo that we are known for in offset. A commitment characterized by continuing research, materials testing, extensive training and full support by the Goss parts and service network.

Goss Newspaper Products: First in offset. Now first in flexo.

For more information, contact Goss Newspaper Products, Graphic Systems Division, Rockwell International, 3100 South Central Avenue, Chicago, IL 60650. Or phone 312-656-8600.



With the modular design of the Goss Flexo press units, you can expand to three, four, five or six colors by adding halfdecks, full decks, upper halfdecks and upper fulldecks — whenever you need them. Goss Flexo units can replace all the units in a letterpress. Or individual units to increase the color capability of a press.

NEW MARKETING STRATEGY

AD NETWORKS

Groups made up of separately owned newspapers find success in selling preprint delivery under a one-buy, one-bill system

BY C. DAVID RAMBO
presstime staff writer

The Winn Dixie food stores' Raleigh, N.C., division runs preprinted ads in 60-65 newspapers every week. For many advertisers, that would mean paying 60-65 different bills and handling all the accompanying paper work.

But thanks to a special marketing network set up among those papers, Winn Dixie buys them all with just one insertion order and one bill.

"It streamlines, simplifies our work," and saves Winn Dixie money, says Ivan Hardesty, advertising director of the Raleigh division.

The newspaper network so beneficial to Winn Dixie's ad buys is one of three that have sprung up across the country during the last couple of years to facilitate the placement of preprinted advertising in multiple newspapers [**presstime**, Feb. 1985, p. 14].

So far, the preprint networks have been responsible for hundreds of multiple-newspaper insertion orders. Those who are using them like their potential, and more are planned.

Successful preprint networks have been set up by the Newspaper Advertising Bureau, which oversees the Winn Dixie project; the Atlanta office of Landon Associates, a New York City advertising representative firm; and McClatchy Newspapers in California.

In addition, newspapers are attempting to set up other networks for preprint sales in at least two locations—Florida's west coast and North Carolina.

The concept of selling ads for two or more unrelated newspapers is not new. It dates back at least 60 years, when the Washington Newspaper Publishers Association began a one-order, one-bill service for run-of-paper advertising in its member newspapers. Many state press associations now provide such services for both ROP and classified advertising. The latter has proved especially popular for some types of real estate such as recreational property.

Another form of classified networking—for recruitment ads—cropped up five months ago in Southern California between four separately owned dailies. Knight-Ridder Newspaper Sales is coordinating the operation for Knight-Ridder's Press-Telegram in Long Beach; The Orange County Register of Santa Ana, owned by Freedom Newspapers; The Daily Breeze of Torrance, owned by Copley Newspapers; and the Daily News of Los Angeles, owned by Jack Kent Cooke.

Networking for preprints, however, is a recent development.

The largest preprint network operation to date is the one run by Landon. As an example, in July it put together 19 networks for 6 million circulars; each network consists of one advertiser's circular being placed in 5 to 300 participating newspapers. Advertisers are characterized as "regional" firms such as Family Dollar, Shoe World and Auto Shack. (K mart, the national discount store chain that is a mainstay of the shared-mail endeavors of Advo-System Inc., is not among Landon's customers.)

Newspapers that have been beneficiaries of Landon's networking are located mainly in the Southeast, but some in Arizona and Maine also have participated.

PURSUING NEW MONEY. Jeffrey A. Deitz, Landon's southern regional sales manager, says he strives to target prospective clients that do not currently use newspapers as a medium for their message. "We just worry about getting it out of the mail and off the TV screen," he explains.

Another Landon strategy is to approach an ad buy from an advertiser's perspective. That is, Landon's staff members "look at problems from the advertiser's point of view." They seek to present market data from each newspaper in a simplified and standardized manner.

"Newspapers don't get the (ad) share they deserve because they are difficult to buy," Deitz says. "If you make a popular product easy to buy, you'll sell a lot."

Landon sells using one insertion order that covers all newspapers an advertiser wants to use. The advertiser can receive bills from each newspaper, or a single bill. In the latter case, paper work shifts from Landon to yet another party, The Greenville (Tenn.) Sun, which for a fee handles billing for the Landon networks.

In that arrangement, the Sun—using insertion information provided by Landon—calculates amounts owed to each participating newspaper and issues checks to those papers from accounts set up by

Powers (right) of Big Valley Distribution discusses his eight-newspaper network with Gary Augustin of PayLess Drug Stores in Sacramento.

Landon. Mary Cross, who runs the Sun billing operation, says the system uses a Radio Shack computer and off-the-shelf software called "Run Time" to keep track of who is owed what.

Despite networking's apparent potential for success, some experts say there are limits to its effectiveness.

For example, James H. Hollis, senior vice president/mass merchandising of the Newspaper Advertising Bureau, says the concept works better in smaller markets, partly because many big papers would prefer to handle their own preprint marketing.

Opportunities rest "primarily with small, regional advertisers" that use small newspapers with small circulations, Hollis continues. Such advertisers can save on bookkeeping when buying through a network, he notes, and they sometimes may benefit from national ad orders and from one-shot campaigns such as a manufacturer's notice of a product recall.

NAB is modestly involved in preprint networking in the Southeast and in Indiana and Kentucky. Its strong suit is presenting data and circulation maps on different newspapers in a common format.

Landon's Deitz largely disagrees there are market-size limitations on networks. He points out that his network serves many large-circulation newspapers including The Commercial Appeal of Memphis, The Tennessean of Nashville and The Baltimore Sun.

Deitz acknowledges, however, that establishing such networks takes "a tremendous amount of work" and time. It is very detail-oriented—mainly because of the mass of information that must be kept about all the newspapers.

Landon is paid for its network service by the newspapers. In the NAB network, payment for the service varies—sometimes the newspapers pay, sometimes the advertiser.

Networks also require attention to legal detail, specifically possible antitrust problems. Executives involved say if handled properly, problems can be avoided. They recommend legal consultation.

LOCATION A FACTOR. Another factor affecting the viability of networking for preprint sales is geography. Big Valley Distribution Co. of Sacramento, a division of McClatchy Newspapers, has acted as preprint sales agent for eight newspapers in California's Central Valley since 1984. Three are McClatchy papers, two are owned by Gannett Co., one by Lesher Communications, one by McNaughton, and one is an independent.

Establishing networks takes "a tremendous amount of work" and time. It is very detail-oriented.

Big Valley Marketing Director Glenn W. Powers says the network has more than 1 million circulation, including 600,000 paid and 400,000 in non-subscriber coverage. "We can offer an almost contiguous marketing area," he says.

Since its inception, Big Valley has used its "one-order, one-rate, one-bill situation" to woo most of the area's major preprint advertisers to newspaper folds. A prize catch was K mart, which shifted from a mid-week Advo mail program to newspapers.

As these projects make headway, others are starting to surface. A collection of seven newspapers on Florida's Gulf Coast has hired a local advertising agency to go after preprint advertising. Supermarkets and fast-food companies are high on the target list.

Leo L. Kubiet, vice president and advertising director of the St. Petersburg Times and Evening Independent, sees "an unlimited opportunity that should serve advertisers as well as newspapers in a very big way." Networking can save much time for advertisers just by simplifying all the different newspapers' marketing data. The various terms and variables "can be a maze for advertisers," he observes.

John W. Roell, advertising director of The Tampa Tribune, says networking for preprint sales provides a needed "synergistic effect."

Another new networking effort is planned in one of the networking areas where both Landon and NAB have been active—North Carolina.

Fred D. Crisp, advertising director of The News and Observer and The Raleigh Times, says the North Carolina Press Association is considering formation of a network of newspapers to sell preprints to statewide and regional automobile dealer associations. Those associations spend millions in broadcast media every year to promote the sale of cars. "Newspapers get very little of it," he says, mainly because newspapers have not yet tried offering the dealer groups the ease of a network buy.

Crisp says the primary goal is to go after money spent on the "glamour medium," television. Selling preprints can help alleviate "the old agency thorn in the side with the differential of (ROP retail and national) ad rates," as well as the aggravating problem agencies have buying ROP advertising when some newspapers do not print color, or do not print it satisfactorily.

"This seems to be the easiest sale (for the press association) to start with," Crisp says. Then again, he quips, "We might not sell an inch." □

BLUE-CHIP GROUPS ON THE RISE

J-School Boards

Working journalists offer advice to academia based on their experience and expertise. They also help raise money.

BY MARGARET GENOVESE
presstime staff writer

Some colleges call them "boards of visitors," others "advisory councils." They may be made up of alumni who have made good in the communications field, media stars from across the country, or local press luminaries.

And they appear to be on the rise.

No one keeps track of how many of the nation's approximately 250 schools of journalism have these blue-chip boards. Most schools probably do not, although "a growing number do," says Richard R. Cole, president of the Association of Schools of Journalism and Mass Communication, the national organization of journalism school administrators.

Cole is considering establishing one at the University of North Carolina School of Journalism, where he is dean. "They make possible a good dialogue between the professors and the professionals," he says.

There even has been some talk in the Committee on News and Editorial Education, an organization made up of journalists and educators, of urging every J-school to have an advisory council.

Typically, the boards give advice to the J-schools on a wide range of topics, such as how to limit enrollment, what new programs to pursue and what equipment to purchase. They also are useful in recruiting faculty and students. And they may get involved in fund raising.

At the University of Texas, for example, one function of the College of Communication Foundation Advisory Council is "to open doors for fund-raising opportunities," says Dean Robert C. Jeffrey. But, he adds, the council is also used to advise the college on curriculum and to assist in locating and attracting faculty.

Asked for examples of where his school has implemented recommendations made

Kevin Morley, Richmond Newspapers

Alf Goodykoontz (head of table, back of room) of Richmond Newspapers presides over advisory board meeting at Virginia Commonwealth University's School of Mass Communications. Other members are (clockwise from left foreground) H.W. Goodall III, Continental Cablevision; William Westbrook, Westbrook Inc. ad agency; Norman G. Beatty, The Colonial Williamsburg Foundation; David W. Brown, VCU; Laura Cameron, Style Weekly, Richmond; George T. Crutchfield, VCU School of Mass Communications; James Kent, WDBJ-TV, Roanoke, Va.; Thomas R. Roe, A.H. Robins Co.; Louise C. Seals, Richmond Newspapers; and June O. Nicholson, VCU.

by its advisory council, Jeffrey cites a master's program that combines communications and business-administration studies, which was established three years ago, and a master's program in medical writing, which is in the process of gaining state approval. Both were suggested by a council task force responsible for generating ideas for curriculum innovations.

Another task force, on recruiting and retaining minority students, proposed establishment of a Visiting Minority Adjunct Professor program, which began last year, Jeffrey says.

Some of the advisory panels, like the one at Texas, go back a decade or more. But several were established more recently by new administrators with new agendas.

Northwestern University's Medill School of Journalism established a board of visitors in November 1984. "We needed the advice and counsel because we are changing things here at Medill," says Dean Edward P. Bassett, who was named to his post earlier that year.

Similarly, the College of Journalism at the University of Maryland established a board of visitors in 1983, two years after Reese Cleghorn became dean. "I knew that I wanted to do this when I came in," he says.

One of the board's first tasks was to help the school develop a five-year plan, which was unveiled a year ago [**presstime**, Nov. 1985, p. 54]. "I think (board members') participation in the development of our five-year plan gave it great credibility," Cleghorn says. "We didn't want a sort of blue-sky plan. We wanted something that people would (look at and) say, 'Yeah, that's achievable.' "

WINDOW DRESSING? Even though these bo[illegible] may resemble corporate boards of directors, they have no inherent power.

"It is an advisory board, and the members understand that," says Edmund B. Lambeth, director of the University of Kentucky's School of Journalism, referring to his school's board of visitors. "But they also appreciate that their advice is listened to with a great deal of respect and authentic appreciation."

The Kentucky board was established in 1983, two years after Lambeth was named director. Its members are "smart people" who "respect academic autonomy," Lambeth says. "They are not so cornball that they think they are going to vote through a new curriculum."

The effectiveness of such boards depends largely on what a given school wants to do with them, "and that's going to vary from faculty to faculty, school to school," notes Ted M. Natt, president of Allied Daily Newspapers. That Pacific Northwest association recently criticized some journalism schools in the region for being out of touch with practical newspapering [**presstime**, July 1986, p. 70].

> *"They are not so cornball that they think they are going to vote through a new curriculum."*

Advisory boards can be just "window dressing—bring them in, pour them a cup of coffee, pat them on the back, tell them about what you have been doing, listen to what they have to say, pat them on the back as they go out the door and go about your business," he says.

But at the University of Texas, Advisory Council Chairman Pickard E. Wagner says his group is persistent in pushing for the programs it views as desirable. "If there are differences or disagreements between the board and the faculty and staff over how quickly to move into new programs, or whether to move into them at all, we continue negotiating, we don't just drop the ball," says Wagner, who retired last year as director of media relations for American Telephone & Telegraph Co. in Washington, D.C.

He adds that the faculty may think "we are providing more advice and less consent than it would like."

STAR-STUDDED ROSTERS. The rosters of some of these advisory councils read like a Who's Who of the Media, including the heads of some of the nation's largest newspaper groups.

In 1980, Texas reorganized its council, which had been made up largely of Texas publishers, to include more out-of-state members. Fewer than 50 percent are graduates of the school.

Similarly at Maryland, a minority of visiting board members have old school ties. "We wanted a board that would work closely with us, a prestigious board to give us a sense of what the best professionals in the field think a journalism school should be doing," Cleghorn says. "We chose people who, for the most part, had not been identified a great deal with us because we thought of this as a reaching out beyond the immediate contacts."

But other schools have opted to have their boards composed largely of people who either work in areas close to the school or who are alumni. "When you have people the caliber of (newspaper executives) Gene Patterson in St. Petersburg and Tom Johnson in Los Angeles, it doesn't make much sense not to go to them," says J. Thomas Russell, dean of the Henry W. Grady School of Journalism and Mass Communication at the University of Georgia.

The half-dozen school administrators contacted by **presstime** say their advisory councils meet as infrequently as once a year and as often as quarterly. At Virginia Commonwealth University's School of Mass Communications, Director George T. Crutchfield says members of the school's two-year-old advisory board are "so enthusiastic" they have suggested convening every other month.

The size of the boards ranges from less than a dozen members to well over two dozen. None of the professionals is paid for participating, most pay their own expenses to attend meetings and some even serve as hosts for off-campus meetings.

Why do they agree to membership on an advisory board? "I feel very strongly that one of our real resources in our business is the person who comes into our editorial and advertising departments just out of college or soon thereafter," says Robert G. Marbut, president and chief executive officer of Harte-Hanks Communications Inc., who serves on the Texas advisory council and also has been a member of the board at Georgia.

"If journalism schools are creating a resource for us, I think it is very important for us, as customers, to understand what that process is and have some input into it." If newspaper professionals do not make this effort, they have only themselves to blame if they do not like the quality or relevance of the product that comes out of the J-schools, Marbut says.

James K. Batten, president of Knight-Ridder Inc., serves on the boards at Texas and Northwestern. Aside from whatever advice and assistance he can provide to the schools, Batten says the involvement benefits his company. In the case of Texas, where Knight-Ridder owns no newspapers, it provides better connections with newspapering in the state. In the case of Northwestern, it provides close ties to a school from which it has hired many employees.

From a personal perspective, Batten says, "It's stimulating and helpful to be in touch with first-class academic people who are working in the fields that I'm concerned with." ☐

VIEWED AS INSURANCE

To Avoid Conflicts, Many Newspapers Adopt

CODES OF ETHICS

BY GENE GOLTZ
presstime staff writer

Once upon a time there was an unwritten adage about newspaper people, and it went something like this: A newspaper reporter should never 1) get married; 2) have children; 3) buy a home.

The rules were never printed in anyone's management manual, and if no one took them seriously, they did have an element of sardonic humor and bitter truth. The average reporter worked long and irregular hours, moved around like a vagabond, and got paid just enough to more or less pay the rent, buy meals and pay the bar tab.

Nowadays, evidence indicates that reporters earn enough to support a family, buy a home and have a little left over. At larger newspapers, newsroom salaries of $30,000 to well over $40,000 are common. Employees at Newsday recently approved a contract that will pay a minimum of $1,000 a week for reporters and copy editors with five years' experience as of April 1, 1989.

This rising affluence among reporters and editors has been accompanied by a surge in the number of newspapers adopting codes of ethics.

News executives contacted by presstime do not believe there is a major problem of reporters and editors making investments and then coloring the news accordingly. But most say codes should be enforced to help ensure it won't happen.

The Chicago Tribune, for example, has a code that calls for all Tribune staffers to fill out a disclosure statement once a year. They are asked to reveal sources of outside income as well as civic and political involvement.

The code also stresses common sense as a guideline and cautions staffers to avoid the appearance as well as the reality of conflicts of interest.

Editor James D. Squires believes that these and other safeguards prevent reporters from getting into conflict-of-interest situations, even if they wanted to.

"What the public doesn't realize is that there is a really well-honed antenna for bull in the newsroom," he says. "The reporter's ability to manipulate the stock market just is not there."

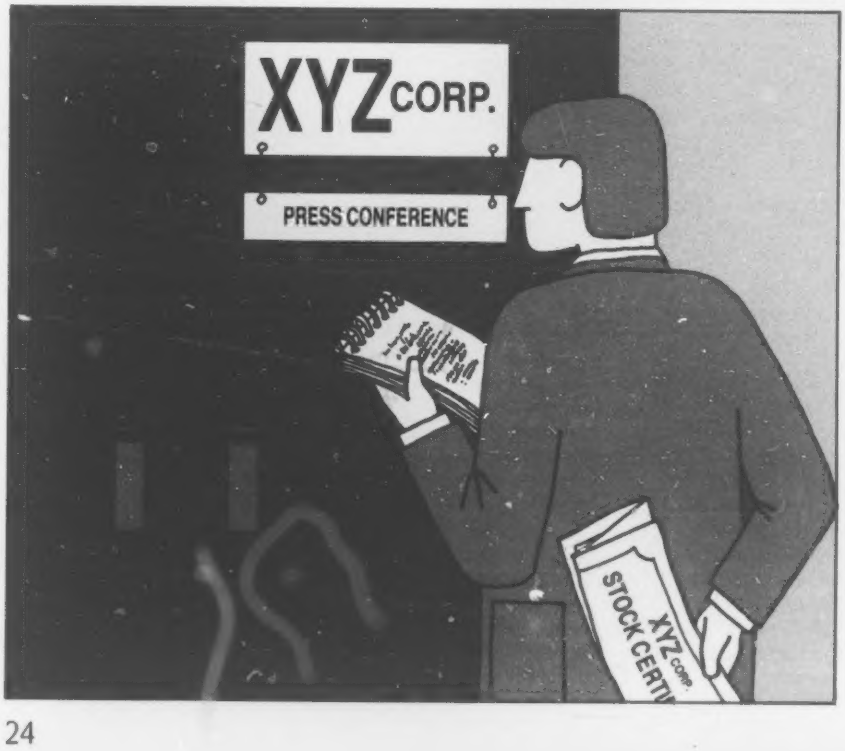
Additionally, reporters don't make enough money to have significant investments, he maintains. Suppose a reporter were successful in moving the stock of his favorite company up a few points; it would not put enough money in his pocket to make it worth the risk, Squires says.

He contends that reporters—except possibly those at The Wall Street Journal or The New York Times—cannot influence the market, and that if they tried, it would be obvious to their editors.

Concurring with Squires is James K. Gentry, director of the business journalism program at the University of Missouri and adviser to the Society of American Business and Economic Writers. "The stock market is controlled by institutional investors," he says. "They are not going to listen to any newspaper columnist." Gentry says a few financial writers for New York and Washington, D.C., newspapers might affect stocks, but "once you get beyond those two markets, newspaper writers have little influence."

At the San Jose Mercury News, published in the high-technology "Silicon Valley" of California, Business Editor James J. Mitchell says he, too, does not perceive conflict of interest as a major problem at this time.

Of course, the newspaper's own code may be keeping a problem from developing. It forbids the 18 business news reporters and editors from owning local stock. Says Mitchell: "We don't want our business employees owning any local stock, period, whether they disclose it or not. We want to avoid not only the possibility of conflict of interest but the percep-



XYZ CORP.
PRESS CONFERENCE
XYZ corp.
STOCK CERTI

tion of the public that there might be a conflict."

The same holds true for The Boston Globe, which has seen a rapid expansion in recent years of high-tech companies in New England. The Globe employs 30 business reporters and editors, almost all of whom earn at least the five-year minimum of $42,000 a year.

Business Editor Lincoln Millstein says the newspaper's contract with the Boston Globe Employees Association requires prior approval for any outside activity that may constitute a conflict of interest.

The business desk goes further. "To me, any reporter owning publicly owned stock in New England is in direct conflict of interest," says Millstein. "My reporters know exactly how I stand, and I've put it in writing."

All individual newspaper ethics codes seem to prohibit any kind of conduct that would indicate conflict of interest. But in many cases, the conflict-of-interest clauses seem to be overshadowed by lengthy sections dealing with gifts, free travel, drinks, Christmas presents and any and all sorts of gratuities.

Each of the 92 daily Gannett Co. newspapers has its own ethical code, with which the parent company does not interfere, according to Madelyn P. Jennings, senior vice president/personnel.

> *"To me, any reporter owning publicly owned stock in New England is in direct conflict of interest."*

However, department heads of Gannett's newspapers are required to sign an annual statement affirming compliance with corporate ethics. Among other things, the two-page ethics statement requires those employees to maintain an "arms-length relationship with anyone seeking to influence the news." The code has 14 paragraphs dealing with various ethical matters that generally forbid employees from acting in ways "that might reflect adversely, directly or indirectly, upon Gannett."

Knight-Ridder Inc., which requires top editors and senior executives to sign statements of compliance with conflict-of-interest rules, authorizes each of its newspapers to decide whether to adopt an ethical code, says Larry Jinks, vice president for news and operations.

"I think people in this business are concerned about conflict of interest, and they're particularly proud of being able to deal honorably with whatever's put in front of them," Jinks says. "They're doing a good job of it."

Besides individual newspapers and newspaper groups, a number of industry organizations have adopted codes. One is the Society of American Business Writers, which advises its members to avoid active, stock-market trading and other short-term, profit-seeking opportunities. The code also advises writers to avoid taking advantage of inside information and to make sure any investment-related information is widely disseminated before they personally buy or sell stock.

Despite the warnings and strictures, the society has no way of enforcing its code. It can only, in its own words, "encourage" observance of the standards.

WINANS CASE AFTERMATH. Practically every time conflict of interest is mentioned in newspaper circles, the case of R. Foster Winans comes to the fore. At his non-jury trial in January 1985, Winans admitted having leaked advance information about his "Heard on the Street" column in The Wall Street Journal to a stock broker. The broker bought or sold stocks based on that information before the items were published. By the time the

Hoopla Over 'Freebies' Is Mickey Mouse Talk for Many Journalists

The high-toned language in newspaper ethics codes received a stress test in September when the real world of free travel junkets intruded.

By mid-September, 4,000 journalists and other media people had told Walt Disney World they would accept the offer of an all-expense-paid trip Oct. 2-5 to the Florida resort. The total number of media people is expected to reach 5,000, a Disney World employee told **presstime**. If each of them takes a guest, as Disney World is allowing, the number of freebie vacationers would be about 10,000.

According to a spokesman, Disney World sent out about 15,000 invitations to journalists here and abroad—newspaper and magazine editors and publishers, travel writers, food and feature writers, drive-time radio personalities, and television employees.

The free ride for journalists, which some newspeople are calling a breach of journalistic ethics, is for a joint celebration of Disney World's 15th birthday and the upcoming 200th anniversary of the writing of the U.S. Constitution.

Fifteen airlines, including Delta and Eastern, offered free air travel to Orlando. Twenty-two hotels will provide free rooms. Disney World expects to absorb $1.5 million in costs.

The state of Florida will put up $335,000 for the weekend's costs, and the Orange County Convention and Visitors Bureau and the Kissimmee-St. Cloud Resort Area organization agreed to match the amount. For their largesse, the latter two organizations will be allowed to fete the journalists at parties extolling other Florida attractions. The parties, estimated Robert Mervine, manager of press and publicity for Disney World, will cost $300,000 to $400,000 each.

To those who felt uneasy about accepting the entire package free, Disney World said they could pay $150 a person—or the entire bill.

Charles Ridgeway, director of press relations and publicity at Disney World, said that "almost universally, those people who have ethics policies are adhering to them." But he declined to say how many of the attendees will be paying part or all of the weekend's expense.

Asked about newspaper acceptances, he replied, "There isn't a large number of big dailies, but a fair number are represented." He said "a lot of weekly newspaper editors and publishers" were invited, but he did not know how many had accepted.

Michael G. Gartner, editor of The Courier-Journal and The Louisville Times and president of the American Society of Newspaper Editors, called the weekend package the "junket of all junkets." Said Gartner: "I'm dismayed and disappointed. I thought that those days ended a generation ago. I certainly don't fault Disney for offering this, but I certainly am concerned and confused. I thought we just didn't do things like that anymore."

SALES LTD.

scheme was broken up in the spring of 1984, the broker had grossed $675,000 in profits, of which Winans and his roommate, former Journal employee David Carpenter, received $31,000.

Winans was fined $5,000 and sentenced to 18 months in prison [presstime, Sept. 1985, p. 36].

Winans recently wrote *Trading Secrets: Seduction and Scandal at The Wall Street Journal,* in which he also disclosed that while working for the newspaper he bought shares in American Surgery Centers, then praised the stock in his column.

The widely publicized Winans case may have had a hand in the recent increase in written ethics codes at newspapers. In 1974, according to Oklahoma State University journalism instructor Harry Heath, only one in 10 newspapers had written ethics codes; by August 1985, three out of four had them.

Of course, whether codes of ethics deter anyone who wants to break the rules is a favorite topic of debate among journalists and professional journalism associations.

Parent company Dow Jones had a code in place during Winans' tenure at the Journal. Its conflict-of-interest section states: "Dow Jones has always had a strict policy on security transactions by employees who have access to inside information regarding unpublished stories or advertising schedules." It suggests that employees wait two full days after a business article has appeared before trading in any company mentioned in the article. Employees are not allowed to accept payments from brokers for any services rendered—a prohibition that Winans violated.

> *Whether codes of ethics deter anyone who wants to break the rules is a favorite topic of debate.*

Some papers have no written ethics codes. "There was a preliminary attempt to do one right after The Wall Street Journal mess," says Morris Wildey, business editor for The Indianapolis Star. Wildey says a final version never was approved, partly because there was no consensus on specific terms.

Although Harte-Hanks newspapers have informal oral rules about gifts and other ethical situations, written policies "are virtually non-existent," a Harte-Hanks editor found in an August survey.

Another paper without an ethics code is the St. Louis Post-Dispatch, but Editor William Woo says he is interested in devising one. He notes there has been a great increase in business news in recent years, which in turn has stimulated concern about ethical behavior.

Woo says developing a written policy for various groups of employees could turn out to be a problem. "The principles would remain the same," he says, "but will we be able to draft a code so comprehensive it would include the movie reviewer, foreign correspondent and editorial writer? These are things we are thinking about." ☐

Will all those who still doubt the capacity of the

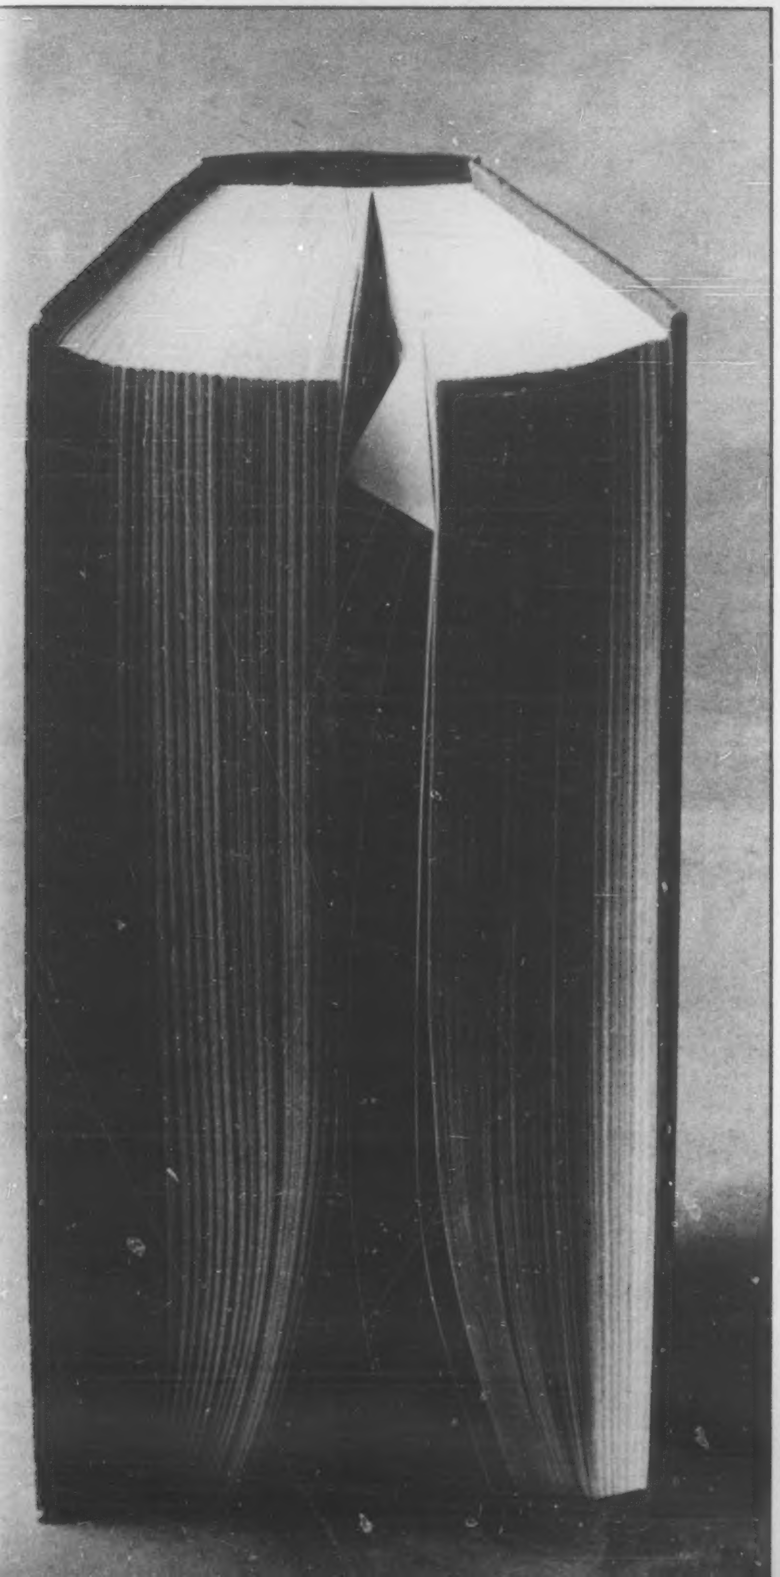
WHETHER BOOKS AND MINDS ARE OPEN DEPENDS ON LITERACY



It's a battle no one should hesitate to join. There's no left or right—only the sure knowledge that not to wage war on illiteracy and help 27 million functionally illiterate people is eventual societal suicide.

Newspapers and broadcast stations are now playing a leading role in national literacy campaigns.

Scripps Howard has made a major commitment to support literacy programs in all Scripps Howard cities, including comprehensive efforts by the El Paso Herald-Post.

Other media groups, including Cox Newspapers and Capital Cities, are developing model literacy programs in their communities.

PROJECT LITERACY U.S. (PLUS), a joint program of ABC and PBS, has featured extensive television and radio coverage of literacy problems. PLUS is also involving numerous volunteer organizations, including churches and synagogues.

The American Newspaper Publishers Association with its "Press to Read" campaign has distributed materials to help newspapers launch their own literacy programs.

And the American Society of Newspaper Editors has formed a Literacy Committee chaired by Jay Ambrose of the El Paso Herald-Post.

What are you doing to help open books and minds?

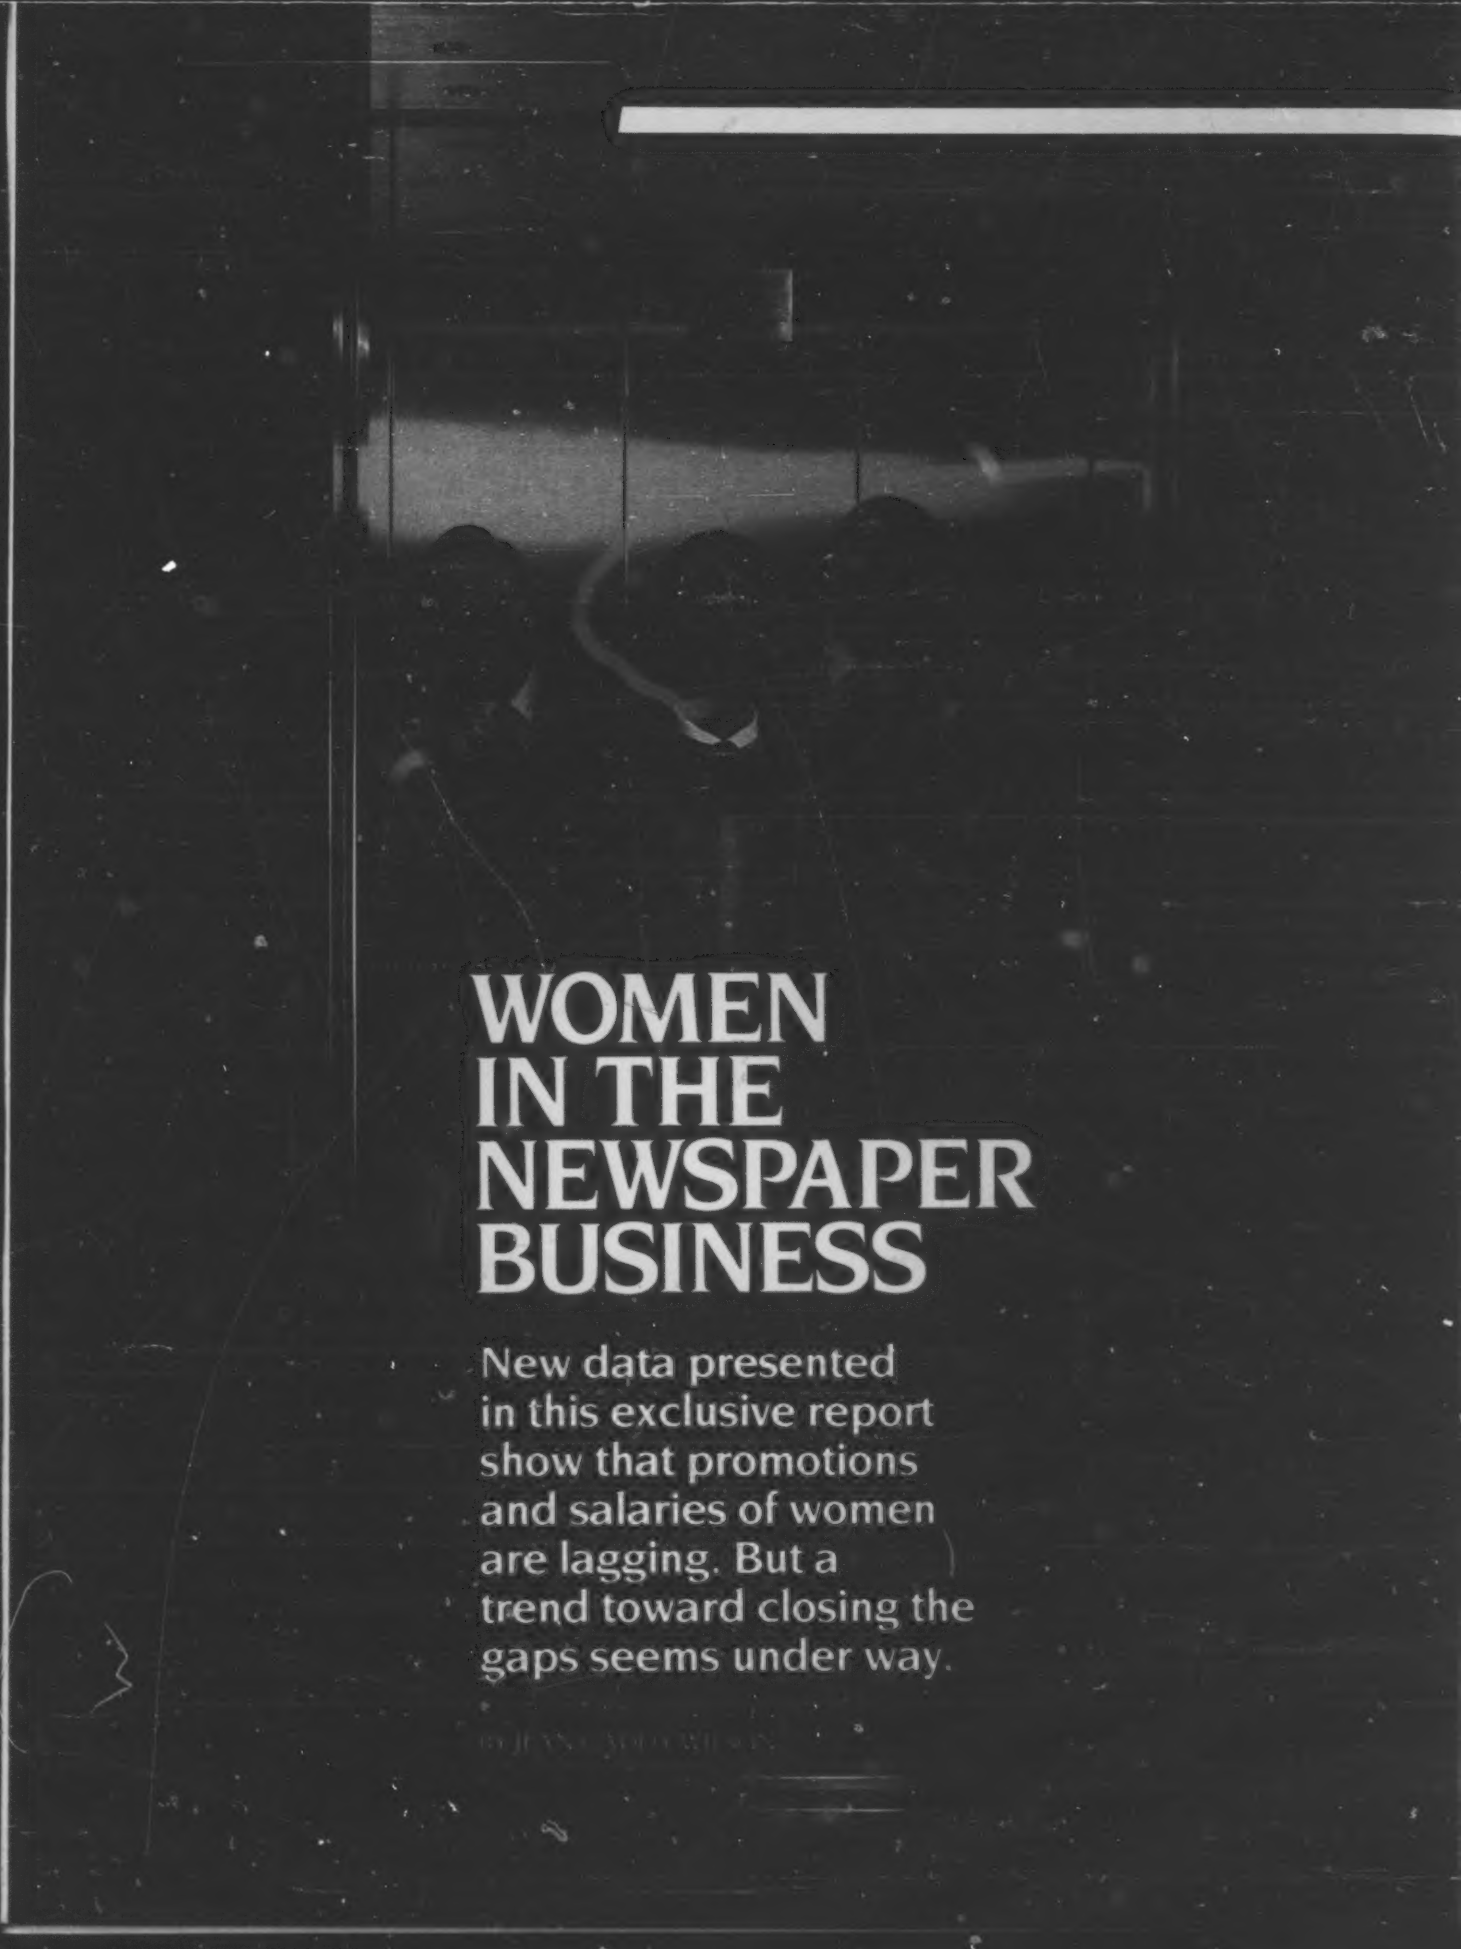
LITERACY: WE OPEN DOORS TO A WIDER WORLD



WOMEN IN THE NEWSPAPER BUSINESS

New data presented in this exclusive report show that promotions and salaries of women are lagging. But a trend toward closing the gaps seems under way.

[illegible]

Special Report

(Editor's note: This Special Report provides the first look at the newspaper findings of Jean Gaddy Wilson's massive study on women in the media. The study is based on responses to a national survey, "The Media in the '80s," that was sent last year to all U.S. daily newspapers and television stations, and to a random sample of radio stations. The survey's 12-page questionnaire asked for 485 pieces of information about media employment, including salaries, length of service, number of employees supervised and expectations for employment trends over the next five years. Wilson had replies from 648 publishers of U.S. dailies—a response rate of 40.6 percent, for a margin of error of less than 3.9 percent. These responses were in proportion to overall industry numbers in terms of geography and circulation categories. Funding for the study, which also involved personal interviews with 250 women and men employed in the media, was provided primarily by the Gannett Foundation. The full study, "Taking Stock: Women in the Media Before the 21st Century," is being published by Gannett Foundation.)*

Newspapers—probably more than any other medium—brought attention to what has been called the "silent revolution" of women's move from unpaid to paid employment.

At the same time, newspapers underwent some changes of their own in response to the individual decisions that women were making about how to use their time. Four years ago, **presstime** ran a Special Report on the changing role for women in newspapers, "Women see mostly MANagement." The article's title was symptomatic of where women were in the business—on the lower rungs of the management ladder. At that time, the best data regarding the percentage of women employed at newspapers came primarily from estimates.

To get a clearer picture of women employed by daily newspapers and other U.S. media, the first national survey on the subject was conducted last year.

Responses from newspaper publishers show that:

- The overwhelming majority of management jobs on the most influential papers continue to be held by men.
- The overwhelming majority of management jobs on mid-size and small newspapers also continue to be held by men.
- Women's salaries lag behind men's in almost every newspaper job in almost every circulation category.
- Even when women and men with the same length of service are compared, women's salaries in a majority of cases lag behind those of their male counterparts in the same job at newspapers of a similar size.
- Although the number of women employed at newspapers is still below the number of men, there appears to have been a steady increase of women in management and professional positions in the past two decades.

Wilson, a faculty member at the University of Missouri School of Journalism, is engaged in research and has written extensively about employment in the media.

STAGGERING SHIFT. Before many newspapers found themselves in the midst of the trend, they carried multiple stories on the historic shift of women into the paid workplace. Throughout the 1960s and 1970s, they published an ongoing series of "the first woman to . . ." stories, whether that woman was the "first woman to" drive a cab, run for the Senate, anchor the evening news, repair telephone wires, train to be an astronaut, run a major ad agency, fly a commercial airliner or serve as mayor.

At times, newspapers covered the rumble that accompanied the movement. The revolution was not entirely quiet, and change didn't happen all that easily. Litigation and legislation, discrimination and assimilation—all were stories accompanying the transformation of the workforce.

Each newspaper had an opportunity to cover the emerging, but different, ways women were using their time—whether the community was Walla Walla, Wash., St. Petersburg, New York City or Mexico, Mo. There were, after all, women in every city who became the "first woman union steward," the "first woman garbage collector" and the "first woman judge."

Ultimately, the "first woman to . . ." stories gave way, although not altogether, to stories about structural changes in society as massive numbers of women went on payrolls.

The shift, in retrospect, was as staggering as it was swift. During each year beginning in 1960, a million or more women joined the workforce. Today, women constitute 44 percent of the nation's employees.

Meanwhile, women were getting better educated. They entered colleges—and journalism schools—in record numbers. In fact, the first male-dominated academic area in recent times where women became a majority was journalism. That milestone was reached in 1977, and it had happened only once before—during World War II. Today, 60 percent of journalism students nationwide are women.

Special Report

In 1979, women became the majority in overall population at colleges and universities. Among other changes, this has led to a growing female presence in labor pools for predominantly male occupations. Today, women are 40 percent of the students in business and law, 36 percent of computer science students, a third of medical students, a quarter of dental students and approaching one-fifth of engineering students.

Such unparalleled changes continue. According to the U.S. Labor Department's Bureau of Labor Statistics, *for the first time ever,* a historic moment in employment was reached in March when women became more than half of the "professional" or so-called "white-collar" class of workers.

And 1986 will be remembered as an equally historic year in education—the year when women will have earned half of all college undergraduate and graduate degrees awarded.

CHANGES AT NEWSPAPERS. During the 20-year period in which they reported these fundamental changes in American education and employment, newspapers found themselves being directly affected by the evolution. Women were hired in greater numbers than ever into newsrooms, ad departments, circulation. And sometimes, management.

In a way, it was reminiscent of the years during World War II, when female reporters kept the papers going. But there was a difference: In the immediate post-war period, a number of female reporters were fired to make room for returning GIs; but in the late 1960s, '70s and '80s, they and women in other newspaper jobs were no longer out of place.

Yes, in the four decades since women were once a majority of employees in a number of newspapers, newspapers have changed . . . and they haven't.

"Women's news" still wraps around the grocery and furniture

ads in the back of the paper. "Men's news" still predominates on the front page. Both are sweeping generalizations with exceptions in broad degree. But "hard news" usually means coverage of men, and "soft news" means women.

Women who have reached the top in the business went by one of two routes: by virtue of family ownership, as was the case for Katharine Graham of The Washington Post Co. and Helen K. Copley of The Copley Press Inc.; or by climbing corporate ladders, as was true for USA Today Publisher Cathleen Black. Fewer than 60 female publishers run U.S. dailies.

And in a report last January in The Bulletin of the American Society Newspaper Editors, Dorothy Jurney provided results of her ninth annual survey on women in newsroom management. It found that fewer than 10 percent of "directing editors" listed in the 1985 *Editor & Publisher YearBook* were female.

According to Jurney's survey, at 28 dailies (out of 37) with circulations of 250,000 or more, no women carried the titles of editor, executive editor, managing editor, assistant managing editor, editorial chief, or other high editorial positions.

As an indication of how few women historically have been in

> *Only 7 percent of publishers and general managers are women. Fewer than 20 percent of managers of the news, advertising and circulation departments are female.*

Selected Jobs at U.S. Daily Newspapers

reported for a particular job in a particular circulation category, the chart specifies "not enough in category." Where no women were reported as being in a job in a circulation category, a "0" is used.

(Percentages represent the number of women employed in that job. Shaded blocks denote where women are half or more of those reported.)

newspaper work, the Census Bureau still names jobs for professional news employees that include "newsman" and "legman," even though those jobs may be filled by women. Another indication is that class-action and individual sex-discrimination lawsuits against major newspapers were filed and won by women continuing through the first part of this decade.

Yet there is a sense that the past few years have been a time of unparalleled change for women in newspapers—in newsrooms, business offices, personnel offices, advertising departments and management.

THE NEW SURVEY. The questionnaire titled "The Media in the '80s" was designed, in part, to get a better picture of how the daily newspaper industry in the United States is hiring and promoting women. Publishers were queried on employment, changing news content, business conditions for newspapers, and expectations of where jobs will increase, decrease or remain the same.

Regarding employment, publishers were asked to specify the number of men and women employed in 10 departments and to provide detailed information about 93 jobs including: the exact salary, plus any commissions being earned by the person employed; the number of employees the person supervised; the

number of years the employee had been with the company; and whether that person was male or female.

Each job was defined precisely so that a national "snapshot" of employment would emerge. For instance, under the title of "Advertising Director or Manager," the definition was "overall management responsibility for advertising functions. Develops and manages budgets. Supervises sales and/or management employees. Top management position."

In looking at Chart 1 totals (see pp. 32 and 33) for responses covering 29 jobs common to most newspapers, it is possible to get a sense of those areas where women are being hired and promoted.

When all newspapers' responses are averaged together, women are a majority in areas that traditionally have been "women's jobs"—classified advertising manager, longest-term employee in classified ad sales, feature editor, feature reporter, lifestyle editor and business office manager.

The job with the highest percentage (90 percent) of women employed is, predictably, the lifestyle editor who is responsible for the "women's news" of the paper. Also predictably, the lowest percentages for women are in jobs traditionally held by men—longest-term sports editor (3 percent), sports reporter (5 percent), production manager (3 percent) and pressroom manager (0 percent).

Percentages in parentheses represent female average salary compared with male average salary. Shaded blocks note where female average salary is approximately the same or greater than male average salary (95% or higher). Where there are fewer than 10 total employees in a job, figures are not computed.

Women represent only 7 percent of top management in the publisher and general manager positions.

Jobs with more than one-third women also include national ad manager, longest-term retail ad sales worker, business manager, copy editor, wire editor and longest-term general reporter. Women are about one-fourth the employees in the jobs of retail manager, managing editor, news editor and controller. Fewer than 20 percent of the managers of the news, advertising and circulation departments are female.

CIRCULATION BREAKDOWN. The new survey also examines the employment situation by circulation categories:

- **More than 100,000.** At the largest newspapers, women are the majority by a 4 to 1 ratio in one job—lifestyle editor. Women are about half the business office managers, feature reporters and feature editors. They account for about one-quarter of the classified ad managers, longest-term classified ad sales workers, news editors, national ad managers and wire editors.

Women are fewer than one in 10 in these top management positions: publisher, general manager, ad director, editor and production manager. They also account for about one in 10 editorial page editors.

- **25,000-100,000.** Although newspapers of 25,000 circulation are quite different businesses from those of 100,000, they have about the same percentages of women employed in comparable jobs. The employment of women is higher in this circulation category than at the largest papers.

Newspaper publishers reported that the job most likely to be filled by a woman in the ad department of dailies within this range is the longest-term advertising sales rep. In the editorial department, women are a clear majority of lifestyle editors, two-thirds of the feature editors and about half the feature reporters. A higher percentage of women are business office managers than at the largest papers.

Among management positions at newspapers in this circulation category, women are fewer than one in 10 publishers, general managers, ad directors, editors, circulation managers and production managers. They also make up fewer than one in 10 photography directors, editorial page editors, sports editors and sports reporters.

- **Fewer than 25,000.** In general, as newspaper circulation decreases, the percentage of women employed increases, regardless of department.

While women are fewer than one-tenth of the ad directors at dailies of 25,000-100,000 circulation, at the smallest papers they are more than a third.

In editorial jobs, the percentage of women employed increases almost across the board as circulation decreases, whether the position is that of editor, managing editor, city editor, copy editor, general news reporter or sports reporter.

Those jobs filled by a majority of women on the large papers grow to even larger percentages of the papers with less than 25,000 circulation. For instance, while women are about half the feature editors on the largest papers, they have about three-fourths of those jobs at the smallest papers.

THE SALARY GAP. Looking at percentages of women employed in selected positions gives an indication of where women have been hired and promoted. Looking at salaries for men and women in the same positions gives an indication of the salary differences, if any, between the sexes in a given job.

As late as 1980, U.S. Bureau of Labor Statistics figures showed that if all men's and women's salaries were averaged together, a woman made 59 cents for a man's dollar. The figure for women has climbed to 64 cents, reflecting their being hired into jobs outside the purely service sector and into higher-paying jobs.

Although that comparison is used extensively in the United States in talking about the difference between men's and women's salaries, it is misleading to think that standard should be applied to comparable jobs such as the ones in Chart 2 (pp. 34 and 35). The expectation would be that the same jobs, in the same size newspapers, would have salaries in the same general range. But that is not the case.

Comparing men's and women's salaries overall in Chart 2, none of the jobs show comparable pay. However, in the circulation breakdowns, several jobs show up where women make approximately the same or more than men in those jobs.

In the "Overall" column, when all men's and women's salaries are combined for a particular job, the figures are shown both as an average and as a median.

For instance, when all publishers' salaries are computed, $65,729 is the average compensation. When all publishers' salaries are computed for the median, half of the salaries are higher than $55,000 and half are lower.

When all male publishers' salaries are averaged, the salary is $66,496. Half of all male publishers' salaries are higher than $56,600 and half are lower. When female publishers' salaries are averaged, the figure is $55,197. When a female publisher median is computed, half the women publishers make more than $45,000 and half make less than that.

On the average in this survey, female publishers make 83 cents for every male publisher's dollar. Women publishers' median salary is 80 percent that of their male counterparts.

Jack L. Hillwig, University of South Carolina College of Journalism

As with government statistics, overall figures give a view of the average salary for the entire group of people in a category. Women's overall percentage of men's salaries is lower than in the various circulation categories. Why? Because in most jobs, more men are at the larger newspapers with resulting high salaries.

Women and men are closest to having equitable salaries in the top job (publisher) and in editorial (general news reporter, feature reporter, news editor and wire editor)—all in the 80 percent range.

Positions where salary averages are furthest apart—where women make about 60 percent of men's salaries—include: classified ad manager (many women are in this job at smaller papers with lower salaries); national ad manager (occupied by few women); editor, photography director and sports editor (reflecting a preponderance of men in these positions at the higher-paid, larger newspapers); and general manager, controller, business manager, circulation manager and production manager (also reflecting a dearth of women in these jobs at larger papers).

Moving from the overall figures to those for various circulation categories, it is generally the case that, at the largest newspapers, women are paid three-fourths or more what men make. However, few women are in some of the best-paying positions.

In the highest-circulation category, women make the same or more than men in two jobs: wire editor and circulation manager. At the lowest-circulation papers, women make the same or more in five jobs—business office manager, feature reporter, lifestyle editor, classified ad manager and retail manager.

There are not many positions where men and women make the same money in the same job in the same circulation category. However, there are a good number of jobs in the same circulation category where women make upwards of 80 percent of the same salary as men. In some cases that may be a $10,000 difference; in others, a $5,000 difference.

The most telling factor is that out of the 141 different job comparisons across all newspapers where there were enough men and women to compare, women made equitable salaries in about one-sixth of the cases.

In a number of positions at the bigger newspapers, there were no women at all in the highest-paid jobs such as editor, publisher and general manager.

LENGTH OF SERVICE. It's common perception that women now have a greater role in newspapering than 10 years ago.

In looking at the percentage of females at five-year service increments, it becomes evident that the participation of women in newspaper management has been increasing in recent years.

At each succeeding five-year interval, women become less of the percentage of management people employed.

For instance, in the first five years of employment in management, women are about a third of those hired. At the 6-10-year level, the percentage shrinks to a little less than a third, and it continues to drop with each five-year increment. This may indicate that newly employed women stand a better chance of being promoted into management than women hired some years earlier.

This assumption is bolstered by the statistics on salaries, also. Although women are still paid less than men in management, the gap narrows for the newer employees. For instance, women in newspaper management with 1-5 years of service make $11,000 less than their male counterparts, but the difference generally is much greater for those with longer periods of service.

The trend to higher enrollment of women in journalism schools is reflected by a University of South Carolina photojournalism class.

Length of Service (Years)	Percentage of Females in Management	Average Difference in Salaries Between Men and Women
1-5	32	-$11,000
6-10	29	-$11,000
11-15	26	-$16,000
16-20	19	-$19,000
21-25	15	-$15,000
26-30	11	-$22,000
31-35	7	-$19,000
36-40	3	-$20,000
41-45	8	-$21,000

In the second layer of management, where fewer employees are supervised, women also make less than men. However, in this middle-management area for the first 15 years, women are about four of every 10 employees. After that, the percentage of women goes down.

Length of Service (Years)	Percentage of Females in Mid-management	Average Difference in Salaries Between Men and Women
1-5	39	-$ 5,000
6-10	40	-$ 6,000
11-15	38	-$ 5,600
16-20	27	-$ 8,400
21-25	23	-$ 6,000
26-30	15	-$ 7,000
31-35	15	-$ 8,000
36-40	15	-$12,000
41-45	27	-$ 9,000

In the "professional" area, where employees are reporters or advertising sales reps and where they supervise few employees, women are also paid less for every year of employment. However, in the first five years, women are almost half of those who are being employed as reporters and professionals. This is the bottom tier of what becomes a management pyramid.

Length of Service (Years)	Percentage of Females in Professional Jobs	Average Difference in Salaries Between Men and Women
1-5	46	-$ 3,500
6-10	38	-$ 4,400
11-15	27	-$ 6,000
16-20	22	-$ 5,600
21-25	14	-$ 5,000
26-30	15	-$ 6,500
31-35	10	-$ 7,000
36-40	15	-$ 3,700
41-45	25	-$13,000

SUMMING UP. It appears that women have a better chance than ever to be hired in every area of newspaper employment. However, because women have been the majority in journalism education programs for almost a decade, we could expect to see a sharp increase in women's employment and promotion at dailies. As yet, that dramatic increase doesn't seem to be happening. However, the trend seems to be in place.

Before this first-time ever survey, the newspaper industry has had estimates rather than an actual counting of the participation of women at U.S. dailies. This study, made possible through the cooperation of funders, newspaper publishers and interested news people, provides the first national yardstick against which future hiring, promotions and compensation may be measured.

Because of the industry's response to and interest in this initial study, it is hoped that future national surveys will be conducted on a regular basis to provide the news business with a continuing look at newspaper employment, including the hiring and promotion of women. ☐

STAGING A COMEBACK

JOB TESTING

Newspapers once again are considering tests as an aid in employee selection

BY CLARK NEWSOM
presstime labor writer

While much attention has been riveted recently on testing prospective and current employees for evidence of drug use, other forms of testing are showing signs of making a comeback at newspapers.

This testing is for motivation, interest and aptitude, not only for job applicants but also for current employees who give indications of potential for advancement. Although he stops short of calling it a trend, Thomas C. Bryan, personnel manager of The Seattle Times, says he sees evidence of a move back toward testing.

"I agree with Bryan," says George D. Veon, vice president and director of employee relations for the Chicago Tribune. "Personnel people are coming to the conclusion that testing is not the legal risk they thought it was 10 years ago" when some tests ran afoul of civil rights laws.

Veon says the Tribune is beginning to validate the results of recently initiated tests in the production area as indicators of job performance. He notes that validation is a time-consuming and costly endeavor, "but it may be worth it."

Alvin Miller, vice president/business for The Record in Hackensack, N.J., is another executive who says newspaper people "are beginning to revisit the subject" of testing. At the same time, he says, they are "concerned and cautious" that tests do not discriminate against certain segments of the population as some earlier ones did.

Miller, who was recently elected president of the Newspaper Personnel Relations Association, says that in 1985 The Record began using a mechanical-aptitude test for pressroom job applicants.

Other personnel selection techniques being explored and used by newspapers are job samples—such as a tryout test—and new, more sophisticated biographical questionnaires. The use of so-called assessment centers to evaluate current employees is favored by a small number of newspaper companies.

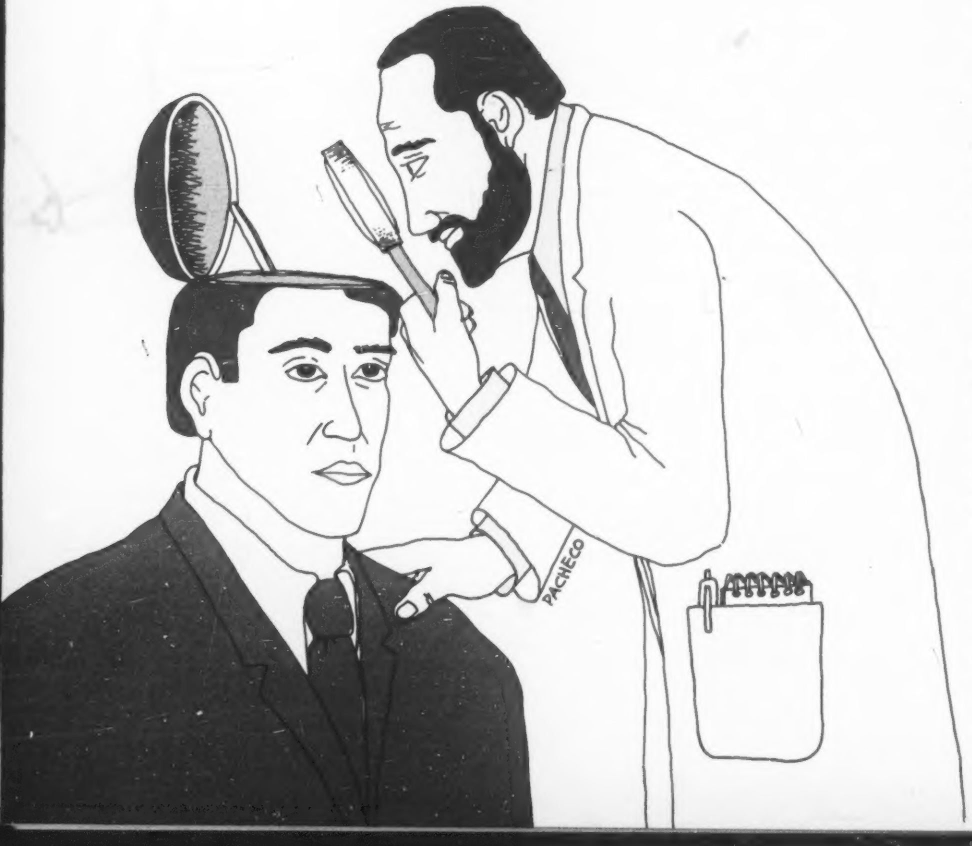
WHY TESTING FADED. The use of written psychological and "intelligence" tests by employers began to fade in the early 1970s after several courts found some tests were discriminatory to groups protected by the Civil Rights Act of 1964. The use of "cutoff" scores that eliminated applicants who failed to achieve a certain level often denied jobs to members of minority groups.

The Civil Rights Act does not prohibit the use of tests in the selection of employees. The act's Title VII authorizes the use of "any professionally developed ability test" provided it does not discriminate against groups protected by the act.

The Equal Employment Opportunity Commission's "Uniform Guidelines on Employee Selection Procedures" set forth the process employers must use to demonstrate that their testing procedures have no adverse impact on job opportunities for any race, sex or ethnic group. The expense of proving a particular test is a valid predictor of job performance was among the reasons many newspapers dropped them.

However, Knight-Ridder Inc. in Miami has continued its pioneering efforts to validate tests for a wide variety of newspaper jobs. The group has always endorsed a step-by-step employee selection system, of which testing—if appropriate for the position—is one step [**presstime**, March 1981, p. 47].

MOTIVATIONAL TESTS. One newspaper has taken a different approach in attempting to identify people with the potential to be successful in the business. In 1985, The Patriot Ledger of Quincy, Mass., began a "personality assessment" program to complement the job-interviewing process.



(Editor's note: This article is the last in a series dealing with techniques being used by newspapers in the employee-selection process. Previous articles covered interviewing [July 1986, p. 13] and reference checking [Dec. 1985, p. 22].)

1986-87

committee rosters

This publication contains ANPA and ANPA Foundation committee rosters listing member newspaper executives and others who have been appointed to one-year terms by ANPA Chairman and President Alvah H. Chapman Jr. and ANPA Foundation Chairman and President Edwin L. Heminger, respectively.

American Newspaper Publishers Association

ANPA

TO ADVANCE THE CAUSE OF A FREE PRESS

The newspaper uses an "adjective checklist," formally called the Predictive Index, that was developed by Praendex Inc. of Wellesley Hills, Mass It is the only daily newspaper currently using the index. Through the two-page checklist, which takes about 15 minutes to complete, job applicants describe themselves and describe how they believe other people perceive them.

The index is scored by a person who has completed a four-day seminar in administering the test. "We do not use it as the deciding factor in hiring," says Karen M. Dobbyn, human resources manager for the Massachusetts daily. "We use it the same as information obtained from reference checking. What it will tell you is whether a person is suited for a particular job."

Dobbyn says the index can tell such things as whether a person is a good team worker, can delegate authority, is persuasive, and tends to be more objective or subjective. She says the index is used in the circulation, retail and classified advertising, accounting, business and employee services areas.

Stephen N. Picarde, president of Praendex Midlantic in Bowie, Md., says that the Predictive Index has been validated by two psychologists from Harvard University as non-discriminatory.

Another selection tool that is coming into the picture is called "biodata" testing, a technique that calls for applicants to answer a series of autobiographical questions, such as "How old were you when you became completely independent of your family for financial assistance?"

Many industrial psychologists contend that biographical data are the best single predictor of job performance. "In my opinion, the validity of biographical data is equal to or greater than the validity of other selection techniques, most particularly interviews," says psychologist William D. Buel, vice president of industrial-organizational research and evaluation in the Tampa office of Byron Harless, Reid & Associates, an industrial consulting firm.

Some personnel experts say that such tests and others like them should be called by another name. H. Rad Eanes III, a psychologist in the San Antonio office of the consulting firm Schneider & Eanes and former vice president of human resources for Harte-Hanks Communications Inc., says the word "test" implies there are right or wrong answers to questions. If properly used, he says, such tests are merely "instruments" that allow management to best utilize the skills, knowledge and potential of people.

But most newspapers, including the 92 dailies in the Gannett Co. group, simply do not use motivational tests in screening job applicants. "We've been more involved with training than trying to predict performance through testing," says James Robert Jones III, the company's vice president/employee relations.

APTITUDE AND ABILITY. One of the most significant developments in newspaper personnel testing occurred more than three years ago when a consortium of newspapers participated in a validation study of an aptitude test for reporters and copy editors. The newspapers involved in the study, which was finalized in August 1983, were the Alexandria (La.) Daily Town Talk, The Courier-Journal and The Louisville Times, The Miami Herald, and three dailies in the McClatchy Newspapers group.

> *"The validity of biographical data is equal to or greater than the validity of other selection techniques, most particularly interviews," says psychologist* William D. Buel.

The newspapers worked with Byron Harless, Reid & Associates to validate the tests. Reporters and copy editors at the newspapers took a variety of tests, which were finally narrowed down to the three in use:

- Thurstone Test of Mental Alertness, which measures general problem-solving ability, both verbal and numerical
- Cooperative English Test (Form 1B-Effectiveness), which indicates the ability to express one's self in writing
- Differential Aptitude Test, which gauges the ability to understand concepts stated verbally.

Buel of Byron Harless, Reid & Associates emphasizes that the tests are aptitude and ability tests, not motivational or personality tests.

The newspapers involved in the validation study use the tests, which take about an hour to administer, in several different ways. For example, in Alexandria the tests are given to all editorial applicants regardless of experience. "I wish we had (similar tests) in other areas" of the newspaper, says A.N. (Nelder) Dawson Jr., director of personnel and employee relations.

At McClatchy's flagship paper, The Sacramento Bee, the three tests are given only to the final job candidates. And not all departments in the newsroom use them. The battery of tests is used primarily as a selection tool for writers and copy editors in the sports and business news departments, and for copy editors on the news desk.

Many newspapers have devised their own in-house tests as one factor in the selection process. In the newsroom, this usually involves giving applicants a set of facts for writing a story, or giving them a story to be rewritten.

"We've developed our own job-related tests, and I feel comfortable with them," says Judith A. Szabados, manager of human resources at the Daily Herald in Arlington Heights, Ill.

Frank A. McDonald, director of personnel at the Richmond (Va.) Times-Dispatch and News Leader, notes that such tests are "content valid," which means that the test "on its face is related to job performance."

The Associated Press has given editorial applicants a writing and editing test for more than 20 years. The test is timed, "which is key to us," says Kelly Smith Tunney, assistant general manager and director of corporate communications. It is "directly job-related" and involves writing "different kinds of stories," she says. AP also has tests for engineers and technical people, she adds.

But aptitude tests are by no means universal in the news business. The Toronto Star and The Columbian of Vancouver, Wash., are examples of newspapers that do not administer them. Some papers prefer tryouts in lieu of testing. For instance, The Arizona Republic and The Phoenix Gazette give editorial applicants a week's tryout before being hired.

ASSESSING EMPLOYEES. Although testing may become more prevalent as one of the tools used in the selection of job applicants, newspaper human resources specialists are exploring other ways that current employees can benefit from an evaluation of their strengths and weaknesses.

"We are trying to identify people who have the potential to do what needs to be done," says Guy T. Garrett Jr., vice president/personnel for The New York Times Co. He notes that test results do not necessarily predict success in a job.

The Times Co. is one of the few newspaper companies that have used an "assessment center" and an outside consultant for the career development of people. An assessment center usually involves a group of employees who are assigned to tackle typical management problems under the observation of senior managment employees called "assessors." The assessors later summarize their observations, giving an outline of the participants' strengths and areas for development.

The sessions are held outside the plant, usually in a hotel, and involve 25 to 30 people. Garrett cites as an example of the success of such programs a former proofpress operator who is now circulation manager for metropolitan New York City.

Assessment centers have their critics, too—mainly because of the expense involved in renting space and taking people way from their jobs for as long as a week.

But personnel specialists say it is vital that something be done to help people progress. "It's important that people know there are opportunities to advance within the organization," says Daniel V. Mannix, vice president/labor relations at Newsday, Long Island, N.Y. He says newspapers should develop their own programs to help people overcome their weak points and not rely on "canned" programs. For example, if people have difficulty expressing themselves, there are courses they can take to develop confidence.

There is a real need in certain job areas for tools that will help predict job performance.

The Toronto Star uses outside industrial psychologists to evaluate people for their strengths and weaknesses. It's a "career-counseling device," says Personnel Manager Jim E. Eaton. Each employee receives a copy of the consulting firm's evaluation and is free to discuss it with the psychologists.

And since the 1960s, the Peoria (Ill.) Journal Star has used a local resource—the Human Evaluation Center at Bradley University—for assistance in making decisions on the promotion of employees to supervisory jobs.

All in all, while there is no surge in the newspaper business back to the psychological testing that was so prevalent prior to the 1964 Civil Rights Act, some human resources specialists say there is a real need in certain job areas, such as computer programming and advertising sales, for tools such as aptitude and attitude tests that will help predict job performance.

But the "one-on-one interview and a solid background check is more important" than testing, says Bryan of The Seattle Times.

"There is a skill that comes with experience in interviewing, and we'd rather rely on that," says Robert E. Brophy, vice president of human resources for Scripps Howard in Cincinnati. ☐

Newspaper Management Systems
A Proven, Effective, Productive Solution.

"We use Collier-Jackson's Newspaper Management Systems because they specialize in the newspaper industry. One software philosophy for all systems makes it easier on everyone — from the DP technical coordinators to the operators at the terminal screen."

Evan A. Ray
Controller
Arkansas Gazette

"CJ/ADVERTISING™ has all the markings of a software winner — a winner being a package that reaches that critical user's mass which ensures its continued maintenance, development and enhancement.

Why is Bill Applebee in newspaper pagination?

With more than four years in daily production, the outstanding success of full-page pagination at the Pasadena STAR-NEWS has earned the Southern California newspaper worldwide recognition and a place in the history books.

Publisher William R. "Bill" Applebee says the STAR-NEWS has achieved exactly what it expected from Information International's Newspaper Pagination System.

"Greater editorial control, extended deadlines, improved appearance, significant cost savings, higher profits—all thanks to pagination. Triple-I's people and products have come through for us since day one of production. Add it all up and that's why the Pasadena STAR-NEWS is in pagination to stay," says Applebee.

Find out why Information International systems have an impressive array of production proven, cost-justifiable benefits.

Call triple-I today.

Increasing Reporters' Paychecks Would Result in Better, More Profitable Newspapers

BY TUCKER SUTHERLAND

Starting pay for reporters is fringing on the criminal. If any other industry paid professionals as poorly, it would be a major news topic; but, I guess, because the enemy is us, it is not exposed.

Pay for journalists has always been a sensitive topic with some publishers. Twenty years ago when I worked for the Texas Daily Newspaper Association, a publisher resigned because of a program I wrote that required interns be paid.

Historically, ours has been recognized as a low-paying profession, but at least we were able to point to teachers as a group paid worse. Unfortunately, we don't have educators to look down on anymore. Today, teachers are starting at pay levels higher than reporters, as are all other college graduates and most blue-collar workers. It is interesting that the emphasis on better education and increased pay for teachers that has swept the country was spearheaded by newspapers.

Why should we as publishers and editors be concerned? There are some very important business reasons, but, frankly, I think the problem has become so serious that there is a humanitarian issue now involved. We are not paying reporters a living wage. In many cases, without parental help or a working spouse, reporters lack enough money for the bare necessities. (At least, I guess this is an effective way to fight drug and alcohol abuse among people working in the newsroom: They can't afford it.)

If you have the stomach for it, take the time to sit down with one of these young journalists and try to figure out how they are surviving on what you pay.

Before going on, let me make two disclaimers. First, I am certainly in a position to help solve this problem and have done little more than pay it lip service. So, I include myself in the criticism. Secondly, I know some publishers and editors do better than the averages on which I base my case. So some are less guilty than others.

In many cases, without some help, reporters lack enough money for the bare necessities.

Tucker Sutherland

College graduates starting as daily newspaper reporters last year were paid a median of $13,500 a year or $260 per week. But for smaller dailies it was more like $200 per week. $300 per week should be an absolute minimum—and that is still less than teachers make.

One of the ideas I used to promote was for editors to hire more secretaries to handle many of the duties performed by reporters. Then someone pointed out the average starting pay for secretaries is $15,869, which is 18-percent higher than that for reporters.

But let's look at the practical side of why we need to pay more to journalists. The biggest problem we face is lack of circulation growth. If our household penetration continues to decline, we are going to lose our advertising customers and our ability to increase advertising and circulation rates.

This means profits will suffer, and we will not be able to pay publishers and other executives as well as we do today. Now *that* is really serious, and I know you agree it deserves a solution!

We can blame our lack of circulation growth on lots of things—people are too busy to read, they are too lazy to read, they cannot afford newspapers because of inflation—but the real problem is we have not been meeting their needs. We are not making our newspapers relevant to their lives. Too many people are finding newspapers dispensable as a source of information and entertainment.

This problem can only be solved in the newsroom, and it will only happen if we make a greater investment in the raw product—the journalists. We should look at higher pay for journalists as just that, an investment. I know the return on investment is there. I have seen it happen.

We have an editor in our company, Glenn Dromgoole, who has tenaciously fought the battle for higher pay for journalists. He has been the editor of two of our newspapers, and I don't think there has been a year he did not increase circulation and market penetration. He has not done it only by winning a bigger share of the budget for editorial; he also has matched the newspaper's investment by demanding high quality and high productivity. He has sacrificed body count to gain better people at higher pay.

I am convinced that serious attention to this problem by publishers and editors can produce a dramatic upturn in the future and fortunes of daily newspapers. If we recruit and retain the best and the brightest, there is no other reason we cannot make our newspapers more relevant, more useful, more interesting and just plain indispensable. ☐

Carol Green

Road from reporter to labor negotiator paved with opportunity

BY CLARK NEWSOM
presstime labor writer

There probably are as many theories about how women can get ahead in the newspaper business as there are about why they haven't moved any faster already.

Carol H. Green has her own approach toward climbing the corporate ladder—go the non-traditional route, recognize that "everything in life is an opportunity," and be willing to work hard.

There are two undeniable things about Green's approach. First, it depends on her own initiative rather than on the good will of others; and second, it certainly has worked for her.

Today, Green, erstwhile star reporter on a mid-size Southern daily, is vice president of human resources and legal affairs for The Denver Post.

At 42, she is responsible for labor negotiations with nine unions and the administration of personnel policies for 1,400 employees. She also is general counsel for the newspaper, an officer and director of The Denver Post Corp. and is one of the seven-member senior executive team managing the newspaper.

Her performance has drawn high praise from colleagues in the newspaper, legal and other professions within which she moves. Typical of her impact on others is the reaction of her boss, Richard T. Schlosberg III, publisher and chief executive officer of The Post.

"She's one of the most competent and effective newspaper executives I've ever worked with," says Schlosberg. "She's tough-minded, with high intellectual capacity combined with strong insights and sensitivity to others."

Green's motivation has been more toward achievement than toward spearheading a women's movement within the walls of the newspaper industry. Nonetheless, her experience has left her with strong beliefs about how women should help themselves move up the ladder. "Women have to learn to become tough negotiators on their own behalf," she says.

Her practical advice for her female colleagues is tough and explicit: "Go for the areas of work that are traditionally not considered to be female areas—for example, in the newsroom, go for hard news, business or sports. On the business side, train yourself for non-traditional areas such as circulation, labor or outside sales. Ask for opportunities when they open up, take seminars, volunteer for the hard projects and take risks. On the personal side, don't develop any romantic involvements with anyone at the newspaper."

Green was born in Seattle but grew up on a farm in Northern Louisiana where she was raised by her grandparents. She joined the Shreveport (La.) Times in 1965 after receiving a bachelor's degree in journalism and history from Louisiana Tech University in Ruston. She had served as the paid editor of the school newspaper, The Tech Talk, for two years.

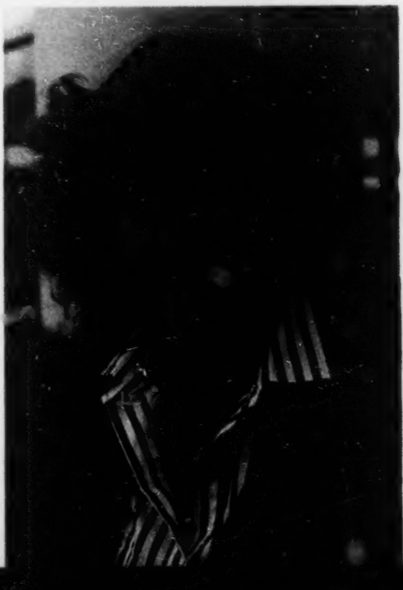
She came to the Times as an "exceptionally talented" reporter, recalls Raymond L. McDaniel, the newspaper's former editor, now retired.

Green's next move was an early example of her willingness to take the non-traditional step. She left the Shreveport paper after two years to work for a year as a reporter for a daily in Guam. The opportunity to work overseas was "too tempting to resist," she says.

Returning stateside, she joined the Post as a reporter in 1968.

In 1977, an event occurred that changed her career path. She was selected as one of the five participants in the first group of journalists to attend Yale Law School's Master of Studies in Law program, which gave her the first year of law school.

In 1978, while still working at the Post as an editorial writer and assistant editor of the editorial page, she attended night school at the University of Denver College of Law, graduating in 1979 and passing the bar in 1980. She subsequently served as the Post's in-house counsel and became labor relations manager in 1981.



When Green encountered obstacles in her career path, she attacked them with a resolve and a willingness to take chances that have marked her march to the top.

"I found that during the period I was learning labor negotiations that I had to struggle for opportunities to learn, and I was considerably underpaid," she says. "I overcame that by being stubborn about my right to be a full participant in labor strategy and policy and by leaving the newspaper business for a couple of years and gaining more training before I returned."

That sabbatical—two years with the largest law firm in Denver—allowed her to hone her litigation skills defending suits in libel and employment law.

One day in 1985, she received a telephone call from Schlosberg inviting her to lunch. During the meal, Schlosberg persuaded her to return to the Post.

She's happy that she did. Her job, she says, "is extremely challenging and an opportunity to help shape the future of the newspaper." Perhaps the most challenging aspect is "finding a way to turn conflict into a 'win-win' situation for both sides, and at the same time achieving management goals."

Post Editor David Hall notes that Green understands the total newspaper operations. "It is rare in this business to get to work with an executive . . . who has the depth of knowledge she has," he says.

"Carol is absolutely dogged and determined, and at the same time a very decent person," says Michael J. Rybicki, a partner in the Chicago office of the law firm Seyfarth, Shaw, Fairweather & Geraldson. Rybicki, who has worked with Green on legal matters, adds that she "works incredibly long hours."

Before returning to The Post, Green spent a month discussing the American news media and the law with journalists, lawyers, students and government officials in Egypt and India on behalf of the U.S. Information Agency.

That trip was just one more example of her following her personal philosophy: "Everything in life is an opportunity, and the best way to achieve meaning in life is to follow the potential and see where it leads."

Green, who is divorced, says she is an "avid" skier, horseback rider, traveler and "very amateur" photographer. ☐

SYMMETRY® ON SUNDAY

The New York Times
Dallas Life Magazine
The Dallas Morning News
GRAHAM: TEXAS' SAFEST CITY
News/Sun-Sentinel
Dallas Times Herald

IT UPGRADES YOUR SUNDAY MAGAZINE. IT ATTRACTS NEW ADVERTISERS.

If your objective is to improve your Sunday magazine, to increase ad pages, revenues and circulation…in an environment that reproduces color advertising and editorial with virtually all the subtlety and fidelity you see in national magazines…then you should examine Symmetry® supercalendered paper.

Color reproduction on Symmetry's satin-like, polished finish will satisfy the most discriminating advertiser. Coupled with quality editorial design, your Sunday magazine then becomes an enhanced setting for readers and advertisers alike.

The New York Times Magazine is one example. With advertising sagging in the mid-1970's, it turned to Symmetry and Symmetry helped turn it around. Last year, The Times Magazine carried more advertising than any other U.S. magazine.

Symmetry's ability to balance quality with economy is catching the attention of some of America's leading newspapers. Join them — and follow the trend to upgraded Sunday magazines with upscale advertising and Symmetry.

LEGISLATION

Margaret Genovese

Listening as Martz testifies are (from left) Gene Kimmelman, Consumer Federation of America; James M. Fischer, Missouri Public Service Commission; and Ronald F. Stowe, Pacific Telesis Group.

Retain the diversity principle, ANPA tells Senate committee

In testimony Sept. 16 before the Senate Commerce Committee, ANPA said the diversity principle should be part of any legislation transferring jurisdiction over the AT&T consent decree to the Federal Communications Commission.

The diversity principle holds that AT&T and the Bell regional operating companies should not be allowed to own or control the information carried over their monopoly facilities.

The committee heard testimony on S 2565, sponsored by Majority Leader Robert J. Dole, to shift control over the decree from U.S. District Judge Harold H. Greene to the FCC [**presstime**, Sept. 1986, p. 40].

"Telephone company monopoly power over the transmission of electronic information services is as strong now as it ever was," Uzal Martz, chairman of the ANPA Telecommunications Committee, told the Senate committee. "Accordingly, the reasons justifying an unequivocal retention of this diversity principle are just as compelling today as they were four years ago, when extensive legislative and judicial proceedings resulted in the Senate's adopting it in S 898 and Judge Greene including it in the consent decree."

Martz, president and publisher of the Pottsville (Pa.) Republican, said any shift of the consent decree's administration from Greene's court should include a provision barring AT&T and the Bell regionals from entering the electronic information services business while they have monopoly power. He suggested that when a telephone company controls less than 75 percent of the market for local or long-distance telephone service, it could be viewed as no longer having a monopoly.

"However, before it could then enter the electronic information services market, it would still be required to demonstrate that there is no substantial possibility that it could use its market dominance to impede competition, and clearly defined protective safeguards would need to be met," he said. □

FOIA clampdown

The House Sept. 22 passed a bill by voice vote that would change procedures for processing requests for business information under the Freedom of Information Act.

Under HR 4862 businesses would mark certain records confidential. Government agencies would notify the businesses when FOIA requests are made for those records and give them an opportunity to oppose release [**presstime**, July 1986, p. 64]. □

COURTS

Eyes right: New lineup on court

BY LISA M. DAWSON

All eyes will be on the lookout for a possible shift to a more conservative philosophy when the U.S. Supreme Court convenes Oct. 6 for its new term.

The swearing in of William F. Rehnquist as chief justice and of Antonin Scalia as associate justice could tilt the balance against the press in certain instances, some media observers fear [**presstime**, Aug. 1986, p. 37]. Rehnquist is viewed as more conservative than the man he succeeded as chief justice, Warren E. Burger; and as Rehnquist's replacement on the nine-member court, Scalia brings to the job a legacy of decisions viewed as unfriendly to the press.

Confirmed by the Senate Sept. 17—Rehnquist with 33 opposing votes and Scalia unanimously—both were sworn in Sept. 26.

Among the cases already accepted for review in this term are two in which the media have a big stake.

In *Arkansas Writers' Project Inc. v. Ragland, Commissioner of Revenue*, the court has been asked to decide whether an Arkansas statute that exempts newspapers and certain magazines (but not general-circulation magazines) from a general sales tax is constitutional [**presstime**, Aug. 1986, p. 40].

The Writers' Project publishes Arkansas Times Magazine, a general-interest monthly that was denied an exemption under the statute. The Arkansas Supreme Court held that the exemption was not applicable to the Times because the statute was intended to exempt only newspapers and religious, sports, professional and trade publications—not general-interest magazines.

Relying on the Supreme Court's decision in *Minneapolis Star & Tribune Co. v. Minnesota Commissioner of Revenue* [**presstime**, May 1983, p. 29], the Writers' Project argued that the Arkansas tax plan

---

Dawson is a paralegal in the ANPA Legal/Government Affairs Department.

has the same effect as Minnesota's because the latter also singled out only a few to be taxed.

ANPA joined The Miami Herald Publishing Co. in a friend-of-the-court brief presenting a historical view of taxing the press and stressing that taxes on information are constitutionally suspect.

The court has also agreed to hear an appeal brought by the Department of Justice regarding the requirement of the Foreign Agents Registration Act that the label "political propaganda" appear on certain films. In *Meese v. Keene,* the government seeks reversal of a District court ruling that use of the words "political propaganda" violated the First Amendment.

At issue are three films, two on acid rain and one on nuclear war, produced by the National Film Board of Canada. When the films were submitted to the Justice Department in accordance with the act, the department found them to be "political propaganda, from a foreign source," and subject to the act's registration and source-disclosure requirements.

Besides these two accepted cases, the court has been asked to hear several others including:

- *Janklow v. Newsweek Inc.,* on whether allegedly defamatory suggestions are constitutionally protected assertions of opinion or statements of fact. Also at issue is whether opinions based on misrepresented facts should still be given First Amendment protection.

South Dakota Gov. William Janklow claimed he was defamed by a Newsweek article suggesting that while serving as state attorney general he sought prosecution of Indian activist Dennis Banks in revenge for Banks' initiation of rape charges against Janklow in tribal court.

The charges have been acknowledged to be false. Janklow claims the Banks prosecution preceded the tribal court allegations.

- *LaRouche v. National Broadcasting Co. Inc. et al.,* on whether a lower court erred in allowing an NBC reporter to testify in a public-figure libel trial about information received from confidential sources but not ordering the journalist to identify those sources.

The 8th U.S. Circuit Court of Appeals affirmed a District Court's finding that LaRouche had not exhausted all reasonable alternatives in his attempt to secure the identity of NBC's confidential sources. The case arose from two NBC programs about LaRouche and his political organization.

- *Fleming v. Moore,* on whether the Virginia Supreme Court erred in upholding a large damage award in a non-media libel case. The case centers on an editorial-type advertisement titled "Racism" that was placed in a newspaper by a black real estate developer. He ran the ad after local officials turned down his application to develop property. A white professor with adjoining property was mentioned in the ad.

An all-white jury awarded the professor $233,333 in damages. The Virginia Supreme Court upheld the award for punitive damages, stating the real estate developer had acted with reckless disregard of the truth, therefore satisfying the actual malice standard.

- *Jersawitz v. Noonan,* on whether a Bureau of Prisons regulation limiting personal interviews with inmates to radio or television stations licensed by the Federal Communications Commission is constitutional. Jersawitz, a self-employed journalist, claims the regulation violates equal protection rights.

The 11th Circuit upheld the regulation, finding that it served a significant goal by way of preserving order and security in a maximum-security prison. ☐

COURT BRIEFS

- Capital Cities/ABC Inc. and its subsidiary, the Kansas City Star Co., reached settlement with 263 of the 267 independent-contract carriers who had sued over termination of their contracts. Announcing the **$28-million settlement** Sept. 5, the company said settlement offers remain outstanding to the four remaining plaintiffs.

The dispute arose in 1975 when the Star Co. first considered changing its delivery system from independent contract carriers to delivery agents.

According to the carriers' attorney, Steven G. Emerson, the agreement settles claims in two lawsuits—one in a state court over contract issues and one in federal court over alleged overcharging for newspaper copies [**presstime**, Jan. 1985, p. 44].

- Three independent distributors have filed a $45-million, class-action antitrust suit against The Pensacola (Fla.) News Journal Inc., several of the company's employees and its owner, Gannett Co.

The distributors claimed in U.S. District Court that the defendants **unlawfully conspired to set prices** at which carriers sell The Pensacola News Journal and USA Today. The defendants have denied the charge.

In a related development, according to Lawrence J. Aldrich, senior legal counsel for Gannett, The Pensacola News Journal will discontinue its independent-contract carrier distribution system Oct. 4 and go to a delivery agent system, in which carriers are paid a fee for their services.

- The Winnipeg (Manitoba) Sun was found guilty Sept. 5 of **contempt of court** for publishing the criminal record of a man accused of robbery prior to his being convicted.

Queen's Bench Judge Vern Simonsen ruled that printing the story risked prejudicing the case. He ordered the newspaper to pay $200 in court costs.

- A three-judge panel of the U.S. Court of Appeals, District of Columbia Circuit, Sept. 19 ruled that the **"fairness doctrine"** is not required by law. The doctrine obligates broadcasters to "afford reasonable opportunity for the discussion of conflicting views on issues of public importance."

The ruling came in a case challenging the Federal Communications Commission's decision not to apply that doctrine as well as political reasonable-access and equal-time rules to teletext. ANPA had supported the FCC approach [**presstime**, May 1983, p. 33].

The court upheld the FCC's decision to exempt teletext from the reasonable-access rule and from the fairness doctrine. But the court reversed the commission's decision to exempt teletext from the reasonable-access rule and from the equal-time rule and sent it back to the FCC for further consideration.

The court's statement on the fairness doctrine is viewed by some as meaning the FCC may do away with the fairness doctrine.

- In a decision that overturned an earlier judgment in a related case, the Ohio Supreme Court ruled 4-3 that a column in The News-Herald of Willoughby was **constitutionally protected expression of editorial opinion**.

The 1975 column said two school officials lied at a hearing, and it spawned separate libel suits. In 1984, when it heard an appeal in the first case, the court ruled that the statement at issue was an assertion of fact, not opinion. That case was appealed by the newspaper to the U.S. Supreme Court, which declined to hear it [**presstime**, Oct. 1985, p. 42].

The recent decision came on an appeal of the second case.

REGULATIONS

Detroit dailies oppose JOA hearing

Detroit's daily newspapers have asked Attorney General Edwin Meese III to disregard the recommendation of his Antitrust Division and approve their proposed joint operating arrangement—without a public hearing.

In an Aug. 25 response to the Antitrust Division's call for a hearing, the newspapers said the Detroit Free Press is continuing to suffer "substantial losses." They maintain that the Free Press is a "failing" newspaper as defined by the Newspaper Preservation Act.

The two dailies said the losses for the Free Press, owned by Knight-Ridder Inc., totaled $8.3 million in the first six months of 1986, about 18 percent more than during the comparable period in 1985. The Detroit News, acquired by Gannett Co. in February, lost $3.5 million during the first half of this year, they said.

The dailies also said: "Although the report of the Antitrust Division weaves a web of 'maybes' and hopes, offering threads of promise for the future of the Free Press, the uncontroverted facts . . . make clear the reality of continuing substantial losses that the Free Press confronts."

The deadline for public comment on the plan has been extended for a second time and is now Oct. 23 [**presstime**, Sept. 1986, p. 39].

The extension will allow the newspapers and the Justice Department to settle an issue regarding confidentiality of some documents supplied to the department.

According to a department spokesman, the newspapers requested that some 30 boxes of documents not be put on the public record on the case. He said the department informed the newspapers Sept. 23 that it would honor their request for confidentiality for some, but not all, of the documents. The department set up a process whereby the newspapers could appeal that decision.

Meese may make his recommendation on the JOA application any time after the comment period. He can approve it, deny it, or order a public hearing. ☐

ANPA helping FCC on press-radio licensing

Beginning Oct. 22, a newspaper or wire service seeking to obtain a new license for a two-way mobile radio system or to modify an existing license will submit the application to ANPA, instead of directly to the Federal Communications Commission.

Under its new responsibility as the FCC-certified "frequency coordinator" for the Relay Press Radio Service, ANPA will review each application and recommend a frequency within the block of frequencies set aside for press use. It will submit its recommendation to the FCC, which will make the final decision on granting the license.

The Association has contracted with Spectrum Management Systems Inc. of Arlington, Va., for assistance in developing a computer database of licensees, establishing management procedures and performing certain technical tasks.

Spectrum, a wholly owned subsidiary of Special Industrial Radio Service Association Inc., will work with the ANPA Telecommunications Department. According to Kathleen Criner, ANPA director/telecommunications affairs, the Association is considering establishing an advisory group of newspaper executives to provide technical advice.

In November, the Association will send copies of licenses on file with the FCC to the licensees and ask them to review the documents for accuracy, Criner said. "Looking down the road," she said, "what we hope to be able to do is get a better sense of how newspapers are using mobile frequencies and identify opportunities for new applications."

ANPA will charge a basic fee of $105 per application for the frequency coordination service, with additional fees depending on the number of proposed base stations. In addition, the FCC is charging a separate fee of $30.

Questions regarding the service and ANPA's role may be directed to Criner at The Newspaper Center in Reston, Va. Applications should be submitted to ANPA c/o SMS, 1700 North Moore St., Suite 910, Arlington, Va. 22209.

The Association sought and obtained FCC certification as the frequency coordinator for the Relay Press Service when the FCC ordered that all private radio services have such committees [**presstime**, May 1986, p. 60]. ANPA acted to ensure that newspapers would continue to have primary access to the service. ☐

Donrey's cellular system exceeds expectations

The cellular radiotelephone system in Tulsa is exceeding growth predictions, said William G. Babb, general manager. Called Cellular One, it is 92-percent owned by a subsidiary of Donrey Media Group, which publishes 48 daily newspapers and 55 non-dailies, mostly in Western states.

Marketing of Cellular One began in the spring of 1985, and the system began operating last March. Babb said the Tulsa operation is no different from other cellular businesses in that it generally takes "three to five years before you get into the black, and five to seven years before you get into a payoff."

Donrey is one of a handful of newspaper-related companies that currently own cellular radiotelephone systems [**presstime**, Aug. 1986, p. 6]. ☐

New York Times assists in information service

An electronic information service, New York Pulse, was introduced in September to New York area consumers. The service is provided by a New York Times Co. subsidiary and Covidea, a partnership of several companies.

Through their personal computers, users of the service will have access to news, sports scores, restaurant and theater information, business and other information [**presstime**, Dec. 1985, p. 42]. ☐

Dow Jones offers new business report

A summarized business report is being offered by the Dow Jones News/Retrieval service for computer users. The report joins more than 40 other databases that provide business and financial information through the service.

The Business Report is described by Dow Jones officials as a "snapshot" by which a user can get a quick look at updated business news, with a cross-reference to more detailed information.

Dow Jones also announced an electronic link with Westlaw, a legal-information service. Westlaw customers will be able to combine News/Retrieval's financial information with the legal service. ☐

Enterprise vows to appeal rate decision

The publisher of a free-circulation newspaper, thwarted in proceedings before postal authorities, said he will file another court appeal in a continuing fight for the right to use relatively low second-class rates.

Ron Bailey, publisher of The Enterprise of Winchester, Tenn., said he will appeal to the U.S. Circuit Court of Appeals an adverse decision of the governors of the U.S. Postal Service.

The governors Sept. 19 upheld a recommendation from the Postal Rate Commission, which said existing postal rules constitute "the least restrictive means" of determining second-class eligibility. The Enterprise, it said, must use more expensive third-class rates for subscriber delivery.

The panel relied heavily on its decision in a similar case last November, in which it found the free-circulation River Parishes Sun of LaPlace, La., did not qualify for second-class rates even though it carried a full plate of local news [presstime, Jan. 1986, p. 27].

At issue is the requirement that more than 50 percent of a newspaper's circulation must be paid in order for the newspaper to qualify for subsidized, in-county, and most other second-class rates.

For more than three years, The Enterprise has been trying to win the right to use second-class rates. It initially took its case to U.S. District Court, which ruled the paper has a right to the lower rates. A federal appeals court overturned that decision without examining the case's merits; the court said The Enterprise should have exhausted administrative remedies before seeking court relief. An administrative appeal led to the rate commission's decision July 31.

Bailey said he still feels the paid-subscriber rules are "totally discriminatory" and vowed to take his case to the appeals court for a hearing on the merits of his argument.

The Enterprise and River Parishes Sun were two of four free newspapers seeking second-class mail rights. The other two are now defunct. One of them, The Weekly of St. Louis, lost a lawsuit in U.S. District Court on jurisdictional grounds. The other, The Gulf Times of Beckley, W.Va., dropped its lawsuit in U.S. District Court after it went out of business. ☐

ANPA Assistant General Counsel Tonda F. Rush (center) discusses postal issues with Elliott R. Paul (right) of Calkins Newspapers, Levittown, Pa., and Al Smith of the Columbia, S.C., papers at an ANPA-International Circulation Managers Association reception Sept. 9 in Washington, D.C. It was held during the annual National Postal Forum.

Four dailies file complaint with Rate Commission over new second-class TMC rules

Four daily newspapers have blasted a new postal rule that attempts to ban delivery of total-market-coverage papers via second-class mail. They also said the rule was implemented improperly.

The rule in question took effect July 20 after publication in the Federal Register five days earlier.

Among other things, the rule bars a TMC publication from traveling under a newspaper's second-class permit if the number of non-subscriber copies "is more than twice the number of copies of any other single issue of the parent publication distributed through the mails during the same week."

The restriction came on top of previous rule changes effective in June also made to clamp down on second-class TMC [presstime, Aug. 1986, p. 38].

The Sacramento Bee, the Des Moines Register, The Tennessean of Nashville and the Nashville Banner said in a complaint at the Postal Rate Commission that the newest rule is a "clumsy and broad-gauged effort" to deal with TMC. They said it could have an adverse impact on newspaper issues not designed to be TMC papers—by requiring a newspaper to have separate permits to mail its regular issues on different days, for example.

The newspapers also said the new rule amounts to an improper change in mail classification. ☐

POSTAL NOTES

- The House and Senate appropriations committees have approved postal funding levels for the new fiscal year that would result in **no rate increases** for so-called "preferred" mail, including the in-county, second-class category.

Although Congress had not taken final action by press time, ANPA postal experts believed the appropriations levels would be passed intact. The new fiscal year began Sept. 27.

- Another postal-rate-related bill is given a **slim chance of adoption** this congressional term. One part of the bill would benefit many newspapers by reinstating a subsidy for mailing fewer than 5,000 copies of a second-class publication in a contiguous county of publication [presstime, Sept. 1986, p. 43].

But another part would work to the detriment of at least one newspaper company—the Journal Newspapers of Springfield, Va. The bill would limit use of relatively cheap in-county rates to 20,000 copies. Three of the five Journal dailies have in-county mail circulations of more than 20,000.

The company would have to pay more expensive, regular rates for about 75,000 mail copies each day. That would add hundreds of thousands of dollars to its annual postal bill, Journal officials said.

Guess Which One Will Grow Up to Work in the Newspaper Industry?

Photo: Ed Bernik

As things stand now, there really isn't too much guesswork involved.

It's just a tainted fact of our business that there are fewer minorities represented in our work force. Whatever the reason for this discrepancy, the cost to our industry is tremendous because it influences the career decisions of our youngsters and limits their creative impact on our final product.

Support minorities in your hiring process. They've got a lot to offer as pressmen, machinists, typesetters, sales people, artists and management. And you've got a lot to gain.

Media press Soviets on Daniloff

Leaders of 11 major U.S. media organizations in late September were awaiting a response from Soviet leaders to their appeal for permission to send a delegation to Moscow to press for the release of American journalist Nicholas S. Daniloff.

The appeal, in telegrams to Soviet General Secretary Mikhail S. Gorbachev and other leaders in the Kremlin, was disclosed at a Sept. 22 press conference in Washington, D.C., regarded as an unprecedented joint action by the press groups.

"We view Mr. Daniloff as an exemplary journalist," the organizations said. "We believe his continuing detention needlessly worsens relations between the Soviet Union and the United States. We are concerned by the serious implications of this matter for members of the international press corps who are assigned to cover the Soviet Union."

At the same time, the media representatives sent a letter to the Soviet embassy in Washington, D.C., applying for visas. Although they left the dates of the trip open, they said they hoped that it would take place within two weeks.

Daniloff, Moscow correspondent for U.S. News & World Report, was arrested Aug. 30 and charged with espionage after he met with a Soviet acquaintance and accepted a package that was said by the Soviets to contain secret materials. He was imprisoned for two weeks then released to the custody of the U.S. ambassador in Moscow while awaiting trial.

The United States contends that Daniloff was set up by the Soviets after the FBI on Aug. 23 arrested Gannadi F. Zakharov, a member of the Soviet delegation to the United Nations. Zakharov, accused of espionage, was released to the custody of the Soviet's U.S. ambassador in a deal to get Daniloff out of jail.

"Nick Daniloff's fate is not just a matter for state-to-state negotiations," said Richard J.V. Johnson, immediate past president of ANPA, at the media's press conference. "The American news media have a direct interest in the outcome; and as their representatives, we will do all we can to press for Mr. Daniloff's release—and for an understanding that nothing like this will happen again," said Johnson, president of the Houston Chronicle.

Michael G. Gartner, president of the American Society of Newspaper Editors, called the press conference the first such gathering in memory. "I believe it shows the gravity of our concern about the issue of using an American reporter as a pawn in international affairs," he said.

ANPA, ASNE and the other groups came together to show their "unity," "concern" and "dismay" over the Daniloff affair, said Gartner, editor of The Courier-Journal and The Louisville Times.

Eugene L. Roberts, executive editor of The Philadelphia Inquirer and president of Philadelphia Newspapers Inc., said another reason for the meeting was to "get across a message to our correspondents in Moscow that we do, indeed, stand behind them. We do not want them to be inhibited. We want them to cover the news."

Asked what a delegation of media representatives could do that the government hasn't already done to free Daniloff, Roberts, chairman of the News Advisory Board of United Press International, said it was a "mistake to let only government do our talking for us. Then we appear to give substantiation to Russian charges, which we believe strongly to be untrue." Roberts, who was credited with "prodding" the media to act on the issue, added: "We feel the time has come to speak for ourselves and to act for ourselves."

Gartner said the group had not discussed what might be done to secure Daniloff's release, including the issue of a possible exchange for Zakharov.

However, USN&WR Chairman and Editor-in-Chief Mortimer B. Zuckerman said it was "outrageous to contemplate a swap." Zuckerman said he favored an "asymmetrical" agreement rather than an equal exchange.

He said he had no complaints with the way the U.S. government had handled the incident and was "particularly happy" that Daniloff's release from prison was negotiated. "Frankly, Nick Daniloff was going through, as he stated, mental torture in that prison," he said.

ANPA's Johnson spoke of the implications of the incident. "For every American journalist now in Moscow and for those who work there in the future, the stakes have suddenly soared," he said. "Where previously the worst fear for an enterprising reporter was expulsion, it is now arrest for a crime that is punishable by death or, at least, a long term in a Soviet prison."

Also at the press conference and signing the media's appeal in addition to ANPA, ASNE and the UPI advisory board were representatives of the American Committee of the International Press Institute, American Society of Magazine Editors, Associated Press Managing Editors, National Association of Broadcasters, National Press Photographers Association, Radio-Television News Directors Association, Reporters Committee for Freedom of the Press, and Society of Professional Journalists, Sigma Delta Chi.

Medical information curb sought

ANPA has alerted state newspaper association managers to be on the lookout in their legislatures for a model bill to restrict access to medical information.

The National Conference of Commissioners on Uniform State Laws passed the Health Records Act in August. Although the model bill goes to the American Bar Association for ratification in February, it already is available to the states, according to Tonda F. Rush, ANPA assistant general counsel.

NCCUSL is a group of legal experts, appointed by state governors, that recommends model state laws.

According to Rush, the proposed Health Records Act would prohibit any health care facility or provider, whether public or private, from disclosing any medical information about a patient except name, presence in the facility and general condition. Where a patient does not consent, even that information could be withheld, she said.

If the bill surfaces in their legislatures, state press association managers should check with newsrooms to determine how much medical information currently is available and how the bill would affect their news-gathering, Rush said. "The bill contains no exemption for public officials or for matters of public interest."

Prior to the August NCCUSL meeting, ANPA wrote to the commissioners opposing another model bill, the Uniform Criminal History Records Act. The Association said that bill would result in the sealing of most non-conviction criminal records in state information systems.

The measure obtained NCCUSL approval and also will come before the ABA in February. ☐

Dozen states have new libel or tort law

Legislatures in 12 states have passed bills this year having to do with libel or, more broadly, with tort reform.

According to a report by Kevin Grant, ANPA's state relations coordinator, five states enacted laws that specifically cover actions in libel:

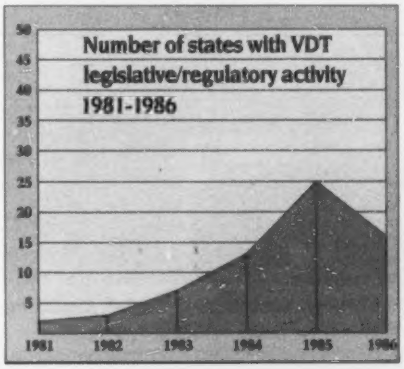
- Florida reduced the statute of limitations for bringing a libel suit from four years to two years.
- Georgia amended its retraction statute by extending the time period for publishing a retraction from three days to seven days.
- Oklahoma limited punitive damage awards in libel cases to 50 percent of actual damages unless the court finds the defendant acted with wanton and reckless disregard for the rights of the plaintiff.
- Vermont required courts to award "costs and reasonable attorney fees" to prevailing defendants in a defamation suit if the court finds the action was "frivolous and without merit."
- Washington limited damages for pain and suffering that a libel or privacy plaintiff can recover, according to a formula.

At press time, libel-related bills were still pending before legislatures in two states, California and Pennsylvania. Grant said it is unlikely the bills will pass this session. Grant said seven other states have enacted broad tort revision laws that may have some general application to actions in libel. ☐

VDT bills expected in 17 state legislatures

Legislation that would affect the use of video display terminals is expected to be introduced in 17 states in 1987, according to the ANPA Legal and Government Affairs Department.

As the accompanying chart shows, the number of states considering VDT bills since 1981 steadily increased before peaking at 25 in 1985 and dropping to 16 this year. To date, no state has passed legislation that would affect employers in the private sector. Two states, Connecticut and Maine, passed "study" bills, and the governor of Oregon vetoed a VDT bill [presstime, Aug. 1985, p. 36]. ☐



Alberto Pacheco

A behind-the-scenes look at libel

Reform of U.S. libel and privacy laws is necessary and will happen, says Rodney A. Smolla, associate law professor at the University of Arkansas, Fayetteville. The reason, he claims, is that neither the media nor the public is satisfied with current law.

Smolla examines these and related issues in *Suing the Press: Libel, the Media & Power*. The book focuses on economics of media litigation and the cultural forces that have a bearing on libel judgments.

The 280-page, hard-cover book is available for $18.95 from Oxford University Press Inc., 200 Madison Ave., New York, N.Y. 10016.

The impact of political reporting

How much influence does the press really have in political reporting? Thomas C. Leonard, associate professor of journalism at the University of California at Berkeley, says in *The Power of the Press: The Birth of American Political Power* that political reporting today has much more clout than in the past.

However, that clout has become a double-edged sword, he argues. On one hand, it has fostered interest in democratic government; on the other, it has threatened political participation, Leonard says.

The 276-page, hard-cover book, which costs $22.50, was published by Oxford University Press Inc., 200 Madison Ave., New York, N.Y. 10016.

J-schools should teach management, too

Journalism schools emphasize the editorial side of newspapering, and students often are not familiar with other aspects of the business, says W. Parkman Rankin in *The Practice of Newspaper Management*.

Rankin, associate professor at Arizona State University's Walter Cronkite School of Communications and a former newspaper executive, discusses newspapers' advertising, circulation and promotion departments and the roles of the heads of each within the "corporate culture."

The 168-page, hard-cover book is available for $29.95 from Praeger Publishers, 88 Post Road W., Box 5007, Westport, Conn. 06881. ☐

Coverage of men, women appears more balanced than in past

BY GUIDO H. STEMPEL III

Many studies in recent years have compared the coverage of men and women. The typical finding is that men get better coverage, but it's not usually clear whether this reflects coverage or the actual status of women in contemporary American society.

Guido H. Stempel III

A study by Diane Silver in the Spring 1986 Journalism Quarterly offers a new perspective on this. She studied coverage of male and female officials in 21 Michigan newspapers for a nine-week period in 1983.

She found that men did get better coverage, but that when the analysis was controlled for occupation and seniority, coverage was nearly the same. For example, two members of the Michigan Legislature, one male and one female, who had been in office the same length of time, would tend to get comparable coverage.

She also found untrue the frequent complaint that news stories about women tend to mention attire, physical attributes and marital status more than similar stories about men. She concluded that perhaps the press is working harder at trying to avoid being sexist in coverage.

Silver, now a reporter for the Wichita Eagle-Beacon, did the study for her master's thesis at Michigan State University.

Ever since *Near v. Minnesota* in 1931, the U.S. Supreme Court has consistently upheld the right of the press to publish material that it has acquired. At the same time, the Supreme Court has usually said that there is no First Amendment right to report, no right of access to the news.

A major breakthrough came in 1980 in *Richmond Newspapers* when the Supreme Court said that the Sixth Amendment meant the press has a right to report trials.

Recent Supreme Court cases seem to be expanding the right, according to Ann L. Plamondon, associate professor of communication and theater at St. Mary's College of Indiana. In her article in the Spring 1986 Journalism Quarterly, she singles out three Supreme Court decisions:

- In *Press Enterprise Co. v. Superior Court of California,* the court ruled that the precedent from *Richmond Newspapers* covered jury selection as well as the trial.
- In *Waller v. Georgia,* the court ruled that the closing of a hearing on whether or not evidence should be suppressed was improper.
- In *Seattle Times Co. v. Rhinehart,* the court ruled that information disclosed by the discovery process could be restricted by protective order. However, the justices made it clear that this applies only to material that is truly sensitive, invades privacy or discloses trade secrets. Most discovery material is to be public.

The critical question is whether the court will see fit to extend the right to report to other areas of government.

• • •

It's generally believed that Roy Peter Clark started the writing coach movement when he took on that role for the St. Petersburg Times in 1977. Today there are probably more than 200 newspapers using their services.

What does a writing coach do? If you have a writing coach, does yours do pretty much what others do? You can find the answers to those two questions in an article by Rita Wolf and Tommy Thomason in the Spring Newspaper Research Journal. Both Wolf and Thomason are on the journalism faculty at Texas Christian University.

They report, on the basis of a national survey, that one-on-one conferences head the list of coaching activities. Coaches believe this is the most effective approach.

Organization is the area on which they spend the most time, and they believe it is the most common weakness of newspaper writers. Other major concerns are clarity and conciseness.

The great majority of writing coaches believe their efforts make a difference. ☐

Stempel is distinguished professor of journalism at the E.W. Scripps School of Journalism at Ohio University, Athens, and editor of Journalism Quarterly. He is a regular contributor to presstime.

Yellow Pages hurt newspaper revenues, but there are ways to fight back

BY CRAIG C. STANDEN

One major consequence of the breakup of AT&T has been the emergence of classified telephone directories, the so-called Yellow Pages, as a major competitor for newspapers' advertising business.

From their beginning in 1878 until 1984, the Yellow Pages were effectively controlled by AT&T, which through its subsidiaries accounted for 85 percent of Yellow Pages business. The others were produced by non-Bell phone companies (mainly GTE, United Telecom and Continental) and a large number of small companies—some in the phone business and some not—that published local directories. Except for these small local directories, there was very little overlap or serious competition among these companies.

The divestiture agreement between AT&T and the Justice Department prohibited AT&T from publishing Yellow Pages directories for seven years and required AT&T to turn the Yellow Pages business over to the seven regional "Baby Bell" companies.

That precipitated an explosion in the directory business. The number of Yellow Pages directories has grown from 6,200 in 1983 to an estimated 7,500 this year. This may not sound very explosive, but many of the 1,300 new Yellow Pages directories have been launched in the largest markets in the United States.

So, in that same three-year period, estimated Yellow Pages revenues have grown by a startling 56 percent, from $5 billion in 1983 to a projected $7.8 billion this year. And by 1988, Yellow Pages revenues are expected to be close to $11 billion—more than double 1983 revenues.

A lot of that is coming out of *our hide,* not only in local advertising but in national as well.

In 1985, local advertising—the cornerstone of our business—totaled $22 billion in U.S. daily newspapers. The Yellow Pages' 1985 local advertising revenues were $6 billion. but during that year, Yellow Pages revenues were up 15.4 percent, while local spending in newspapers increased only 7.6 percent.

As for national advertising, newspaper expenditures in 1985 totaled $3.3 billion, compared with $600 million for the Yellow Pages. But again, the Yellow Pages grew approximately twice as fast during the year, by 16.4 percent to newspapers' 8.8 percent.

Craig C. Standen

In an increasing number of markets, directories published by competing companies are pitted against each other. In New York City, for example, invader Southwestern Bell is promoting its new "New York Yellow Pages," against the local Baby Bell's "NYNEX Yellow Pages." Southwestern Bell is the most aggressive of the regional Baby Bell companies, publishing more than 1,000 directories in approximately 100 markets all over the United States.

HOW THEY SELL. The Yellow Pages have some powerful selling arguments. For example:

- 77 percent of all U.S. adults refer to the Yellow Pages in a typical month; 56 percent use the Yellow Pages in a typical week.
- The Yellow Pages reach prospects when they're ready to buy.
- The average person makes 1.83 references to the Yellow Pages per week.
- 83 percent of all Yellow Pages references result in user's contacting a store or business.
- 47 percent of all Yellow Pages references result in the purchase of a product or service. That's 21.4 million purchases per day.
- 54 percent of these Yellow Pages purchases were for $25 or more.

There are many more such statistics, but that will give you an idea. And if you were an advertiser, you'd find these sales arguments hard to resist.

Even more important to the success of the Yellow Pages has been their strategy of producing directories aimed at specific market segments. This strategy fits neatly with the target-marketing objectives of today's advertisers. In fact, some directories are targeting ethnic groups, specific industries and other segments of society.

In general, the large Yellow Pages publishers have aggressive, well-trained, professional sales organizations. Typically, the Yellow Pages sales person has a base salary of $28,000-$35,000, plus commission. Their employment ads state that an average sales person with no selling experience can make $40,000 per year. Industry sources say top Yellow Pages sales people earn more than $100,000 a year.

When a Yellow Pages sale is made in your market, it's a commitment for a year or more. This takes money out of the advertiser's budget and reduces his or her flexibility. In the long run, it means your paper almostly invariably receives a smaller share of the advertiser's total expenditure.

HOW TO FIGHT BACK. Of course, the Yellow Pages have plenty of weaknesses as an advertising medium.

- **Inflexibility:** There is usually a lead time of three months or more before the ad appears—and no chance to change the copy for a year or more.
- **Limits on ad content and creativity:** Most Yellow Pages won't accept competitive copy (for example, a claim like "lowest prices in town." Artwork and type selection are very limited.
- **Proliferation:** Many advertisers are now facing the need to choose from as many as half a dozen different directories in a single market.
- **Uncertain distribution:** Even if a directory is distributed to every household in a market, how can the advertiser be sure it is *used?* This is an especially strong argument for daily newspapers, which readers pay for because they want to read them.

Tom Fitzpatrick of the bureau's Marketing Department recently compiled a more detailed overview of the Yellow Pages as they relate to the newspaper business. If you'd like to receive a free copy, call or write me.

On a longer-range basis, the bureau is developing a workshop on selling against the Yellow Pages, which should be available sometime next year. ☐

Standen, president of the Newspaper Advertising Bureau in New York City, is a regular contributor to presstime.

Lesser increases in ad rates expected

Observers inside and outside the business are predicting that U.S. daily newspapers next year will continue their recent trend of whittling down advertising-rate increases.

The 1987 increases will average "in the range of 5 to 7 percent," said Robert C. Momson, president of the International Newspaper Advertising and Marketing Executives.

From "6 to 6½ percent on average," said Bruce Thorp, newspaper analyst for Lynch, Jones & Ryan.

According to the Newspaper Advertising Bureau, U.S. dailies' ad rates increased an average of 11.6 percent in 1982, 10.1 percent in 1983, 9.5 percent in 1984 and 8.6 percent in 1985. NAB has reported that increases through August of this year averaged 7.7 percent.

However, an annual study by a leading ad agency in New York City shows a somewhat different picture. Against the background of the recent decline in the rate of inflation and relatively stagnant total newspaper circulation, these modest increments take on greater dimensions.

According to figures compiled by Ted Bates Advertising, newspapers' ad-rate increases ranked second only to daytime television in 1986, when measured in terms of cost per thousand, or CPM.

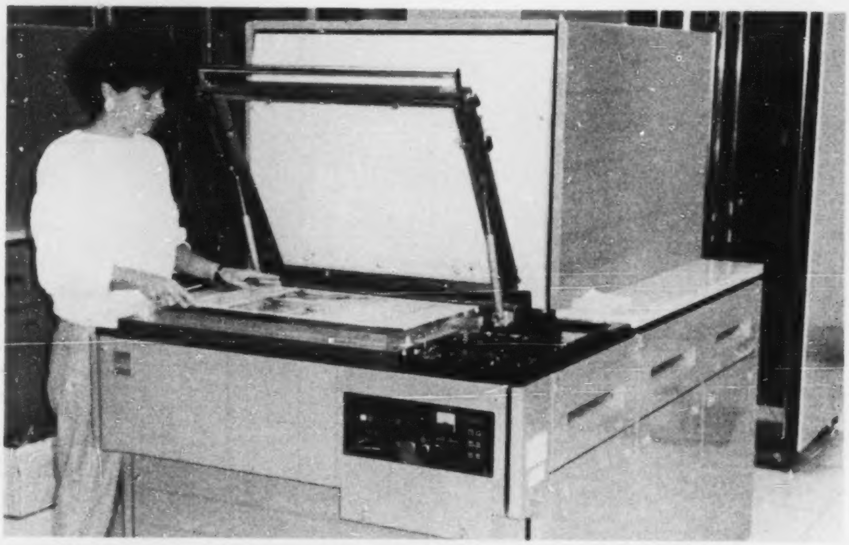
In the absence of major circulation gains by newspapers, some ad buyers consider even modest cost increases unjustified. "Newspaper costs have gone out of sight in relation to where the circulation has gone," said Jack Cohen, for DDB Needham Worldwide. "Therefore CPM has gone through the roof."

But some newspaper executives and analysts disagree.

In general, increases can be justified by "tremendous investments in plants and equipment," said INAME's Momson, vice president/marketing for the St. Paul Pioneer Press and Dispatch.

Frank J. Savino, vice president/marketing for The Record in Hackensack, N.J., said advertisers should consider the "dominant demographics" of newspaper readers, not just count CPM.

And with a "possible" rise in newsprint prices and an expected 3.5-percent rise in inflation next year, analyst Thorp said "anything less than a 6-percent increase (in ad rates) might hurt newspapers." ☐



Jeanne Bracken, traffic manager of AD/SAT, the system that will deliver national advertising to newspapers via satellite, places ad on scanner during final transmission calibrations at the AD/SAT Technical Operations Center in New York. The first demonstration transmission of material was scheduled for Sept. 29 [presstime, July 1986, p. 56].

Globe and Mail urges Canadian government to ban tobacco advertising

Citing the "harsh medical evidence of tobacco's effect on the human body," The Globe and Mail of Toronto has called on the Canadian government to ban the promotion of tobacco products.

In an Aug. 27 editorial advocating the ban, the newspaper—Canada's fourth-largest and only nationally circulated daily—said it no longer will accept tobacco advertising. "There must be compelling public interest before a government, or a newspaper, should take the extraordinary step of preventing a legal product's promotion. We believe that interest here is undeniable," the paper said.

In 1985, The Globe and Mail received $124,000 (Canadian) worth of tobacco advertising, according to Shirley Sharzer, associate managing editor. In the early 1980s the newspaper was averaging about $500,000 a year from tobacco advertising. "But the signals were going out from our publisher that we were probably heading in the direction (of refusing such ads), so the advertisers began to pull out."

Last year, two smaller Ontario dailies, The Whig-Standard of Kingston and The Recorder and Times of Brockville, stopped taking such ads [presstime, Oct. 1985, p. 34].

Canada has no legal restrictions on tobacco advertising. However, in accordance with a voluntary code adopted by Canadian tobacco manufacturers, tobacco ads do not appear on Canadian television and radio, and print ads carry a health warning. ☐

Scarborough sale assures study funding

An American subsidiary of VNU, the largest publishing company in the Netherlands, has agreed to acquire Scarborough Research Corp.

This move by VNU-Amvest comes two months after Simmons-Scarborough Syndicated Research Associates dissolved. Subsequently, the parent companies—Simmons Market Research Bureau and Scarborough—announced separately that each would continue industry-wide syndicated research for newspapers in the top 50 markets [presstime, Sept. 1986, p. 51].

"A number of people were concerned about the financing Scarborough would have, and I think that this (acquisition) answers the question," said Scarborough President Harold Israel. "The new relationship with VNU-Amvest ensures the funding required" for Scarborough's 1987 newspaper ratings study, said Executive Vice President Jay M. Cohen. ☐

Market research, suburban news join API's 1987 schedule

New programs on the use of market research and on coverage of suburban and community news will highlight the 41st year of seminars at the American Press Institute.

The two new seminars are:

- **Effective Use of Market Research**, Feb. 1-4. It will focus on new methods for using market data, surveys and audience research to build circulation and advertising growth. The emphasis will be on understanding and interpreting research and translating it into effective promotion, marketing and sales development plans.
- **Suburban and Community News Coverage**, June 7-12. It will address methods for improving and intensifying local news content, with special emphasis on coverage beyond a newspaper's metropolitan area. The program will center on the special nature of the suburban/regional newspaper audience and how best to reach it.

Thirty-two other seminars have been scheduled by API for 1987:

- **City and Metro Editors** (for newspapers over 75,000 circulation), Jan. 4-14
- **Editing the Weekly Newspaper**, Jan. 11-16
- **Circulation Managers**, Jan. 18-28
- **Newspaper Design and Graphics**, Jan. 18-23
- **Publishers and Chief Executives** (for newspapers under 75,000 circulation), Feb. 1-6
- **Executive Editors and Managing Editors** (for newspapers under 75,000 circulation), Feb. 8-18
- **News Editors and Copy Desk Chiefs**, Feb. 22-March 4
- **Weekly Advertising Executives**, Feb. 22-27
- **Marketing the Daily Newspaper**, March 8-13
- **Newspaper Production and New Technology**, March 8-13
- **Executive Editors and Managing Editors** (for newspapers over 75,000 circulation), March 15-25
- **Classified Advertising Managers**, March 22-28
- **Management and Costs** (for newspapers over 75,000 circulation), March 29-April 8
- **Advertising Executives** (for newspapers over 75,000 circulation), April 5-10

- **Editorial Page Editors and Writers**, Dec. 13-18
- **Newspaper Photojournalism**, Dec. 13-18

Thirty-one of the seminars will be for daily newspapers, and three will be for weeklies.

In addition, weeklies may nominate (along with dailies) people to participate in the seminars on Effective Writing and Editing, Newspaper Design and Graphics, and Developing Management Skills.

Two seminars (denoted by an asterisk in the above list) will again be offered at locations in California. Others will be at the institute in Reston, Va., adjacent to The Newspaper Center.

Seminar charges including housing and meal costs will be unchanged from this year. Tuition will continue at $715 for a nine-day seminar, $625 for a six-day seminar, $575 for a five-day seminar and $350 for a three-day seminar [**presstime**, Nov. 1985, p. 57].

To participate, an applicant must be nominated by a newspaper's principal executive. Additional information and forms can be obtained from API Director Frank Quine, 11690 Sunrise Valley Drive, Reston, Va. 22091.

API has held 660 seminars attended by 19,161 members since 1946. ☐

Accrediting plan draws objections; changes planned

A proposal to restructure radically the journalism school accrediting body has encountered opposition from some of its constituent groups.

And portions of the plan may not comply with guidelines established for accrediting organizations by the Council on Post Secondary Accreditation, according to John M. Lavine, president of the Accrediting Council on Education in Journalism and Mass Communications.

Lavine, editor/publisher of the Lavine Newspaper Group of Chippewa Falls, Wis., said he would discuss the matter with officials of COPA, which is an education organization. He planned to do so on Sept. 29, at a COPA hearing in Chicago on whether to recognize ACEJMC as an accrediting agency for another five years.

Under the plan, drafted in June, ACEJMC would be pared from 35 to 13 members—five communications professionals, five educators, two public members and a president elected at large. One educator and one professional would be chosen to serve on the council by each of five accrediting committees representing segments of the communications field. The commitees would be made up of people from professional and educator organizations [**presstime**, July 1986, p. 70].

Based on reaction to the plan, Lavine has proposed changes and said he anticipates making more before ACEJMC meets Oct. 19 in Chicago.

According to ACEJMC Executive Director Susanne Shaw, among the concerns expressed by council members are that the council would be too small, that the committee structure signals a return to sequence accreditation and that the new fees in the plan are so high the council will lose members. Groups protesting the size reduction include the American Society of Newspaper Editors and the Southern Newspaper Publishers Association. ☐

Exchanges may expand

Fifty-two of the 71 newspapers that have signed up to participate in ANPA Foundation's Publisher-Professor Exchange Program will consider accommodating educator visits of a month or more.

The program traditionally has facilitated brief exchange visits, from one to five days, between journalism educators and newspaper staff members. ☐

What used to be black and white and read all over…

BUSINESS

SECTION C

Circulation down; Ad revenues slip

Recent surveys indicate a decrease in circulation for major daily newspapers that are still utilizing black and white print. Industry experts also agree that a black and white format directly relates to a decline in ad revenues.

Survey responses substantiate today's "color world." More than 90 percent of those surveyed own one or more color televisions. Almost all respondents read two or more color magazines per week.

Advertising, in print as in television, is a visual medium. Attaining the right "image" for whatever is being marketed is all important. For more and more advertisers, black and white no longer suffices, especially when their significant insertion rates are considered.

Recent surveys indicate a decrease in circulation for major daily newspapers that are still utilizing black
white print. Industry experts also agree that a black

day's "color

Can now be black and white and red and yellow and blue and...

...in short, a more visually impressive, attention-getting newspaper with late-breaking color pictures! Hell Graphic Systems is your single-source for state-of-the-art products that allow you to conveniently and cost-effectively step up to full-page color composition. And the cost-savings, increased ad revenues, and greater circulation that go along with it!

We're contributing to newspapers' color revolution with innovative products such as:

- The NewsPlan system for video transmission of late-breaking news photos
- Chromagraph color scanners for the generation of high-quality separations
- The Scanskop for soft proofing assurance
- The LS210 laser image setter for combined output of text and graphics
- The Pressfax system for facsimile transmission of newspaper pages

Hell offers a complete product line that allows any newspaper of any size to feature late-breaking news, sports, and advertising in color. Get the edge on your competition! Join the color revolution...you'll see the results in increased circulation and ad revenues. And our systems can be easily configured to your exact production requirements.

BUSINESS

Circulation up;
Ad revenues rebound

The use of color is paying big dividends for newspaper publishers across the nation.

Recent industry surveys indicate a marked rise in readership and advertising revenues in major daily newspapers that have switched from black and white to color.

The use of new color technology has served a two-fold purpose; heightening reader interest through a more visually appealing format and reducing the time gap between news deadline and press time. Now, even the video camera can replace the traditional still photo camera in the field.

The move to color also results in significant cost savings. Although situations vary, the return on investment is quite favorable, with the new equipment paying for itself in three years, on average.

The use of color is paying big dividends for newspaper publishers across the nation.

ANPA to test print quality

ANPA is establishing a new technical program that will evaluate objectively the printing quality of member newspapers upon request.

Newspapers desiring such an evaluation would send one or more copies to the Association's Technical Research Department for examination and a written report.

ANPA hopes to begin offering the service by mid-1987, said George Cashau, director/technical research.

The program, to be included as part of the Association's larger quality-evaluation program, "will be an important tool for newspapers seeking to improve themselves, and we all know how important that is these days," said ANPA Technical Committee Chairman Gene McDavid, vice president and general manager of the Houston Chronicle.

The idea was developed by the committee's Quality Reproduction Task Force and was presented at the committee's Sept. 4-5 meeting at The Newspaper Center in Reston, Va.

According to Ray Maly, vice president/operations for The Columbian in Vancouver, Wash., who conducted the task force meeting, newspapers are concerned about turning out a quality product but have trouble quantifying their efforts. What may appear to be good reproduction to one person may look substandard to another.

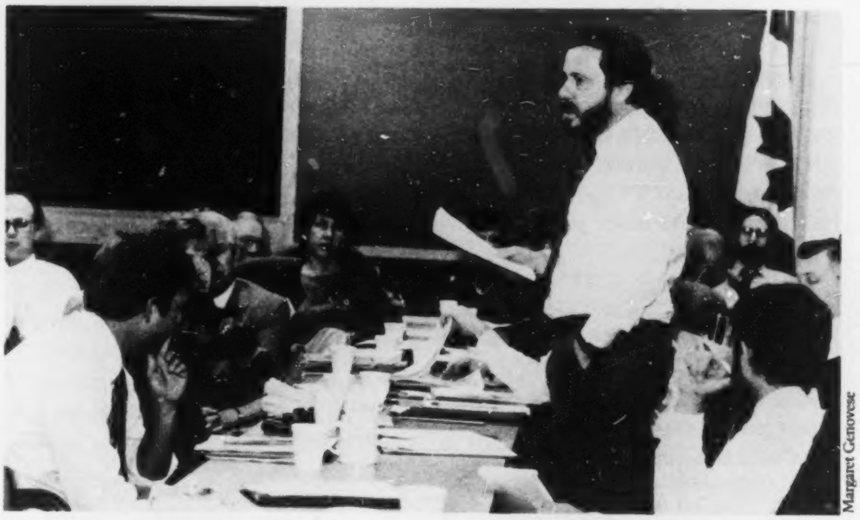
For that reason, the program would use computer software to compute various measurements of quality. Generally accepted standards, such as those recently published in the ANPA-Newspaper Advertising Bureau *Guide to Quality Newspaper Reproduction*, would be used in creating the software.

A technician would use various equipment in examining a submitted newspaper and plug in the numbers from these tests. The newspaper then would be told whether its printing quality falls within the accepted ranges for ink density, halftone dots, screen rulings and other specific areas.

The task force and ANPA staff members would establish other criteria as well.

One or two copies from the same day's press run would be evaluated or, if the newspaper wished, an entire week of newspapers could be studied.

In addition to evaluations by ANPA staff members, the task force is working to develop materials that a newspaper could use to evaluate its own work. They would include a checklist on such points as whether margins are equal, spacing is consistent, spot color is in register, process colors are true, and the paper is without torn pages.



Louis J. Franconeri of The Baltimore Sun reports progress on electronic photography.

Margaret Genovese

Also at the committee's semiannual meeting, the Post-Press Packaging and Distribution Task Force called for the standardization of packaging and shipping specifications for skids of preprinted ad inserts that newspapers receive from commercial printers.

Task force members explained that many newspapers set individual standards, and they vary from paper to paper. Faced with different specifications, commercial printers often resort to preparing skids the way they want to.

Ralph Roth, vice president/production for Knight-Ridder Inc. and task force chairman, said a standard size for skids would streamline and speed production in the post-press area.

As a means of establishing the standards, task force members will query news-

ANPA trade show is now ANPA/TEC '87

The ANPA Board of Directors has decided on a new, much abbreviated name for the Association's annual trade show. Beginning next year, the name will change from the "59th Annual ANPA Operations Management Conference & Exposition" to simply "ANPA/TEC '87."

In the new designation, "TEC" stands for Technical Exposition and Conference.

Begun 58 years ago, the event was first known as the ANPA Mechanical Conference. It was renamed the Production Management Conference in 1961 and the OMCE three years ago. The new name was recommended by the 1987 arrangements committee.

Los Angeles Times' Larry D. Strutton (left) and Scripps Howard's Homer E. Taylor Jr. are chairman and vice chairman, respectively, of the ANPA/TEC '87 Arrangements Committee.

papers and commercial printers on the methods by which preprints could be packaged and shipped most effeciently.

Planning also began for next year's post-press symposium. The symposium, "Newspaper Packaging and Distribution: From Press Folder to Reader," will be March 25 and 26 at the Hyatt Regency O'Hare in Chicago [**presstime**, Sept. 1986, p. 53].

Among proposed topics are accurate bundle counts, storage and retrieval of skids, labeling and zoning.

Peter P. Romano, ANPA director/technical services, reported his staff has been busy responding to Technical Advisory Service calls as newspapers across North America purchase new equipment, build new plants and expand existing facilities.

In other reports by Technical Committee task forces:

- The Computer Task Force said it wants to establish industry standards for pagination interface coding that would allow various pieces of equipment to communicate with each other, simplifying pagination and the use of computer graphics.
- The Newsprint Quality Improvements Task Force reported that ANPA staffers are continuing to work toward establishing standards for newsprint quality.
- The Environmental Task Force said it will develop a manual to assist newspapers in disposing of waste materials. (See story, p. 6.)
- The Newspaper Ink Study and Research Task Force recommended that ANPA members be surveyed on ink problems, and that work be initiated to arrive at various standards for black news ink. ☐

Flexo project highlights current ANPA research

Walk through the pressroom of The Newspaper Center in Reston, Va., and you'll see exposed gears, dangling wires and spare parts, an indication the anilox letterpress unit donated by Tokyo Kikai Seisakusho, the Japanese press company also known as TKS, is still undergoing conversion to flexography.

But, if all goes according to plan, the unit should be up and running by the end of the month, affording ANPA technical researchers yet another opportunity to advance the cause of newspaper technology.

According to George Cashau, ANPA director/technical research, plans are to use the flexographic unit to study interactions between plates, water-based ink, paper and underpackings. Vendors will also be asked to submit materials to test.

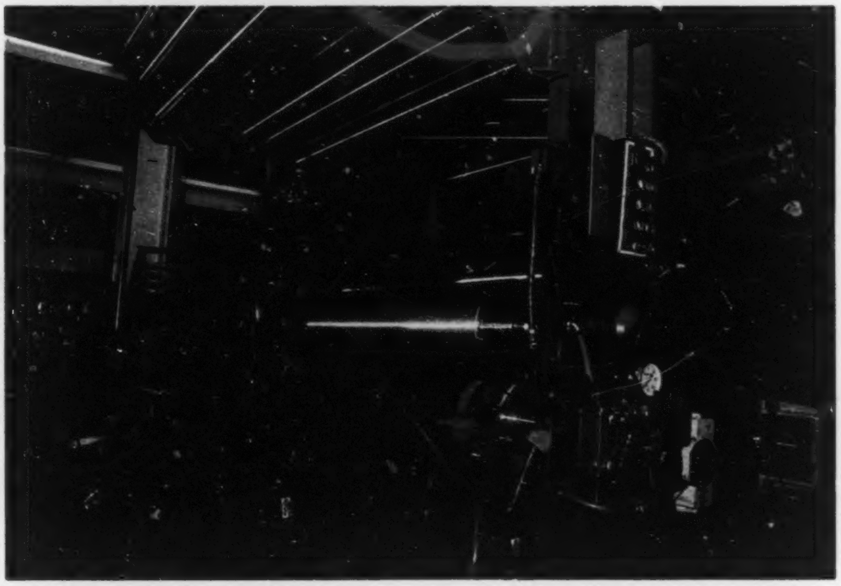
A TKS employee and ANPA technicians have been working for several months on the conversion project.

Improving the quality of newspaper printing has long been a goal of ANPA, and research has been a practical means of turning that goal into reality in a variety of areas, Cashau noted.

"Our objective is to take new technology and introduce it into the newspaper industry in order to improve the efficiency and productivity of newspapers," he explained. "We don't make any money off the things we develop, but that's not our intention."

ANPA advances newspaper technolgy in two ways. First, the Association's researchers and technicans work on projects designated by ANPA Board of Directors and the Association's Technical Committee as priorities for the industry.

If ANPA technical researchers produce a breakthrough, such as plastic plates for letterpress printing back in the 1960s, a patent is obtained and the Asssociation licenses it to manufacturers for a nominal fee. Manufacturers are encouraged to take the technology and improve it.



C. David Rambo

Tetuo Iseno of TKS works on the flexographic press conversion at The Newspaper Center.

"Ideally, we like to use their money and our skills to make newspapers better," Cashau said with a laugh.

In its other approach, ANPA encourages companies not making equipment for the newspaper industry to adapt their technology to the needs of newspapers. That, Cashau said, keeps fresh ideas continually flowing.

Keeping ideas flowing has been an Association concern since 1926 when what was then known as the ANPA Mechanical Department was founded. Reducing newsprint waste was one of its earliest concerns and continues to be a concern today.

Other research and testing projects currently under way include:

- A bundle verifier, which by measuring height will give an accurate count of the number of newspapers in a bundle. The machine is ready to be tested in a newspaper's distribution area, and negotiations are under way to do that.
- ANPA-INK®, a non-petroleum, vegetable oil-based ink, which researchers believe may be the answer to the problem of ink rubbing off on readers' hands. ANPA researchers are fairly satisified with performance of the black ink, and Cashau said the Association is negotiating with a manufacturer to produce it in tank-car volume. This would allow a test under normal newspaper production conditions, perhaps next year. Work continues on color ANPA-INK.
- A keyless (anilox) inking system for

offset presses, designed to reduce one of the chief problems with offset printing—excessive newsprint waste. When the press starts, the operator seeks to achieve just the right balance of ink and water; newsprint is wasted before that first salable copy is produced. A waste factor of 2 to 4 percent is common, Cashau said.

Other advantages are savings in the press's basic cost, labor requirements and electrical consumption. A keyless offset unit designed by ANPA is currently being tested at The Burlington County Times in Willingboro, N.J. Several vendors are also testing keyless offset presses.

Cashau said each of the researchers in his department works on at least two projects simultaneously. Some are short term—a few months to a year—while others may take seven or more years. His department's 34-member staff includes 16 professionals with college degrees in engineering, chemistry or industrial hygiene. He looks for expertise that can be adapted to the newspaper business.

In addition to the research that goes on at The Newspaper Center, Cashau said his staff members make numerous field trips to newspapers each year. For example, industrial hygienists are called upon to conduct sample air quality and to study noise levels in newspaper plants.

"Most of the things we do, whether it's the research we conduct or symposiums we hold, we do because it makes newspapers better," Cashau said. "Vendors recognize the need for research and development, but sometimes our work serves as that little extra stimulation they need to move things along." ☐

Saranda Introduces New Non-Smudge Printing Inks

AT LAST — A SOLUTION TO RUB-OFF PROBLEMS

Saranda has solved the age-old problem of rub-off with the creation of new dye-based letterpress inks. New patented inks with greater intensity, truer colors. New inks that don't mist on the press or require new equipment or special operator training. New inks that are cost-competitive.

Newspapers of all sizes have tested the non-toxic Saranda inks the past 18 months. One press plate manager called the papers printed with the new inks "absolutely smudgeless."

With daily plant capacity of 30,000 gallons, we're prepared to work with you immediately in creating a cleaner, crisper newspaper.

Write or call Tom Whitmire at Saranda.

TECHNOLOGY NOTES

- A graphic arts industry committee seeking to develop voluntary national standards for the **exchange of digital data** between various electronic imaging systems held its first meeting.

A priority for the group is to develop a standard user-exchange format for image data, which will include, but not be limited to, color pictures, scanned line art and geometric art.

The group is developing standards to propose to the American National Standards Institute and to the International Standards Organization [presstime, June 1986, p. 90]

- Interleaf Inc. and Digital Equipment Corp. have **expanded a cooperative marketing agreement** the two companies signed in May 1985.

Digital sells Interleaf software for Digital work stations, and Interleaf markets its electronic publishing system on Digital hardware. Digital now will also work to identify new markets for Interleaf products.

Both companies have headquarters in Massachusetts—Interleaf in Cambridge and Digital in Maynard.

- In another joint marketing agreement, Xixphias, a computer graphics software supplier, **will sell Monotype Inc. fonts** for laser printers that have a resolution of 600 dots per inch or less.

Monotype, an Arlington Heights, Ill., firm., has a digitized library of more than 800 typefaces. Xixphias is located in Marina Del Ray, Calif.

- A West German supplier of digital typeface production systems, URW Unternehmensberatung, has **formed a wholly owned U.S. subsidiary**, URW Inc.

Located in Nashua, N.H., the subsidiary's product line includes an "intelligent" automatic digitizing system for logos, artwork and typefaces. Its library has more than 1200 typefaces.

- Cybertext Corp., which manufactures microcomputer-driven typesetting hardware and software, **moved its headquarters** from Arcata, Calif., to Ashland, Ore.

Another newspaper supplier, Publishers Equipment Corp., moved its engineering and field service staffs to Rockford, Ill., but kept its corporate headquarters in Dallas.

TECHNOLOGY CALENDAR

- **Composition Technologies,** a seminar sponsored by the National Composition Association, will be Oct. 2-3 at the Key Bridge Marriott in Arlington, Va.

- The **50th Annual Western Newspaper Production Conference** will be Oct. 2-4 at the Monterey (Calif.) Sheraton.

- The **Digital Equipment Computer Users Society Symposium** will be Oct. 5-10 at the Moscone Center in San Francisco.

- **Computer Graphics for Design '86** will be Oct. 6-7 at the Hyatt Union Square in San Francisco.

- The Society of Photographic Scientists and Engineers will hold its fall symposium and annual **International Conference & Exposition on Electronic Imaging** Oct. 13-16 at the Hyatt Regency Crystal City in Arlington, Va.

- The **International Newspaper Conversions Group** will meet Oct. 15-17 at the Capital Hilton in Washington, D.C.

- **Graph Expo '86 East** will be Oct. 19-22 at the Philadelphia Civic Center.

- An **International Printing and Graphic Arts Conference** will be Oct. 21-23 at the Chateau Laurier in Ottawa.

- The Data Processing Management Association's **35th International Computer Conference and Business Exposition** will be Oct. 27-29 at the Georgia World Congress Center in Atlanta.

- The National Printing Equipment and Supply Association will hold its **Print Outlook Conference** Dec. 1-2 at the Hyatt Regency Capitol Hill in Washington, D.C.

- **The seminar series Computer Graphic Arts 86/87,** will be Dec. 7-10 at the Marriott Marquis in New York City.

- A seminar on **Color Separation and Electronic Scanning** will be Dec. 13 at the Greensboro/High Point Marriott in Greensboro, N.C., sponsored by the Graphic Arts Technical Foundation.

- Expocounsul International will sponsor a **Microcomputer Graphics Show and Conference** Dec. 17-19 at the Jacob K. Javits Convention Center in New York City.

- **Seybold Seminars '87** will be March 9-13 at the Beverly Hilton Hotel, Beverly Hills, Calif.

Transportation

National rail strike averted; problems persist in New England

The threat of a nationwide rail strike is over, but rail labor problems remain unsettled in New England.

On the national level, railroad management and the Brotherhood of Railway Carmen reached tentative agreement on a new contract in September, ending the threat of a nationwide rail strike. The union had been free to strike Sept. 15.

The BRC was the last of six unions to settle during a 60-day, cooling-off period ordered by President Reagan.

Regarding New England lines, Reagan signed a congressional joint resolution that extended until Sept. 20 a cooling-off period between the Brotherhood of Maintenance of Way Employees and three New England railroads—the Main Central, the Delaware & Hudson, and the Boston & Maine.

The resolution also required the Maine Central to restore pay and work rules existing before March 3, when the BMWE struck the Maine Central and posted pickets at the other two railroads [presstime, Aug. 1986, p. 55].

BMWE officials said the union was "agreeable to accepting, sight unseen, a congressional advisory board's recommendations" to keep negotiations from breaking down. Legislation imposing the recommendations was being drafted. ☐

Conrail headed for public sale

Legislation was introduced in the House for a public sale of Conrail following Norfolk Southern Corp.'s withdrawal of its offer to purchase the rail system.

In a related development, the Congressional Budget Office estimated Conrail is worth between $3.2 and $3.6 billion, assuming average performance over the next decade. ☐

Canadian deregulation

The Canadian government introduced legislation in the House of Commons to deregulate railroads, airlines, interprovincial trucking and some marine operations. The bill will be referred to a parliamentary committee for discussion. Passage is not likely before next year [presstime, April 1986, p. 52]. ☐

Quebec may get new newsprint machine; 180,000-ton capacity

Bato Co. is planning to install a 180,000 metric-tons-a-year newsprint machine at either the F.F. Soucy Inc. Rivière-du-Loup mill in Quebec or the Bear Island Paper Co. mill in Doswell, Va. The Quebec mill is said to have the inside track.

Participants in the expansion would be Soucy, Dow Jones & Co. and Rexfor, a Quebec government agency involved in forestry. Dow Jones and Rexfor are partners with Bato in one of the two machines at the Soucy mill, with the other machine being owned entirely by Bato. Bato also owns one-third of Bear Island.

According to Bato officials, the decision rests upon the ability of the Canadian federal and Quebec provincial governments to provide grants to help finance the project [presstime, June 1986, p. 77]. ☐

Labor talks proceed at 3 companies

Negotiations are under way between the United Paperworkers International Union and three U.S. paper companies: Augusta (Ga.) Newsprint Co. Champion International Corp. of Lufkin, Texas, and U.S. Pulp and Newsprint (Kimberly-Clark) of Coosa Pines, Ala. Contracts there expired over the summer.

In Canada, MacMillan Bloedel Ltd.'s newsprint mill in Port Alberni, British Columbia, is still inoperative because the mill's union workers refuse to cross picket lines set up by the International Woodworkers of America [presstime, Sept. 1986, p. 49]. ☐

Bidding for Donohue

Normick Perron Inc., which owns 58 percent of Donohue Normick Ltd.'s newsprint mill in Amos, Quebec, has indicated it will make another offer for control of Donohue Inc. If turned down, Normick Perron said it will seek Donohue's 42-percent stake in the Amos mill.

Other firms interested in Donohue include Cascades Inc., a Kingsey-Falls, Quebec, paper company that offered to buy a 55-percent stake in the firm, and Quebecor of Montreal, a printing and newspaper publishing company that said it also would make an offer. ☐

Consumption up again

Newsprint consumption by all U.S. users increased 5.3 percent in July and 3.8 percent in August from the same months last year. For the first eight months of 1986, U.S. newsprint users consumed 3.4 percent more than they did in the same period of 1985.

Consumption by U.S. daily newspapers rose 2.5 percent in July and 2.9 percent in August compared with a year earlier. The figures are not exactly comparable because there were five Sundays in August this year and four last year.

At the end of August, newsprint inventories of newspapers in the ANPA statistical sample were at 38 days, six days lower than in 1985. Stocks of North American mills were slightly higher than last year at the same time.

The August operating rate was 93 percent for Canadian mills and 96.9 percent for U.S. mills.

Estimated consumption of all U.S. daily newspapers[1]

Dailies take wellness to 'heart'

HEART AT WORK

At least two newspapers are taking advantage of an employee health program being offered through local chapters and affiliated offices of the American Heart Association.

Called "Heart At Work," the program includes five "modules" focusing on high blood pressure, smoking cessation, nutrition, exercise and heart-disease prevention.

The Washington Post started the program on heart-disease prevention last March, according to Terry Paull, occupational health nurse.

Clare C. Whitley, a nurse and health programs coordinator at the Los Angeles Times, said the same program was initiated at that newspaper's San Fernando plant last year, and she expects it to be introduced in the Los Angeles office later this year.

"Our goal was to encourage more people to enroll in our CPR (cardiopulmonary resuscitation) classes and to recognize the symptoms of a heart attack," Whitley said. She said 30 people were enrolled immediately after being exposed to the program.

At the Post, the program was announced the first of the year with letters to employees, distribution of promotional literature and posters obtained from the AHA. In March, 139 employees were tested for cholesterol levels, with 17 showing signs of high levels, Paull said. They received counseling on ways to lower their cholesterol levels.

The high-blood-pressure module was introduced in May. Of 208 employees who had their blood pressure tested, 75 had hypertension—50 were mild cases, 13 moderate and 12 severe, Paull said. "The majority of those 12 had no idea they had high blood pressure," she said.

Paull said the exercise module will be introduced in October, smoking cessation in January and nutrition in March. "This is a program you could spend a great deal of money on or very little," Paull said. She noted that the Heart At Work modules are part of the company's overall wellness program.

A package of information about the program and how to implement it can be obtained for $25 from local AHA offices, according to the association's headquarters in Dallas. The cost of the program depends on the number of employees involved and the amount of support material, such as pay envelope stuffers and posters, ordered.

For a newspaper with 300 employees, the cost of the Heart At Work program, including all five modules, would be about $2,700, according to Willie Carr, an administrative assistant at AHA headquarters.

"The package is a good guide for preparing a program that can be offered at different levels," said Whitley of the Los Angeles Times. It is "an easy starting point for a smaller newspaper without the resources for a large wellness program," she said.

A large program may require the coordination of benefits experts, training department instructors and health professionals.

As an example of what can be done on a smaller scale, the Lancaster (Pa.) New Era and Intelligencer Journal in September began to distribute to employees a monthly brochure dealing with health issues. The company became aware of the program, called Love-Life, through a local hospital, according to Personnel Manager M. Steven Weaver.

The Love-Life program costs about $4,000 a year, Weaver said, and includes a thousand payroll stuffers a month, posters and a monthly article that can be adapted for the company's house organ.

The first payroll insert dealt with lifestyles and included a test on life expectancy.

The October brochure will discuss smoking. In conjunction with that, the newspapers will offer a company-paid, in-house American Lung Association smoking cessation program for employees and their spouses in October.

A booklet on wellness programs prepared by the Environmental Task Force of the ANPA Technical Committee, scheduled to be mailed to ANPA-member newspapers this month [presstime, Sept. 1986, p. 60], notes that there are numerous community resources available that can be used for little or no cost.

Margaret M. Jannetti, The Washington Post

The Washington Post's Paull checks employee's blood pressure.

Perfect attendance may bring extra $s

The Daily Herald of Arlington Heights, Ill., has launched a program to encourage perfect attendance.

To recognize full-time employees who have not missed a day of work because of illness or personal reasons, a drawing is held quarterly for three $100 U.S. Savings Bonds. At the end of the year, there is a drawing for a $500 bond to be awarded to an employee who had perfect attendance the entire year.

Who wants new publisher? The union, not the Union

A labor union that recently ran a help-wanted ad for a newspaper publisher in a trade magazine said the ad was no joke. Nevertheless, the union did leave out some pertinent information—like the fact it doesn't own the paper and that the paper already has a publisher.

The ad, placed in the Aug. 23 issue of Editor & Publisher, stated: "Proud, dedicated and feisty workforce wants to save 135-year-old No. 2 newspaper in California's capital from death by mismanagement. We're looking for a publisher who knows the business and is willing to work with employees to make a success of this piece of California history. We're eager to roll up our sleeves for a publisher who believes in what we can accomplish together. Contact Joe B. Rocker, Administrative Officer, (916) 446-4885."

The newspaper involved was The Sacramento Union.

Rocker, whose first name is Gerald rather than Joe, placed the ad. He is administrative officer of Northern California Newspaper Guild No. 52, which represents about 200 editorial and commercial employees at the Union.

Rocker said the ad should have made it clear that "we don't own the paper." The publisher and owner of the newspaper is Richard Mellon Scaife.

Before the ad appeared, the Guild filed unfair labor practice charges with the National Labor Relations Board alleging that the newspaper bargained in bad faith. It charged the paper with implementing the terms and conditions of its most recent contract offer, including a 15-percent wage cut, prior to an impasse in bargaining [presstime, Sept. 1986, p. 60].

"We understand that he (Rocker) ran the ad as a nuisance, and we accept it as that," said Jack Bates, the newspaper's vice president and general manager.

"It wasn't a joke," Rocker said. "You could characterize it as a long shot."

Rocker said that the ad, which cost "about $154," drew more than 30 responses, including "three serious inquiries." He said he referred some of the respondents to Bates. "We are serious about saving that paper," Rocker said.

Chicago Tribune under no obligation to arbitrate, appeals court rules in 'call room' dispute

The 7th U.S. Circuit Court of Appeals has ruled that a federal judge erred in ordering the Chicago Tribune and Paper Handlers' Union No. 2 to arbitrate a dispute that arose after the labor agreement expired.

The last agreement between the parties expired Sept. 3, 1984. Two days after the expiration, the Tribune announced it was going to discontinue hiring extra workers through the union's hiring hall, or "call room." Although the newspaper had used the call room for some 40 years, there was no contractual requirement to do so.

The union filed a suit in U.S. District Court to compel arbitration over the Tribune's decision, and the court granted summary judgment in favor of the union. The newspaper and the Chicago Newspaper Publishers' Association appealed, arguing that any duty to arbitrate the dispute expired with the labor agreement.

The 7th Circuit agreed, finding that the Tribune and the publishers' association "were under no duty" to arbitrate the company's decision.

The union, which is affiliated with the Graphic Communications International Union, is one of three that struck the Tribune July 18, 1985.

(Graphic Communications Union, Chicago Paper Handlers' Local No. 2, and Chicago Tribune Co. and CNPA, USCA7 No. 85-2383) ☐

Correction

In the article "Lawsuits Are Eroding Employers' Right to Fire" in the September issue, the reference to the Albany (Ore.) Democrat-Herald's loss of a wrongful discharge case was incorrect. The Oregon Supreme Court overturned a lower court ruling for the newspaper, finding that an employer can be held to terms in a handbook. However, the newspaper won the subsequent jury trial by proving compliance with those terms. Presstime regrets the error. ☐

Drug test refusal led to firing, former employees say

Two editorial employees of the Freeport (Ill.) Journal-Standard have charged they were fired for refusing the publisher's order to take a drug test.

Managing Editor Gregory K. (Greg) Bean and Chief Photographer Richard Foertsch were discharged Aug. 27.

"We are in contact with attorneys on the issue," Bean said. "We didn't know what he was going to do with the (test) results."

Bean, 34, said his discharge "isn't a question of job performance," noting that the 17,625-circulation daily won six awards in this year's Illinois Press Association competition.

Publisher Larry E. Shearer said the two men were fired because of "very strong differences over managerial policy that could not be resolved." He added that any speculation about drug use "was generated by Mr. Bean and Mr. Foertsch."

The newspaper is owned by Howard Publications Inc. of Oceanside, Calif.

In another discharge case at the Journal-Standard, one-time Advertising Manager John L. Altman has filed a lawsuit alleging that his Sept. 30, 1985, discharge violated the Age Discrimination in Employment Act and the Employee Retirement Income Security Act.

Altman, 53, said he was discharged shortly after being demoted to the position of marketing representative and was replaced with a younger man. He is seeking at least $700,000 in damages against the newspaper. ☐

Printers in Tacoma disavow union

A majority of employees in separate composing room, technical services and job shop bargaining units at The Tacoma (Wash.) News Tribune recently notified the company that they no longer wish to be represented by International Typographical Union No. 99.

The company subsequently announced that it would neither recognize nor bargain with the union as the representative of the employees.

The newspaper was recently purchased by McClatchy Newspapers of Sacramento. McClatchy did not accept any of the labor agreements or other contracts made by the previous owner [presstime, Aug. 1986, p. 51]. ☐

Philadelphia dailies upheld in work dispute

An arbitrator has ruled that The Philadelphia Inquirer and Philadelphia Daily News did not violate a labor agreement by having non-bargaining unit employees enter new subscriber data into the company's computer system.

The Newspaper Guild of Greater Philadelphia contended that having non-Guild employees perform such work violated a section of the agreement that states: "Work of the kinds presently or normally done by employees to whom this contract applies shall be done only by such employees."

The union represents circulation clerks in the company's Home Delivery Communications Center.

The new subscriptions are solicited by employees working for a company formed in 1981 called Circom, a wholly owned subsidiary of Philadelphia Newspapers Inc. Initially, Circom employees did not enter solicited starts into the computer, and the union did not claim telephone solicitations as bargaining-unit work.

The dispute arose in 1985 when Circom employees were given VDTs and began to enter "starts" into the computer. Prior to that, start forms were sent to the Home Delivery Communications Center where the data were put into the computer by the Guild-represented clerks. The change did not result in the layoff of any HDCC clerks.

Arbitrator Scott E. Buchheit upheld the company on grounds of arbitral precedent and bargaining history. He noted that a similar union grievance had been denied by another arbitrator [**presstime**, Nov. 1985, p. 60], and that the Philadelphia Guild had tried unsuccessfully to change the involved contract language during negotiations for a new agreement.

"Consistent decisions by arbitrators in cases involving the same parties is sound arbitral practice whenever there is good reason for the prior determination," Buchheit said.

He said it is "a fundamental principle" of arbitration that a party should not obtain in arbitration what it could not obtain by bargaining. "Barring compelling reasons," he said, "it is my practice not to deviate from this principle." ☐

Wage increase case in Newark affirmed

A federal judge's modification of an arbitrator's award in a wage dispute between The Star-Ledger of Newark and Typographical Union No. 103 has been affirmed by the 3rd U.S. Circuit Court of Appeals.

The union had appealed the judge's reduction in the amount of a wage increase granted by the arbitrator to composing room employees [**presstime**, Oct. 1985, p. 52].

"In sum," the 3rd Circuit said, "we, like the district court, 'can find no rational basis for the arbitrator's award;' and we therefore agree that the district court was 'compelled to modify the award.' "

One of the three judges dissented.

(Newark Morning Ledger Co. v. Newark Typographical Union No. 103, USCA3 No. 85-5535) ☐

Union certification revoked in Asheville

An NLRB regional director has revoked the certification of Local 202 of the Graphic Communications International Union to represent pressroom employees of The Asheville (N.C.) Citizen and The Asheville Times.

The local had informed the company that the employees no longer wished to be represented by the union, which had been certified to represent the pressmen in 1957.

(Asheville Citizen-Times Publishing Co. and Printing and Graphic Communications Union, GCIU, Case No. 11-RC-972) ☐

Additional arbitration awards

Baltimore Sun, GCIU: Ira F. Jaffe ruled that members of a press crew were not entitled to additional pay for working past the time they normally would have been allowed to leave within the confines of their 9 a.m. to 5 p.m. shift.

Baltimore Sun, ITU: Jaffe converted to a two-month disciplinary suspension the discharge of a printer for poor work performance.

Dayton (Ohio) Daily News/Journal Herald, ITU: Sinclair Kossoff ruled that the company did not violate the labor agreement when it assigned a mailer to operate more than one insert-feeding station of a new McCain inserting machine.

Hightstown (N.J.) Daily Racing Form, GCIU: Thomas J. Reynolds upheld the pressmen's union in an overtime pay dispute.

New London (Conn.) Day, GCIU: Harvey L. Friedman awarded pressmen annual wage increases of 6 percent and 5.5 percent in a new two-year contract; the company had proposed 5 percent in a one-year agreement.

New York Daily News, Guild: Margery Gootnick ruled that the transfer of an advertising clerk from a New Jersey office to Manhattan was not made for a discriminatory reason.

New York Times, Guild: Stanley L. Aiges sustained the discharge of an index department clerk for insubordination to a supervisor.

St. Louis Post-Dispatch, Guild: Peter M. Kelliher upheld the dismissal of a part-time city desk clerk for defying a direct order from a supervisor.

Washington Post, ITU: Marcel Mallet-Prevost converted to seven-month disciplinary suspensions the discharges of two printers for alleged theft of a mop wringer.

Washington Post, ITU: Max Rosenberg ruled that the company did not violate the mailers' labor agreement by using an outside firm to mail advertising supplements.

Wilmette (Ill.) Pioneer Press, Guild: Bruce R. Boals converted to a one-week suspension the discharge of a union steward for insubordination to a supervisor.

Youngstown (Ohio) Vindicator, Guild: Richard H. Siegel found that the company properly removed a county editor's position from the bargaining unit.

(Full texts are available from the ANPA Human Resources Department at The Newspaper Center, Reston, Va.)

NLRB elections

Albuquerque Journal and Tribune, ITU: Mailroom inserters voted 43-0 in favor of representation by Mailers' Union No. 156.

(NLRB Case No. 28-RC-4316)

New Bedford (Mass.) Standard-Times, ITU: Mailroom inserters voted 25-23 against representation by Typographical Union No. 276.

(NLRB Case No. 1-RC-18725)

Philadelphia papers reorganize; new daily started in Canada

Despite the announcement in September of financial losses, cutbacks and other changes at the Philadelphia Daily News, the paper will be around for a long time to come, a spokesman for Philadelphia Newspapers Inc. said.

BUSINESS ROUND-UP

On Sept. 9, management of PNI told employees that the Daily News advertising staff would be consolidated with that of The Philadelphia Inquirer, resulting in a loss of 51 advertising jobs at the News. In addition, $500,000 a year is to be slashed from the Daily News newsroom budget.

Those items, plus the information that the Daily News had lost $30 million over the past six years, reportedly sent shock waves through the staff.

In late September, PNI announced further changes. Sam S. McKeel, president of the Inquirer and the Daily News, was named publisher, of both newspapers. Eugene L. Roberts, executive editor of the Inquirer, retained that post and became president of the two newspapers.

But William W. Broom, vice president for public affairs, said the realignment will result in a healthier Daily News, an evening tabloid.

Broom said the changes represent a five-year publishing plan for both Philadelphia newspapers, which are owned by Knight-Ridder Inc. The plan is in response to "changes in demographics," he said. Newspaper circulation within the city has been dropping, he said, and the Daily News has had its primary audience there. The morning Inquirer, on the other hand, circulates over a broader area including fast-growing suburban communities.

The News, which is sold almost entirely from newsstands and racks, had a daily circulation of 251,876 as of March 31, compared with 284,253 the same time a year earlier.

Newspaper analyst Bruce Thorp of Lynch, Jones & Ryan in Washington, D.C., said he agrees that PNI's actions in no way reflect a desire by management to phase out the Daily News. To eliminate the News would only invite other entrepreneurs to start up an afternoon in the Philadelphia market, he said.

Thorp said News business writer Robin Palley was right on target when she was quoted in The New York Times as saying: "We're (the Daily News) the tugboat protecting the flagship to keep another afternoon paper from coming into town."

In other newspaper business:

• In St. Louis a newspaper that temporarily suspended publication last year is showing signs of vitality.

The Globe-Democrat is turning away ads because of limited press capacity, and it is consistently edging toward profitability, according to Publisher John B. Prentis.

The Monday through Saturday paper had its biggest Thursday of the year on Sept. 11, running 52 pages, with about 42-percent advertising. Fifty-two pages is the maximum press capacity of the Nordmann Printing Co. of St. Louis, which prints the Globe-Democrat, General Manager Richard H. Amberg said. He said the paper plans to buy its own presses.

"We're still here; that's better than the alternative," said Prentis. "We're not in the black as yet, but more and more we are operating less in the red." The Prentis said the average circulation has been "seesawing around" 150,000 since mid-year.

Prentis said the paper has about 140 editorial employees, or 10 to 15 more than it had when he and his partner, William E. Franke, bought the paper from Jeffrey M. Gluck and began publishing Jan. 27 [**presstime**, March 1986, p. 68].

• A Southam family group has exercised its option to buy 1.6-million shares of Torstar Corp. stock for $26.1 million. This completes the business left over from August 1985 when Southam Inc. and Torstar, both of Toronto, traded shares of stock. The transaction gives Torstar and Southam each about 22.4 percent of Southam's common stock.

A group of minority Southam shareholders, meanwhile, is asking the Canadian government to intervene in the share-trading deal, which placed control of Southam Inc. in the hands of the Southam family and Torstar. The Canada Business Corporation Act gives the government authority to set aside transactions, but it is rarely invoked, according to Richard Lestage, deputy director of enforcement and investigation of the Department of Consumer and Corporate Affairs.

• A new newspaper, The Burlington Spectator, began publication Sept. 8 in Burlington, Ontario. It is being distributed afternoons Monday through Friday and on Saturday morning. The Southam paper absorbed a 42,000-circulation weekly, The Burlington Gazette, said Publisher Gordon Bullock. Burlington, a city of 130,000, previously had no local daily paper.

• A management team has been formed to study the future of The Louisville Times. A company spokesman said the team will study all possibilities, including folding the evening Times, publishing one all-day paper or continuing to publish both the Times and The Courier-Journal, a morning paper.

Gannett Co. purchased the Louisville papers earlier this year from the Bingham family for $300 million [**presstime**, June 1986, p. 98].

- Rapid circulation growth in Europe has led The Wall Street Journal to expand its printing operation on the Continent.

Previously printed only in the Netherlands, The Wall Street Journal/Europe is now also being published at a printing plant near Lucerne, Switzerland. Average daily circulation of the 4-year-old edition was 35,379 during the six months ending June 30, Journal officials said. This was an increase of 10.5 percent over the first half of 1985 [**presstime**, Jan. 1986, p. 28].

- A Cleveland restaurateur said he and a group of investors plan to start a new daily newspaper next June in Cleveland. J. Charles Fox, owner of the Linkas Steak and Tap House, said he has already purchased 40 units of Goss presses. Fox currently publishes a 30,000-circulation free paper in Cleveland, the Crusader News.
- Both USA Weekend, Gannett Co.'s Sunday supplement, and Parade magazine report gains in total circulation and in newspaper customers since USA Weekend was launched a year ago.

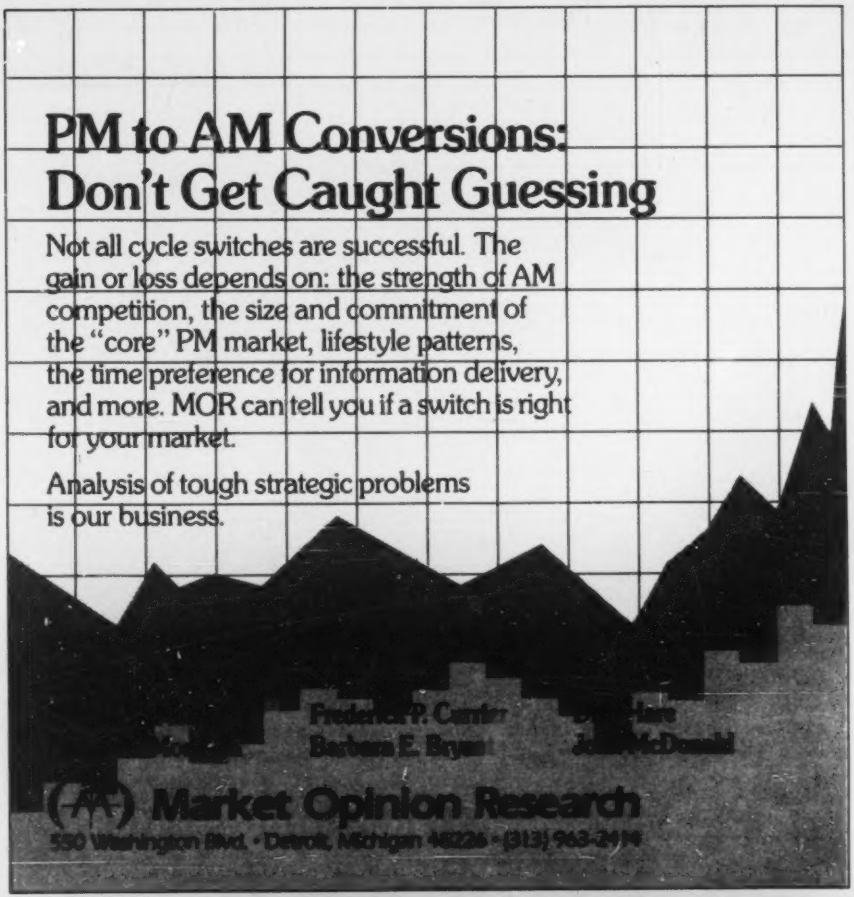
USA Weekend, however, is being carried by fewer newspapers than its predecessor publication, Family Weekly, which in February 1985 was being circulated by 362 newspapers. As of Sept. 18, USA Weekend was being carried in 285 newspapers with a combined circulation of 14.3 million, a Gannett spokesman said. In September 1985, the magazine was in 255 newspapers with combined circulation of 12.5 million.

Parade is currently part of 288 newspapers with a circulation of 31.4 million, said President and Publisher Carlo Vittorini. Just before USA Weekend was launched, Parade had 25.2-million circulation in 134 newspapers [**presstime**, Oct. 1985, p. 60]. ☐

Berkley-Small to sell two publications

Circulation consultant Ronald C. Anderson has signed a letter of intent with Berkley-Small Inc. to purchase two publications—NIE Information Service, for Newspaper in Education personnel, and Circulation Idea Service, for newspaper circulators.

Berkley-Small, a subsidiary of Scripps Howard, is closing its Mobile, Ala., office, where it published the two monthlies. Anderson said his consulting firm, RC Anderson Associates of Pittsford, N.Y., would continue both publications. ☐



PM to AM Conversions: Don't Get Caught Guessing

Not all cycle switches are successful. The gain or loss depends on: the strength of AM competition, the size and commitment of the "core" PM market, lifestyle patterns, the time preference for information delivery, and more. MOR can tell you if a switch is right for your market.

Analysis of tough strategic problems is our business.

States News Service's staff of about 25 journalists reports Washington news for newspaper clients.

Times deal fortifies States News

States News Service, which covers Washington, D.C., for about 50 newspapers, is now being represented by the The New York Times Syndication Sales Corp.

This means the syndicate will market States News Service to newspapers along with the syndicate's other features.

In financial difficulty since its founding in 1973, States News provides subscribers with news of local interest often overlooked by major wires or papers with Washington bureaus [presstime, March 1984, p. 23].

"People think of us as a very young staff that writes for small newspapers, and that's not the case," said Leland Schwartz, the service's founder, president and editor. "Probably three-fourths of the news service is supported by papers with Washington bureaus that use States as a backup and supplement. That's what's really unknown about us," said Schwartz, who oversees a staff of about 30.

In addition to general news, States has recently launched a service geared to business sections—reporting daily on the Securities and Exchange Commission—and it plans to extend such coverage to selected government agencies. □

AP increase lowest in 16 years

The Associated Press Board of Directors has voted the lowest membership assessment increase in 16 years—2.5 percent for 1987.

Over the preceding three years, assessments increased an average of 4.9 percent—5.5 in 1984, 4.7 in 1985 and 4.6 in 1986 [presstime, Nov. 1985, p. 69].

AP Board Chairman Frank Batten said the low increase reflects gains in both AP membership and non-member revenue. The AP in late September had 1,351 newspaper and about 5,700 broadcast members.

For the third year in a row, the AP will finance capital needs internally without outside borrowing, said Batten, chairman of Landmark Communications Inc. of Norfolk.

"The board has never been more confident of AP's resources and commitment to provide its members with a premier news and photo product," Batten said.

The assessment increase will enable the news cooperative to upgrade its financial reporting services, he said. In addition, AP will purchase more portable transmitters and LaserPhoto receivers and install more electronic darkrooms.

AP said it will notify members Nov. 1 of their exact 1987 assessments, which will go into effect Jan. 4. □

Field of major libel carriers drops to 3

The new underwriter for libel insurance for members of the National Newspaper Association is Safeco of Seattle.

The change came after CNA Insurance Co., the previous carrier, stopped underwriting libel policies, leaving only The Mutual Insurance Co. Ltd. of Bermuda, Employers Reinsurance Corp. of Overland Park, Kan., and Safeco as the major underwriters of libel insurance [presstime, April 1986, p. 8].

In announcing the change, NNA said its members, mostly weekly newspapers and some small dailies, will be faced with "substantially" increased rates, higher deductibles and reduced limits.

At ANPA, Senior Vice President Thomas C. Fichter said, "We are continuing to see premiums for libel insurance being quadrupled at a minimum.

"What many non-ANPA members have found is that it costs less money to join ANPA and pay the insurance premiums charged by Mutual Insurance than it costs to use any of the other alternatives."

John J. Crout, a partner in the Union, N.J., insurance consulting firm Blades & Macaulay, said the cost of reinsurance "is continuing to escalate," forcing up the premiums charged by primary insurers.

In other insurance matters, the United States and the United Kingdom have signed a tax treaty that would eliminate the 4-percent excise tax on premiums paid by U.S. policyholders of Bermuda insurance companies. The treaty will be submitted to the Senate for ratification and would apply to libel and strike insurance premiums of Mutual Insurance. □

Changes in command

The **American Association of Sunday and Feature Editors**, at its annual convention Sept. 10-12 in Calgary, Alberta, elected the following new officers:

- *President*—Rosalie Muller Wright, San Francisco Chronicle
- *First Vice President*—Gilbert L. Watson III, The Baltimore Sun
- *Second Vice President*—Mary Hadar, The Washington Post
- *Secretary*—Reg Vickers, The Calgary Herald
- *Treasurer*—Clifford Ridley, The Detroit News □

Observances coming up for Newspaper Week, Carrier Day

National Newspaper Week will be observed Oct. 5-11.

Sponsored annually by Newspaper Association Managers Inc., this year's observance has as its theme: "A Free Press Serves a Free People." NAM has distributed kits offering numerous ideas on how newspapers can promote the occasion.

ANPA Chairman and President Alvah H. Chapman Jr. said National Newspaper Week is a time to "rededicate our efforts to meet the guarantees of a free press as provided in our Constitution—serving and protecting our rights and our security."

A related observance, International Newspaper Carrier Day, will be marked Oct. 11. It is sponsored by the International Circulation Managers Association.

Recent acquisitions

Midwest Newspapers Inc. of Des Moines is acquiring the Ames Daily Tribune, circulation 10,157.

Alameda (Calif.) Newspapers Inc. acquired the Alameda Times-Star, daily circulation 8,485.

Members of the family of the late J. S. Gray, who already owned 50 percent of the Monroe (Mich.) Publishing Co., acquired the remaining 50 percent from the C. K. Wesley estate. The company publishes the Monroe Evening News, daily circulation 26,785.

Tribune-Review Publishing Co. of Greensburg, Pa., is acquiring The Daily Standard-Observer of Irwin, Pa., circulation 13,021, from Allbritton Newspapers of Paterson, N.J.

Bill D. Hall and G. Frank Withrow of Macon, Mo., acquired the Macon Chronicle-Herald, daily circulation 3,833, from Donrey Media Group of Fort Smith, Ark.

James Huckle of Traverse City, Mich., acquired the Faribault (Minn.) Daily News, circulation 8,900. □

ANPA committee members serve at their own expense

The nearly 350 newspaper executives who serve as members of the ANPA Board of Directors and committees, and as Trustees and committee members of ANPA Foundation, pay virtually all of their expenses associated with that service. The practice represents an "exception" among national trade associations, according to Executive Vice President Jerry W. Friedheim.

(Rosters of the Association's various committees are published in an insert to this issue of **presstime**.)

"The willingness of newspaper executives for so many years to make the contribution not just of their time but also of their own resources makes ANPA an exception within the trade association community, an exception which I believe contributes in large measure to our exceptional capability to serve our industry's mainstream concerns," said Friedheim.

It has been the "traditional practice" over the 100-year history of ANPA for newspaper executives who serve its Board and committees to do so at their own expense or at the expense of their newspapers, he noted.

This practice "lessens overall costs to the Association, which, of course, are borne by individual newspaper dues in large measure," Friedheim said.

"It means that those who participate in ANPA Board and committee activities are personally interested and committed to helping the industry and do it as an important service, not just as a sideline," he added.

The primary expenses associated with service to the Association are travel to and from meetings, wherever they occur in North America or overseas, and lodging for the newspaper executive and family members, should they be involved. Under U.S. tax law, these expenditures are deductible to individuals or newspaper companies as business expenses.

ANPA pays for meals at various meetings and functions, especially when nonnewspaper guests or speakers are included, Friedheim said.

In addition, he said, ANPA does, "from time to time, try to add to our committees some key resource people from outside newspapering who can contribute to the committees' deliberations. ANPA does pay travel and housing expenses for those individuals when their own institutions do not have funds available to support these experts' participation in newspaper business activities." □

Martin joins ANPA as industrial hygienist

Lisa G. Martin has joined ANPA as an industrial hygienist.

Lisa G. Martin

A 1983 graduate of Central Missouri State University, with a bachelor's degree in industrial hygiene, Martin formerly was an industrial hygienist with the District of Columbia government. She also held occupational health and safety positions with the Olin Corp. and the Remington Arms Co. Inc. in Independence, Mo., and with the U.S. Environmental Protection Agency in Kansas City. □

over-set

Hey, you— 'mailroom' is taboo

In 1975, Gene McDavid, vice president and general manager of the Houston Chronicle, urged the ANPA Production Management Committee to drop the word "mailroom" from newspaper jargon. He argued that the name did not reflect what went on in modern day newspapers.

People are still calling it the mailroom, but McDavid, now chairman of the successor Technical Committee, can take heart.

Ralph Roth, vice president/production for Knight-Ridder Inc., has taken on the burden of ridding the newspaper world of "mailrooms" and replacing them with "distribution centers" or "packaging and distribution centers."

Roth suggested at the Technical Committee meeting in September that anyone who utters the word "mailroom" be fined 50 cents. There was some backsliding during the meeting, but no one actually saw money change hands.

Still, Roth is only half-joking about the fine. And if he's successful, mailrooms will forever pass from the newspaper lexicon. Oops . . . anyone have change for a dollar?

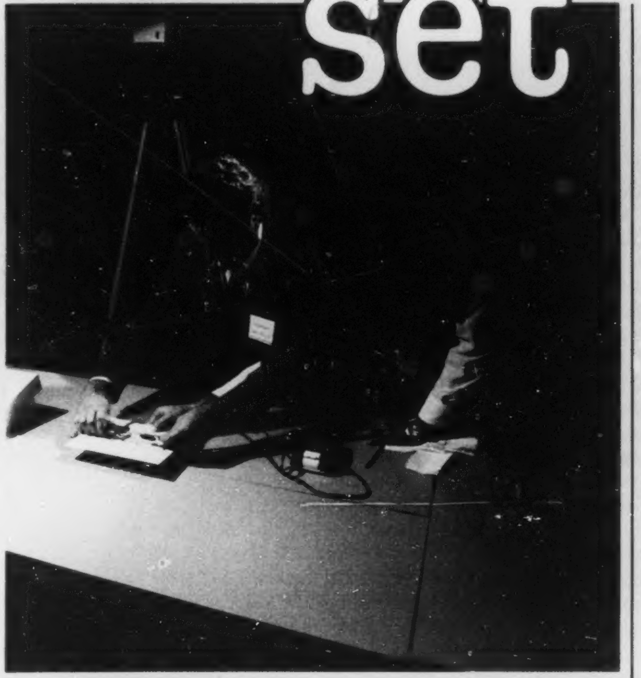
Newspaper numbers

15.64—number of dollars a composing room worker makes, on average, for every daytime hour worked at daily newspapers in the 20 largest U.S. cities.

31—number of instances in the top-100 markets where a TV station was commonly owned with a local daily newspaper, as of Jan. 1, 1986.

10,611,514—number of dollars spent on newsracks in 1985 by U.S. and Canadian newspapers responding to ANPA's annual capital expenditures survey.

4,629—number of calls made to the minority job "hotline" of the Society of Professional Journalists, Sigma Delta Chi, from April 1985, until it was discontinued in September.



What brings swarm of reader responses? A cockroach contest, of course

To the lilting strains of "La Cucaracha," played by a strolling guitarist, The Orlando Sentinel lent its expertise to an unlikely task—finding the largest cockroach in Florida.

With the aid of a Mitutoyo Digital Calipers, calibrated to ten-thousandth of an inch, more than 100 atttending the Sentinel ceremony and thousands more through television news got the answer—2.429 inches.

The winner, in actual size

The public selection of "Longfellow" owed its beginning to Bob Morris, who used his Sentinel column to "put Texas in its place." Seems a contest there showed the largest cockroach in the Lone Star State checking in at 1.94 inches.

Morris says the best thing he did was to tell his readers to report—not mail—roaches over two inches, because 347 responded, the biggest reaction he's ever had to a column.

Only finalists were invited for measurement at the Sentinel, where rules were strictly enforced: Water bugs were disqualified; live roaches were killed; and the fattest and fiercest did not win.

Meanwhile, the winner may be dead, but not forgotten. Encased in Lucite, Longfellow will lead Orlando's November parade, the Queen Kumquat Sashay.

Morris offers no comment to the slogan of the International Cockroach Society: "They shall inherit the earth."

Journalism rated most desirable career—in USSR

Foreign journalists are having their troubles with Soviet leaders these days. But in the eyes of Soviet youth, journalists rank high.

In fact, a recent poll shows school-age Soviet youngsters rate journalism first as a desirable career.

Rated second was the performing arts, with a career in the military ranking third. Further down the line, in descending order of prestige, the youngsters named doctors, physicists, engineers and teachers.

The poll, conducted by Smyena magazine, was reported from Moscow by The Globe and Mail of Toronto.

It's never too late for correction

With "all the news that's fit to print," it's never too late to make sure that all the news in print is fit.

At least at The New York Times.

On Nov. 4, 1977, a Times obituary reported the death of Rupert Weeks.

But it was Robert M. Weeks who died.

Nine years later, Weeks' daughter returned to New York, which she had left soon after her father's death. Discovering the error in a library, she informed the Times, which published a correction Sept. 12, 1986.

"There isn't anything to say that if a mistake is old, it shouldn't be corrected," comments Times spokesman Leonard R. Harris. "Especially if you are a paper of record."

Phoenix papers blame cutup for complaints

Human error was apparently behind the hyperactive shredder at a Phoenix bank that chewed up untold numbers of checks from would-be subscribers to the city's daily newspapers.

For weeks, complaints mounted at The Arizona Republic and The Phoenix Gazette—more than 75 a day—as angry callers demanded to know why their papers had not been delivered. And it took a while for the circulation department to ascertain what had gone wrong, reports Circulation Manager Robert A. Hallay.

In Phoenix, subscribers send their checks directly to the United Bank of Arizona. However, for several months a bank employee responsible for opening envelopes containing subscribers' checks mistakenly put them in trays containing envelopes destined for the shredder.

Nobody knows exactly how many checks were shredded. What is known is that non-payment results in cancellation of a subscription or start order and that a fair part of the 9,000 terminations in recent months resulted from the bank snafu.

The two papers published an explanation Aug. 14.

Now both bank and newspapers say they are hard at work putting the pieces together, and officials are clear on at least one conclusion: "It's the strangest thing I've ever had happen in my whole career," says Conrad Kloh, director of sales for Phoenix Newspapers Inc. Echoes George H. Isbell, executive vice president of United Bank: "It's the strangest thing that's ever happened in my career as well."

There are stories aplenty out there; it takes only an idea to get started on them

Do you know who keeps the windows squeaky clean down at City Hall?

When was the last time you took a serious look at chewing gum?

Do you know how many local citizens hold a second job and how they juggle them?

If the answers are "I have no idea," "never" or the like, give a second thought to whether stories on subjects like those might brighten up some otherwise gray pages.

Starting a flow of fresh ideas for feature, news and investigative pieces is the aim of a new book titled *A Collection of 1001 News Ideas.*

Kenneth C. Bronson, vice president of Stauffer Communications, Inc., collected the ideas from a variety of sources over the past 30 years, including his own experiences as an editor and publisher.

The ideas were augmented and put into book form by R. Joe Sullivan, editor and publisher of Stauffer's Blue Springs (Mo.) Examiner.

Arranged alphabetically, the subject areas range from "antiques" to "wildlife," from "crops" to "toys," from "elderly" to "real estate."

The 166-page, loose-leaf book costs $25 and is available from Bronson at 616 S.E. Jefferson St., Topeka, Kan. 66607.

Survival guides for overseas duty

Even before the Daniloff case became front-page news, (see story, p. 51), copies of the International Press Institute's "guide to staying alive" were disappearing fast.

Called *Journalists on Dangerous Assignments,* the 84-page booklet includes tips from foreign correspondents and a history of efforts to safeguard their lives.

The first printing of 2,000 was distributed free. The second printing will be sold. For copies, contact former IPI Chairman Richard H. Leonard, at 330 E. Beaumont Ave., Milwaukee, Wis. 53219; (414) 963-0598.

Another guide, *Surviving Dangerous Assignments,* was prepared by the Inter American Press Association. Contact IAPA, 2911 N.W. 39th St., Miami, Fla. 33142; (305) 634-2465.

FREE NICHOLAS DANILOFF

Quality and commitment: The best in writing.

"I'm sort of the back roads person for the AP," says Special Correspondent Jules Loh. "I have been to every state, not as a tourist but as a reporter, talking to the people. And I'm forever discovering something about this country that I didn't know before."

The Associated Press is a news organization that doesn't have a star system, but Jules Loh stands out. His stories, focused on the everyday lives of Americans, often show the extraordinary side of ordinary people. His well-crafted pieces have been spotlighted in almost every newspaper in the country and have made his name one of AP's most familiar bylines.

Loh is a product of AP. He came up through the bureau system, starting 28 years ago in Louisville, filing the wire. He's spent his career taking on all kinds of news and features assignments, routine and special, to serve the needs of the thousands of member newspapers and broadcasters who own AP.

Like him, the 2,850 people who staff AP's 219 offices around the world are dedicated to giving these members the highest quality service in the news industry — a goal that is a continuing commitment by everyone in AP.

"Quality is not something I specifically think about every time I go to work in the morning," says Loh. "But when you're working with people who have a commitment to excellence and to quality, the quality comes out."

AP Associated Press
Quality. Commitment.

Jules Loh (left) talks with Teddy Hayes in Sasabe, Ariz.
